NEW YORK, Nov. 2.—Rumors that Dodge Brothers, Inc., was to be merged with another automobile manufacturer were denied today by F. J. Haynes, president, on his return from Europe.

204,827 FORDS IN OCTOBER

DETROIT, Nov. 2.—Ford's production in October was 204,827 vehicles. The output of all domestic branches on Oct. 31 was 9,109 vehicles, the highest day's production in the history of the company.

New Car Sales Show Big Increases in Californi

Used Automobiles Fail to Mov Quickly Because of Lower Prices of Late Models

SAN FRANCISCO, Oct. 31.—Marke falling off in used-car sales and materia increase in sales of new cars priced a up to $1500 delivered here, are the out standing features of automotive mer chandising in central and northern Cali fornia for the first fifteen days of Oc tober. Consequent to these condition stocks of used cars have increased ma terially, while few dealers in new car within this price range are at all over stocked.

Deliveries of the new Ford models ar reported as slow, while a number o Ford dealers, particularly in the smalle cities and towns report that there ha been no great movement by presen Ford owners to turn in their old car on new ones. Probably the greater par of the large sales of these new For models has been to prospects who di not already own Fords.

Sales throughout the San Francisc and Oakland territory are more tha holding their own with the first tw weeks of September, and prospect are strong that October will prove on of the best months of the year in sale of new cars priced under $1500 here.

Fees paid for registrations of moto vehicles and trailers to the state a Sacramento on October 10 were $44,10 in excess of the total similarly paid fo all of 1924, according to a statemen issued on that date by the State Moto Vehicle Department. The total for 192 up to October 10 was $1,394,867, as com pared with $1,350,759 for all of last yea

Will H. Marsh, head of the departmen predicted that total registrations fo California for 1925 would be at leas 100,000 ahead of the 1924 total.

NEW CHEVOLET DEALER

INDIANAPOLIS, Oct. 31.—The Mario Chevrolet, a new organization, takes th place of the General Chevrolet Compan local Chevrolet dealer, according to a announcement made at a Indianapol zone meeting here this week at whic Charles E. Lee, sales manager for th Indianapolis zone of the Chevrolet Moto Company, presided. The heads of th new Marion company are S. L. Savidg and David H. Thomas, formerly connec ed with the Summit Chevrolet Compan of Akron, Ohio.

GORRELL MADE DIRECTOR

INDIANAPOLIS, Oct. 31.—At a mee ing of the board of directors of the Stut Motor Car Company of America, Inc Edgar S. Gorrell was elected a directo of the company. This action of th board of directors follows the electio of Mr. Gorrell as vice-president of th organization, which was made severa weeks ago at the time he became asso ciated with the company.

epresentatives Make Pleas For Removal of War Taxes

ambill Tells House Body Automobile Dealers Lose $6,000,000 Every Year

WASHINGTON, Oct. 31.—Automobile ealers are losing a total of $6,000,000 a ear through the operation of the motor ehicle tax, C. E. Gambill, president of ne National Automobile Dealers' Asso-iation, told members of the House Ways nd Means committee at the tax hearing his week. This sum represents tax sses on demonstration and call cars nd loss of interest on taxes paid by the ealers to the manufacturers and not ollected from the consumer for 30 days r more.

Mr. Gambill further estimated that ealers on the average always have in-ested $20,000 in excise taxes and that uring the eight years of operation of ne tax, dealers have collected nearly 900,000,000 for the government at a cost o them of about $40,000,000.

Besides Mr. Gambill, the association as represented by J. H. McAlman of oston, J. W. Tarbill and F. E. Santry f Cincinnati, C. E. Fisher and Claude olgate of Newark, C. W. Hunt of Cleve-nd, Sidney Bowman of New York, all ealers, and C. A. Vane, general mana-er, and W. B. Guy, general counsel.

Others who appeared before the com-ittee in behalf of the automotive in-ustry were Charles F. Bulte, represent-ng the Automobile Club of Rochester, . Y.; E. P. Chalfant, vice president, Gill anufacturing Co. of Chicago, represent-ng the Motor and Accessory Manufactur-rs' Association; David Widman, repre-enting the Automobile Body Builders' ssociation; F. C. Van Cleef, chairman f the tax committee of the Rubber Asso-iation of America; D. H. Kelly, presi-ent of the National Battery Manufac-urers' Association; S. Duncan Black, epresenting the Automotive Equipment ssociation of Chicago; and Congress-an Grant M. Hudson of Michigan.

CHRYSLER SEES BIG OUTPUT

NEW YORK, Oct. 31.—Returning from urope, Walter P. Chrysler predicted roduction and sale of at least 250,000 ars by the Chrysler Corp. next year nd exportation of at least 25,000. He aid Chrysler was now making 850 cars aily of which 60 per cent were fours nd 40 per cent sixes and the daily out-ut would soon be increased to 1,000. Orders were well ahead of output and the actory was about three months behind n sixes and four weeks behind on fours.

PLAN LONG TRUCK HAUL

NEW YORK, Oct. 31.—Among the first f the large Eastern firms to recognize he possibilities of the Dixie Highway is he Aquazone Corp. of New York, which lans to inaugurate this fall what is laimed to be the first long haul motor elivery service between New York and lorida.

Yellow Traffic Lights Hit

BALTIMORE, Oct. 31.—Yellow lights should have no place in a traffic signaling system, according to Dr. Knight Dunlap, professor of experimental psychology at the Johns Hopkins University. Dr. Dunlap bases his opinion on investigation which, he says, have shown that between 2 and 8 per cent of the male population is color-blind, according to the accepted interpretation of the term. Statistics relative to the number of color-blind women have not been completed.

CADILLAC PLANS RECORD

NEW YORK, Oct. 31.—Cadillac Motor Car Co. expects to produce about 14,000 cars in the first five months of its fiscal year, which runs from August to August, as against 17,000 for all of last year, according to Lawrence P. Fisher, president, who has just returned from Europe. He said the company planned to go on production of 3,500 cars a month soon but with all this production there would not be 1,000 cars in dealers' hands January 1 because of difficulty in keeping pace with orders. Fisher saw no abatement in the demand for all types of cars.

New Diana 7-Passenger Sedan Model Announced

ST. LOUIS, Oct 31.—Diana Motors has announced that deliveries are now being made on another new model, known as the Seven-Passenger Diana DeLuxe Sedan. The introduction of this model follows closely behind that of the five-passenger phaeton.

The addition of the two last named models brings the Diana light straight eight line to eight styles, the roadster, standard two-door sedan, standard four-door sedan, two-door brougham de luxe, cabriolet roadster, four-door sedan de luxe, five-passenger phaeton, and seven-passenger Diana de luxe sedan.

The phaeton model is known as the Diana Arrow-Head Phaeton, due to the arrow-head design raised panel.

The new seven passenger closed model has a 135-in. wheelbase, special springs, rich interior finishings including a smoking set and vanity case, gray broadcloth upholstery and is finished in Brewster green Duco below the belt, contrasted with black above.

MOOCK ADDRESSES DEALERS

ST. LOUIS, Oct. 31.—Harry G. Moock, sales manager of the Hudson Motor Car Co. of Detroit was in St. Louis last week on a visit to the Hudson-Frampton Motor Car Co., St. Louis distributors for Hudson and Essex cars. He addressed a meeting of the dealers and salesmen in this district. Moock came here from a trip through the south.

New Plan for Financing of Shop Equipment Announced

Atlas Securities Has Arrangement Whereby Garageman May Buy Tools on Time

INDIANAPOLIS, Oct. 31.—The Atlas Securities Company of this city is making public announcement of a credit and financing plan which it believes is a new extension of time payments on a national basis for the benefit of equipment wholesalers and jobbers and their garage customers by which garage equipment and shop tools may be financed by any jobber in any state without cost to himself.

Though the plan is just now being made public it has been in actual operation for several months and has been found to work smoothly in many points of the country.

Garage equipment and heavy tools, though they constitute a permanent investment, have generally been carried like other goods bought by the garage on thirty days billing. This has held back the extension of adequate quantity business, and kept the garage behind the times in tools and equipment. In some places wholesalers have instituted time payments and carried the paper.

Under the Atlas plan shop equipment is sold to the garageman who pays from one-fourth to one-third down. He executes a note and a contract which the wholesaler discounts with the Atlas Securities. Some wholesalers under the plan do their own collecting. Others inform the customer of the Atlas arrangement and have payments made to that concern. The whole transaction is completed by the wholesaler who mails the note and contract to the Atlas and receives a check to cover the full amount.

Another variation of the plan called the "sight draft plan" enables the wholesaler to deposit the properly made out papers with his own bank for credit and the bank fowards the papers to the Indianapolis bank of the Atlas company.

The success with which the plan has operated is said to be due to three factors. First, the cost to the wholesaler is nothing. The financing cost to the garage customer is said to be as low as sound finance can make it, and less than terms demanded in some sections. Further because of varying state laws which were investigated and proper form drawn up for operation in all states the Atlas is prepared to do business anywhere in proper legal forms with no delay.

FEDERAL HAS TAMPA BRANCH

ATLANTA, Oct. 31.—The Federal Motor Truck Co. announces the recent opening of a direct factory branch at Tampa, Fla., under the name of the Federal Truck Co. of Tampa, Inc., the branch located at 1811 Franklin St., and handling the company's South Florida trade. F. E. Young has been appointed manager of the new branch.

No Abnormal Decline Seen in Chicago Sales Volume

Downward Trend Not So Great As in Former Years Despite Severe Weather

CHICAGO, Oct. 31.—Despite extremely severe and unusual weather in October, sales of new and used cars in the Chicago territory have not suffered any abnormal decline. Combined reports from distributors and dealers indicate that although the bad weather affected sales to some extent, October as a whole was between 150 and 200 per cent better than the same month last year.

A normal downward trend to the sales curve of between 10 and 15 per cent below the September volume is general in this section.

In some cases deliveries still are a problem, while in other instances delayed deliveries have caused October to show a sales volume equal to March and June. Factories are putting forth efforts to catch up with the orders taken in the summer, with the result that in most cases deliveries at this time present no problem.

In the majority of instances, dealers and distributors report a definite downward trend during the early fall weeks, but this downward slide of the curve has not been so great nor so abrupt as in former years.

Rural business has been largely instrumental in holding the sales volume on a more nearly level line this season.

Automotive Men Pledge Aid to Owners Through A. A. A.

WASHINGTON, Oct. 31.—The formation of a gigantic co-operative unit in the automotive field is foreshadowed as the result of assurance given the American Automobile Association by car manufacturers, distributors and dealers to the effect that they will hereafter make common cause with motor clubs in the work of smoothening out the difficulties in the path of the automobile owners of the country.

This development, announcement of which came from the A. A. A. national headquarters, was characterized by Thomas P. Henry, president of the national motoring body, as one of the most important steps taken in recent years to unify the efforts of the various automotive and motoring bodies interested in the welfare of the motorists.

William E. Metzger, of Detroit, a member of the executive committee of the A. A. A. and also a director of the National Automobile Chamber of Commerce, was largely instrumental in securing action on the resolution and in having the views of the manufacturers broadcast to the automobile dealers of the country.

MARMON PROMOTES ROGERS

INDIANAPOLIS, Oct. 31.—Nordyke & Marmon Company announces the appointment of the well known A. "Jack" Rogers as head of a new department of "Quality and Style" and as the assistant to Vice-President Hal G. Purdy, one of the key men of the Nordyke & Marmon organization. Rogers, who for several years was advertising manager of the company and one of the executive staff for about ten years, except during the war period, became assistant sales manager some years ago and has continued in that capacity until the formation of the new department which is to be an important link between the factory production and the sales departments.

DURANT MAKES DENIAL

NEW YORK, Oct. 31.—W. C. Durant has issued a statement denying the rumor that he had been seeking to regain control of General Motors Corp. He said: "Because of the widespread publicity given the rumor, I wish to emphatically deny that I am planning or seeking control of General Motors, and have no desire or intention of again becoming active in its affairs, were such a thing possible. My interest in General Motors is purely that of an investor and my holdings have recently been increased because of the confidence I have in the future of that great corporation and of its commanding position in the industry."

Studebaker Pleased With Success of Pledge Plan

SOUTH BEND, Oct. 31.—So thoroughly have the terms of the Studebaker dealers' pledge to the public on the sale of used cars been carried out by the dealers subscribing to it that, after the sale of more than 30,000 used cars under this pledge during the last three months, only 43 complaints have been received by Studebaker, the company announces.

Further, of this number of complaints, only 11 indicated a fault on the part of the dealer.

The creditable showing of fidelity to the pledge, revealed by the negligible number of complaints, has strengthened the corporation in its policy of advertising its dealers to the public as responsible used car merchants.

MOON SURVEYS MEXICO

ST. LOUIS, Oct. 31.—Edmund H. Serrano, director of exports for the Moon Motor Car Co., has left on an extended trip through Mexico and Cuba in the interests of Moon and Diana dealers in those countries. Mr. Serrano said that the recent opening of the National Bank of Mexico, which is issuing for the first time in Mexico, paper money backed by a gold reserve, had stabilized business and improved to a marked degree and outlook for financing Moon and Diana sales.

North Carolina Service Men Organize 4 New Divisions

Tire, Battery and Wholesale and Retail Gasoline Dealers Form Bureaus

CHARLOTTE, N. C., Oct. 31.—Organization of automobile tire, battery and wholesale and retail gasoline dealers' divisions was perfected at the two-day semi-annual convention here of the North Carolina Automotive Service Association. Keeley A. Grice of Charlotte, president of the state association, presided at the general conference's sessions.

Victor Shaw, of Charlotte, was elected chairman of the tire dealers' division of the state association. W. L. Pope, of Statesville, was elected chairman of the battery dealers' division. A. O. Costner, of Lincolnton, was named chairman of the wholesale gasoline dealers' division, and the retail gasoline dealers elected J. Caldwell McDonald, of Charlotte, as chairman.

Approximately 50 dealers attended the conference, the second held by the association, which has made important advances in several lines of endeavor since it was organized last May at Charlotte.

The principal address of the convention was delivered by Tom McP. Glasgow, of Charlotte, president of the National Automotive Jobbers' Association. The importance of "fair play" toward retailer and consumer was emphasized by L. H. Martin, of Greensboro, speaking on the general subject of wholesalers' policies. J. T. Thompson, of Burlington, spoke as a wholesaler on the relation of the wholesalers to the retailer, and R. O. Holland, of Greensboro, discussed this subject from the viewpoint of the retailer, each emphasizing the necessity of co-operation.

Ford of Canada Reports Earnings of $6,132,327

FORD CITY, Ont., Oct. 31.—Seventy thousand eight hundred and sixteen passenger cars and 4.545 tractors were manufactured by the Ford Motor Company of Canada during the twelve months ending July 31, according to an announcement made public today by W. R. Campbell, vice-president and general manager.

Profits of the company during the last year amounted to $6,132,327.50 or $2,413,139.99 more than the preceding year. The total assets of the company are listed at $41,419,335.66.

During the year the company expanded its activities and established two Australian companies. The companies which were established under the supervision of P. W. Grandjean, secretary and assistant treasurer, were the Ford Manufacturing Company of Australia, (Pty) Ltd., and the Ford Motor Company (Pty) Ltd.

The first named concern will handle the manufacture of car bodies while the latter concern will handle the assembly and sales divisions of the combined firms.

PHILADELPHIA, Oct. 31.—The 25th nual Automobile Show under the spices of the Philadelphia Automobile ade Association will be held Jan. 16-23, clusive, at the Commercial Museum, th Street below Spruce, it was anunced today by W. H. Metcalf, execue secretary of the association.

FRANKLIN DEALERS MEET

ATLANTA, Oct. 31.—Dealers and distributors handling the Franklin automobile line in the southeastern territory held a sales and merchandising conference at the Biltmore Hotel in Atlanta recently, S. E. Ackerman, sales manager for the company, presiding. In the Atlanta and Georgia district alone Mr. Ackerman told the dealers that an increase of 30 per cent in Franklin car sales has resulted so far this year as compared with the corresponding period in 1924. Sales in the state of Florida, he stated have been 196 per cent larger than the the corresponding period in 1924.

Stanley Zweibel Is Named Marmon Service Manager

INDIANAPOLIS, Oct. 31. — Stanley Zweibel, who has served as the service manager of the Marmon Automobile Company of New York, has been appointed service manager for the Nordyke & Marmon Company plant here it was announced by H. H. Brooks, general director of sales.

The new executive is well known to the automotive trade as a result of many years connection with Marmon factory and dealer organizations. He was appointed director of the Marmon educational department in charge of the sales school following the war and was later made director of service for the company, which position he relinquished to become manager of service at the New York Marmon branch.

Prior to his Marmon connection Mr. Zweibel was engaged in industrial educational work.

THOMAS F. MANVILLE

NEW YORK, Oct. 31.—Thomas Franklin Manville, chairman of the board of Johns-Manville, Inc., manufacturers of asbestos brake lining, has died here. Mr. Manville with his brother, H. E. Manville, has built up an organization in the last 25 years, capable of carrying out his plans and policies in the asbestos industry even without his directing hand.

H. E. Manville, who succeeded his brother as president of the company in 1924, will continue to direct the policies of the organization.

In addition to chairman of the board of directors of Johns-Manville, Inc., Mr. Manville was president of the Arizona Asbestos Company, treasurer and director of the Asbestos Wood & Shingle Company, president and director of the Canadian Johns-Manville Company, director of the Fibre Corporation, director of the Fifth Avenue Bank, trustee of the Franklin Savings Bank, president and director of the Manville Securities Company. He was a member of the Bankers' Metropolitan and Union League Clubs in New York City.

FORD, LTD., VOTES DIVIDEND

DETROIT, Oct. 31.—Cash dividend of 10 per cent, payable November 15 to stockholders as of record November 5 was voted by the directors of the Ford Motor Company of Canada. All the old officers and directors were re-elected.

7-Passenger Willys-Knight Six Announced in Two Styles

Touring and Sedan Bodies Make Up New Line—Engine Unchanged, Springs Longer

TOLEDO, Oct. 31.—Continuing its policy of bringing out new models only as demanded by automobile purchasers, Willys-Overland now announces production of a new seven-passenger Willys-Knight Six.

Because of the success of the Willys-Knight Six engine no changes have been made in it, while the chassis, remains unchanged with the exception of an increase in rear spring strength to care for additional passengers.

Conspicuous among changes in the new seven-passenger Willys-Knight Six is the mounting of the spare rim on the left hand side of the body forward of the left front door.

While two additional seats have been provided for additional passengers and comfortable leg room added, the increased weight of the car is but slightly more than the Model 66 five-passenger cars.

The new seven-passenger Willys-Knight Sixes are being built in both touring and sedan body types and completely round out the Willys-Knight lines of fours and sixes. With the wheelbase of the seven-passenger models and the overall length remaining at 126 and 175 inches respectively as in the five-passenger models, the body length from the engine hood to the rear of the body has been considerably increased to care for additional passengers.

Auxiliary seats of the disappearing type are employed which completely fold out of way into the backs of the front seat, the compartment into which they fold being utilized, when seven passengers are riding, for leg room of the two auxiliary seat occupants.

Approximately seven inches of additional space is provided from the front of the rear seat cushion to the backs of the auxiliary seats while the distance from the backs of the auxiliary seats to the back of the front seat has been established at 25½ inches, providing ample leg room for the two extra passengers. Height of the auxiliary seats from the floor of the car is 13 5/8 which, with the reclining angle of the seats provide the most comfort for the occupants.

List prices of the touring and sedan seven-passenger models of the Willys-Knight Sixes are $1,950 and $2,495 respectively f.o.b. Toledo.

MARTIN TO MAKE RADIOS

CLEVELAND, O., Oct. 31.—Extensive manufacture of radio equipment soon is to be started by the Glenn L. Martin Company, airplane makers here. Announcement to this effect was made today by Martin, president of the company, who pointed out manufacture of "B" battery eliminators for radios already had started.

Overland Shipments Surpass 1924 Output by 44,000

Production in First 20 Days of October Nearly 13,000 Cars, Factory Announces

TOLEDO, O., Oct. 31.—Some idea of how greatly this fall's motor business exceeds that of a year ago is seen in the sales and production figures of Willys-Overland, Inc., for October and for the period from January 1 to October 20, 1925.

For the year to October 20 Willys-Overland shipments totaled more than 174,840 cars as compared with 130,971 for the corresponding period of last year. In addition, company production for the first 20 days of October totalled approximately 13,000 cars, indicating that between 20,500 and 21,000 cars will be built during this month, a figure that will break all production records for October shipments and production in company history. This figure compares with the October production of 1924 which totaled approximately 10,000 cars.

Orders for more than 15,000 cars for November delivery are now on hand and, after a careful checkup with dealers and distributors, factory officials declared there will probably be produced and shipped between 17,000 and 18,000 cars during November, as compared with the 5,000 cars produced in November of 1924.

TRUCK FIRMS MERGE

BOSTON, Oct. 31.—The Noyes-G. M. C. Truck Company and the Stone Motors, Inc., both of Boston, have been merged into the Noyes Motor Truck & Coach Company here. The Noyes-G. M. C. Truck Company handled the commercial vehicles of General Motors and the Stone Motors, Inc., had the distribution of Yellow Cab products. When Yellow Cab was sold to General Motors, Stone Motors, Inc., had just leased a building and moved in on Commonwealth Avenue, while the Noyes-G. M. C. Truck Company was in a place directly across from the Noyes-Buick Company. Now the new company has leased the big structure vacated recently by the Leghorn Motors Company formerly New England distributors of the Gardner until the company was dissolved a month ago. The Stone Motors store has been vacated and Mr. Stone has become an officer of the new company with Harry K. Noyes.

PLANS CANADA BRANCH

SPOKANE, Wash., Oct. 31.—The Burrow's Manufacturing Company will open a branch factory at Winnipeg, Manitoba, at an early date to take care of western Canada demand for the Burrow tire boot. A branch is already in operation at Akron, Ohio, to take care of eastern business. The headquarters factory here supplies the demand as far south as Los Angeles and Phoenix and east as far as Minneapolis.

Frisco Claims Honor of First Car

SAN FRANCISCO, Oct. 31.—Honor of being the first city in which an automobile ride was made goes to San Francisco, rather than to Kokomo, according to Dr. David Starr Jordan, former president, and now chancellor emeritus, of Stanford University. Dr. Jordan claims that he rode, in 1892, two years before the Kokomo car made its brief trip, from the Southern Pacific station to the football field. "I was picked up," said Dr. Jordan, "by a man named Elliott, who was driving a self-propelled vehicle which he called by that infernal name, half Greek and half French, which still sticks to it—an 'automobile.' Elliott had built this from designs of a gas engine in a French technical journal. The thing went very well, as I recall, on the level, at a rate of between two and four miles an hour."

BIG CHRYSLER DRIVEAWAY

DETROIT, Oct. 31.—Three hundred Chrysler passenger cars formed the driveaway shipment of the R. H. Collins Automobile Company, Chicago Chrysler distributors, which left Detroit recently for the Illinois metropolis. The occasion was the annual visit of the Collins organization and dealers to the local plant. Stretched out on the road, the cars formed a line a mile long. They were escorted through the different Michigan and Illinois cities by motorcycle policemen. Arriving in Chicago the cars were delivered to customers who had placed orders for delivery.

DORRIS PROMOTES PURCELL

ST. LOUIS, Oct. 31.—Bernard A. Purcell has been appointed sales manager of Dorris Motors, Inc., successors to the Dorris Motor Car Co. H. H. Walker has been named advertising manager. Purcell has been with the Dorris company since 1908 except for a period during which he served in the army.

RICKENBACKER-TRIPPENSEE MERGE

DETROIT, Oct. 31.—Stockholders of the Rickenbacker Motor Co. have ratified the consolidation contract between that company and the Trippensee Closed Body Co. by more than a two-thirds vote. At the same meeting, stockholders approved the change in the par value of the stock from $10 to no par.

INDIA PICKS APPLEBY

AKRON, Oct. 31.—J. H. Appleby has joined the India Tire & Rubber Co., as district manager, and will have jurisdiction over Chicago and Milwaukee territories. Appleby was formerly sales manager of the Denman-Meyers Cord Tire Co.

Packard Report Reveals Greatest Year in History

Sales, Production and Earnings of Company All Are Far Ahead of Any Other Like Period

DETROIT, Oct. 31.—In the fiscal year ending August 31, the Packard Motor Car Company attained the greatest sales, production and earnings in its history, according to the annual report made public today.

Sales of cars, parts, marine and aviation engines totaled $60,475,989.89 or $14,472,310.63 greater than last year.

Production reached 24,246 passenger cars. Sales abroad were 50 per cent greater than a year ago. Net earnings were $12,191,081.21 after provision for federal income tax. Last year the net earnings were $4,805,174.54, after provisions had been made for the federal income tax. The income for the year just ended was a million a month.

The current assets aggregate $29,281,414.82 and are three and one-half times current liabilities. The total assets are four and one-half times total liabilities.

The report further says that the preferred dividend amounted to $686,993.04 and the common dividend to $4,476,046.00. The regular common dividend during the year amounted to 12 per cent to which extra dividends of 3 and 5 per cent were declared. Including the amount paid out for retiring the preferred stock, there was disbursed in cash during the year to common and preferred shareholders, $18,213,485.

The balance at the beginning of the last year was $9,488,442.71. Add to this the profit and the surplus is $21,679,523.92. A year ago it was $13,481.21.

WILLS STE. CLAIRE DEALERS

MARYSVILLE, Mich., Oct. 31.—Dealers who have recently taken on the Wills Sainte Claire line are as follows: Ayer and Ayer, Inc., Springfield, Mass; Geo. W. Stohler and Company, South Williamsport, Pa.; Edward A. Morris, Springfield, Ill.

DEALERS VISIT PEERLESS

CLEVELAND, Oct. 31.—The Peerless Motor Car Co. factory in this city was visited last week by 30 distributors and dealers, accompanied by C. R. Cuncliffe and H. S. Svevens, manager and wholesale manager respectively, of the Peerless Motor Car Co., Philadelphia, branch. They were addressed by Edward Ver Linden, president, L. R. German, vice-president and Charles A. Tucker, sales manager.

TOOL SERVICE ARRANGED

CINCINNATI, Oct. 31.—The United States Electrical Tool Company announces that U. S. portable electric tools will be serviced by and through Westinghouse service stations located in 28 cities in America.

kland Announces Larger and Roomier Landau Sedan

w Colors and Other Refinements Now Being Offered at Same Price as Former Model

PONTIAC, Mich., Oct. 31.—The Oakland tor Car Company now has in produc- n a new style Landau Sedan with ger body, wider rear seat, larger rear arter windows, new colors and many ier refinements. Price remains un- anged—$1295 f. o. b., Pontiac, Mich.

The lengthening of the body affords ded space in the tonneau of the car d easier entrance, while the widening the rear seat provides big car roomi- ss, desired for the complete relaxation occupants.

The rear quarter windows have been larged from the oval to a square ish, with upper rear corners rounded conform to the shapeliness of the rear e of the body.

The change in Duco finish to a pyra- d gray lower body, with black upper ucture and red striping on body, hood ivres and wheels adds to the attrac- eness of this car.

Automatic windshield cleaner, visor, nt snubbers, natural wood wheels, nt bumper, rear fender guards, gaso- e gauge on instrument board, heater, to-meter, Fisher VV one-piece wind- ield, roller shades and other appoint- nts are standard equipment, besides e many mechanical Oakland features ch as harmonic balancer, air cleaner, filter and mechanical four wheel akes.

MOHAWK CHANGES NAME

NEW YORK, Oct. 31.—To avoid confus- on with the Mohawk Electric Mfg. Co. Newark, N. J., the name of the Mo- wk Electric Corp. of Chicago has been anged to the Mohawk Corp. of Illinois. ne corporation has recently added these stributors: Marshall Field & Co., En- ewood Electrical Supply Co., Amber lectrical Supply Co., and Harry Alter Co., all of Chicago. Other distributors Mohawk radio receiving sets include orehouse & Wells Co., Decatur, Ill., and aac Walker Hardware Co., Peoria, Ill.

ax Appeal Board Upholds Deduction for Bad Debt

WASHINGTON, Oct. 31.—Appeal of ne Pacific Pipe and Supply Company California that it was within its rights hen it charged off a bad debt by the nited States Board of Tax Appeals.

The evidence showed that the taxpay- g company purchased, in 1918, $50,- 37.23 worth of tires from the Palmer ire and Rubber Company of Chicago; at the tires were unsatisfactory and at the tire company was adjudged ankrupt in 1920, failing to make prom- ed restitution.

"The action of the taxpayer is charg- g off the debt on its books upon learn- ing of the bankruptcy," said the opinion of the tax board, "knowing as it did that the merchandise sold by the debtor had proven unsatisfactory, and after having unsuccessfully attempted for several months to collect the account, was in accordance with sound business practice.

"We do not mean to say that, in the case of every bankruptcy, debts due may be charged off as worthless. Each account must stand upon its special circumstances."

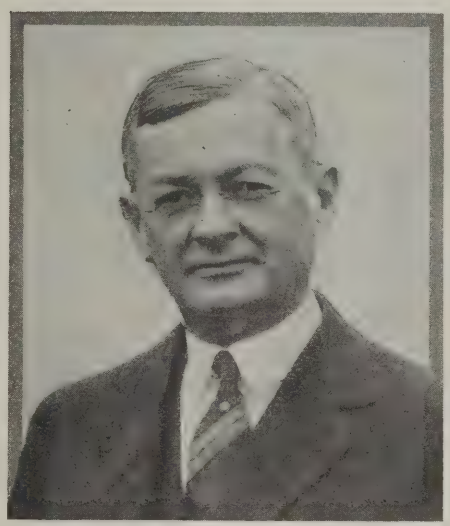
Bargain Basement for Used Cars

CLEVELAND, Oct. 31.—The Walter F. Wright Co., Chrysler distributer, has carried into the retailing of used cars one of the features that have been adopted with success by merchants in other lines of products. This is the basement store. He has made extensive alterations in his used car sales room at 4624 Euclid avenue, and by utilizing the vacant space beneath the ground floor he has doubled the floor space of his salesroom. In other words, Wright has doubled his floor space without adding one cent to his rent. A new entrance ramp constructed at the rear of the store makes the entire basement available for display purposes, and provides room for an additional 40 cars. The increased floor space has permitted the company to arrange cars without crowding so that customers may inspect them under the best possible conditions.

CHEVROLET OUTPUT HEAVY

FLINT, Mich., Oct. 31.—Chevrolet came within 378 passenger cars and trucks of equaling its highest production month when it turned out 55,865 passenger cars and trucks for September, it was announced at the factory today. The number bettered the revised estimate by 2,000. October's output has been put at 54,500. This may be changed later to a higher figure, according to factory officials to permit taking care of the orders on hand. Deliveries to dealers during the past month amounted to 44,500 making the month second to April and May. According to Charles F. Barth, vice-president in charge of production, the condition is an indication of the industry becoming more stabilized.

FISHER TO EXPAND



DETROIT, Oct. 31.—Two million dollars will be expended in doubling the capacity of the Fisher Body plant at Memphis, William A. Fisher, president of the company, said yesterday. The working force of 1,000 men will be doubled. Since the acquisition of the plant two years ago upwards of $1,000,000 has been spent in conditioning the plant. The present enlargement was decided upon to take care of the increased orders that the Fisher Company has received.

R. C. Rueschaw Retires As Sales Manager for Reo

Veteran Executive Will Retain Seat on Board of Directors—Triphagen Is Successor

LANSING, Mich., Oct. 31.—R. C. Rueschaw, sales manager of the Reo Motor Car Company has retired from active duties, according to an announcement made early this week. The veteran executive in turning over the actual direction of sales retains his seat with the board of directors. He will also continue to make his home in Lansing.

A recent serious illness, from which he is now completely recovered, together with a long-postponed desire to gain more leisure for travel, recreation and the administration of personal affairs were deciding factors in bringing about his retirement from the executive position which he has held so long.

R. C. Rueschaw

Mr. Rueschaw, like the other six executives of Reo, started with the company from its inception, and he has been closely allied with the Reo Motor Car Company since 1904. He has been an active worker in the National Automobile Chamber of Commerce and is, at the time of his retirement, a member of several committees of that organization.

Mr. Rueschaw turns over the reins to C. A. Triphagen, assistant sales manager for the Reo Motor Car Company during the last three years and manager of Reo's Detroit branch for a number of years prior.

NEW AUBURN DEALERS

AUBURN, Ind., Oct. 31.—New dealers added to the organization of the Auburn Automobile Co. include:

Reising Auto Sales, Cincinnati; J. E. Molloy Motor Co., Norwood, O.; Heinss Motor Car Co., Cincinnati; Curwin Enscoe, Dayton, O.; Midway Garage, Decatur, Ill.; Fred Emerson, Angola, Ind.; Auburn Motors, Huntington, W. Va.; Basha Motor Co., Masontown, Pa.; Johns Motor Sales Co., Brooklyn, N. Y.

Along Automobile Row

DENVER.—The South Denver Motor Company, dealers in Overland and Willys-Knight cars, is moving into new quarters at 171 Broadway. This move has been necessitated by increasing volume of business.

ST. LOUIS.—De Luxe Automobile Company, Oldsmobile distributor in the St. Louis district has announced appointment of M. C. Ingram of Carbondale, Illinois, as an Oldsmobile dealer.

CHICAGO. — The Smith-Sauer Motor Company, Marmon distributor, has moved from the former location at 2436 South Michigan Avenue to 2349 South Michigan, the building which formerly housed the Stevens Duryea Motors, Inc., and the O'Brien Motor Company, Stanley Steamer dealers. The old home of the Marmon has been purchased by the Stewart Warner Speedometer Corp., and that company will move its offices to the new location.

BOSTON.—Cooms & McBeath, Inc., Ford and Lincoln dealer, has moved into the new building formerly occupied by the Autocar Sales & Service Company.

DETROIT.—The Grosse Pointe Motor Company, Jefferson and Wayburn, is the latest Hudson-Essex dealer in Detroit. The owner, Gilbert Michel, was formerly a salesman for the Aaron DeRoy Motor Car Company, Hudson-Essex distributors for this territory.

SIOUX CITY, Iowa.—The Ryal Miller Chevrolet Company, which has conducted a used car store, exclusively, at 518 Sixth Street, has opened a second used car exchange. Lee Mylan directs the store, but the old one is in charge of J. H. Christie.

MEMPHIS.—The Gerber, Hudson-Essex Company, John D. Gerber, president and general manager, has been launched as an additional sales department for Hudson and Essex.

VANCOUVER, B. C.—A new company has been formed to take over the retail selling and servicing of McLaughlin-Buick cars in the territory of Greater Vancouver. The new firm, Clark-Parsons Buick, Ltd., will continue to carry on business at 1219 George Street.

DETROIT,—Four dealers for the Oakland six have been announced by G. A. Richards, president of the Richards-Oakland Company. The new appointments make 12 Oakland dealers in addition to two retail branches in the city. The new dealers are Shepard Motor Sales, the Grand Motors Inc., Linwood Auto Sales, and the Handloser Sales & Service.

FITCHBURG, Mass.—E. H. Page, who had the Reo agency for 15 years, is retiring from business and has sold out to Frank J. O'Reilly, for the last 14 years connected with the Linscott Motor Company of Boston, Reo distributor.

DANVILLE, Ill.—Rewert & Ehler have acquired the Hupmobile agency, formerly conducted by Milt Stewart and have taken over the former Holmes Garage Company building on North Hazel Street. The Rewert & Ehler agency also handles the Hupp in Decatur and Champaign.

SPRINGFIELD, Mass.—E. V. Warriner has been appointed distributor and retail dealer for the Flint. The business will be run under the name of the Springfield Flint Company. This arrangement involves the discontinuance of the factory branch of Flint Motors. Mr. Warriner will continue to run the Stanley agency. Donald MacDonald, for six years with the last named concern, has been appointed manager for both establishments.

MEMPHIS.—R. Price, president of the Memphis Automobile Dealers' Association and connected with the Southern Motor Car Company has returned from a trip through the Mississippi Delta. He expects to visit the Cadillac factory soon.

CLAREMORE, Okla.—A Buick agency has been established in Claremore at the Sequoyah Garage by the Forster-Davis Motor Company of Tulsa, which has been given the Claremore territory.

ST. LOUIS.—Southwest Nash Company, Nash distributor here, has opened another used car department at the northeast corner of Washington Boulevard and Jefferson Avenue. Al Ehrengart, assistant sales manager of the company is in charge.

LITTLE ROCK, Ark.—Grady C. Hopkins, for more than two years salesman for the Arkansas Motors Company, has been placed in charge of the company's used car department.

BROWNSVILLE, Tenn.—Pittman Auto Co., Ford and Lincoln dealer, is doubling the size of the plant to care for increased business.

ROCKFORD, Ill. — L. L. Lebkicher, Chrysler agent, has moved across the street from 317 South Church Street to 314 South Church. He will build an annex to the new store to handle his supply lines.

ATLANTA.—The Southern branch of the Stewart-Warner Products Co., advises that R. S. Bacon has recently joined the traveling sales forces of the company out of the Jacksonville, Fla., branch, and will handle the dealer trade in a part of the Florida territory, specializing in sales promotion work with the dealers.

CHICAGO.—The address of the Chicago office of the Brown-Lipe Gear Company has been changed from 1028 Standard Oil Building to 1015 Standard Oil Building, 910 S. Michigan Avenue.

MONTICELLO, Ill.—E. A. Johnson has purchased a brick building at 212 West Washington street, and is remodeling it and perparing to move his Hudson-Essex sales room and garage there.

NEW HAZELTON, B. C.—Cary & Stone are now operating the Hazelton garage, and have been appointed Ford service agents.

ST. LOUIS.—Star Square Auto Supply Co., automobile accessory dealer, will open its fifth store in St. Louis at 2300 South Grand Boulevard. Edwin Geil has been named manager of the new branch, the third opened by the concern this year.

TULSA, Okla.—The Bobst Motor Company of Tulsa, distributors of Hudson and Essex cars, has recently moved into a new building.

FAYETTE, Mo.—D. B. Denny has sold the Denny Motor Company, which includes the Ford agency, to a company which represents Ford at Palmyra, Mo. B. A. Dye, of Palmyra will be manager of the new concern which will be known as the Fayette Motor Company.

SHEBOYGAN, Wis.—R. H. Thieman Company, Ford and Lincoln dealer here, has purchased the property of the Jenkins Machine Co. and will start reconstruction of the building on January 1, when the Jenkins company moves to Sheboygan Falls to take over the plant of the Falls Motor Co.

TOLEDO.—The Marmon Toledo Co., has been chartered with an authorized capital of $20,000 to deal in motor vehicles, parts and accessories.

ROCHESTER, N. Y.—Robert J. McCarthy, of Smethport, Pa., has purchased the business of the Denny Motor Company, Ford dealer at Naples, near here. Mr. McCarthy, who has a wide experience in the automotive field, will conduct the business under the name of the Naples Motor Company.

CHICAGO.—Fred C. Wendell has been appointed to the newly created position of assistant sales manager by the Pierce-Arrow Sales Corp., 2420 South Michigan Avenue.

MOLINE, Ill.—I. E. Hoogner, veteran automobile man, has been appointed local agent for the Cleveland car and will establish headquarters and salesroom in the LeClaire garage.

PORTLAND, Ore.—G. B. Pendergrass has opened a new automobile sales room at Union Avenue and has been named as community dealer for Hudson and Essex cars.

ROCHESTER, N. Y.—James Hutton has joined the MacConnell Motor Corporation, Ford dealers, as service manager. He was formerly connected with the service departments of Swope Stanley Motors and Judge Motor Corporation of that city.

DULUTH, Minn.—The Chandler-Cleveland Agency, Inc., has moved to 1009 East Superior street, where complete service is to be given along with sales. Peter Doll is manager of the service with a crew of five men. The local sales for the agency have been put in charge of G. L. McLeod, who comes from San Diego, Calif., where he managed sales of the Peerless and Oldsmobile.

SPRINGFIELD, O. — The Brubaker-Saunders Co. has been incorporated with a capital stock of $25,000 to handle the Overland and the Willys-Knight cars in the Springfield territory. It takes the place of The Overland-Burnett Co.

DETROIT.—The Pennow Motor Sales, 6340 West Fort street, Paige and Jewett dealers, has opened a sales branch at 6520 Michigan avenue. Albert Pennow is head of the company.

CHICAGO.—Willard McAllister, for the last year retail sales manager of the Smith-Sauer Motor Co., Marmon representative, has taken the retail sales of the Marmon, while the Smith-Sauer company will confine its activities to the wholesale field.

OTTAWA.—A new company has been formed to handle the Chevrolet in Ottawa as associate dealer with temporary sales rooms at 301 Bank Street. A charter has been applied for in the name of the Superior Motor Sales, Ltd.

ST. LOUIS.—De Luxe Automobile Co., St. Louis Oldsmobile distributor, has opened a used car showroom at 3118 Locust Street.

SPOKANE, Wash. — The George H. Koester & Son tire shop and service station, distributors of Kelly tires, has added a complete battery service station with H. W. Brow, a veteran in the industry, in charge.

MILWAUKEE.—The Hathaway Buick Co. of Oshkosh, Wis., has plans for erection of a 50x50 one-story garage as an addition to its present plant at that location.

CHICAGO.—Burnstine Motor Sales, 2457 South Michigan Avenue, Chrysler dealer, has started construction of three new buildings in outlying districts to care for its increasing business. The new buildings are located at 3041 Lawrence Avenue, 1840 Ridge Avenue, Evanston, and 6335 Broadway.

ROCHESTER, N. Y.—Frank P. Conlon and Cornelius O'Leary, owners of the Mount Morris Studebaker Garage have erected a new showroom.

FORT DODGE, Iowa.—Hupmobile dealers from northwest Iowa were guests of the local Hupmobile agent, D. H. Kuhlman at a one-day factory demonstration and sales conference conducted by George A. Clark, Detroit.

HOUSTON, Tex.—Griff Vance, for years connected with the Jack Neal-Nash Motor company of San Antonio, and for the last two years sales manager of that concern, has been named manager of the Jack Neal-Nash Motor company here.

CHICAGO.—Allen W. Granger, formerly manager of the Chicago branch of the General Motors Truck Co., has been appointed supervisor of retail and fleet sales for the Reo Motor Car Co., 2412 South Michigan Avenue.

With the Associations

New Directors Chosen

KANSAS CITY, Oct. 31.—The annual election of directors for the Kansas City Motor Car Dealer's Association was held at the Kansas City Club. The following were elected:

W. J. Brace, president of the Hudson-Brace Motor Company; Robert C. Greenlease, president, Greenlease Motor Car Company; Nelson S. Riley, president, Studebaker Riley Company; Estel Scott, general manager, General Motors Truck Company; Edward F. Williams, president, Franklin-Williams Motor Company; Arthur Bunker, general manager, Bird-Sykes-Bunker Company; George H. Cox, branch manager, Reo Motor Car Company; W. P. Hemphill, secretary-treasurer, Hemphill Motor Company; Rollo W. Reid, president Reid-Ward Motor Company.

Would Standardize Service

ROCHESTER, N. Y., Oct. 31.—The Rochester Garage Owners' Association has been organized by garage men here to standardize garage service. One of the acts of the new association has been to launch a drive to have a city ordinance passed which shall provide for licensing of all garage proprietors.

The garage men feel, they say, that too many inexperienced "motor tinkers" are opening so called garages in their backyards, turning out interior work and thereby bringing the garage business as a whole into disrepute. Furthermore, this mushroom growth of the backyard garage, they declared, has been a big factor in the last year or two in reducing additional business which the legitimate garage man with his mounting overhead expenses has a right to expect.

Rochester garage men say they want to be licensed the same as plumbers, electricians or druggists. Since this latter group was licensed primarily to protect the physical welfare of the public, they point out that faulty repairs made by a novice garage man endanger the life of the car owner and the public as well.

The officers of the new association are Frank L. Sherwood, president; G. A. Dancey, vice-president; William Bauer, treasurer; F. E. Hill, recording secretary; Charles W. Punch, field secretary and organizer.

Mexican Club Formed

WASHINGTON, Oct. 31.—A meeting of business men in Tampico, Mexico, held under the auspices of the Tampico branch of the Mexican Chamber of Commerce resulted in the organization of the club known as El Automovil Club de Tampico, the Automotive Division of the Department of Commerce is informed. The purposes of this organization include the general popularizing of automobile traffic in this section, promotion of good roads, general protection to individuals and firms engaged in the sale of automotive products, etc.

Milwaukee to Celebrate

MILWAUKEE, Oct. 31.—An outstanding event in the history of the automobile industry in Wisconsin will be celebrated here Nov. 9, when the Milwaukee Automotive Dealers' Association in combination with the entire automotive industry in the state will celebrate the fifteenth birthday of the local dealers' organization.

F. W. B. Achen, president of the association and Cleveland and Chandler distributor in Wisconsin, and Bart J. Ruddle, executive secretary of the organization are preparing for the big banquet which will feature the celebration, and which will be attended by at least 300 of the leading dealers, wholesale parts and equipment men, distributors and factory representatives as well as representatives of the motor press and the National Automobile Dealer's Association.

Leaders of the industry, including manufacturers whose lines are represented in Wisconsin, and prominent trade association officials will be guests of the Milwaukee organization at the birthday party. Efforts are being made to bring Alfred Reeves, general manager of the National Automobile Chamber of Commerce, and C. A. Vane, general manager of the National Automobile Dealers' Association to Milwaukee, as the principal message bearers of the industry.

Gasoline Dealers Elect

ROCHESTER, N. Y., Oct. 31.—Ward L. Gerber was elected president of the Western New York Gasoline Dealers' Association at the annual meeting held here recently. Other officers elected are C. R. Hertzberg, vice-president; J. L. Hilton, secretary and treasurer. The board of directors is composed of William Bauer, F. W. Fincher, J. J. Dolman and A. D. Whittley.

Proposed Code Studied

SPOKANE, Wash., Oct. 31.—At a recent meeting of the eastern Washington branch of the Washington Automotive Trade Association the proposed new motor code was given a thorough airing. Jack Powers of the Eldridge-Buick company of Seattle presented the trade's arguments on the code, representatives from non-automotive interests also being present.

He characterized as one of the most important sections that which would provide that all cars carry under the front cushion a certificate of title which would be of special interest to repairmen and dealers handling used cars. It is also proposed to make a sales slip pasted on windshield serve in lieu of a license plate until the latter can be obtained.

Reduction of the license and personal property tax on cars and increase of the gas tax are also provided for.

Studies Flat Rates

PORTLAND, Ore., Oct. 31.—As one of its major activities for the coming year the Portland Automotive Trades Association has appointed a committee to gather and place in the hands of all members all available information of flat rates for repairs. Interest in flat rates was renewed by the MOTOR AGE flat rate chart, which was placed in the hands of the association by the Chilton Class Journal Co.

W. A. Gill, former president, is chairman of the committee, which includes Axel Kidahl, Henry Ward, Earl F. Heym, C. A. Bankhead, Al May and A. G. Anderson.

Even the smaller repair shops along the Pacific Coast are now becoming sold on the advantages of the flat rate, despite the fact that many of them formerly held that such a system could be advantageous only to the big shops or the one specializing in repairs on a few makes of cars.

Southwest Boosters Banquet

DALLAS, Tex., Oct. 31.—More than 200 automobile dealers, distributors, and accessory and parts jobbers attended the annual banquet of the Automotive Boosters Club here. The Dallas organization is part of the association representing Texas, Louisiana, Arkansas and Oklahoma.

At the close of a day's activities the club elected Frank Lynn president, A. D. Graham, vice-president, D. H. McFadden, secretary, and M. J. LaDue, treasurer. The officers elected are all of Dallas.

Speakers on the program included W. L. Martin, former president, Frank Lynn, new president, Ellis Boyd, president of the Automotive Dealers' Association of Texas, C. O. McCauley, president of the Texas Automotive Jobbers Association, F. A. Ferris, M. J. Norrell and F. F. Florence.

Portland Elects Crittenden

PORTLAND, Ore., Oct. 31.—The Automobile Dealers' Association of Portland passes into the coming year of its activity with one of its oldest workers at its head. J. A. Crittenden, sales manager of the Willys-Overland company, has been elected to the presidency.

In point of service to the association and his fellow dealers Jack Crittenden dates back to the organization of the association in 1916. From that time he has been an officer of the dealer group continuously and while offered the presidency before, did not finally accept until last election.

The other officers elected at the same time were H. C. Berg, vice-president, and the following directors: Ray Albee, L. E. Therkelsen, C. L. Boss, C. E. Francis, Chase Garfield, H. W. Roberts and Arnold Cohen. Ralph J. Staehli is secreary-treasurer.

Revenue Collections Show Gain Again in September

Total Received From Industry Is $4,220,828 More Than Same Period Last Year

WASHINGTON, Oct. 31.—Internal revenue collections from the automotive industry during September, 1925, were $4,220,828.32 greater than those for the period from July 1, 1925, to September 30, 1925, were $11,521,126.83 more than for the period from July 1, 1924, to September 30, 1924, the Bureau of Internal Revenue, Treasury Department, announces here.

The total collections from the automotive industry for September 1st is given at $15,932,884.16 as compared with $11,712,055.84 for September, 1924, while the total collection for the period July 1, 1925, to September 30, 1925, is given at $43,983,788.63 as compared with $32,462,-661.80 for the period July 1, 1924, to September 30, 1924.

Itemized, the collections give automobile trucks and automobile wagons $1,463,394.85 for September, 1925, as compared with $545,096.98 for September, 1925, as compared with $545,096.98 for September, 1924; other automobiles and motorcycles, $11,800,416.81 for September, 1925, as compared with $9,278,014.28 for September, 1924; and automobile parts and accessories, $2,669,072.50 for September, 1925, as compared with $1,882,944.62 for September, 1924.

The grand total of collections for September last is given at $448,340,453.84 or $24,890,759.87 greater than for September, 1924, while the grand total for for period from July 1, 1925 to September 30, 1925, is given at $691,701,061.88 or $69,082,237.64 greater than for the period from July 1, 1924, to September 30, 1924.

Los Angeles Dealers Report 10-20 Per Cent Sales Gain

LOS ANGELES, Oct. 31.—Stimulated by a highly successful closed car salon held in Los Angeles during the early part of the month, sales throughout Southern California in October are reported by virtually all dealers as holding up well, with every indication for a good winter business. Increases in sales ranging from 10 to 20 per cent are reported over October of last year, with only isolated instances of decreases.

The farming communities still continues a strong factor in Southern California sales, evidencing the exceptional prosperity of fruit growers and agriculturists.

The two year payment plan is now being featured by nearly all Los Angeles distributors, and the new low down payments and the long terms are causing a slowing up of used car sales. Dealers who feature guaranteed reconditioned used cars, however, declare that they are still having a satisfactory turnover, but the independent used car dealers are finding it increasingly difficult to locate buyers for their "as is" merchandise.

Although the outlook for new car sales is viewed as entirely satisfactory, Los Angeles distributors admit that used cars are likely to present a serious merchandising problem this winter in Southern California.

Coming Motor Events

Automobile Shows

Chicago ..... Nov. 9-14
Seventh annual exhibit of the Automotive Equipment Association at Coliseum, in connection with annual convention.

STUDEBAKER SALES INCREASE

DETROIT, Oct. 31.—Sales of the Studebaker Corp. for the first nine months of this year amounted to 111,525 cars, as compared with 76.508 in the corresponding period in 1924. Sales for the period exceeded the total of any previous year, except 1923. Sales in 1924 were 110,240 cars and 145,167 in 1923. Earnings for the third quarter are estimated at more than double the $2,131,409 reported for the third quarter of 1924. On this basis the company is expected to show earnings for the first nine months of this year approximating $15,000,000, with a balance for the common shares equal to nearly double the $4 annual dividend.

NEW FLINT BRANCH

DENVER, Colo., Oct. 31.—The Flint Motor Company announces the opening of a Denver factory branch at 1248 Broadway, under the name of the Colorado Flint Motor Company. The new concern will be under the management of Joseph C. Hunt, who has been in the automobile business in this city for twelve years. Complete sales and service facilities will be maintained under the direction of factory experts, and a complete line of Flint parts will be on hand at all times.

FORD SETS RECORD

DETROIT, Oct. 31.—The Ford Motor Company's production record moved up to a higher peak than ever during the last week. Figures given out by the company Saturday afternoon showed that for the week of October 17-23 the domestic production totaled 49,004 cars and trucks, a record for any six-day period. The biggest day for the week, which reached a new record, was last Tuesday when 8,466 cars and trucks were produced.

September Sales and Profits Largest in History of G-M

Sloan Announces Earnings For First Nine Months Ahead of Any Other Entire Year

NEW YORK, Oct. 31.—Alfred P. Sloan, Jr., president, announces that General Motors Corp. earnings for the first nine months of 1925 exceeded those of any previous entire year in the corporation's history. Sales and earnings in September were the largest of any month and third quarter earnings were substantially the same as the second quarter this year, which were the largest of any quarter in the corporation's history.

Third quarter net earnings after depreciation and all charges were $28,161,730. After dividends on preferred and debenture stocks this was equivalent to $5.09 per share on the common. These figures include dividends from subsidiaries but not equities earned by subsidiaries in excess of dividends paid. If the corporation's equity in the undivided profits of all its subsidiaries were included the amount earned on each share of common for the quarter would be $5.55.

For the first nine months this year net earnings, after depreciation and all charges, were $74,243,966, or $13.27 per common share excluding and $14.57 including the equity of all subsidiaries.

As of September 30, current assets were $277,136,233 and liabilities were $79,865,530, leaving an excess of assets amounting to $197,270,703. This compares with $161,105,281, as of December 31, 1924, and with $188,614,557 as of June 30 this year. Cash in banks, government securities, temporary loans and marketable securities as of September 30 were $143,308,120, or $3,933,058 in excess of that reported as of June 30, 1925.

Retail deliveries of cars and trucks by dealers to users in the third quarter were $228,029 compared with $164,243 in the third quarter last year; in the first nine months this year they were $624,389 against $544,551 in the same period of 1924. General Motors Corporation's sales to dealers of cars and trucks in the third quarter this year were $222,158, against $141,132 in the same quarter last year; in the first nine months this year they were $611,367 compared with $494,231 in the first nine months of 1924.

Cleveland Co. Adopts Flat Rate System for Servicing

CLEVELAND, Oct. 31.—These days when an automobile owner finds it necessary to stop in a service station to have his car looked over, or some minor adjustment made, he wants to know just what that particular service operation is going to cost, before it is actually started, says J. T. Nicholson, service manager of the Cleveland Automobile Company.

"No longer does the average motorist want to put up with service costs which are excessive. He wants to be assured of a square deal. It must be remembered that without a flat rate system of charges in effect, it is absolutely impossible for all dealers to maintain a similar cost on service. Each has his own particular idea as to labor costs and what maintenance work is worth. This has proved to be so varying that many of the foremost motor car manufacturers have adopted what is known as a flat rate system of charge. The Cleveland Six has just introduced a system of this character to its distributing organization.

The complication of this flat rate system dates back over several years, inasmuch as it was necessary to record the time and cost of thousands of service operations in the shops of Cleveland Six distributors and dealers. This has enabled the factory to work out an equitable charge basis for each operation in connection with the Cleveland Six.

"Each Cleveland Six distributor or dealer adopting this system of service is supplied with a list of maintenance operations, the cost of each being definitely stated, consequently Cleveland Six costs in this respect will be uniform with each distributor and dealer who has adopted the flat rate system in conjunction with his business."

SQUEEKS and RATTLES

UNTIMELY

Truck Driver—Hey! This aint the place to be practicin' hurdlin', Buddy.
—Humorist.

She—What do you think of the new type of car that can be converted for sleeping?

He—It's the bunk.

—A. H. P.

Ability to stop a car is ten times as important as ability to start it.
—B-C-A News.

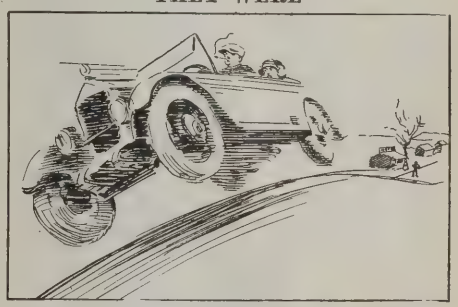
Good Morning, Judge

Comes up honkin'
To race your hack
Speeds past the stop sign
No lights in back
Most crowds you off the bridge
Into the river
Gee—that's an easy one
A police flivver.

—A. H. P.

The Difference

I don't go out with Ruth any more.



Last summer there was hardly a night went by that we weren't together. We showed up regularly at all social functions—and when there wasn't anything else to do we went riding in the moonlight. Sometimes we were denied this privilege and merely went riding. But always together—Ruth and I. Wherever the gang went we would be found. I would be driving, and Ruth would be at my side.

It was early in September that her Dad decided to sell the car,—but that made no difference. Ruth and I were always together. Last week he sold it. . . .

No, I don't go out with Ruth any more.

—Notre Dame Juggler.

THEY WERE

Driver—This is a swell little township.
Passenger—Yes, wasn't it?
—Sydney Bulletin.

NEW CHEVROLET DEALERS

DALLAS, Tex., Oct. 31.—New dealers recently added to the organization of the Chevrolet Motor Co., in this territory, include:

Waco Chevrolet Co., Waco, Tex., William L. Matthews, Greenville, Tex., Farrier & Parham, Omaha, Tex., Gregg Chevrolet Co., Longview, Tex., Winnsboro Chevrolet Co., Winnsboro, Tex., Webb Motor Co., Fabens, Tex., East Texas Motor Co., Atlanta, Tex., and the Moser Motor Co., Menard, Tex.

Two Important Figures in Rubber Industry Are Dead

AKRON, Oct. 31.—Two important figures in the automobile tire industry died recently.

Dr. L. E. Sisler, 65, director of the Firestone Tire & Rubber Co., and one of the founders of the company died suddenly from an attack of heart disease. Dr. Sisler was credited with "discovering" Harvey S. Firestone. The Swinehart in 1900 had a patent on sidewires to hold solid tires to carriages. Firestone became interested in the patent and a company was formed, Sisler, Firestone, the Swineharts and one or two others contributing the capital.

The death of Elmer S. Firestone, 61, brother of Harvey Firestone, occurred in Los Angeles, where he was branch manager for the company. He was buried in Columbiana O., his former home.

TASCO Gauges Sell Fast in Winter

Sell Quick at

$1.25

Retail

Nobody likes to go thru all the trouble of "measuring" the gasoline in their tank when the weather is cold. Ford, Chevrolet and Overland owners can read their gas at a glance with a TASCO gasoline gauge screwed in place of the filler cap.

Counter display rack packed with every dozen enables you to show them. And—that's all that's necessary.

Order Type "H" for the new Ford Roadster, Touring and Tudor. Type "C" for the Fordor.

FORD, CHEVROLET *and* OVERLAND

Replace with FOSTORIA FENDERS

Have you sent for your copy of the FOSTORIA FENDER CHART?

Fostoria Replacement Fenders are made exactly like the original factory fenders which they replace. They can be put on easily and quickly without the aid of special tools.

The Fostoria Wall Chart shows just what fender is needed and the nearest Fostoria distributor will ship it to you without delay.

This wall chart plus your salesmanship will put a new fender on every job that comes into your shop—the low cost of Fostoria Fenders and the beauty of the finished job has made the hammer obsolete on bent, broken or smashed fenders.

Sit down right now and mail that coupon.

A Car Owner With a Smashed Fender Wants Action

—and there is big money in being able to give it to him

Which is exactly why the Fostoria system of fender replacement is making money for dealers everywhere.

The distributor carries the stock — you order from him — he ships at once — the car owner gets action —you make money. That is all there is to it.

Wherever you are there's a Fostoria Distributor near you.

Get in this big money making game without delay.

Mail the coupon below for *quick action* from us.

THE FOSTORIA PRESSED STEEL COMPANY
Department B, Fostoria, Ohio
Also manufacturers of EUREKA Pumps and Jacks

SAVE THEM FROM FREEZING

Here are three evident chances for profit in the replacement of hose, repacking of pump and sale of anti-freeze. Other opportunities for profit are bound to follow a hard drive for anti-freeze business

COMES a time when the strong box that holds the north winds has broken. Across river and plain the breath of winter creeps with crafty subtlety or in violent gusts. Passengers huddle in the waiting room, then scurry to a wind swept platform as the train skids to a shivering stop.

But the streams of gasoline driven vehicles that fill the roads and highways of our broad country and throng the city streets, flow on with scarcely a pause.

Closed cars and adequate heaters defy the north wind's breath. Wise merchants of winter goods have sold supplies that give summer comfort to winter driving and wise automotive merchants will also look well to the winter requirements of the engine, as well as the needs of the driver of the car.

Change of temperature. What wonders by it are wrought. In the firing fuel it produces that expansive force which lifts tons up rugged slopes. Here it is a constructive force, but expansion and contraction are not always so kind.

Cars Must Be Kept Running

To the general rule that heat expands and cold contracts, we find an exception, that water contracts as it cools until within a few degrees of the freezing point. Then, due to some trick of nature, it begins to expand again. Perhaps fortunate for us that it does, or the first layers of ice would form at the bottom of our lakes, and a severe cold spell would freeze them solid.

In the radiators and engines of the millions of cars that constitute our modern system of transportation, the expansion is not so desirable, for with the first cold snap, many car owners are taken unawares. The outward thrust of the expanding ice is met by the contracting force of radiator tubes and cylinder water jackets common to the great majority of motor vehicles. Brass and iron have met a worthy foe and then fall before the onslaught of winter.

And Get a Share of a $50,000,000 Business

Protection of Millions of Motor Vehicles Against Damage From Cold Weather Provides Profitable Merchandising and Service Opportunity for the Dealer

By A. H. PACKER

Cars laid up, out of service with repairs that cost the owner much money, are not cars that bring in the most profits to the automotive dealer or most satisfaction to the owner. Cars that run bring in these profits, for they mean more tires, more supplies, more accessories sold. Much more profit in this than can be wrested from the repair of an occasional wrecked engine for an owner who wonders why someone did not warn him of the danger and sell him the necessary anti-freeze which would have saved all the trouble.

Car owners who are forehanded can find solutions to put in the radiator, but in most cases they must be sought; rarely are they *sold*. And when anti-freeze is sold, it is a product and not a service that is sold. Here, then is an opportunity to not only render a service, but to gain more work for the shop and profits for the business.

Inspection Job First Step

Rotten hose connections and leaking pump packing may not mean so much when the leakage can be replaced at any pump, faucet or filling station, but when dollars are slowly leaking away it means a money loss, in addition to the annoyance of repeatedly filling the cooling system. The first step in adequate anti-freeze service is, then, an inspection job on the cooling system, followed by more or less work in nearly every case.

Hose connections rot away; some sooner than others, but vibration and hot water take their toll of the best. Hose connections, moreover, are inexpensive, and few car operators would hesitate to authorize the replacement of these flexible connections in the cooling system, if it insures against trouble some time later when the mercury is hovering near the zero mark.

Not only do the hose connections usually need attention, and either replacement or tightening of the clamps, but the pump packing should be inspected to insure against leakage at this point. Here is another chance to get profitable business with an adequate anti-freeze campaign. Before starting a drive for this sort of business, however, the merits and qualities of the various anti-freeze materials should be thoroughly considered.

Alcohol in the cooling system of motor cars has been used for many years but its failings have been acknowledged by all. First in importance is its low boiling point and the consequent vaporization which takes place, the result being that a solution which affords protection today may be much too weak for safety a week from today. Hydrometer tests at frequent intervals make it possible to guard against running the car with insuffi-

cient alcohol, but car owners are not usually careful enough. They run the car by guess, hoping there is enough alcohol in the radiator, but the hopes are not always justified.

The use of alcohol, which boils at approximately 173 degrees Fahrenheit, means that the operating temperature of the engine is such that the greatest efficiency is not attained. Running cool, the engine is afflicted by crankcase dilution, which results in poor lubrication and unnecessary wear, while running hot, the alcohol is rapidly driven off.

Recently another charge has been brought against alcohol, that in cases where it boils over on the hood, it may prove detrimental to the finish of the car, particularly where pyroxylin finishes have been used. This opinion, however, does not seem to be unanimous, and makers of the better grades of pyroxylin finishes claim that no harm results unless inferior finishes have been used on a car, in which case there might be some slight action, due to the use of poor solvents in the lacquer:

When alcohol as an anti-freeze agent is sold and used the above factors must be considered carefully in order to get the best service.

When alcohol is sold and recommended, not only should the engine be checked to see that there are no leaks in the cooling system, but water should be poured in until it runs out the overflow pipe, to make sure that the pipe is clear. Then the radiator cap should be checked to see that it fits tightly, and the owner should be cautioned against removing the cap in case the radiator solution boils.

When the water in the radiator boils, the first temptation is to take the cap off. This causes a steam geyser to spout all over the car owner and the car. A little patience would obviate the danger to the individual and to the car. If solution does run out on the car finish, it should be promptly wiped off, to reduce to a minimum the chance of damage to the finish.

For years glycerine has also been known as a good anti-freeze constituent and recent developments have put on the market a glycerine product that is free from the faults of the commercial product. Commercial glycerine has been harmful to hose connections and prone to cause leakage all too easily. Due to its heavy body and slow flowing characteristics it has usually been used in connection with alcohol, its effect being to increase somewhat

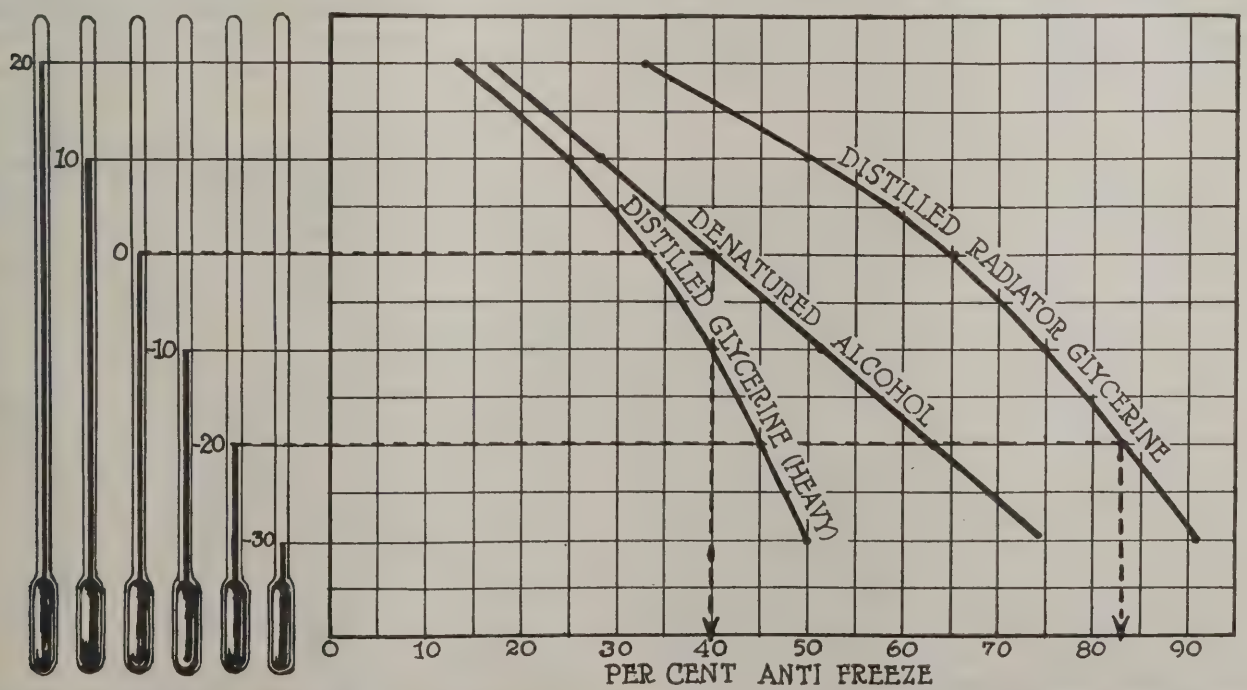

Fig. 1. Curves showing the percentage of alcohol and glycerine to use to provide protection against freezing at various temperatures

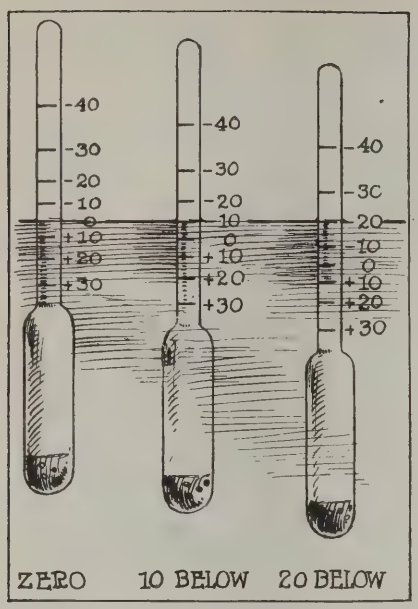

Fig. 2. When alcohol is used a hydrometer test should be frequently made to see that evaporation has not seriously affected the temperature at which the solution will freeze

the boiling point of the mixture and to give a solution not so readily vitiated by evaporation. At low temperatures glycerine, while not freezing solid, becomes thicker and thicker, which in thermo-syphon cooling systems is undesirable as it prevents proper circulation of the liquid through the radiator and cylinder jackets.

The disadvantages of glycerine as an anti-freeze have to a great extent been overcome in a new product known as distilled radiator glycerine put out by a number of the large soap makers. Glycerine is found in vegetable and animal fats, such as cocoanut, olive, palm, cottonseed, corn, sunflower seed and sesame oils, butter, lard and tallow, and is removed by the process of converting the fatty matter into soap, which releases the glycerine as a by-product. There is, however, nothing fatty or greasy about glycerine, it being a sirupy substance, similar in consistency to water, except that it is one and one quarter times heavier than water and mixes readily with water.

The distilled glycerine is claimed to be superior to commercial glycerine obtained in times past, in that it is practically free from harmful impurities. It is also said to have no destructive action on hose connections, one concern even stating that the new type of glycerine has less action on the hose than water at the temperatures normally found in the cooling system.

Superiority Is Claimed

The distilled glycerine, however, is also quite thick like the old commercial glycerine, and if used undiluted or poured directly into the radiator would have a tendency to retard the circulation, especially in thermo-syphon systems. If thinned out first with approximately 40 per cent water, it can be used satisfactorily. It is for this reason that soap concerns producing glycerine for radiator use are making a practice of selling it diluted under various trade names, such as "Low Temp," "Freeze-pruf," "Ivo," "NoVap" and "Zero-foe," about 40 per cent water being used in most cases.

In this form it is know as distilled *radiator* glycerine as distinguished from the heavy form known as distilled glycerine, and in this prepared form it may be used in the cooling system without any additional water. Under these circumstances it provides protection to thirty-five degrees below zero or better. Even if it congeals slightly as it might at extreme temperatures, there would be no bursting tendency, for the ice thus formed is mushy and never becomes hard enough to strain the cylinder jackets or radiator tubes or cells.

Running the engine a few minutes with the radiator covered would also generate enough heat to thin out the solution so that normal operation would be obtained. For less severe weather the distilled radiator glycerine can be used with additional water, the percentages of glycerine to use being shown on one of the curves of Fig. 1. Care should be used to pick out the correct curve. One curve is for distilled glycerine, one is for alcohol and the other for the distilled radiator glycerine, prepared for immediate use.

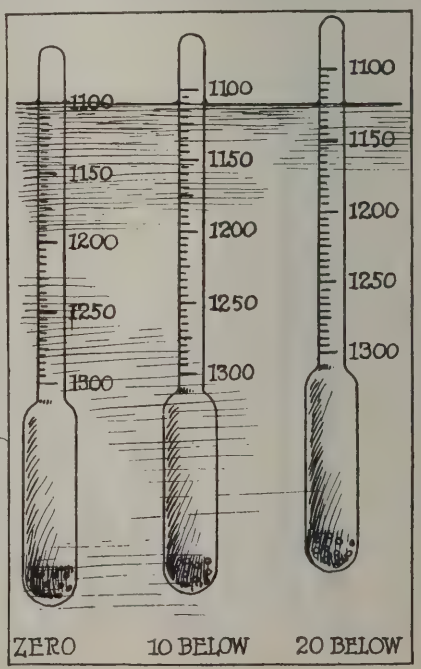
Glycerine has the advantages that it does not evaporate and that it raises, instead of lowering, the boiling point. This means that the first cost is the last cost, and while it may cost the car owner several dollars to properly protect his engine against cold weather, he has the assurance that no futher attention will be needed until spring, unless it is to occasionally add water to make up for what evaporates. The glycerine however will not need to be replaced unless leakage occurs.

Leakage, when glycerine is used, is often found to occur, where the system seemed tight before. This is due to the fact that glycerine has a cleansing action and loosens scale and rust which may have been stopping up places that would otherwise be leaking. It is not harmful, however, to good clean metal. This characteristic of glycerine means that hose connections may work loose due to removal of scale, but tightening again will correct this condition. If new hose connections are applied before anti-freeze solution is poured in, they should be put on with cup grease, not with shellac. Then if for any reason the connections must be taken off, they can be replaced without leaking, whereas shellaced hose connections will in many cases leak if applied the second time.

A 50 per cent solution of glycerine has a boiling point of 225 degrees, the boiling point of water being 212 degrees.

Besides alcohol and glycerine, there are also on the market preparations sold under various trade names. In adopting any of these it would be well to investigate the product and the concern sponsoring it, for at times preparations have been sold which have eaten the solder from the radiator and caused corrosion which has rapidly destroyed the core. Other preparations have been sold, which on evaporating deposited a film of conduct-

(Continued on Page 24)



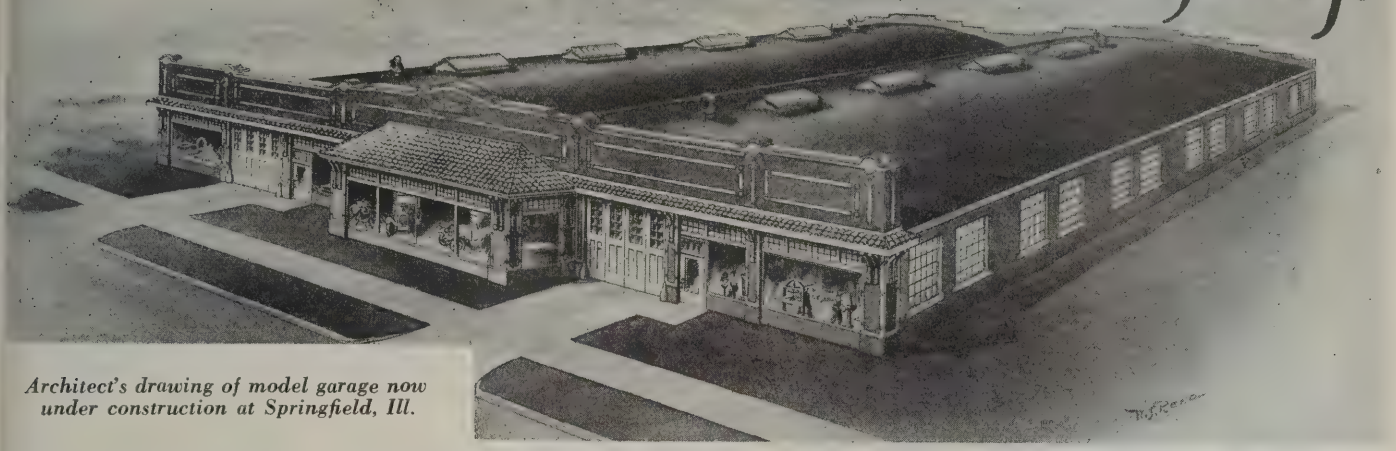


Fig. 3. Although glycerine does not evaporate, a rough check on the solution may be made with a battery hydrometer

SHOW-WINDOW SERVICE in This Model Garage

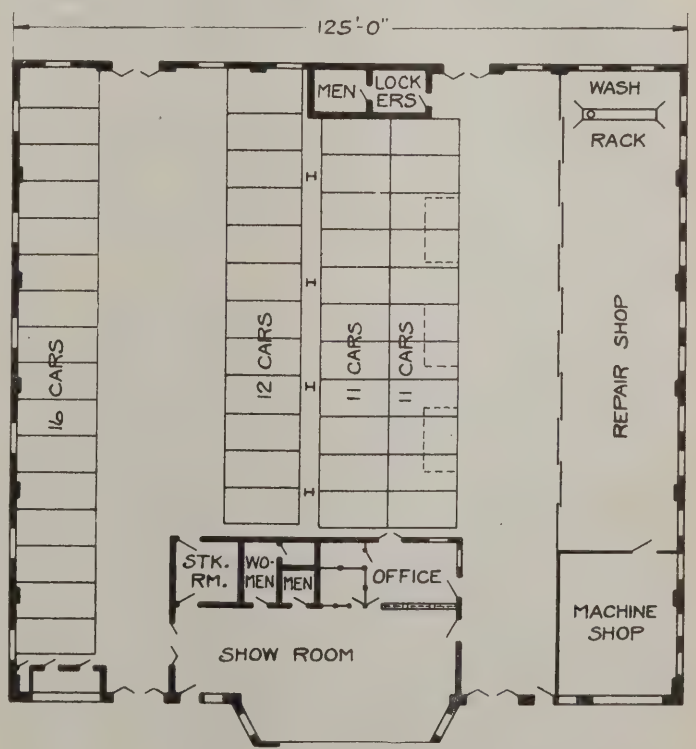
Architect's drawing of model garage now under construction at Springfield, Ill.

New Automotive Equipment Will Be Developed in Laboratory Behind Plate Glass

RECONDITIONING of automobiles with modern machine tools behind plate glass where all who pass may see and understand will be done in the model garage now under construction at Springfield, Ill., by the Weaver Manufacturing Co., makers of shop equipment.

The primary purpose of this model garage which will have a frontage of 125 feet, and an equal depth, across the street from the Weaver factory, is to provide a complete modern laboratory where the Weaver company can develop, under actual service conditions, new equipment in anticipation of future needs of the industry, as well as improve equipment now on the market.

This Weaver garage is to be a real business institution, rendering service of all kinds to the public, with every department expected to pay its own way. It is only in this way that the practical testing of the utility and efficiency of various machines and tools can be carried out.



The building as shown by the architect's drawing is to be of attractive appearance. It will set back from the sidewalk and the intervening space will be filled with neat grass plots. The main show room where reconditioned cars may be displayed will have a large bay window topped with an attractive tile roof. The machine shop will occupy one corner of the building with a large display window at the front, and in the other front corner will be an accessory room, also with a large display window.

The design of the building, its floor arrangement and the complete equipment have been the subject of much study and research by Weaver engineers for years and it is believed that the finished enterprise will present to the automotive industry the best available ideas in the layout and equipment of a service garage or reconditioning shop.

Besides a full line of Weaver garage and shop equipment, every department will have a full assortment of hand tools and the lighter shop equipment, so that 100 per cent automotive service can be rendered throughout the establishment. A number of manufacturers of garage tools and equipment not competing with the Weaver line already have requested the privilege of placing their products in the garage.

Ideal lighting will be provided throughout the building. There will be ample window space on all four sides and numerous skylights. The walls of the one-story building will be of brick and the roof of steel.

It is expected that this model garage will be completed and in operation about Jan. 1 and the Weaver company will be glad to show visiting automotive men through it.

Floor plan of model garage of Weaver Manufacturing Co.

HOW TO ADJUST BRAKES

Fig. 4—How "bleeding" of the line is accomplished on a hydraulically operated brake. This bleeding is done to expel any air that might accumulate in the system

Steps to Follow in the Maintenance of Hydraulically Operated Four-Wheel Brakes. No Need for Equalization in This Type as This Is Automatically Accomplished. Proper Band Clearance Very Important With This Kind

BY B. M. IKERT

(This is the fourth of a series of articles dealing with conventional rear wheel, mechanical four wheel and hydraulic four wheel brakes)

WHEN it comes to adjusting four wheel hydraulically operated brakes it is well for the service man to know something about the basic principles or rather the laws of fluids governing the operation of such brakes.

Briefly hydraulically operated brakes are based on what is known as Pascal's law which is:

Pressure applied to any area of an enclosed fluid is transmitted in all directions and without diminution to every part of the fluid and of the interior of the containing vessel.

To better understand this law refer to Fig. 1. Here is shown a hollow glass sphere provided with several openings distributed over its surface. If the apparatus is filled with water and the piston A forced into the cylinder B the water will escape in a series of jets of apparently equal velocities, though only one of these jets is in direct line with the piston.

Now refer to Fig. 2. Here we have in effect the application of the above principle in a hydraulically operated braking system. Here the cylinder in Fig. 1 together with the piston is replaced by a foot pedal operating a piston in a cylinder which displaces the liquid in the line C into the cylinder D. In the latter cylinder are two pistons operating levers which as the pistons move outward pull the brake band against the drum. When the foot pressure is taken off of the pedal the piston in the cylinder comes back to its original position as do also the pistons in cylinder D by virtue of the spring tension returning the brake band in the off position.

Actually there is no pressure in the line when the brakes are in the release position. In fact the system operates simply by the displacement of the liquid, there being no air in the line whatsoever. From the fact that the pressure on the foot pedal displaces the liquid into the cylinders on the brakes with equal and undiminished force it will become readily apparent that the pressure is exerted on the bands with equal force. A thorough understanding of the diagram in Fig. 1 will make this clear and that is also why hydraulically operated brakes require no adjustment for equalization. Adjustment is necessary only to take care of the wear in the lining on the bands. If the brakes appear to be unequally applied it should not be corrected by adjustment of the bands as the trouble will almost always be found in the lining.

To adjust the bands of the Lockheed hydraulic brakes the procedure is very much the same as in any external contracting band brake, but it is very necessary that the adjustment be carefully made owing to the danger of locking the wheel if too little clearance is used.

We have found cases where some mechanics have trouble after relining the brakes of a hydraulic system with the brakes locking. In checking up such cases it almost invariably turns out that the mechanic did not use a

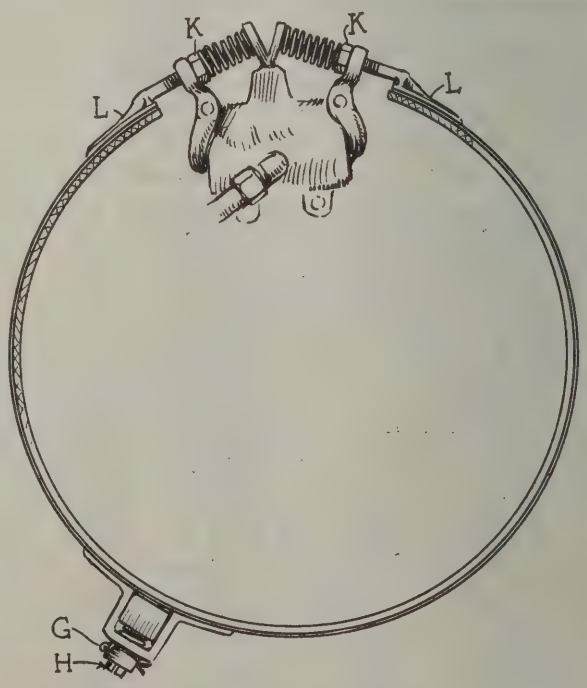


Fig. 3—This shows where the adjustments are made on the bands of a hydraulically operated system using an external contracting band against the drum.

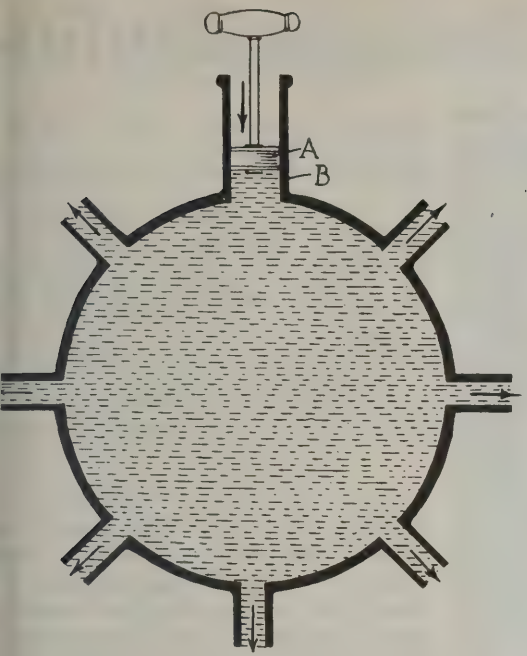

Fig. 1—Diagram to show the basic principle upon which hydraulically operated brakes work. When pressure is applied to the piston in the cylinder the liquid is forced equally and with undimished force from all the openings even though one of these openings is in direct line with the cylinder A

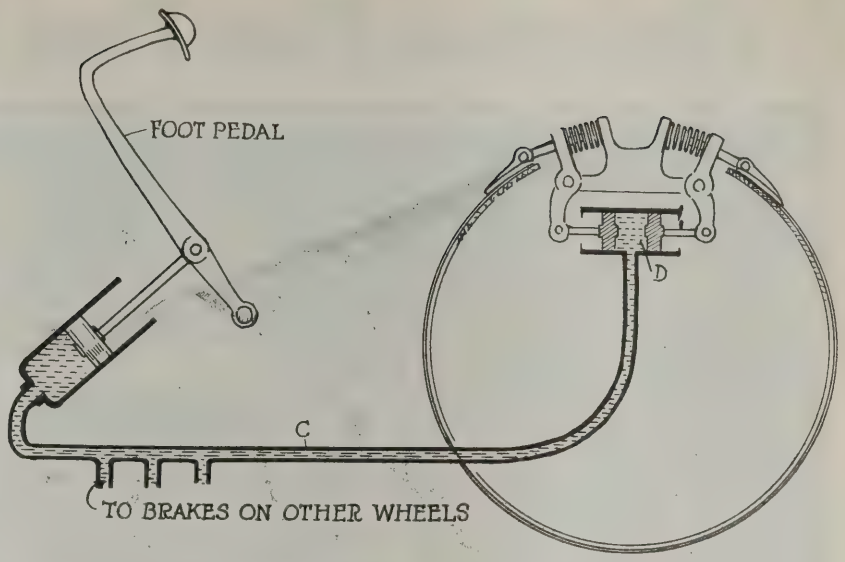

Fig. 2—Schematic diagram to show the operation of a hydraulically operated brake. A clear understanding of what takes place in Fig. 1 will help to grasp this diagram.

feeler gage between the lining and drum with the result that the clearance is too small. Some car manufacturers using the hydraulically operated brakes state that the clearance should be .015 but other authorities claim this should be .025 at all points. One prominent brake lining manufacturer states that if less clearance is used than .025 the expansion of the brake drum at about 500 deg. F. will lock the wheel.

There is also something to be said about the expansion of the fluid on very hot days. When pressure is applied to the fluid its expansion naturally causes the clearance between the lining and drum to decrease slightly and if it is found that the travel of the pedal is noticeably smaller on a hot day pressure on the fluid should be reduced until the pedal travels 2½ in. before the brakes are set.

Anchor Bracket Must Be Free

When inspection of the lining shows that it is extensively worn and adjustment is necessary this can be done as follows: The wheel should be jacked up until it is entirely free after which the cotter pin G, Fig. 3 is removed from the anchor bracket screw H. The latter is then turned until the clearance between the lining and drum will admit the feeler gage showing a clearance of .025. Then replace the cotter pin.

It is very important that the anchor bracket be free to move up and down and if this condition does not exist the band will release slowly causing the brakes to drag and a resultant heating of the drum.

The next step is to take up or back off on the nut K, on the brake band ends L, Fig. 3 until the lining clears the drum to admit the .025 feeler gage. If it is found that this gage does not readily slip between the lining and drum at all points it is an indication that the brake band is not round. To reshape the band put a piece of thin metal between the drum and the band at the point of least clearance and with a ball peen hammer reshape the band to fit the drum, tapping the band at each side of the strip of metal. When the clearance is the same all the way around the drum the adjustment is complete.

In order to remove the backlash in the brake pedal release the bands by snapping the brake band ends L against the levers with a screwdriver and with the pressure released from the pedal loosen the handle of the pump on the supply tank located on the engine side of the dash by turning the handle to the left until it is free to move up and down. A few strokes of the handle will then force more liquid into the system, after which the handle should be pushed all the way down and turned to the right until it is firmly locked. This is important because there must be assurance that no liquid will return to the tank under the pedal pressure.

When to Bleed the Lines

Should it be found that this does not take up the backlash in the pedal it is a pretty safe indication that there is air somewhere in the line and it becomes necessary to "bleed" the lines of the system to remove the air.

To do this unscrew the handle of the supply pump on the dash and remove it entirely by taking off the cap of the tank. The latter is then filled with liquid which should be allowed to stand for several minutes in order to give the air a chance to rise to the surface. Then remove the dust screw from the end of the bleeder connection S, Fig 4 and screw the bleeder tube in place and slip the wrench over it until the screw is engaged. The end of the hose which is slipped over the end of the bleeder connection should be allowed to hang in a clean container and with the wrench the connection S should be given about a 3/4 in. turn.

Let the liquid drain out until all bubbles cease to appear or when the stream is a solid fluid mass. Then close the bleeder connection S, open it slightly again for a moment to allow a very small amount of the fluid to drain after which it can be locked. The drained liquid should then be poured back into the tank allowing several minutes for it to stand after which the bleeding operation is repeated for each wheel. Normally about half a pint will expel most of the air.

After all of the wheels have been taken care of force the foot pedal to the floor board slowly with the hand. This allows all of the liquid from the master cylinder to travel into the supply tank carrying with it any air that might have lodged in the master cylinder operated by the brake pedal. After filling the supply tank re-

(Continued on page 34)

A Christmas Plan That Brought Profits

Mr. Howard's Christmas window last year. With this invitation he found it easy to bring men, women and children into his store to select Christmas gifts

Maine Dealer Tells How He Cashed in on Holiday Trade by Following Suggestions He Got From the A. E. A. and Trade Papers

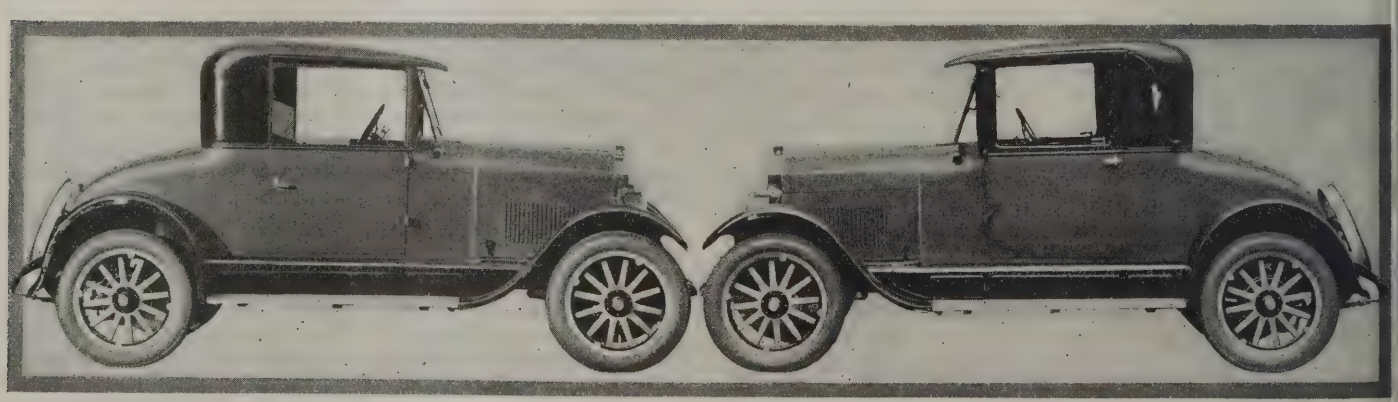
By NORMAN W. HOWARD
Proprietor Acme Service & Supply Shop
Bath, Maine

CHRISTMAS at our store three years ago meant nothing more than a holiday that broke up the regular routine until the trade papers suggested selling automobiles and supplies as ideal Christmas gifts.

At this time of the year, the automotive supply business is quite slack, giving plenty of time to clean up, decorate the store, dress windows and showcases, think up ads and talk "Buying Something for the Car for Christmas."

As we are located in Maine, it did not take long to find a Christmas tree suitable for the show window and plenty of bright trimmings at Woolworth's. Next an imitation chimney was built from rough boards and covered with red brick tissue furnished by our kind jobber. When completed and dressed, it was the most attractive window display in town. Besides creating public interest in the store and bringing in many Christmas buyers, the local paper gave a good write up. For an automotive supply store to be advertising Christmas presents seemed out of the ordinary.

Inside the store we moved the spring rack, tin rack, etc., to make room for a long L-shaped table, which was decorated and sectioned into price departments starting with 5 cents, 10 cents, 25 cents, 50 cents, etc., and everything that was not where the Christmas eye could readily see, was brought out and placed in its proper price section. We found hundreds of articles throughout the shelves, drawers and cabinets that filled to capacity the table, with a dandy variety for shoppers to pick from. They could see the different things we offered for $1, $2, etc., for a supply store's prices seem high sometimes. Here, for instance, the customer buying a mirror was allowed a chance to compare it in the different sections 75 cents, $1, $1.25, $2, $3.50, etc.



We placed slow-moving stock in a price section below its ordinary selling price. This actually sold a large percentage of our order stock.

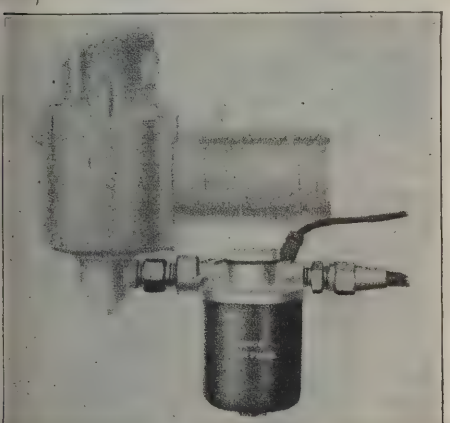
We started advertising just before the other stores about Christmas presents, stating that all packages would be wrapped in holly paper ready for the tree, also that we were to give away paper airplanes, telephone directories, blotters, road maps and gasoline sticks, being open every evening the week before Christmas to accommodate shoppers to a "House of a Thousand Gifts that fit your car and pocket book."

School boys and girls had no trouble finding something for their Dad's car. Wives and sweethearts had no difficulty, while the men found variety with extra value, good service and an unhurried courteous treatment that is sometimes lacking during the busy season.

We were very gratified with the results of our efforts and were obliged to re-order many times on items that ordinarily move slowly. Besides the profit and turnover which were extra, we are now permanently on the Christmas buyer's list every year.

(The foregoing article was submitted in this year's Automotive Equipment Association contest for the best letters telling how dealers profited from the Christmas merchandising campaign. It is published here through the courtesy of the A. E. A.)

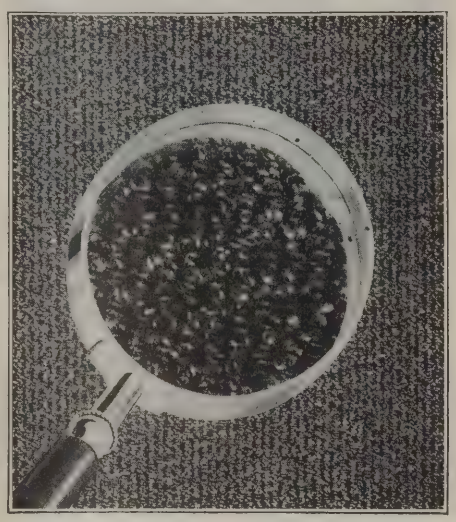
Two of the body models included in the Star Six line. At the left is the coupster and the other is the coupe. The former is lacquered in Oasis green with a gold band around the body The other car is finished in the same manner its prinicpal difference is the addition of Landau irons. The price of the coupster is $745 F.O.B. Lansing and the coupe $820.



Some New Products at A. E. A. Show

On this and the following pages MOTOR AGE presents more descriptions and illustrations of new products displayed at the Automotive Equipment Association's seventh annual show. The show, held concurrently with the association's annual convention, opened Monday, Nov. 9th, to hold forth through the week. Descriptions and illustrations of many new products displayed at the show were presented in last week's edition of this publication. Still other descriptons and illustrations will be printed in the issue of Nov. 19th.

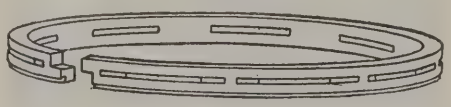
IMCO AUTOPULSE



Cut Shown Below

IMCO Autopulse, described as "the safe automatic fuel feed system." Made by Freland & Matthews Mfg. Co., 1500 Beard Avenue, Detroit, Mich. This is a device designed both for automobile and marine motors. Its chief advantages as pointed out by the manufacturers are as follows: Maintains even pressure of gasoline at carbureter under all conditions, assuring maximum motor efficiency. Attains full gasoline pressure at carbureter before engine is cranked. Self-priming. No storage of gasoline close to motor, thereby eliminating fire hazard. Flow of gasoline controlled by ignition switch, enabling operator to cut off immediately in emergency. Installation does not require any change in design of engine. Can be installed on any job with carbureter which has a float and which has battery current or its equivalent.

VENTILATED SUPEROYL RING

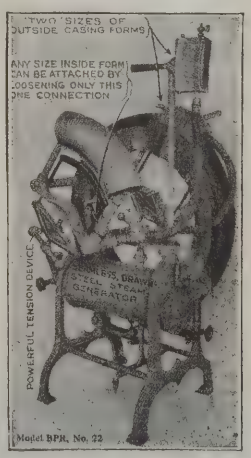


McQUAY-NORRIS ventilated Superoyl ring. McQuay-Norris Mfg. Co., St. Louis, Missouri. Combines the oil scraping principle of the Superoyl ring in addition to ventilating slots through the face of the ring to further reduce oil pumping. The rings are made of electric iron to close limits. Each ring is sealed in a parchment container and the rings are packed 12 in a box with a distinctive label. As heretofore the new ring is made with a step joint. Price 50 cents each in all sizes from 2 3/8 in. to 4 15/16 in. diameter.

TACONY PILE FABRIC

Cut Shown Above

TACONY Pile Fabric. A new upholstery material for automobiles put on the market by the L. H. Gilmer Co., Tacony, Philadelphia, Pa. Based upon a new kind of pile yarn made from fiber-dyed cotton this fabric's surface is covered with nibs of yarn that project and take the wear and at the same time give depth and beauty to the texture of the material. The nibs are too small to be readily discerned with the eye but show clearly under a magnifying glass. Among advantages claimed for this material is that it is extremely durable and when partly worn does not become threadbare. It is said that its construction is of such a kind that it makes a comfortable upholstering in all seasons. Easily cleaned; does not hold dirt; colors are fast.



Ventilated Superoyl Ring

SHALER BALLOON VULCANIZER

Cut Shown Below

SHALER Balloon Tire Vulcanizer. C. A. Shaler Company, Waupun, Wis. The Wrapped Tread Method of repairing casings by heating from the inside and outside at the same time which has long been a feature of Shaler vulcanizers is used also in the Shaler Balloon Tire Vulcanizer. Shaler vulcanizers for balloons are only slightly different from the company's earlier models. Change in the shape of the mandrels was necessary because the cross-section of the balloon tire is circular instead of pear shaped. This new shape and the large sizes that are required brought on the problem of designing a tape tension device with great power and capable of exerting heavy pressure on the side walls. In the new design the tape, where it crosses the tension bar, can be placed practically horizontal so the pull of the tension bar applies pressure on the side walls as well as on other parts of the tire. No part of the tire escapes full pressure. Model BPR No. 22 including

boiler with city gas burner, two outside heaters, two inside mandrels and other items lists at $135. Model PR No. 22, same as above with boiler omitted, lists at $100.

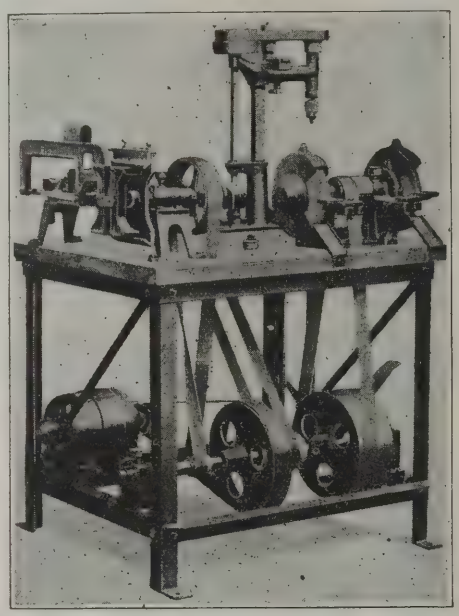
PORTABLE ACETYLENE GENERATOR

Cut Shown Below

REGO portable acetylene generator. Bastian Blessing Company, Chicago, Ill. These are made in 30 lb. and 60 lb. carbide capacity, delivering approximately 140 and 280 cu. ft. of acetylene per charge, at the normal rate of 30 and 60 cu. ft. per hour. The carbide hopper is a single casting on which is mounted the entire feed and feed locking mechanism. The water and gas generating chamber is of welded steel, galvanized. Each generator is equipped with two blow off valves having a capacity of 1200 cu. ft. per hour at 15 lb. pressure. The trucks are of all welded steel construction with very large rear wheels. Prices on the 30 lb. carbide capacity without interlocking levers and truck are $210. With interlocking levers and without truck $250. The 60 lb. capacity without interlocking levers and truck is $255 and with interlocking levers and without truck $275. The price of the trucks is $60 for the smaller size and $6 for the larger.



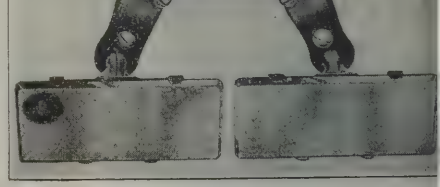
IMCO ALL-STEEL TRUNKS

IMCO All-Steel Automobile Trunks. Made by Ireland & Matthews Mfg. Co., 1500 Beard Ave., Detroit, Mich. Strongly made trunk designed for durability and attractiveness. Oval top contributes to appearance and ruggedness. Piano hinges securely riveted, easily operated. Has rubber strip across ends and along front to make trunk dust and waterproof. Two nickel finished toggle locks. Enamel finished body. Rumble eliminated by rear end construction. List from $25 to $60.

Imco All-Steel Trunk

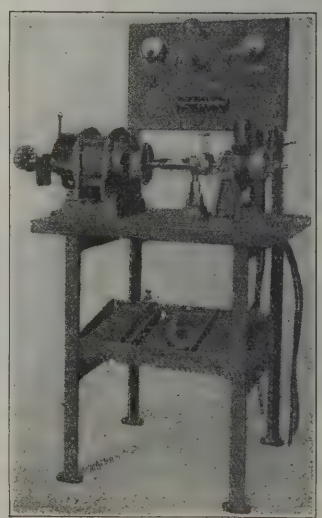
Manley Machine Shop Unit

DOUBLE HINDVIEW MIRROR



KALES Double Hindview Mirror. Kales Stamping Co., Detroit, Mich. May be installed on either open or closed cars. One of the two mirrors is for driver. The other is for the front seat passenger. Adjustability makes it possible for driver to utilize both glasses if he wants special check on situation behind him. There also is an adjustment feature permitting 4-inch raising or lowering of glass after installation. Price $3.

SUPER-SERVICE TEST BENCH



WEIDENHOFF Super-Service test bench. Joseph Weidenhoff, 4352, W. Roosevelt Road, Chicago. Made with a self aligning flexible drive, in which the chuck remains square with the driving motor shaft in all positions. This eliminates all torsional strains on bearings of the driving motor as well as the unit being tested. There is no noise or vibration at 3600 R.P.M. when the chuck is clamped on the bent shaft or when the unit is 1¼ in. off center. All generators are held without removing the coil, cutout or distributer. Starting motors with projecting shafts of any length or diameter can be tested. An adjustable V bracket supports magnetos and square type generators. Complete distributer assemblies are held in a vise with a special fixture and are driven with standard socket wrenches which fit the nut on the end of the shaft. An extra torque arm is furnished for testing starting motors through Bendix enclosed and open types.

MANLEY MACHINE SHOP UNIT

THE Manley Machine Shop Unit. Made by the Manley Mfg. Co., York, Pa. This unit is a combination of three highly essential garage tools, hack saw, grinder and drill press. The three tools are mounted on a wood table, having thoroughly braced steel legs. The motor is mounted on the lower tie members of the bench. The shafting is supported by two self-centering bearings on the angle cross members. The pulleys are pinned to this shaft. Driving belts pass through slots in the table. Each machine is individually controlled. Motor is controlled by snap switch on top of table. The advantages pointed out for the combination unit are that it eliminates necessity for installation of line shafting, counter shafting, motor brackets, etc., which would be required by the installation of individual machines, as the unit comes completely assembled. No. 43 with 110V AC motor ¾ h.p. lists at $28 and weighs 550 lbs. No. 436 with 11 DC motor, ¾ h.p. lists at $295. Same weight.

Kales Double Hindview Mirror

Super Service Test Bench

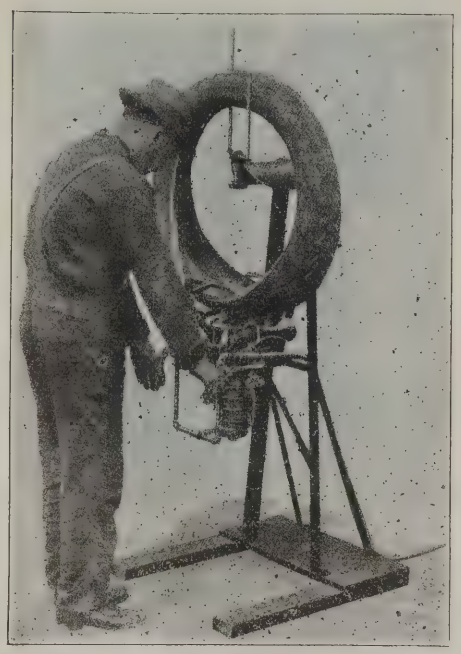
MANLEY TIRE INSPECTOR

MANLEY Pneumatic Tire Inspector. Manley Mfg. Co., York, Pa. Operated by air and works automatically. By opening the right hand valve the plunger rises, forcing the inside tire upward. At the same time the arms pull the side walls outward and downward so the inside of the tire is completely exposed. Handles large tire with same ease as small tire. Special rollers make it easy to revolve tire. Designed to save time in locating trouble. Price $44.

FORD TRUCK OVERSIZE WHEELS

OVERSIZE Pneumatic Wheels for Ford Trucks. Mutual Wheel Company, Moline, Ill. For 30 by 5 DT rims, for 30 by 5 B. rims and for 32 by 6 B rims. Also offer wheels for Dodge Brothers, Reo and all light trucks—for 30 by 5 B rims and for 32 by 6 B rims.

Ford Truck Oversize Wheels

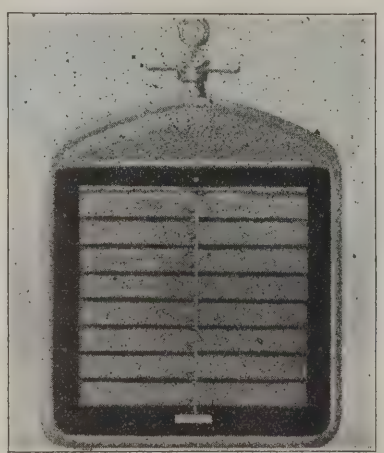


BALLOON REPLACEMENT WHEELS

STANDARD Type Balloon Replacement Wheels for Ford Cars. Mutual Wheel Co., Moline, Ill. These are 28 by 3½ single balloon wheels in three types, viz.: Firestone "A" Type with detachable clamps; Jaxon Type with detachable clamps; Lug Attached Rim Wheel, same as Hayes. Black or natural wood finish. Eight wheels packed to crate. This company now also offers Balloon Wheel Sets for Ford, Chevrolet, Star and all light cars. A 21 in. wheel with 28 by 3½ rim, taking 29 by 4.40 tire. Set consists of 4 wheels less hubs, 5 straight side demountable rims, with necessary rim bolts, nuts, wedges and wrench.

KALES TIE ROD FOR NEW FORD

KALES Tie Rod for Late Model Fords. Made by Kales Stamping Company, Detroit. This tie rod is easily and quickly installed by removing and replacing one bolt of headlamp bracket on each side. Made of enameled pressed steel. Has bracket for license plate. List $1.

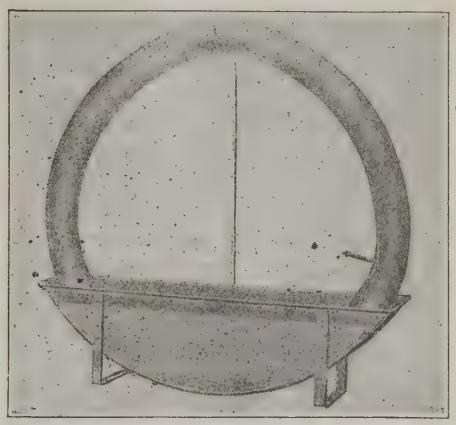


Manley Tire Inspector

U-AUTO-SHUTTER

Cut Shown Below

U-AUTO-SHUTTER. Made by Haines Mfg. Corp., Rochester, N. Y. This shutter is for Fords. Makers say it cannot rattle and will outlast the car. It is hand-controlled. Can be opened from the seat. Action is said to be smooth and positive while installation can be quickly made without alterations. List $5.



Kales Tie Rod

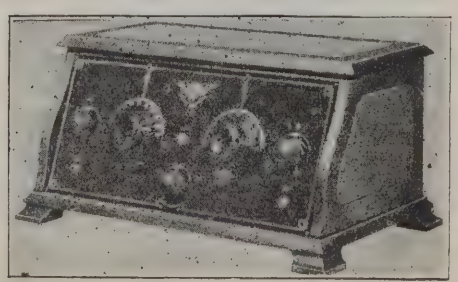
BALLOON TIRE TEST TANK

Cut Shown Below

BALLOON Tire Tester Tank. Dover Stamping and Mfg. Co., Cambridge, Mass. A tank for use in the shop in testing balloon tires. Adjustable rod is used to support tube in upright position while it is being examined. Tank made of sheet steel and galvanized after formation. List price $5.

NEW FORD FENDER GUARDS

FENDER Guards for 1926 Ford Rear. Made by New Era Spring & Specialty Co., Grand Rapids, Mich. Said to be designed for long service and to add to appearance of car. Quick installation. List $15 per pair.



New Era Fender Guard for Fords Rear

SENSIBLE E RADIO SET

Cut Shown Below

STILES Sensible E Radio Set. Made by Stiles Manufacturing Co., 125 East Quincy St., St. Louis Mo. This is a five tube set. Two dial control. Straight line frequency condensers. Gets stations 200 to 600 meters. Said to permit absolute logging of stations and give volume without distortion. Simple on-and-off lock switch controls battery current and can be used as key to lock set. Price $97.50 without accessories. Pacific coast prices slightly higher. Canadian prices 40 per cent higher.

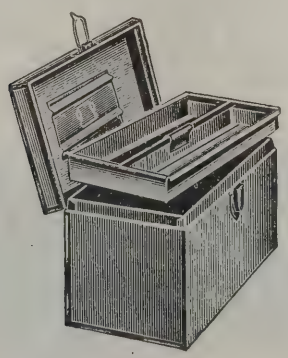
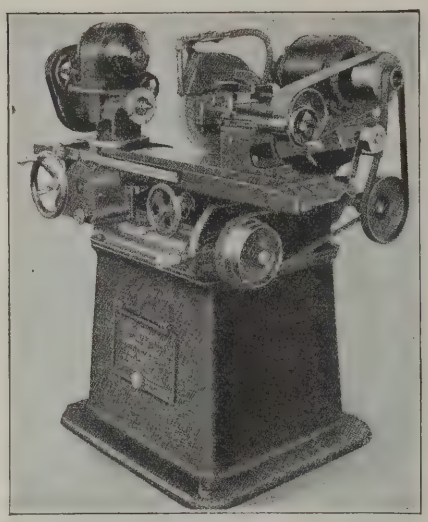
TURNING AND GRINDING MACHINE



VAN NORMAN No. 96 turning and grinding machine. Van Norman Machine Tool Co., Springfield, Mass. Although designed primarily to meet the demands of the piston distributer and service station for a production machine with automatic feeds to be used in turning and grinding semi-finished pistons, it will readily handle other kinds of work. The No. 96 is a wet grinder equipped with water pump, tank and piping. Worn armatures may be made like new by either grinding or turning them on this machine. In addition straight and spiral reamers can be ground and many types of shafts, etc., can be handled between the head and tail stock centers. It occupies 64 in. by 40 in. floor space. A special auto-feed throwout is attached to the cable and both turning and grinding depths can be located definitely by this stop. The company is also bringing out an auto service machine, model B universal valve grinder and super-valve grinder.



REES BUS JACK

Cut Shown Above

REES Bus Jack. Made by Rees Mfg. Co., Pittsburgh, Pa. A special purpose jack, designed to carry on motor bus for emergency use. Compact, strong, easily operated. Begins at 5 in. and raises to 10½ in. Operates with long, folding handle. Weight 25 lbs.

"K" Line Tool Kit

Turning and Grinding Machine

TAXITRUX BRAKE LINING

MULTIBESTOS Taxitrux Brake Lining. Multibestos Company, Walpole, Mass. This is a brake lining that the makers recommend for heavy duty service such as in operation of commercial vehicles, taxicabs and buses. The material is constructed from high content long fibre asbestos yarn and high annealed brass wire twisted together and interwoven in a compact fabric. A special treatment renders the lining oil, heat and water resisting. The lining's response in duty is said to be instantaneous regardless of load.

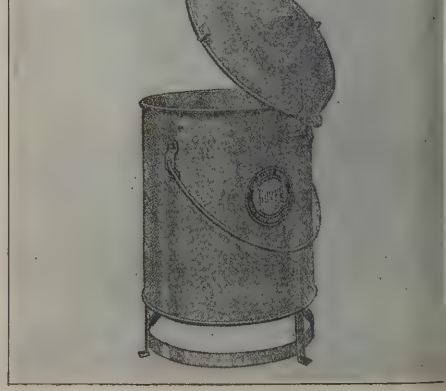
Taxitrux Brake Lining

"K" LINE TOOL KITS

THE "K" Line of Tool Kits. Made by Kennedy Manufacturing Co., Van Wert, O. All steel tool containers for mechanics and repairmen. Snug fitting trays divided into compartments for small tools and parts. Kits are finished in brown enamel, have good locks and leather handles. Prices, according to size, from $3.60 to $3.90.

CHAIN HOIST TRESTLE

Cut Shown Below



MANLEY Chain Hoist Trestle. Manley Mfg. Co., York, Pa. Another piece of equipment for service work. Move it from place to place in garage and fasten chain hoist to it. Can reach spots in shop with trestle that could not be reached with overhead trolley. Swiveling wheels on legs. Easily moved with or without load. Price for No. 85 trestle without chain hoist, cap. 4,000 lbs., height 8 ft., $53. No. 86 without chain hoist, 4,000 lbs. capacity, height 9 ft., wgt. 313 lbs. Price $55.

SAFETY OILY WASTE CANS

Cut Shown Below

NEW Dover Safety Oily Waste Cans Dover Stamping & Mfg. Co., Cambridge, Mass. Name of item tells its purpose. Made of heavy black steel sheets and galvanized after formation. Oil tight. All parts strongly riveted, no solder used in construction. Made to stand fire. Capacity ranges from 8 to 19 gals

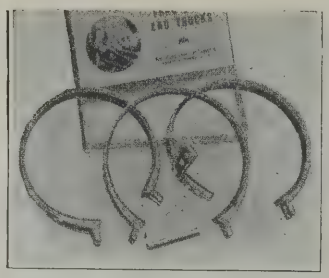
QUICK CHANGE BANDS

MULTIBESTOS Quick Change Transmission Bands for Ford cars and ·ucks. Multibestos Company, Walpole, lass. These bands are for "while you ·ait" installation. Once installed they an be changed in 15 minutes. Not necssary to dismantle transmission and tarter when first putting them on, only ıspection plate on top of transmission ase being removed. A slight opening f the band and removal of detachable ar is sufficient to permit band to be inerted into the transmission and slip round the speed drum into position. Three bands to the set. List price, not ıstalled, $6 per set. List price, installd, $8.50 per set.

IMPROVED "V" TOW BARS

Cut Shown Above

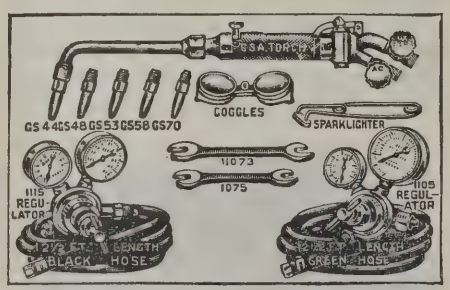


HOLMES Improved "V" Tow bars. Ernest Holmes Company, Chattanooga, Tenn. These bars are designed to give a wider range of adjustment, more flexibility and increased strength. The telescoping members have been reversed, the small inside tube being replaced with a larger tube and becoming the outside member. The standard bar has a range from 3 to 4 ft., and the extra long 4 to 5 ft., prices respectively being $20 and $22.

NEW FORD FRONT BUMPERS

Cut Shown Below

CHALLENGE Bumpers for 1926 Ford Front. Made by New Era Spring & Specialty Company, Grand Rapids, Mich. Offered as serviceable, durable and attractive equipment for the new Fords. List $12.50 each.



Quick Change Transmission Bands

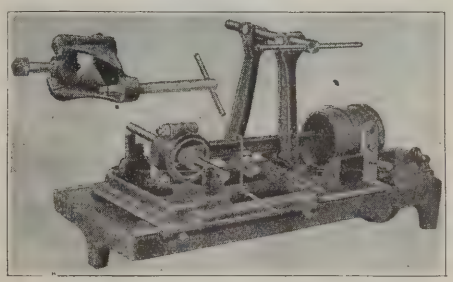
AUTOMATIC SHUT-OFF TORCHES

REGO automatic shut-off torches. Bastian Blessing Company, Chicago, Ill. This torch has a pure copper tip and is made so the gases do not mix in the handle. When ready to weld it is only necessary for the operator to press a button, snap a lighter and the torch is lit. One adjustment only is necessary in the morning and the flame is said to be good for all day. Prices range from $35 to $45.

Rego Automatic Shut-Off Torch

STANDARD LO-LIFT JACK

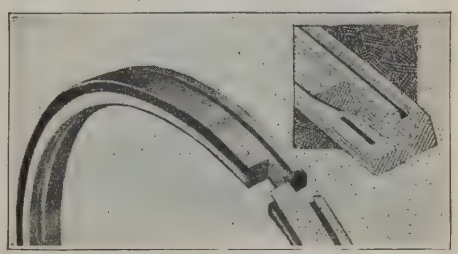
Cut Shown Above



STANDARD Lo-Lift Dolly Jack No. 67 for balloon tires. National Standard Co., Niles, Mich. Has unusual range of lift, from 5 in. to 16 in. from ground, making it desirable for use with large balloon tires and low-hung axles. There are no springs or chains in carrying the load, eliminating a frequent cause of breakage. Hardened roller bearings in front and rear wheels.

Additional descriptions of products will appear in next week's issue.

STORM ALIGNERS



Cut Shown Below

STORM Riteway connecting rod and piston aligner. Storm Mfg. Co., Inc., Minneapolis, Minn. This tool performs all the operations necessary to correct errors in connecting rod alignment without removing the piston from the rod. It shows all of the inaccuracies of the connecting rod and the gage attached to the aligning part of the fixture shows where the corrections are to be made. Special tools are provided more quickly and more easily to bend or twist the rod into alignment while the assembly is attached to the jig. The strain of straightening a rod is not applied to the jig itself, but instead is applied to these special tools, thus eliminating chances of springing the fixture. Price $39.

ECONOMY OIL RING

ECONOMY oil ring. Gill Mfg. Co., 8300 South Chicago Avenue, Chicago. Made of special grey iron castings individually cast out of round, lathe turned and machined. This ring on the down stroke of the piston gathers the excess oil from the cylinder wall into the collector groove, cut in the bottom of the ring. The force of the stroke drives it through the "gates" and in back of the ring. The vacuum on the up stroke of the piston draws this excess oil from the ring and groove through bleeder holes in the piston. The oil then returns to the crankcase.

Gill Economy Oil Ring

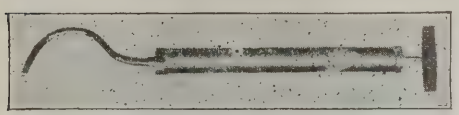
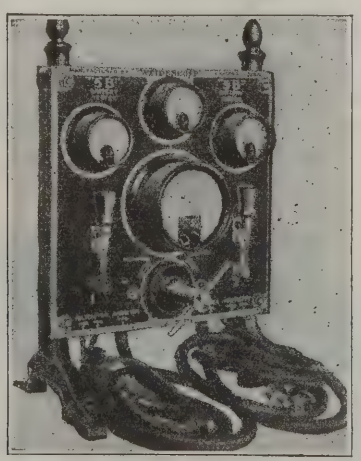
ALLEN MAGNETO CHARGER



ALLEN Ford Magneto charger A-90. Allen Electric Mfg. Co., Detroit, Mich. Operates on either 110 or 220 volt AC or DC. A large meter with zero adjustment registers the amount of current used in charging a magneto and shows whether or not all connections are right. It is also used for testing the output of the magneto before and after charging. 25 foot cables are provided and all switches and contacts are protected by the metal panel board. The outer case is of heavy metal with a large compartment to hold the extension leads. Price complete $45.

Allen Magneto Charger

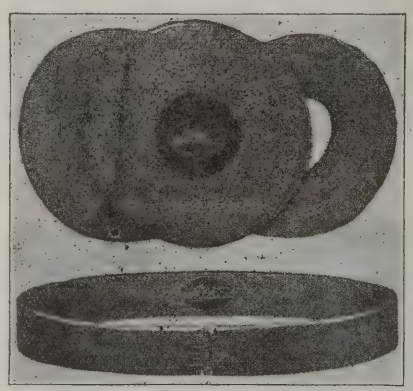
DIFFERENTIAL OIL PUMP



DIFFERENTIAL oil pump. Judd & Leland Mfg. Co., Clifton Springs, New York. Designed especially to remove the old oil and sediment from the differential housing and to replenish with

fresh lubricant. The cylinder is 1½ by 15 in. made of steel and enameled red. It is made with a goose neck terminal to fit the small opening in the rear axle housing. The price is $2.50.

SPARTAN FAN BELTS



EXTRA Heavy Spartan Fan Belts. Graton and Knight Mfg. Co., Worcester, Mass. Makers claim this belting will not crack or rot under oil or steam conditions. Furnish it in rolls or endless flat fan belts 5/32 in. to 3/16 in. thick. In measuring from roll garageman duplicates measurement of old belt or finds size in booklet furnished by company.

5B Battery Tester

STANDARD SPEED-LIFT JACK

STANDARD Speed-Lift Service Jack No. 61. National Standard Co., Niles, Mich. Has wide range of lift making it adaptable for balloon tires. Can be used under rear differential of car, lifting the entire axle. Efficient low foot lift permits front or rear of car to be lifted without danger of tipping jack forward. Operated with short stroke of the handle under the lowest hung car with overhanging tank tire carrier and bumper.

Spartan Fan Belts

5B BATTERY TESTER

WEIDENHOFF 5B battery tester, Joseph Weidenhoff, 4352 W. Roosevelt Road, Chicago. For testing 60 volt radio B batteries, checking starting motor in car, generator and battery. It will also check the complete ignition system together with the lighting system. Voltmeters read neg. 2-0-2½ for cadmium and open voltage cell tests; 0-60 for testing automobile and radio B batteries and ignition and lighting systems. Ammeter reads 30-0-30 for testing generator charging rate and 600-0-600 for starter and battery tests. Panel of Ebonite asbestos material. Carrying handle is mounted on the back of the panel. Price $69.50.

BENDIX DRIVE SCREW TOOL

KWICKWAY Bendix Drive Screw Tool. Made by Haines Mfg. Corp., Rochester, N. Y. A tool for mechanic replacing Bendix Drive cover which

facilitates starting and turning in screws that are very difficult to manage with ordinary screw driver. This device holds the screw securely so it can be started instantly. List $1 each.

Standard Speed-Lift Jack

TYPHOON KAR KLEENER

GLOBE Typhoon Kar Kleener. Globe Mfg. Company, Battle Creek, Michigan. This combines air and water under pressure in such a manner that dried, caked and even frozen mud is removed from any car in four to ten minutes without marring the finish, it is stated. It is said to be extremely rapid and is efficiently operated with any water pressure above 20 pounds. A 1/2 horse power compressor operates the cleaner. It requires no water tank since connection can be made directly to the pipe line.

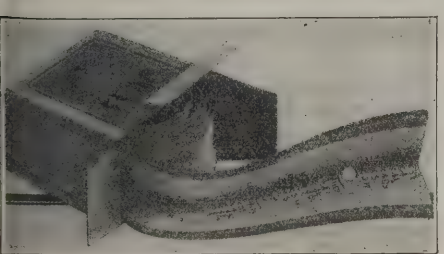
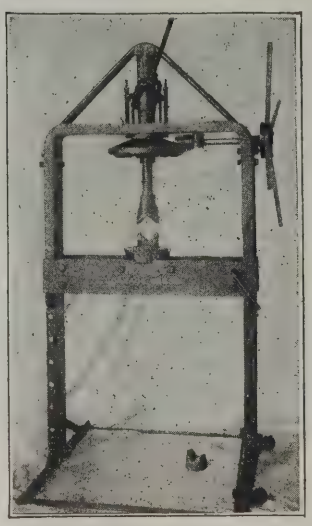
HOLMES GARAGE PRESS



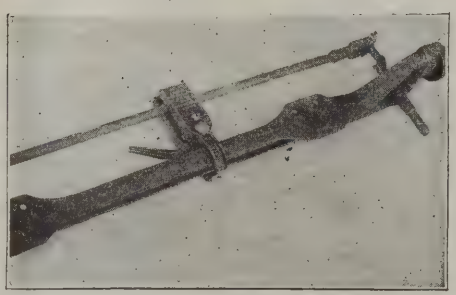
HOLMES Garage press. Ernest Holmes Company, Chattanooga, Tenn. A niversal two speed 4 to 30 ton press. he main feature is a one-piece frame : channel construction reinforced at the op with two large steel tension rods. he high speed consists of a 30 to 1 ver delivering pressure through two eel rods to the top of the thrust bear- ig, and on opposite sides of the screw. his gives 1¼ in. movement to each roke of the lever. The maximum lever- ge, 30 tons, is obtained by bevelled ears and a four spoke wheel. The table adjusted by a double cable, drum and rank arrangement. The press is readily ortable.



NEW MANLEY WRECKING CRANE

Cut Shown Above

NEW Manley Wrecking Crane, Manley Mfg. Co., York, Pa. Features of this rane are said to give device highly fficient operation, speed, great pulling apacity on especially heavy work. Tilt- ng beam is adjustable. Triple chain lift o swiveling nose. Special saddle absorbs train and prevents crane from buckling ervice car chassis. Long beam gives leep overhang and allows crippled car o be swung under the beam. Hoisting drum may be disengaged and may be used as a winch. Crane can be operated rom ground from either side; also from ervice car platform from either side. Capacity 3½ tons. Catalog No. 107. Price, $135.

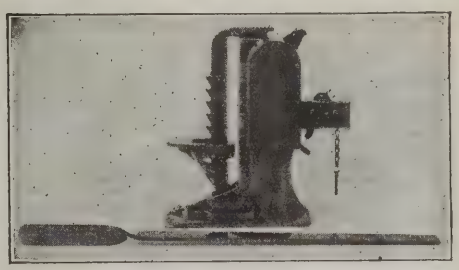


Gates Fitsall Tire Flap

Holmes Garage Press

STEERING GEAR CLAMP

HOLMES Steering Gear Clamp. Ernest Holmes Company, Chattanooga, Tenn. A simple universal device for clamping the tie rod rigidly to the front axle, locking the front wheels in a straight ahead position. The purpose of the clamp is for holding the front wheels of a disabled car while the latter is being towed, with the rear of the car suspended from the service car.



Holmes Steering Gear Clamp

GATES FITSALL TIRE FLAP

GATES Fitsall Tire Flap. Gates Rubber Company, Denver, Colo. The name of this product is descriptive. It fits any size of tire whether balloon or standard. Said to always take its proper position in the casing, never buckling or wrinkling. Reinforced center prevents pinching of the tube by the beads. Withstands wear from contact with the metal rim Snug fit possible through tapered sides which are finished to a feather edge. This feature also prevents chafing of the tube. Dealer prices 1 to 10 order 75 cents each. Lower figure on larger orders. List $1 each.

PACKARD CABLE ASSORTMENT

PACKARD Dealer Assortment of Automotive Cables and "Merchandiser." The "Merchandiser" is a display board for the cables. On the board are ten spools of cable, each spool having 100 feet. The spools of Assortment A are as follows: 16 ga. 1 conductor lighting; 14 ga. 1 conductor lighting; 16 ga. 1 conductor armored; 14 ga. braided low tension; 14 ga. plain low tension; 7mm braided high tension; 7 mm plain high tension; 10 ga. 1 conductor lighting; 18 ga. 2 conductor spotlight; 9 mm plain high tension. Company will supply price.

Standard Work Horse No. 32

STANDARD WORK HORSE

STANDARD Work Horse No. 32. A truck jack of three-ton capacity made by National Standard Co., Niles, Mich. Heavy adjustable lifting step enables jack to reach lowest axles. Range of lift sufficient for largest balloon tires. Long detachable handle permits its use under deep, overhanging truck bodies with convenience. Heavy pawls have double teeth engaging the rack bar at two points instead of one, adding longer life and security. Only one interior regulating part. Flat steel springs make for durability and ease of operation.

MONTREAL PLANS SHOW

MONTREAL, Nov. 7.—Theo Dorian, formerly city editor of La Tribune, Sherbrooke, Que., has been appointed active secretary of the Montreal Automobile Trade Association Ltd., and manager of the 1926 Motor Show, which will be held under the auspices of the association from January 23 to 30 inclusive.

CATALOG OF ELECTRICAL UNITS

The North East Electric Company announces the publication of catalog 100-E which illustrates and lists the North East units that are in current production. Readers of MOTOR AGE may obtain copies by addressing North East Electric Company, Rochester, New York.

Save Them From Freezing

(Continued From Page 12)

ing substances on the high tension wires of the ignition system which prevented the engine running.

The concern and its general reliability as evidenced by worthy products it has produced are doubtless better factors to judge by than the claims on the label. Some special solutions are frankly stated to be alcohol and glycerine with other ingredients used to reduce the tendency toward evaporation of the alcohol content.

Kerosene used in radiators often causes unpleasant odors which are especially noticeable in closed cars. It is also said to constitute a fire hazard, although this opinion may be considerably discounted. It should NEVER be used, however, in thermo-syphon systems, for it does not circulate by itself, for it expands but slightly when heated. Where a circulating pump is used it has been known to give satisfaction under some conditions. Hose connections, while attacked by kerosene usually last throughout the winter if in good condition at the beginning of cold weather.

Objections to Other Preventives

Glucose and honey have at times been tried as anti-freeze solutions and while they do not freeze hard, they start to thicken and flow with difficulty at approximately the freezing temperature of water, so that their use is not recommended. The protection afforded by compounds of this character is not due to the difference in freeze point, which is simliar to that of water, but to the fact that they do not freeze hard and cause bursting.

Mixtures of alcohol, water and glycerine have at times been used, but the difficulty with these solutions is that the alcohol evaporates, in spite of the glycerine and with glycerine present there is no dependable way to check the solution, as would be the case if alcohol alone were used, or if glycerine alone were used, where no evaporation takes place. Where such mixtures are employed, however, it is customary to mix equal parts of water and glycerine, then take various percentages of this mixture and use it with water, the proportions to use being as follows:

Freeze point	Per cent mixture gly. and alcohol
20 degrees F.	15
15	20
10	24
5	27
0	29
— 5	30
—15	32

The glycerine referred to in the above table is heavy glycerine, undiluted except by being mixed with the alcohol.

After you have decided on the kind of anti-freeze service you will render, the next thing to do is to go after the business. Some of it may drift in, but do not depend on the drifts or you will be frozen out by some more aggressive merchandizer. There are approximately 18,000,000 motor vehicles with cooling systems holding from ten to forty quarts, with a conservative average of sixteen quarts.

If we eliminate the vehicles which operate in sixteen of the southern and western states, we still find about 12,000,000 cars and trucks, each of which will need four or five dollars worth of anti-freeze solution or compound of some sort. From *forty-eight to sixty million dollars* worth of direct business to say nothing of the indirect business in the way of shop work and sales of other supplies and winter accessories.

No miraculous stunts are needed. Just tell the folks what you have and what you can do for them. Advertise. Put anti-freeze in your window. Put out a big sign advertising that your anti-freeze service saves repair bills. Offer to test radiator solutions free, if necessary to get them coming to you. The hydrometer readings in Fig. 2 show what to expect when alcohol is used while Fig. 3 shows a regular battery hydrometer used to check the solution when glycerine has been used.

In determining the requirements of each car the chart of cooling system capacities can be referred to. Take a Buick Master Six for example which requires a solution that will be safe to zero, and let us assume that alcohol will be used. Referring to the chart we find the capacity of the system is 18 quarts. Now referring to the alcohol curve in Fig. 1 we take the thermometer at the left which is reading zero and trace the line over to the right until it strikes the middle curve. We then trace downward and find that we hit 40 per cent on the horizontal line. Then we multiply 18 by 40 and point off two places to find the quarts of alcohol needed. This gives us 7.2 quarts, so the sale would be for seven or eight quarts, probably the latter, or an even two gallons, the rest of the solution being water to make enough to fill the system.

Take another case of a Cadillac V-63 needing protection to 20 below zero, and this time we will use distilled radiator glycerine, which does not evaporte. The chart shows that the cooling system holds 24 quarts. Taking Fig. 1 again we use the thermometer which is indicating —20 and trace to the right until we get to the third curve. Tracing down to the horizontal line we find that about 83 per cent glycerine is needed. Multiplying 24 by 83 and pointing off two places we get 19.92 quarts, so to make it even we would sell 20 quarts, or 5 gallons, which would give protection all winter without additional expense.

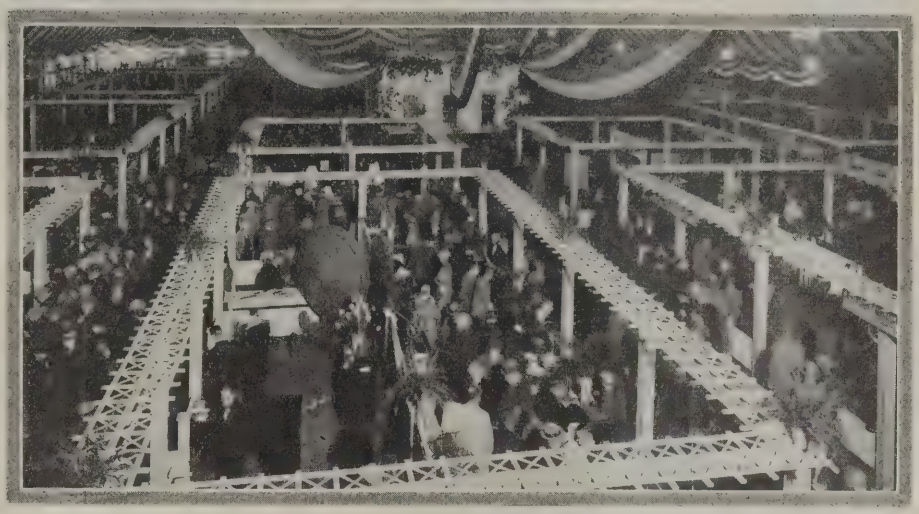
Community Broadcasting to Boom City

CINCINNATI, O.—Nov. 6.—What is claimed to be a new departure in radio service is being arranged through public subscription in Cincinnati under the auspices of the Publicity and Convention Department of the Chamber of Commerce. It is a Community Radio broadcasting service which is to be sent from the WSAI station of the U. S. Playing Card Company but to be absolutely without advertising features. Artists in the musical world, such as singers, instrumentalists and speakers of national and international reputation will be engaged to give free concerts for the Community Radio, the idea being to attract attention to the city of Cincinnati. A fund of $10,000 is to be raised. This is the idea which has been conceived by Frederick Smith, formerly the announcer of WLW radio station of the Crosley Radio Corporation who resigned from the Crosley organization last month to promote the community radio service. Under the direction of Mr. Smith the programs will be arranged and for the 20 weeks commencing with November 1 it is expected there will be broadcasting twice a week, or more from the WSAI.

If the Community Radio idea gains the support which the Chamber of Commerce department predicts for it it is believed there will be no trouble in raising an additional $10,000 for the continuance of the Community Radio programs during the balance of the season. The Chamber of Commerce claims that Cincinnati is to be the first city in the world to undertake this Community Radio program.



A Radio Text Book

"RADIO Sets that Jack and Dad Built —and How They Built Them" is the title of a forty-eight page booklet published by the Hard Rubber Manufacturers Division of The Rubber Association of America, Inc.

Written by M. B. Sleeper, editor of "Radio Engineering" and a recognized set building expert, the booklet describes and illustrates five standard "hook-ups." It tells how Jack inoculates his skeptical Dad with the "radio bug" by making a crystal set. Dad's interest aroused, he and Jack built first an Ambassador set, next an RX-1, then a Browning-Drake "Five" with a three-step resistance amplifier, and with their final 8-tube "Cotton" Superheterodyne win the prize in a radio set building contest.

Besides the wiring and schematic diagrams and step-by-step assembly instructions for each set, the booklet is profusely illustrated with photographs of the different sets and contains many helpful suggestions regarding antennas and grounds, installations, maintenance, and the care and use of dry cell and storage batteries and current tap devices. It is a useful text book for the dealer who wants to learn more about the principles of radio.

The booklet can be purchased for 25 cents a copy from The Rubber Association of America, Inc., 250 West 57th Street, New York City.

A view of the second annual radio show at Buffalo, N. Y. Note the immense loud speaker in the foreground

Radio Show Draws Crowds

FROM the radio wholesalers' viewpoint the second annual show of the Buffalo Radio Trades association, which closed Saturday evening, October 24, was highly successful. That the radio fans of Buffalo, Western New York, Northwestern Pennsylvania and Ontario found much in the exhibition to interest them was evident from the numbers in which they flocked daily to Broadway auditorium, Buffalo's largest assembly hall, where it was held.

The show was promoted by the Buffalo Courier and the Buffalo Star, morning and afternoon papers.

The show was under the management of George B. Bodenhoff. C. S. Bettinger was show chairman. Meyer Goldman, president of Radio trades, said on the concluding night the attendance surpassed greatly that of last year's show and that he and his associates felt that it had stimulated new interest in radio in the present fans and had arrested the attention of many potential enthusiasts. The interest created by the exhibition, he averred, is bound to reflect itself in increased sales during the fall and winter.

Southern Show at Atlanta

THE Auditorium at Atlanta, Ga., will be the scene of a national radio exposition to be held the week of Dec 7, 1925. The show will be given under the auspices of the combined radio trades in Atlanta, and will be the culmination of some months of promotion work by the trades there looking toward the holding of such an exposition.

Many of the leading manufacturers of radio merchandise have taken space for the exposition, which will be further augmented by displays arranged by the jobbers and retail radio dealers in Atlanta.

In addition to the merchandise exposition the broadcasting station of the Atlanta Journal has arranged for the appearance during the week of several nationally known radio stars.

Among the Atlanta automotive jobbers who have taken space at the exposition for their radio department are included the Hopkins Auto Equipment Co.; the Automotive Sales & Service Co.; Bailey & Co.; the Alexander-Seewald Co.; the Southern Bearings & Parts Co.; the Southern Auto Equipment Co.; and radio battery displays by the National Carbon Co. southern branch, and the French Battery Co.

The show will be known as the Atlanta Radio-Electrical Exposition, Lambdin Kay, official announcer for the Atlanta Journal, general chairman.

Bosch Wood-Cone Reproducer

THE American Bosch Magneto Corporation, Springfield, Mass., is building a loud speaker of the Cone type. It is known as the Ambotone reproducer. The entire cone diaphragm is of wood and is 18 in. across. The wood cone is finished in mahogany. The base and metal parts are finished in art bronze. This instrument is also being built in a Junior model which has a smaller cone.

New Station at Milwaukee

MILWAUKEE'S new and first superpower radio broadcasting station WKAF went on the air on Oct. 20. The new station is a 5,000 watt unit and will rank as the city's first commercial station, being available for rental. It is owned and operated by the Broadcasting Co. composed of H. G. Wood, president of the Hotel Antlers, L. M. Kesselman of the Kesselman O'Driscoll Co.; the Hotel Antlers and H. E. Ford, engineer in charge of the station.

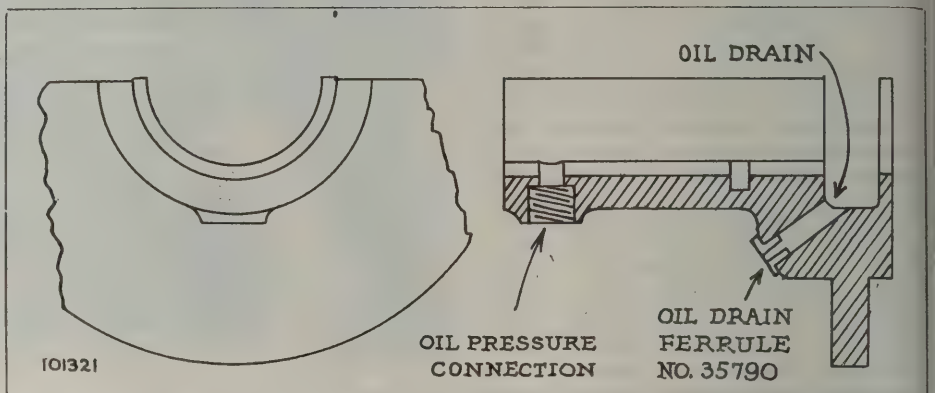
Missing Ferrule Makes Bearing Leak



Q.—Here is a puzzle. It is a late 1923 Maxwell which leaks oil from the engine into the clutch housing so there was a constant drip of oil while the engine was running, but did not get on clutch disk. Oil pressure gage shows 16 to 18 pounds pressure which owner said was normal. The connecting rods were about .004 inches loose but this did not seem to affect the oil pressure. We removed the motor and adjusted the rear main bearing so it dragged. We put it .002 in. paper between bearing and cap. Tested it with hand pump air pressure. It did not show any leak past end of bearing.

Removed bearing and inspected and found no leak at any point around outer edge of bearing. Enlarged oil pressure hole twice its size. There is an oil return hole in an oil pocket at rear of bearing. Replaced motor and ran about ten minutes before it began to drip as before. There was a new gasket between the clutch housing and the engine—Willard S. Congdan's Garage, Dolgeville, N. Y.

We are showing a sketch which illustrates the proper construction for the oil drain hole at the rear of the rear main bearing. In the older type bearings there was a hole about⅛ in. in diameter. In later bearings this hole is ¼ in. in diameter approximately, but merely enlarging the hole does not make the oil drain satisfactory. When this is done it is found that the pressure in the crankcase blows the oil back into the bearing and causes it to leak into the clutch housing.

This condition is remedied, however, by using Maxwell part No. 35740 which is a ferrule used as indicated in the sketch. This permits pressure to get to the oil and at the same time allows oil to drain back into the crankcase. Another remedy which is used at some times is to replace the ferrule with a pipe connecting to the lower part of the crankcase so that oil from the drain pocket in the rear main bearing can run down under the oil in the crankcase. In this way capillary action seems to more than offset the effect of crankcase pressure.

You stated that you enlarged the oil pressure hole to twice its size. We did not get the idea or see the reason for doing this if you are already troubled with excessive oiling. The left hand portion of the sketch shows an end view of the bearing and shows the bearing itself extending above the flat surface of the bearing cap. In case this is done it will hold the surface of the cap away from the upper portion of the bearing and leave an opening through which oil can work into the crankcase. It is essential that the bearing metal be trimmed off the surface of the cap, so that an oil tight joint can be maintained.

View showing construction of oil drain hole at rear of rear main bearing on 1923 Maxwell

READER GIVES CAUSE OF OVERHEATING

Q.—In your article entitled "Eight Cylinder Engine Overheats" on page 26 of the September 17, 1925, issue of MOTOR AGE, you give some possible causes of this trouble. I would like to suggest that the screens in the bottom of the radiator are clogged. In the older type Cadillac radiator the screen screw is at the water outlet, but in the later models the screen can be taken out and cleaned by removing the splash pan and taking out the plugs in the front, in the bottom radiator tank. The screens put in from the front are not screwed in, but can be pulled out with the fingers. I would have written to K. S. S. direct, but there was no address.—S. G. Lininger, Heppner, Ore.

This is a very likely cause of the trouble experienced, as it was stated that the owner of the car in question had used crude oil in the cooling system. This incident also shows the disadvantage of withholding the actual name of the party asking the question. In this case an answer could have been sent much more readily from one subscriber to the other.

WHAT TORQUE IS

Q.—We noticed in one of your publications an article on the h.p. of the Star Car, and if I remember it said that the torque was increased. We would like to know what is meant by the torque of a car.—A Reader.

Briefly torque is the product of a twistinng or tangential force multiplied by the radius of the part it rotates. It is a calculation in which the time element is entirely eliminated. To get an idea of torque consider a long post driven into hard ground. Imagine that you have fastened a one foot lever to the top of this post which is driven in vertically and that you exert a push of one pound at the end of it. Your exertion of one pound on the one foot lever represents one pound foot of torque. Now imagine that you can with a force of one pound move the lever one foot around the circle When you have done this you have exerted one foot pound of work on the post. This is work done.

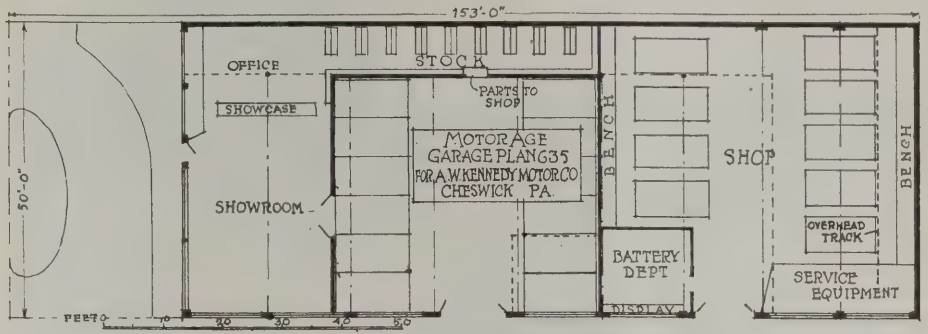
Now if you exert the one foot pound of work on the same object 33,000 times in a minute you have exerted one horse power.

Torque of a car represents its pulling power, and it is the greater pulling power which a horse exerts, which enables it to pull a car out of a hole, when a 40 h.p. engine with less torque or pulling power would be unable to accomplish the task. In like manner the torque of a commercial vehicle is increased by increasing the gear ratio. Considering torque at the rear wheel of a car if we have two similar engines and gear one of them at 5 to 1 in the rear axle and the other 10 to 1 the car with the 10 to 1 will have greater torque at the rear wheels, although it will have no greater power.

SHORTER MANIFOLD WORKS BETTER

Q.—I am writing you about some information on the intake manifold of a 1924 late model Chevrolet. This car has a G. G. vacuum tank and a Carter carbureter. Can the intake manifold be cut off so as to raise the carbureter for winter starting? Manifold at present is 10¾ in. long and I would like to cut off 10 in. of this. Have done this on a racer, but not on a touring car.—H. W. Wright, R. 2, Allen, Kansas.

This is perfectly possible and will give better results. It is also possible to install the new type Chevrolet intake manifold which is nearly a foot shorter than the old one. This would probably be the best procedure and would save time and possibly money.



Planning Your New Building

By TOM WILDER

The READERS CLEARING HOUSE

Enlarging and Rearranging Old Building

Q.—I am planning to remodel our present building to be more suitable for the Ford agency. Due to the narrowness of the building, the best plan, I imagine would be to close the front entrance and make a larger one on the side, for service and storage; making the showroom and whole width of the building with the stock room and offices behind it. But this is a disadvantage since we have a gas station in the front end and the gas man would have to walk across the showroom floor to the cashiers' window for change. In a few years we will likely discontinue the gas station as our business is Ford sales and service. It would also be necessary to extend the shop to the lot line and I would like to have a more suitable place with a show window for the battery department as Ford suggests. I am enclosing a sketch of the present building.—A. W. Kennedy Motor Company, Cheswick, Pa.

The dotted line shows the old wall; the narrow strip at the side is utilized as a stock room

We agree with the notation you have made on your sketch plan to the effect that it would be a good idea to widen the building making it cover the full width of the lot and we have shown how you can do this without very much extra expense.

On our plan the dotted line shows the outline of your old building where the back wall would be torn away. To support the trusses it would be necessary to put up some sort of columns at A and B providing we have guessed the location the trusses correctly. The long narrow place back of the wall between the showroom and the shop is reserved for stockroom purposes and need not be disturbed any more than by putting a roof over it. The roof could be extended over the narrow section without any trouble at all. The extension to the rear would be one or two trusses and these could be built the full width of the building.

The back part could be all in one room with cars stored crossways instead of extending fore and aft, but we believe the arrangement we have shown is better as it divides the shop from the garage and gives a safe place for your new car storage. If desired the parts window could be in the end of the room opening into the shop but this makes a rather long walk for the stock man if he is employed in the office.

If a large battery department is desired it could be extended into the garage as indicated by the dotted line. If this is done entrance from the shop to the garage can be had through the battery department, otherwise a doorway will have to be made somewhere. If you intend eventually to discontinue the filling station and add this space to the building, we believe it would be policy to do it now as a change would effect the whole building and it would be better to make all the changes at once. Possibly the space alloted to the stock room is more than is needed and if that is the case part of the space may be used for toilet room.

Legal Questions Answered—

By WELLINGTON GUSTIN of the Chicago Bar

MAY BE MISUNDERSTANDING

Q.—As a reader of your Motor Age and a dealer in automobiles we would like much to have the following answered:

On May 3, 1925, a gentleman of this locality had a car of which he was the owner and on the same day had an accident which necessitated some repairs. On May 5, 1925, same gentleman brought same car to our salesroom, and car was taken in on exchange for new car and we gave him an allowance of $500 for old car. And on this allowance he gave us the name and address of the man who ran into his car and damaged it, stating that whatever the cost of repairs for old car was to be paid us for same by the man whose name and address he gave us at the time of exchanging the car. The repairs were made which came to $55, and we forwarded the bill to man as stated before, only to have reply returned to us that on September 10 insurance company settled the claim with the man who formerly owned the old car for $35.

Would be pleased if you would inform us just what can be done in regard to this in order to collect on bill of $55, or can anything be done in regard to his collecting that $35 on a car that he did not own at the time?—New York Reader.

Regarding your repair bill, if you have correctly stated the facts and can prove the transaction to be as stated you may sue your customer for the full amount of your claim, regardless of the amount he settled the matter for with the insurance company. And further, if you gave the company notice of your claim, that is the assignment of the customers' rights to collect, then you may hold the insurance company jointly or singly. Perhaps your customer can show a misunderstanding as to the terms of the transaction?

SELLING A CAR IN CALIFORNIA

Q—I have a repair bill over a month old on a car and also possession of car and owner does not have the money. I want to make a sale of same—which I did two years ago on another job, but went to a lawyer which was an extra charge of $16, including advertising two times. I would like to know if I could make a legal sale without the lawyer's fee and if so how?—Waline Auto Repair Shop, Turlock, Calif.

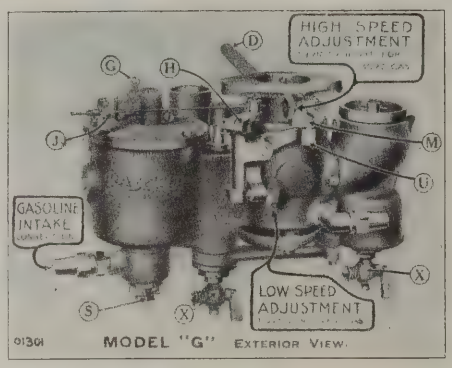
You should recall the old saw about the man who is his own lawyer. However, the law in your state on liens is very simple. It is of possession as at common law, but you may also sell at public auction after 25 days from date the charges are due. But first you must give 10 days previous notice of such sale by advertising such sale in a newspaper published in the county where porperty is situated, or, if there is no newspaper published in the county then by posting notices of the sale in three of the most public places in the town where such property is to be sold, for ten days previous to the date of sale. The proceeds of the sale must be applied to the discharge of the lien and the cost of keeping and selling of the property; the balance goes to the owner. See Secs. 3051-3052 of Kerr's Civil Code of California.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Rayfield Model G Adjustment

Q.—What information can you give on the ignition timing and the adjustment of the Rayfied carbureter on a 1918 Chandler? —Paul E. Thayer, 8 Strathmore Road, Worcester, Mass.

A Bosch magneto was used and the timing was conventional. The interrupter contacts should just begin to separate with spark advance lever in the retard position when the piston comes up on firing dead center or has barely started down again being not more than 1/64 to 1/32 inch down. An illustration of the model G Rayfield carbureter used on this car is shown, there being two adjustments. After engine is warmed up bring both spark and throttle levers into position of full retard on steering wheel and close high speed adjusting nut by turning it as far to the left as it will go in the direction indicated by the arrow for less gas. The low speed adjusting nut should then be turned to the left in the direction indicated by the arrow for less gas until a point is reached where the engine idles evenly. Accelerate the motor quickly by opening the throttle. If the engine hesitates or back fires it will indicate an adjustment that is too lean. Then try the low speed adjustment one or two notches to the right until engine accelerates without popping back into carbureter.



High Speed Adjustment

Turn high speed adjusting nut to the right 7 or 8 notches in the direction indicated by arrow for more gas. Advance spark lever on steering wheel to a point where ordinarily carried. Accelerate engine quickly by opening throttle. If engine picks up quickly without backfiring or without appearing sluggish it will indicate an adjustment about right.

TRUCK ENGINE IDLES UNEVENLY

Q.—We are having trouble with a Hall 3½ ton truck idling properly. This truck uses a Zenith carbureter model L-6 with jets 120-100-50. We have cleaned the jets, put in new gaskets, but cannot make it idle unless we hold the choke about one-half closed. Running on the road or pulling hard it seems o. k.—Charles Neider, Blackfoot, Idaho.

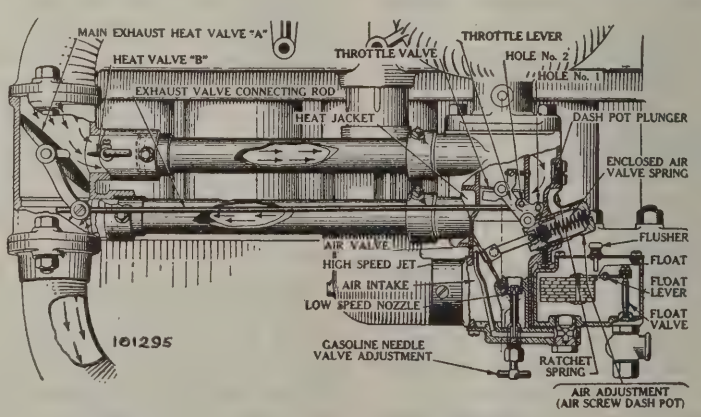
The proper jets are as follows: No. 24 choke, No. 110 main jet, No. 120 compensator, No. 50 idling well and No. 31 seat. You do not mention turning the adjusting screw which controls the idling. As this carbureter seems to be getting too much air the screw should be turned in. If it has to be turned in until it is less than three-quarters of a turn from the seat a larger idling jet should be used.

Rayfield carbureter used on 1918 Chandler

We are assuming of course, that there are no air leaks in the intake manifold. This can be checked by running the engine and squirting gasoline on the intake manifold gasket to see if this changes the way that the engine runs. If so, it shows the presence of air leaks. If you do not readily overcome the trouble it would be well to have the carbureter checked up at the nearest authorized Zenith service station.

100 Miles on a Gallon—Of Oil

Q.—We have a 1924 Dodge Brothers touring car in the shop with which we are having trouble due to excessive oil consumption. It uses one gallon of oil every hundred miles when driving at 35 or 40 miles per hour. The Dodge Brothers service station installed a set of rings when the car was driven 2,500 miles, but the car still uses an excessive amount of oil. The cylinder head was removed and the cylinder checked with gage which showed them to be worn about .003 in. What size holes should be in the oil line that feeds through and how deep should the connecting rods strike oil in troughs?



In the oil line which runs the length of the crankcase there are holes approximately 1/8 inch in diameter which should point directly downward. If the oil pipe is turned slightly so that the streams of oil are directed toward the connecting rods it may cause an excessive amount of oil to be splashed into the cylinders. It is better to have the streams of oil directed downward and slightly away from the center of the engine against the side of the crankcase rather than have the streams of oil sent in the direction of the revolving connecting rod.

The piston clearance is not such a factor in producing excessive oil consumption as poor fitting of the rings would be. The essential thing about a piston ring is to have it a good fit in the ring groove, for if it works up and down it will allow oil to work up into the combustion chamber. If the valve cover plates are removed, it will be found that there are two stand pipes which carry oil vapor from the crankcase into the valve compartment. In some cases at high speed too much oil vapor comes through and escapes past the valve covers. In this way oil is lost. If no other remedy is discovered you might try corking these stand pipes to see if this reduces the oil consumption.

AIR VALVE MAY BE HELD OPEN

Q.—We have a 1923 Buick six in our shop which will run idle on either the cold or hot setting of the carbureter. When we try to run it on the road it spits back through the carbureter. The owner says that this trouble developed after the carbureter was removed to replace the gasket at the bottom of the carbureter.—Boyson Garage, Fremont, Wis.

We are showing a sectional illustration of this carbureter and you will notice that there is an air valve controlled by a spring and that this air valve when opening takes additional fuel from the high speed jet. We suspect that the high speed jet was bent when the carbureter was taken apart, so that it holds the air valve partially open all the time. This would account for the trouble you are having.

Sectional view of carbureter on 1923 Buick Six

Clearing Up Electrical Troubles

EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

Rectifier and Rheostat Efficiency in Battery Charging

Q. I received the information about generator brushes several days ago and wish to express my thanks for the information. I should also be pleased to know whether a hot cathode rectifier using half the alternating current since wave, is necessarily only 50 per cent efficient. I've heard considerable discussion on this pro and con.—George Kissam, 223 W. Queen street, Inglewood, Calif.

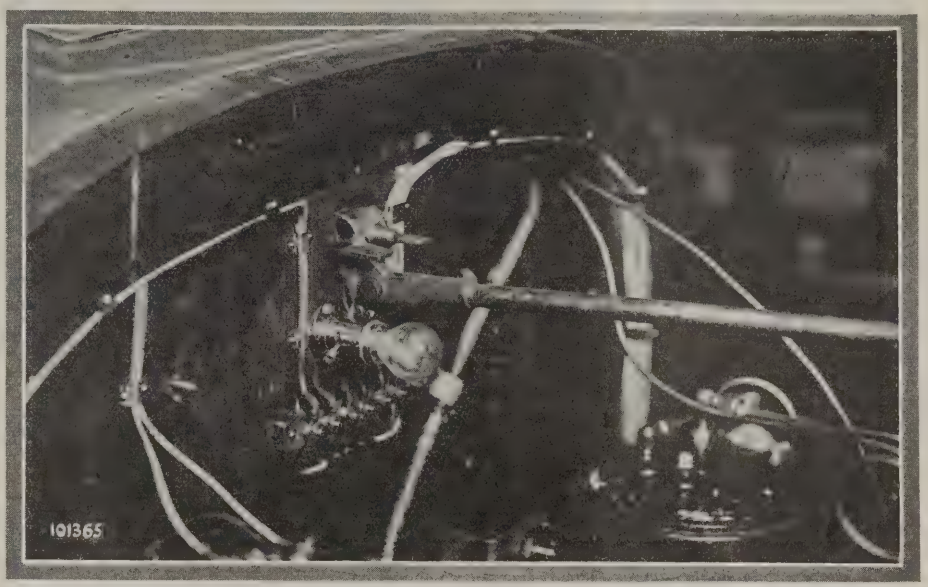
In any electrical device there are certain fixed losses which take place regardless of the load. For this reason it is generally found that an electrical device will be most efficient when it is fully loaded. For this reason if a rectifier can be designed to use both halves of the A. C. wave we believe that the efficiency will be somewhat greater. As we understand it, however, the use of only one-half of the wave does not cut the efficiency in half. The current which you pay for is the current which comes through the meter and when no current comes through, the meter is not caused to rotate. In practically all rectifiers there is a transformer device of some sort and when you draw current from the low voltage side you draw a proportionate current from the high voltage side.

Conversely when you do not draw current from the low voltage side you do not draw from the high voltage side and the meter's reading will be reduced accordingly. The operation of a rectifier might be compared to that of a hand operated switch. If you could accurately turn the alternating current on and off by hand, 120 times a second, you would be drawing current at the instant that it is flowing in the right direction for charging the battery and turning it off when it is trying to flow in the wrong direction. When the current is turned off, we are not causing the meter to indicate and it would therefore appear as if we would incur no additional expense by employing this method. As previously stated, however, there are certain fixed losses which go on continuously so that the efficiency of this sort of a device is apparently somewhat less, although not in the ratio of 2 to 1.

Q. What type rectifier or rheostat is the most efficient for charging batteries? Should a rheostat have the preference if both currents are available?

The only data we have applies to the Tungar rectifier and the efficiency depends on the type of rectifier used and on the number of batteries being charged at one time. This efficiency is as follows:

12 Volt 6 Ampere Tungar



6 Volt Batteries	Efficiency
1	28
2	28
4 Battery Tungar	
4	55
10 Battery Tungar	
1	30
2	45
3	53
4	60

12 Volt 6 Ampere Tungar

6 Volt Batteries	Efficiency
5	63
6	66
7	70
8	72
9	74
10	75

The efficiency in the direct current method is in direct proportion to the number of batteries on charge. For example, if you are charging from 110 volt direct current circuit and have enough batteries on so that your battery voltage is 55, then your efficiency is one-half or 50 per cent. Accordingly, you can see that if there is only one battery on charge you are using only 6 volts out of the available 110 volts and the efficiency is approximately 5 per cent, which is so low that this method of charging is very expensive and undesirable if you only have one or two batteries to charge, but is quite efficient if 14 batteries are on at the same time.

Electrical Shop Should Sell This Idea

The illustration shown gives an idea of the front side of the dash of buses used by the Motor Transit Company of Los Angeles. The light placed under the hood is of great assistance at night when an emergency repair is necessary. Some passenger cars, usually in the higher priced class are also equipped in similar manner, but this is not the rule. It would seem as if electricians handling work on any car could readily sell this idea and install lights under the hood especially where the car owner has experienced trouble at night and has had difficulty in locating it. Successful operation of the electrical department implies knowing how and then selling your knowledge and shop facilities to your customer

WHAT IS MEANT BY IONIZATION?

Q—On page 20 of the April 16, 1925, issue of MOTOR AGE, 27 and 13 lines from the bottom of the first column, there is an explanation that I do not understand. Can you spare me a few minutes to break it up in little bits, so I can assimilate slowly.—Chicago Subscriber.

The article in question referred to a standardized spark gap in which a third needle is used at one side. One portion of the explanation said that when the engine was warmed up the hot gases from the previous explosion were partially ionized which reduced the gap resistance. As we understand the explanation on which this paragraph was based, it is due to the theory as to the nature of matter. Matter is supposed to be divided into small particles known as molecules which in turn are divided into smaller particles known as atoms. A still later theory is that the atoms are divided into smaller particles known as ions and that the atoms split up into ions under certain conditions. The passage of a spark from one point to another through air or some other gap is accomplished more easily when the gas is ionized, that is, when the atoms are split up. In the hot engine the gases as a result of the previous explosion are supposed to be partially in this condition which according to our theory provides a better path for the electrical current than if the gas was in its normal condition.

When we try to make an ignition test out in the air we do not at first have this ionized condition of the air. The theory is that a spark will jump to the third point, ionizing the air and making it easier for the main spark to jump.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Piece Work Often in Wake of Flat Rate

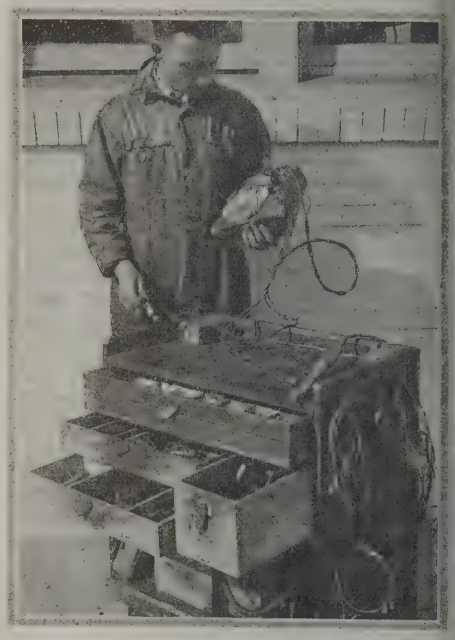
FLAT rate to the customer and piece work to the mechanics seems to be the ultimate development in shops which adopted the fixed price system of selling maintenance and repair operations.

The adoption of the flat rate system involves no special difficulty but putting the men on a piece work basis is not so easy. However, there is this to say in favor of piece work. Once the men get used to working that way they never want to go back to the old hourly rate basis, except under certain conditions.

Although there may be shops which have used the piece work plan of compensating mechanics and have abandoned it, we believe they are few and far between. The size of the shop and the amount of work that can be brought into the shop have a lot to do with it.

Sell Men on Plan

The principal problems involved in getting the mechanics to work on a piece work plan is to first of all get the men firmly sold on the proposition. Then there must be a division between the mechanics and the "house" that is fair to both sides. Again, there must be some provision to insure enough work coming into the shops so the men are busy all the time. There must always be a job waiting for a mechanic before he has finished with the one upon which he is working.



Now, the problem of selling the men is not so difficult if the boss of the institution or foreman shows them that they can make more money. A little arithmetic is all that is needed and they will become readily sold if the division of profits to the men and shop are fair.

In this connection it might be stated that usually 40 per cent of the repair job cost charged the customer goes to the mechanic and the remaining 60 per cent to the establishment. There are modifications of this, of course, depending upon the size of the personnel and the volume of work done. Some shops pay the men 30 per cent. The actual division is something each shop must work out to meet its own conditions.

It also must be remembered that a 40-60 basis is not always fair. This depends upon the nature of the repair job. It stands to reason that on those jobs which require machine tool equipment belonging to the shop that the shop is entitled to a fair return for the use of this equipment.

When it comes to getting enough work into the shop to keep the men busy all the time you will be surprised what the men do themselves in the way of advertising. Every one of them becomes a service salesman, a booster for the flat rate and other things that get business. They work better because they know any comeback jobs are charged against them.

Some shops paying the men on a piece work basis form a little competition among the men by organizing them into teams and the team which turns out the greatest amount of work during a certain period wins a small bonus. It often happens that one man on the same team with another pitches in to lend a hand when necessary because he wants his team to win. The teams are split up from time to time so they are composed of different members. The foreman deals out the jobs and naturally he must use discretion to properly divide the work.

THINGS THAT HELP FLAT RATE

Here is shown a mechanic with testing apparatus for shooting ignition trouble. This cart also contains every need for repair of the ignition system in the car, even to the battery for testing purpose, and electric soldering outfit. No time is wasted looking for tools

Flat Rates on Truck Work

Fall River, Mass.

To the Editor of MOTOR AGE:

Can you inform me if any flat rate schedules have been computed for truck work. Kindly advise where I can obtain such schedules if you cannot supply them.—Henry M. Shea.

Excepting for flat rate operations on such trucks as the Chevrolet, 1-ton Ford, Reo Speed Wagon and Graham Bros. trucks, we do not believe there are any other makes of trucks for which fixed priced operations or flat rate time schedules are available.

Many truck makers are now working on such operations for their respective make of trucks but it will probably be some time before a complete schedule of operations such as set forth in MOTOR AGE's Flat Rate Manual for passenger cars, is available.

Some of the parts makers have a flat rate system for their particular units. For instance, the Buda Company, Harvey, Ill., which makes the Buda engine used in various trucks, has a flat rate schedule covering this engine. But so far as we know flat rates covering trucks as a whole are still something to be desired.

MOTOR AGE'S FLAT RATE FORUM

No. 39

FLAT RATES FOR HUDSON-ESSEX SPRING OPERATIONS

Manufacturer's Official Designation		Time Hudson	Essex 4	Essex 6
J-1	Renew front spring. Install new shackles and spring bolts, if necessary, lubricate parts	1½ hrs.	1½ hrs.	1½ hrs.
J-2	Renew rear spring. Install new shackles and spring bolts, if necessary. Lubricate parts	2¼ hrs.	2¼ hrs.	2¼ hrs.
J-3	Renew right rear spring. (Essex 4 cyl. only.) Install new shackles and spring bolts, if necessary. Lubricate parts		3 hrs.	
J-4	Install new or extra lead on one front or rear spring. Includes rebushing and installing new shackle and belts, if necessary	2½ hrs.	2½ hrs.	2½ hrs.
J-5	Overhaul and rebush springs and replace all parts necessary. Oil all spring leaves, replace center bolts, clips, shackles and shackle bolts where necessary. Lubricate parts	7 hrs.	6½ hrs.	6 hrs.
J-6	Adjust all shackles to eliminate side play and lock in place	¾ hr.	¾ hr.	½ hr.
J-7	Replace or tighten spring "U" bolts	½ hr.	½ hr.	½ hr.
J-8	Install one shackle bolt. Remove broken or frozen shackle bolt and install one new bolt	½ hr.	½ hr.	½ hr.
J-9	Change oil to new style shackle bolts	3½ hrs.	3½ hrs.	

EDITORIAL

Accessories to the Front

A NEW thought worthy of close attention was put forward by W. T. Morris, president of the Automotive Equipment Association, in the article he wrote for the Nov. 5 issue of Motor Age, when he said that keen competition among motor car manufacturers next year probably would lead toward elimination of accessories as standard equipment. According to reports reaching Mr. Morris, which also are borne out by manufacturing preparations the producers are making, there probably will be more cars made next year than even this year's high figure of more than 4,000,000.

Mr. Morris believes it likely that 6,000,000 vehicles may be produced in 1926. The intensity of competition naturally will cause most manufacturers to seek ways of reducing prices to the lowest level and one of the most obvious ways to do this is to leave off accessories. Thus the manufacturer will be able to quote the lowest possible list price.

It does not follow, however, that the cars are to be sold without the accessories and items of equipment that most drivers now consider almost necessities. It will be up to the dealer to sell these items at the time he sells the car, or afterward. Most dealers, having obtained the customer's interest and decision on the basis of a low list price, will be able to then sell at least a fair complement of accessories to be on the car when it is delivered. At the same time there will be opened up to the independent garageman and accessory dealer a great field for the sale of replacement accessories and additional items of equipment that the buyer thought he did not need or could not pay for at the time he bought his car.

On the whole it looks like a big year ahead for the automotive equipment business.

There is too much stepping on the gas when what needs stepping on is the brake.

Tire Sizes Will Be Simplified

WHEN the members of the National Tire Dealers' Association meet in their annual convention at St. Louis this month they should heartily endorse the efforts of the United States Department of Commerce to bring about a reduction in the large number of tire sizes with which the automotive industry is now confused.

They should not only endorse the work being done by the Division of Simplified Practice of the Department of Commerce, but they should actively take up the burden of converting car and tire manufacturers to this program.

The multiplicity of tire sizes adds to the cost of manufacture, but it probably bears more heavily upon the dealer because it makes it necessary for him to carry so large an investment in a widely scattered variety of sizes and types of tires in order to supply the needs of motor car owners. This additional cost is, of course, passed on to the consumer and has no little part along with the British rubber restriction act in advancing the price of tires.

In the closing days of the world war the Department of Commerce was active in working for simplification of types and sizes of tires and the result was that by the beginning of 1922 only 11 sizes were required for all passenger cars in current production. Then came balloon tires and now the Department estimates that no fewer than 90 sizes and types are required for current car production and cars now in service. Many of these sizes are required for cars made before the introduction of balloon tires in order to permit of the adaptation of the balloon principle to the older vehicles. As these older vehicles wear out and disappear from service, however, there will be an automatic reduction in the number of necessary tire sizes, provided there does not come along some new design to supersede balloon tires.

In reality the current passenger car production today requires only 26 sizes of tires. Five of these are high pressure sizes and 21 are balloon sizes. It is evident that even this number of sizes is too large and that in the interest of economy still further standardization must be had. The tire dealers, as well as car dealers, should use all their influence toward bringing about this standardization in which the Department of Commerce is so ready to assist.

Save his car from freezing and you may save a good customer.

Take Discounts

THE successful merchant in any line of business, automotive or otherwise, should be first of all a good collector and a good payer. The merchant who pays his own bills promptly usually is one who gets the money that is coming to him from customers without undue delay. The latter is necessary to the former. The importance of keeping collections up to date and paying all bills promptly is greater than many merchants realize. The merchant who is habitually late in paying his bills and thus loses the ordinary trade discounts for prompt payment is burdening himself with an extra item of overhead that hinders him in the race with competition. It produces a definite waste in his own business that is an unfair burden for the business to carry. The habit of taking advantage of all cash discounts is a good one for the automotive retailer to acquire and is a stepping stone to success.

Ford Causes New Production Record

Some Manufacturers Rush Output to Meet Demands

Constantly Expanding Export Market Is Brightest Spot in Present Picture

PHILADELPHIA, Nov. 11.—The record production of last month of approximately 454,000 cars and trucks in the United States and Canada was made in the face of a declining volume of new orders. It therefore, represented to a great extent the effort of manufacturers such as Ford to catch up with a large surplus of orders already on the books. Furthermore the decline in new orders was not very great and still left the volume far ahead of normal for this time of the year.

At the present output rate, which is being slackened only very gradually, a surplus of roughly 500,000 cars will be carried over into the new year by distributors and dealers. This may sound like a large number but it actually represents only about ten cars per dealer—no more than sound business principles would indicate as the normal stock to be laid by during the slack season. On the other hand it will tie up about $400,000,000 in credit, an important sum should there be any period of serious credit strain.

A constantly expanding export market is perhaps the brightest spot in the automotive picture. Over 15 per cent of current production is going overseas and there are indications that the goal set by the automobile manufacturers—25 per cent of total output for export—may have been too conservative. Germany, with the abandonment of drastic restrictions on automotive imports, has become an important market, and cars are flowing into that country at an astonishing rate.

The total production of cars and trucks for 1925 will be from 4,200,000 to 4,400,000, or a new high record for the industry. Fourth quarter earnings should be little, if any, lower than those of the third quarter. The outlook for 1926 is favorable, with a fair prospect of a lowering or elimination of the automotive excise taxes, and with other economies to the purchaser in the form of a lower insurance and financing rates.

AMERICAN AUTOPARTS SOLD

DETROIT, Nov. 7.—Sale of the American Autoparts Company to the Eaton Axle and Spring Company was announced today by officials of the latter company. No purchase price was named. The American Autoparts Company, which is one of the largest manufacturers of leaf springs for standard equipment and the replacement trade, will be operated as a branch of the Eaton Axle and Spring Company.

SPEED RECORDS AWARDED

WASHINGTON, Nov. 7.—Two new speedway records have been allowed here by the contest board of the American Automobile Association as a result of the automobile race Saturday, October 31, on the newly opened board speedway at Salem, New Hampshire, it is announced here. These new speedway records, regardless of class for non-stock cars, go to Leon Duray, veteran driver, who set a new high mark for the 75 mile and for the 100 miles. Duray negotiated the 75 miles for a world record in 35 minutes, 00.48 seconds, that is at a rate of 128.60 miles an hour. He turned the 100 mile mark in 46 minutes, 41.39 seconds, or at a speed of 128.55 miles an hour. Duray drove a Miller Special.

Paige-Detroit Earnings Are $3,043,174 in 9 Months

DETROIT, Nov. 7.—With the single exception of 1923 the net earnings of the Paige-Detroit Motor Car Company for the first nine months of 1925 which are given as $3,043,174.32, are greater than for any previous full year in the history of the company. The above figures do not include provisions for federal income and profit taxes.

In 1923, the corresponding figures were $3,320,648.85.

The company's net earnings for the first nine months this year after deducting $114,962.75 paid in cash dividends on the 7 per cent cumulative preferred stock showed a balance equivalent to $4.33 a share on the 676,474 shares of common stock of no par value outstanding September 30. This compares with $2.37 a share for the common stock earned during 1924 and $4.50 a share earned in 1923.

For the nine monthe ending September 30, last, the company's revenue from sales less returns—of cars, parts and so forth, including inter-company sales, aggregated $54,164,574.69 showing gross profit of $6,554,671.70 after deducting $47,609,902.99, the cost of sales, including inter-company costs. Selling, administration and general expenses were $3,423.097.41, leaving net operating profit of $3,130,574.29 for the nine months.

After deduction of miscellaneous charges amounting to $88,399.87 there remained net earnings of $3,043,174.42 for the nine months before federal taxes, against $1,834,552.26 for the complete year 1924 and $2,885,737.33 in 1923.

N. Y. YELLOW CAB SALE

NEW YORK, Nov. 7.—William E. McGuirk, president, Yellow Taxi Corp. of New York, confirms reports that his company is negotiating with the Philadelphia Rapid Transit Co. for the sale of its Philadelphia taxicab properties.

New Car Sales Gain Over Last Year in Buffalo, N. Y.

Used Cars Lag and Rural Buying Declines on Short Crop Yields

BUFFALO, Nov. 2.—The sale of new cars in the Buffalo territory during October was about 10 per cent better than during the corresponding month of 1924. The outlook, according to representative dealers, for business during the remainder of the fall is encouraging.

Conditions industrially in Buffalo and in the other cities in the Buffalo territory are good. In Buffalo, with its diversified line of manufacturing and other industries, conditions are satisfactory and the outlook for a prosperous winter is pleasing. Grapes on which Chautauqua farmers largely depend have fallen short of the usual yield. Other crops are light.

The used car situation is lagging. There is some demand for closed used cars of popular makes, but dealers do not think there wil be much doing in the used car field before next March.

The tire business was 25 to 40 per cent better in October of this year than during the same month last year despite the higher prices tires are now bringing.

PIONEER RECEIVER ASKED

INDIANAPOLIS, Nov. 7.—Word has been received here that a petition was filed in Kokomo for the appointment of a receiver for the Pioneer Automobile Company of Kokomo which succeeded to the Apperson Brothers Automobile Company. The claim is filed by the National Lead Company and asks judgment for $1,000 represented by three notes alleging that the first note is past due without payment. The action further sets forth the claim that the concern owes other sums and that tax payments are also owed. The Pioneer Automobile Company took over the property and good will of the old Apperson concern under a lease arrangement.

MANY FARMS USE CARS

SPRINGFIELD, II., Nov. 7.—Automobiles and automotive equipment are utilized on 83.5 per cent of Illinois farms, according to a survey just finished by A. J. Surratt, federal agricultural statistician, who has found that 192,050 of the estimated 230,000 farms of the state have at least one car and many of them several. The distribution ranged from 96.7 per cent in the northeastern district, which included Cook county, to 57 per cent in the southeast. The old time walking plow is used on only 12.7 per cent of the farms now and in 10 central Illinois counties only 1.7 per cent of the farms have the implement.

Bad Weather Injures New Car Sales in Des Moines

Supplies, Accessories and Parts Move Well in October and Radio Business Booms

DES MOINES, Nov. 7.—Wet and disagreeable weather during almost the entire month of October did much to discourage buyers of new cars. As a result new car registrations for the month will probably be considerably below those of the same month last year. Ford dealers have enjoyed good business, much of which was held over from September, when dealers were unable to deliver cars. Many Ford dealers are still behind on deliveries.

Used car sales have slumped with the colder weather. Open air used car markets in particular have suffered from weather conditions and the turnover on used cars is far below what it would have been had October been a pleasant month. As a whole, used car stocks are very conservative. Few Iowa dealers will enter the winter months with heavy stocks of used cars.

Jobbers in supplies, accessories and replacement parts have found excellent business during October. Radio business has been booming. The cold weather during the latter part of the month, brought hurry-up calls for winter supplies and accessories. The sale of replacement parts has been better in the larger centers than in smaller towns.

Collections are characterized as good. Liquidation of many closed banks over the state has done much to relieve the financial condition. The outlook is for a good winter business in all lines.

GOODYEAR BRANCH MOVES

INDIANAPOLIS, Nov. 7.—The Indianapolis branch of the Goodyear Tire and Rubber Company which for many years has been located at Capitol Avenue and Walnut Streets will move next week into its new quarters in the Spink Building at 603 West Washington Street, it was announced here by H. G. Boyer, manager of Goodyear sales interests in Indianapolis territory. The company will occupy the first four floors and basement of the new wholesaling and distributing building which will increase the display, office and storage facilities of the company.

N. A. D. A. SPEAKERS IN SOUTH

ATLANTA, Nov. 7.—A large number of Georgia and Florida automobile dealers and jobbers attended the special congress of the National Automobile Dealers' Association, held at the Atlanta-Woman's Club Tuesday, Nov. 3. Management methods comprised the principal subject discussed, primary speakers on the program including C. A. Vane, general manager of the association; Charles E. Gambill, president of the N. A. D. A.; A. R. Kroh, Lynn Shaw and A. C. Faeh.

GLASS LEAVES OAKES CO.

INDIANAPOLIS, Nov. 7.—F. E. Glass has announced his resignation as vice president and sales manager of the Oakes Company, division of Martin-Parry Corporation, here. Mr. Glass became associated with the Oakes Company in early 1913, shortly after it was established. He was vice president and sales manager for the company when it was taken over by Martin-Parry interests early in 1924, and has been acting in that capacity since then.

Durant to Build New Light Six in Canada

TORONTO, Nov. 7.—Coupled with a financial report showing substantial improvement in the position of the Canadian Durant Company, is the statement that preparations are now being made to place on the market a light six cylinder motor car to compete in the low-priced six cylinder car class. The new car, it is stated, will be produced in 1926.

Important alterations are now being undertaken at the plant. Equipment for lacquer finishing is being installed to supersede the former paint process, while the body assembly plant is being enlarged. Provisions will also be made for the assembling of frames in addition to the present degree.

The report states that for the first six months of this year the production of cars exceeded figures for the same period of 1924 considerably, a total of 6,522 cars having been produced. The outlook of the company for the coming year is considered definitely favorable.

October Sets New High Mark in Car Production

NEW YORK, Nov. 7.—A new high production record for the automobile industry for all time was set in October, according to the preliminary estimate of the National Automobile Chamber of Commerce, which gives 454,327 as the total of car and truck output. This compares with 439,125 in April, 1925, the best previous month, and with 332,759 in September, 1925, and 293,356 in October, 1924.

The total production for the first ten months of the current year is thus brought to 3,620,468, or within about 20,000 of the total for the entire year 1924. There is now no doubt that the record for a year's production, set up in 1923 with a total of 4,086,997 cars and trucks, will be bettered by a wide margin this year.

WALSH GOES TO BUFFALO

BUFFALO, N. Y., Nov. 7.—H. J. Walsh, formerly manager of sales for the Chevrolet Motor Company in the Pittsburgh zone, has been transferred to Buffalo to act in the same capacity for the Buffalo zone. Mr. Walsh succeeds H. G. Semmons.

McClintock Placed at Head Of Erskine Traffic Bureau

Studebaker President Founds Research Department at University of California

LOS ANGELES, Nov. 7.—Dr. Miller McClintock, western traffic expert, formerly a member of the Los Angeles traffic commission, will have charge of the bureau for street traffic research, established at the southern branch of the University of California by Albert Russel Erskine, president of the Studebaker Corp., the university has announced.

A. R. Erskine

Mr. Erskine made an offer to the board of regents of the university to establish two fellowships of $1,000 a year each to graduate engineering students of the university, to encourage traffic control as an engineering profession and to influence extensive research.

Besides his practical experience, Dr. McClintock was connected with the government research bureau at Harvard University and is widely known as a traffic authority. He is the author of "Street Traffic Control" and "The Los Angeles Traffic Code."

Dr. Miller McClintock

The bureau plans to make intensive study of urban traffic difficulties and their correction. Investigation will be made of pedestrian control, conflict between street cars and automobiles, parking methods, street design, speeding, signalling devices and all the other phases of the city highway problem.

Mr. Erskine, in offering the grant to the university, pointed out that traffic is an engineering problem and can be satisfactorily controlled only by engineering methods. It is his belief that the failure of large American cities to deal comprehensively with the traffic situation is largely due to the lack of any technical information.

TO PROVIDE JUNIOR EIGHT COUPE

The Locomobile Company of America, Inc., announces the addition of a coupe to the Junior Eight line of Locomobiles. This new model will be in production during the latter part of November. It will have an extra wide, straight seat inside and a rumble seat in the rear deck for two passengers. It will be finished in gray and black.

Standardization of Truck Chassis Will Be Studied

Executives Will Gather Nov. 11 and 12 at Washington to Consider Simplification of Design

WASHINGTON, Nov. 7.—Standardization of the wide range of motor truck chassis sizes into four specific classes ranging from one to five tons will be the principal topic under discussion here next week when more than 150 executives of motor truck companies and the leading parts manufacturers of the country comprising the membership of Motor Truck Industries, Inc., will gather at the Department of Commerce to consider further progress in a standardization program which the organization began work on some months ago. Announcement of the meeting, November 11 and 12 is made by the Division of Simplified Practice of the Commerce Department.

The four sizes contemplated for motor truck chassis are: Fast freight class, 1 ton and 1½ and 2 tons; heavy duty class, 2½, 3, 4 and 5 tons. This, together with allied subjects, will represent an effort on the part of a number of motor truck leaders to bring about a simplification of parts and the development of standards which will permit a reduction in the cost, as well as the service and maintenance, and the improvement of values to the users of this important mode of transportation.

Seven group committees have been at work surveying the opportunities for standardizing and simplifying various elements of motor trucks. Their reports will be presented at this meeting. They include ratings, motors and accessories, steering gear, axles, wheels and springs, transmission clutches, control, transmission brakes, power takeoffs, etc.; propeller shaft, joints and bearings, frames, cross members and brackets, bodies, dashes, cowls, seats and cabs.

Velie to Build Own Front And Rear Axles at Moline

MOLINE, Ill., Nov. 7.—The Velie Motors Corporation is placing contracts and installing equipment for the manufacture of its own front and rear axles for use in Velie automobiles. These axles will be equipped with Lockheed Hydraulic four-wheel brakes, which has been standard equipment on Velie automobiles for some time past.

The company has recently installed a complete plant for finishing bodies for Velie cars in the popular lacquer with high luster finish. All products of the Velie shops now carry the lacquer finish.

These moves are all in line with the definite policy to make the Velie plant at Moline a self-contained unit with the consequent saving in cost, transportation and handling. The company has an extensive plant at Moline with about 1,000,000 square feet of floor space.

TALKS TAX REPEAL

BUFFALO, N. Y., Nov. 7.—Edward F. Loomis, secretary of the National Motor Truck Association, recently called on executives of the Atterbury Motor Car Company, the Pierce-Arrow Motor Car Company, and the Stewart Motor Corporation, and discussed various problems of the industry. The subject of prize importance was the possibility of reduction or elimination of the Federal tax on motor trucks and motor truck parts.

How to Adjust Brakes

(Continued from page 15)

place the cap and pump handle and with a few strokes return the brake pedal to its normal position after which the pump handle is locked. Do not tigthen the handle with a wrench as this can be properly done with the hands, only. See that the brake pedal has about 1/4 in. play and if it is found that more is present give the pump handle a few more strokes.

At this particular season of the year and especially in the section of the country where snow and ice abound guard against the brake anchor bracket becoming frozen into the anchor pin. It is very important that this anchor bracket function properly at all times and one of the first things the mechanic should check up when the car comes in for brake work is to see that this anchor point works freely.

Western Roads to Request Increase in Freight Rates

NEW YOFK, Nov. 7.—J. S. Marvin of the N. A. C. C. has warned members that western railroads plan to ask a 10 per cent increase in freight rates on automobiles. At a meeting of the railroad Classification Committee in Chicago this week, during a discussion of items affecting freight charges on automobile parts, Chairman Fyfe of the Western Classification Committee announced to N. A. C. C. representatives present that the proposal to increase the classification rating on automobiles in carloads to 110 per cent of first class rates in Western territory would be docketed for discussion at the next meeting of the committee in January. Chairman Fyfe was instructed by the Western railroad executives to take this action. Chairman Dulaney of the Southern Classification Committee was present but not prepared to say whether the Southern lines would take the same action. Present classification rating of automobiles in carloads on western and southern lines is first class while on eastern roads the rating is 110 per cent of first class. The proposed change would not affect shipments to California and the Pacific Coast, which are covered by special commodity rates not subject to classification grouping.

Ajax Production Speeds Up Nash Near Summer Peak

Operations of Seaman Body Plant Continue Higher Than Ever Before in History

MILWAUKEE, Nov. 7.—With the approach of the winter season, the Nash Motors Co. and the Seaman Body Corporation which supplies bodies for Nash cars, are slackening production slightly at both Milwaukee and Kenosha, Wis., plants. Operations at these plants, however, are far more active for this time of year than at any time in their history, and although Nash production is tapering off, output at the Ajax plant at Racine is being pushed to catch up with the heavy demand for cars.

The Nash Motors Co. has laid off between five and six hundred employes, while machinery is being shifted and other arrangements made for taking inventory, at which time practically the entire force of about 5,000 men will remain away from work for about a week, according to W. H. Alford, vice-president and controller of the company. Practically all of these men will be back on the job when that work has been completed or shortly thereafter.

It has not yet been definitely decided when actual taking of inventory will get underway. The yearly checkup will be made simultaneously at the Milwaukee and Kenosha plants, with Milwaukee employes also temporarily laid off at that time.

Output of the Nash factories, exclusive of the Ajax subsidiary has been running about 500 cars a day against 595 during the peak in August. Slowing down of the turnout of Nash cars has enabled the Seaman Body Corporation to get back on a normal basis and night shifts have been discontinued. The force has thus been reduced from 3,900 to 3,500 men. Current output is about 8,000 bodies a month against 11,000 in September and 6,400 in August, the biggest production before erection of the new plant addition.

A BOOK ABOUT BELTS

A BOOKLET ON ENDLESS BELTS which has just been issued by the L. H. Gilmer Co., of Philadelphia, contains engineering data on small belt drives such as are used for automobile fans and small machine tools. Although numerous treatises on large belt drives are available, this is believed to be the first compilation of data specifically applying to small drives such as are used in automotive engineering. Subjects discussed include belt speeds, ratio of pulley diameter to belt thickness, pulley flanges, crowning, take-up, etc. Much of the information is now printed for the first time. The booklet is illustrated with numerous photographs showing the manner in which belts have been applied to drives of exceptional character.

Lighting Association Adopts Plan for Uniform Statutes

Hoover Committee's Pamphlet Approved—Collins of Cincinnati Elected President

CHICAGO, Nov. 7.—The subject of sensible and uniform legislation which was up before the second meeting of the Automotive Lighting Association at the Drake Hotel this week is one that at this time is vital to the industry as a whole.

Much constructive work to draft ideal laws which might be submitted to various state legislatures has been done by the Hoover Committee on Uniformity of Laws and Regulations, National Conference on Street and Highway Safety. A. P. Federline, secretary of this committee expressed the desire to have constructive proposals from those in position to give practical suggestions based on intimate knowledge of lamps and automotive lighting problems.

For this reason a legislative committee and a standardization committee were appointed at the first meeting of the Automotive Lighting Association held last April, and the work of these committees was presented at this session in the form of a pamphlet.

To illustrate the need of such a pamphlet it was stated that if this information had been available a short time ago it would have prevented the passage of a law in one state which makes the spotlight illegal. That spotlights have been improperly used is freely acknowledged, but they also serve a very valuable purpose, and subject to proper regulation, have their rightful place among useful motor car accessories.

The recommendation in this particular case is designed to make provision to overcome the objections to the spotlight without eliminating it, which would work a hardship to car owners, dealers and manufacturers alike.

The pamphlet also recommends the tilted beam principle in headlight control and suggests necessary specifications. It also covers regulations for auxiliary lights which provide for their safe use, without placing limitations on the development of new and useful improvement in motor car lighting.

After some revision, the pamphlet was unanimously approved and will be presented by the legislative committee at the next meeting of the Hoover committee in Washington, Nov. 19.

The meeting also adopted by-laws and elected the following officers: President, H. W. T. Collins of the Cincinnati Victor Co., Cincinnati, Ohio; vice-president, T. K. Quinn, General Electric Co., Clevelan, Ohio; secretary and treasurer, W. S. Murtfeldt, National Lamp Works, Cleveland, Ohio. The following directors were also elected: J. F. Brown, S. M. Lamp Co., Los Angeles; C. H. Blumenauer, Jefferson Glass Co., Follansbee, W. Virginia; J. H. Cattell, Warner Patterson Co., Chicago; W. F. Anklam, C. M. Hall Lamp Co., Detroit; C. C. Mortenson, Stover Signal Engineering Co., Racine, Wis.

Jewett Denies Any Plan To Merge His Company

DETROIT, Nov. 7.—Flat denial that there is a deal pending working toward a change of ownership or of management of the Paige-Detroit Motor Car Company making Paige and Jewett six cylinder cars, was made today by H. M. Jewett, president.

Mr. Jewett issued a brief statement in reply to a widely published rumor that control of the company had passed to a large local manufacturer of four cylinder cars. Mr. Jewett said:

"The Paige-Detroit Company not only has not changed hands, but there has and will be no negotiation. The company has been operating most successfully under the present management for many years and is planing to trust its present advantage in the six cylinder field by aggressive policies of manufacturing and merchandising."

Mexican Bank Reform Is Great Aid to Sale of Cars

DALLAS, Tex., Nov. 7.—The reform of the banking system in Mexico, together with the $40,000,000 good road plan now under way, has increased the sale of automobiles in the republic below the Rio Grande and will result in doubling the number of automobiles in Mexico within the next year, according to J. F. Roark, southwestern manager for the Durant Motor Company, who has just returned from an extended tour of the republic.

Mr. Roark planted agencies at Mexico City, Durango, Victoria, Monterey, San Louis Potisi and several other cities. These agencies are ordering cars in straight car or train lots and paying for them before they reach Mexican soil. The cars are shipped bills lading attached and the paper handled through banks at Laredo, across the Rio Grande from Neuva Laredo where a branch of the Bank of Mexico is located.

New Gill Policy Results In Financial Betterment

Products Now Being Distributed Through Jobbers and Parts Dealers Only

CHICAGO, Nov. 9.—Rapid improvement in the financial condition of the Gill Manufacturing Co. is reported by President Elmer J. Smith, following the change in the company's distribution policy put into effect during the last year. This company's products, including pistons, piston rings and piston pins, are now distributed exclusively through jobbers and replacement parts distributors, and the company's branches, of which there were at one time 39, have been discontinued.

Quick assets of the company are now four to one in proportion to liabilities and net assets are seven to one, according to President Smith and Don M. Compton, chairman of the board of directors. A large reduction in liabilities was accomplished through the sale of stocks formerly carried in the company's branches, resulting in a substanial decrease of inventory.

The company has just sold its oil burner division and will hereafter devote itself to automotive products. The oil burner business was purchased by the Gill Oil Burner Co. of Chicago, an Illinois Corporation.

Three lines of piston rings are now offered by the Gill company: the Gill with interlocking joint, the Service with step cut joint, and the Economy, an oil ring. E. E. Warfield is vice president in charge of sales.

TRACK PAYS WELL

SALEM, N. H., Nov. 7.—The directors of the new Rockingham Board Speedway have reported that the receipts from the race here last Saturday showed a total income of more than $100,000 proving that motor racing would be a success in New England. A total of $37,000 was taken in at the gate Saturday. The race had been postponed twice from Oct. 17 and it was run off at a temperature very close to freezing. Manager Jack Le Cain has applied for sanctions in 1926 for July 4 and September 25, and judging by the attendance last Saturday the speedway will pay off its entire indebtedness next year.

CROWLEY JOINS U. S. CHAIN

BRIDGEPORT, Conn., Nov. 7.—Guy F. Crowley, formerly in the development department of the Firestone Tire and Rubber Co., has joined the technical staff of the American Chain Co., Inc., as sales engineer of the tire bead wire division. Mr. Crowley was associated for several years with the U. S. Tire Co., Hartford plant, as chief draftsman, and with the Fish Rubber Co. of Chicopee Falls, Mass., as assistant chief engineer.

Essex Finance Plan Allows Entry Into Ford Territory

Low Down Payment with Long Time Extension Being Tried as Additional Sales Lever

DETROIT, Nov. 7.—Aaron DeRoy, head of the Aaron DeRoy Motor Car Company, Hudson-Essex distributors in the Detroit area, has announced a new financing plan which will enable purchasers to buy Hudson cars for a down payment of $290.00 and $195.00 for Essex. The remaining amount is divided into 16 equal monthly payments.

With the lowering of prices and the new financing plan, the Essex car goes directly into Ford territory, it being the theory of those behind the financing plan that any one in the market for a Ford car can for a little more money buy an Essex coach. The working out of the plan is being watched with considerable interest.

CHICAGO, Nov. 7.—The Hudson Motor Co. of Illinois, Hudson-Essex distributors for the Chicago territory, this week began advertising down payments of $195 for Essex and $295 for Hudson. It is understood here that the plan has the sanction of the Hudson Motor Car Co., Detroit, and that it is being tried in Detroit, Chicago and New York City.

Authorities on automobile finance in Chicago point out that although down payments of less than one-third and extensions over a period of more than a year, are not regarded as sound principles by the National Association of Finance Companies, that in the majority of cases, a used car is taken in as down payment and that the used car usually represents at least a third of the value of the new automobile.

For this reason, they explain, the advertising of low down payments and unusual time extensions will not materially affect the stability of automobile finance.

Cleveland Is Making Plans For Extensive 1926 Show

CLEVELAND, O., Nov. 7.—Cleveland distributors, dealers and manufacturers of passenger cars will be assigned space in the city's 1926 show Tuesday, November 3, it has just been announced by Herbert Buckman, manager of the Cleveland Automobile Manufacturers' and Dealers' Association, promoters of the exposition.

The annual show here has been set for January 23 to 30 in spacious public auditorium, maintaining its usual chronological position between the New York and Chicago exhibits.

Accessory space already is in process of assignment and commercial car space will be selected immediately following the passenger car drawing.

With the passenger car assignment still in the future, applications for space already are in the hands of the management for the following makes:

Ajax, Auburn, Buick, Chandler, Chrysler, Cleveland, Diana, Essex, Ford, Flint, Franklin, Hudson, Hupmobile, Jordan, Locomobile, Marmon, Moon, Nash, Oakland, Pierce-Arrow, Reo, Rolls-Royce, Stearns, Studebaker.

CLEVELAND DEALERS MEET

SAN FRANCISCO, Nov. 7.—Chandler and Cleveland dealers in central and northern California attended an all-day meeting and luncheon in San Francisco, at which Roy B. Alexander, president of the Chandler-Cleveland Motor Car Company, was the principal speaker. Other speakers were Charles Bowman, sales manager for the company here; Charles L. Hebrank, dealer, of Oakland; Bert Farnsworth, dealer, of Santa Rosa; A. A. Zolezzi, dealer, of San Jose, and J. Charles Nagel, sales manager of the Hebrank, Hunter and Peacock Company, of Oakland.

---

15 More Firms Register For Space at Bus Show

DETROIT, Nov. 7.—With the applications of 15 additional firms for space, the number of firms that will exhibit at the First National Motor Bus Show to be held here November 16 to 21 inclusive has been increased to 46. This does not include those firms which have made tentative reservations.

The firms which made applications during the last week according to C. E. Stone, chairman of the executive committee are: E. I. DuPont de Numoers Co., Kysor Heater Co., Electric Service Supply Co., Gabriel Snubber Sales and Service Co., Eisemann Magneto Corp., United States Recording Instrument Co., Brown-Lipe Gear Co., C. G. Spring and Bumper Co., Miller Rubber Co., National Pneumatic Co., Willis Storage Battery Co., Yellow Truck and Coach Manufacturing Co., Fageol Co., Ruggles Motor Truck Co., and the Chevrolet Motor Co.

An additional feature will be the exhibition of a Stout all-metal monoplane by the Ford Motor Company. The ship is the second to be manufactured by the Stout Metal Airplane Division of the Ford Motor Company and is a replica of those used on the Ford air routes and also the one recently sold to the John Wanamaker Stores, Inc.

CLINICS TO CONTINUE

CHARLOTTE, N. C., Nov. 7.—The series of service clinics, held in North Carolina and South Carolina, under auspices of the Charlotte branch of the Ford Motor Company, completed yesterday at Asheville, N. C., will be followed by a similar series, directed by the company's branch at Jacksonville, Fla., according to an announcement by company officials. The Carolina schedule of clinics, each attended by approximately 50 dealers and mechancis, included Charlotte, Greenville, S. C., Columbia, S. C., Charleston, S. C., Florence, S. C., Fayetteville, N. C., Durham, N. C., and Winston-Salem, N. C.

Graham Active in Drive for Repeal of War Tax

Chandler Vice President Heads Committee Working with U. S. Chamber of Commerce

WASHINGTON, Nov. 7.—George M. Graham, vice-president, Chandler Motor Car Company of Cleveland and acting chairman of the National Automobile Chamber of Commerce taxation committee, is one of a group of leaders in the Chamber of Commerce of the United States who will present to Congress next month a program calling "for an immediate revision of Federal taxation on a peacetime basis and along lines that will encourage economic advancement."

Based on a survey of the entire field of federal, state and local taxation, recommendations to Congress will urge legislation in harmony with plans to coordinate and simplify taxation throughout the United States.

The study of taxation in all its phases is under the direction of a special committee of economists and business men who are working with the chamber's finance department.

"The war was ended seven years ago," says the announcement just made by the U. S. Chamber of Commerce, "and it would seem that the time is near, if it has not already arrived, when instead of accepting the scheme of wartime taxation and simply eliminating or reducing certain taxes from time to time in a haphazard manner, as has been the practice, that the whole scheme of excise should be examined from the viewpoint of a permanent plan of peacetime taxation."

New Models Said to Cut Old Fords' Value 10 Per Cent

BUFFALO, N. Y., Nov. 7.—Alfred S. Meldrum, head of Alfred S. Meldrum, Inc., 59 Franklin St., states that it is his experience that the new model Fords have depreciated the value of used Fords of the old models about 10 per cent. This company does a large used Ford business. However, Mr. Meldrum does not look upon this situation as an evil.

"The introduction of the new model Fords," said he, "has given used Ford dealers an opportunity to deal more conservatively on the old cars. Ford owners, because of the difference between the old and new models are content to accept less allowance on trade-ins than was the case before the new models came out."

LON SMITH JOINS M'KEE

INDIANAPOLIS, Nov. 7. — Lon R. Smith, for years identified with selling in the industry by his connection with Buda, Midwest, Columbia, etc., has become manager of the merchandise department, Homer McKee Company, advertising agency.

A-1 Bonded Garages, Inc., Expanding Its Activities

First Operative Section, Set up in Texas, Will Be Extended to Other Territories

CHICAGO, Nov. 7.—With its system in operation in the southwest the A-1 Bonded Garages, Inc., is going forward with extension of its organization to other sections, according to S. C. Levy, vice president of the corporation. It is the plan to build up its system section by section, solidifying newly organized regions with those already organized as promotional operations advance.

The object of this plan is that the value of the system rests altogether upon the availability at all times during travel by the tourist of A-1 bonded garages. The corporation, therefore, established the first operative section of its system in Texas and the southwest along popular tourist routes where many garages now bear its emblem and where highways display A-1 signs.

Under the system of A-1 Bonded Garages an appeal is made especially for the trade of tourists who want assurances of good mechanical work on their machines. The patron is given a bonded receipt following completion of mechanical work which entitles him to free rectification of the job in another A-1 bonded garage if the work falls down within a period of 24 hours and within a radius of 100 miles from the garage where the work was originally done.

The garage rectifying the work is paid by the central organization and an adjustment is made with the shop which fell down on the job. According to Mr. Levy the plan draws much work to the franchised garage and at the same time makes it more careful to turn out good work. Tires and general overhauls are not included in the bonded work. Before the franchise is granted to a garage Mr. Levy says inspectors pass on the shop's integrity and competency. Special attention is paid to its equipment. Only one shop is licensed in the smaller towns while larger places are zoned. Central headquarters of the corporation are at 11 S. La Salle St., Chicago, and its southwestern offices are in the Dundee building, Fort Worth, Tex.

Budd Builds Assembly Plant for Steel Bodies

PHILADELPHIA, Nov. 7.—The Edward G. Budd Manufacturing Company, of Philadelphia, is entering a new field. On the same plot with their steel wheel plant in Detroit, an assembly station for the one-piece All-Steel body is rapidly nearing completion.

The new facilities provide for complete finishing of the bodies, a task hitherto left to the car manufacturers. The units will be shipped in "the white" from the main factory in Philadelphia, thereby taking advantage of the low production costs, and will be assembled to the last minute detail at Detroit, ready to drop into place on the chassis.

Begun early in September, the new plant, a $2,200,000 structure, will be ready for production early in December.

NEW PAIGE-JEWETT DEALERS

DETROIT, Nov. 7.—The Paige-Detroit Motor Car Company has appointed new dealers as follows:

Callas Simon, Lawrence, Mass.; Toledo Paige-Jewett Co., Toledo, O.; Paige Sales Co., Solvay, N. Y.; Hysell Motor Co., Pomeroy, O.; A. L. Bacon, Frankfort, Ky.; Evans & Towers, Glendale, Cal.; Paige-Jewett Sales, Galion, O.; Edwards Motor Co., Grand Junction, Colo.; Luth Garage, Denver, Colo.; S. B. Hutton & Sons, Santa Paula, Cal.; Bateman Hardware Co., Salida, Colo.; George E. Disbrowe, St. Thomas, Ont.; Georgia-Florida Motors, Inc., Valdosta, Ga., Thomasville, Ga., and Tallahassee, Fla.

AJAX PRODUCTION UP

RACINE, Wis., Nov. 7.—A high record of 133 Ajax cars was reached on Oct. 22. Production is, however, averaging 115 per day and this will be stepped up to 299 per day by February 1. Additional machinery to give this additional capacity is being installed. Ajax cars are now being delivered through more than 500 dealers.

Dodge Brothers Sales Total 203,546 in Nine Months

DETROIT, Nov. 7.—In the nine months ending with Sptember 30, 1925, Dodge Brothers, Inc., sold 203,546 passenger cars, and trucks totaling $175,284,031 more than $20,000,000 better than the figures for the corresponding period last year. The figures for last year, according to company officials were $155,170,714.

The net income was $25,435,427 after depreciation but before interest, federal taxes and dividends. This compared with $14,642,955 for the same period in 1924. The third quarter income was $8,872,115.

After deducting all charges and dividends, the net was equal to $6.33 a share on the common stock including common shares issued against the recent conversion of $15,000,000 debenture bonds.

Oakland Expanding Plant To Produce New G. M. Six

More Than $3,000,000 Being Spent to Increase Facilities for Building the Cars

PONTIAC, Mich., Nov. 7.—The new General Motors car to be produced by the Oakland Motor Car Company as an addition to the line, and a companion to the Oakland Six will also be a six cylinder automobile and place this company among those now building two completely different lines of six cylinder cars.

How far the trend has gone in this direction may be gauged by the fact that a large majority of all motor car companies in this country produce one or more cars in the six cylinder field.

This trend has been particularly noticeable during the last year, when a number of prominent companies added a six to their line of fours and some companies changed from the four to the six. In the low-priced six-cylinder field the development has been particularly rapid.

For several months the new sixes have been undergoing every possible kind of test at the General Motors proving grounds at Milford, and pronounced O.K. and now more than $3,000,000 is being invested in new equipment for the expanding capacity of the Oakland factories, both to increase the production of the Oakland Six and prepare for the new car.

BUFFALO PLANS SHOW

BUFFALO, N. Y., Nov. 7.—Buffalo's 1926 automobile show will be held at the 174th Infantry's armory, January 16 to 23, inclusive, under the auspices of the Buffalo Automobile Dealers' Association. Carlton C. Proctor, executive secretary of the dealers' organization, will be show manager.

25 Years Ago In the Automobile Industry
As Recorded In Motor Age

(From Motor Age of November 15, 1900)

Close of New York Exhibition

NEW YORK, Nov. 10.—The Madison Square Garden automobile show closed tonight with a splendid attendance—the best of the week. * * * Whether or not much direct business was done by the exhibitors is a doubtful question, as most of their time was taken up in giving as many as could be accommodated rides on the testing track. Toward the close of the evening, however, several of the vehicles which had stood during the week in exhibits were run out onto the track for pratical demonstration.

The Manufacturers' Meeting.

At 11 o'clock Saturday morning the representatives of over 30 different manufacturers of automobiles and parts gathered in the press room at the Garden to discuss plans for effecting a permanent national organization of manufacturers. This meeting was due to a call issued by the few who attended a first meeting at the Hoffman House Thursday morning, on which occasion insufficient attendance prevented any action being taken.

A Dinner for Exhibitors

Friday evening the management of the Automobile Club of America gave a dinner to the manufacturers who exhibited at the show. About 250 were present. Vice-President Albert C. Bostwick of the club presided. The dinner was an informal affair and few speeches were made.

Canadian Ford Production Totals 9,200 in October

Combined with Number Built in U. S., Output Is Greatest in History of Company

FORD CITY, Ont., Nov. 27.—Production in the main plant of the Ford Motor Company of Canada located here, and in the eight assembly plants located throughout the Dominion totaled 9,200 for the month of October, the highest in the history of the company, Vice-President and General Manager W. G. Campbell said today.

The best previous month, Mr. Campbell said, was October, 1923, when 5,028 cars were produced. This mark was shattered by 4,172.

Of the October output more than of 5,000 were for export. October, 1923, saw 3,046 sent abroad. Neither figure includes the cars that were produced at the assembly plants of the countries located in overseas countries excepting Australia.

Adding the Ford of Canada production to that of the Ford Motor Company of the United States, the total Ford production in the two countries was 214,027, by far the biggest in the history of the two companies. Output plans for the present month of both companies call for a production greatly in excess of the above figures.

Fords Buying Hudson Stock For Cash in Open Market

NEW YORK, Nov. 7.—The recent rumor that Henry Ford had acquired the Hudson Motor Car Co., denied by Edsel Ford, probably were caused by the fact that the latter has been purchasing for cash several thousand shares of Hudson stock in the open market and transferring it, it is said, to his wife's name.

It is understood that his outright buying for investment has made the Ford interest the largest outside interest in Hudson. The inside holders are R. B. Jackson, son-in-law of Hudson the founder of the concern, and W. J. McAneeny, operating vice-president, Mr. McAneeny representing the Hudson interests.

Company officials and insiders say that the stockholders are disregarding the wide fluctuations of the stock and are determined that control shall not be relinquished by them. Edsel Ford is said to have bought 7000 more shares last Friday at from 106½ to 114.

HAS NICKEL-PLATE PLANT

KENOSHA, Wis., Nov. 7.—A nickel-plating department for the convenience of local motor repair men has been established by the Igo Manufacturing Co. of this city. The department has been informally operating on an experimental basis during the past few months and some 2,000 articles including radiator shells, lamp rims, hub caps, door handles and the like have been plated during that time. The company has installed new equipment preparatory to announcing a new type of automobile bumper for Nash and Ajax cars. The new bumper will be announced to dealers about Jan. 1.

FORD MOVES TO PARIS

PARIS, Oct. 28.—(by mail)—Ford expects to be fully transferred from Bordeaux to the new factory at Asnieres, on the northern suburbs of Paris, during the month of November, thus coming into the heart of the French automobile manufacturing district and being better placed for distribution. Certain French manufacturers in the Paris district claim that Ford is disturbing the labor market by paying a much higher rate of wages than is common in the industry.

Louisville Building Race Track to Open in April

LOUSIVILLE, Nov. 7.—A half mile motor speedway, planned for track records, with special safety facilities, is being built in Louisville on the Dixie Highway, just south of the city.

The track will be dish shaped, 50 ft. in width, with a 16 ft. grade at the turns. A concrete wall will be built in front of the grandstands to protect spectators from any possible accident. When completed the grandstand will seat 6,500 persons.

Grading of the track is complete and, after settling, will be surfaced oil treated and hardened. Plans are being made for the opening in April with three other races during the year, on Memorial Day, Fourth of July and Labor Day. Some of the best drivers in the country are expected to compete in the opening event.

Louisville men interested in the speedway are Mansell Ouerbacker, Pat Moran, Forrest Holt, Raymond Reynolds, Harry Ransdell, Garland Lea and D. A. Given.

SOLEX PLANS U. S. ENTRY

PARIS, Oct. 28.—(by mail)—Maurice Goudard, one of the three owners of the Solex Carbureter Company, will sail for the United States during the month of November with the object of organizing a manufacturing branch of the Solex Company at Detroit. Goudard spent several weeks in America early this year, and returned with the conviction that the Solex carbureter could be manufactured and marketed successfully in the United States.

ADVERTISE FORDS IN TRAMS

NEW ORLEANS, Nov. 7.—Cars for Christmas presents are being advertised strenuously through street car cards by Jarreau Motors Co. of New Orleans. On the card is the picture of a Ford with this inscription: "A $25 deposit will reserve this car for delivery Xmas morning. Pay $85 on December 24. The gift that will bring greatest happiness."

New Peerless Light Six To Be Announced Soon

Car Will Be Shown by Dealers Nov. 21 After National Announcement Nov. 19

CLEVELAND, O., Nov. 7.—Announcement is made at the factory of the Peerless Motor Car Company that the new model 80 light six cylinder car will be formally announced in national advertising on November 19 and will be shown to the public in Peerless showrooms in different parts of the country on November 21.

The formal announcement of the new car will reveal to the public the conception which Edward Ver Linden, president of Peerless, has as to the kind of car the public is demanding. It will be found to be a car which is roomy and powerful enough for all ordinary business and family uses and at the same time light and compact enough for ease of operation, especially on crowded city streets of the present day. Most surprising will be the price. This new Peerless can be bought at a price within the reach of almost any purchaser who is in the market for a real automobile.

Dealers who have seen samples of the new model are enthusiastic over it and Peerless has formed many new dealer connections with men who feel that the new car will have a place of its own in the automobile market.

Sales of the established lines of Peerless cars, the Equipoised Eight and model 72, have been such that production for the month of October at the Peerless factory was announced as 100 per cent greater than the figures in October of last year.

Complete technical description of the new Peerless six will be published in the Nov. 19 issue of Motor Age.

Fort Worth and Waco Send Mechanics to Public Schools

FORT WORTH, Tex., Nov. 7.—The Fort Worth public schools are offering courses in automobile mechanics and have invited each dealer organization in the city to send any mechanic it may desire to the school for special training. The classes are being conducted at night and are without cost to students.

President Fisher of the Fort Worth Automotive Trades Association, in behalf of the body, thanked the schools for establishing the course and urged each dealer body to send any man they might have who desired a more extensive course in his work, to the new classes. The Fort Worth association has endorsed the establishing of the course in the public schools.

The Waco Public Schools have also included a course in automobile mechanics in its course of instruction. The dealers there have endorsed the action of the school board in this matter.

Texas Sees New Record In 1925 Car Business

New Automobile Volume Is Expected to Reach $130,000,00 by First of Year

DALLAS, Tex., Nov. 7.—The volume of business done in automotive lines in Texas this year will probably establish a new record. All lines of the trade have been active since the first of the year and it appears the trade will continue good for the remainder of the season

The new car business in Texas during the present year will amount to around $130,000,000, automobile dealers and distributors estimate. That will establish a record, not in money value of cars sold, but in number of cars, it is said.

Those closely in touch with the used car business in Texas estimate the number of used cars disposed of has been larger than the number of new cars. The value of these cars, however, is far below that of the new cars.

The accessory business during the year has already set a new record.

The tire business is good but frequent hikes in prices have driven many motorists to tire rebuilding shops in efforts to avoid steep quotations. The business this year, the dealers say, will amount to as much in number of tires sold, as in 1924, which means the volume of business will be larger.

The majority of the new cars sold now, as in the first ten months of the year, involves trade-in and part cash basis. The same applies to used car business. Dealers and credit corporations report collections good and few repossessions necessary.

Indiana Registrations in September Show Decline

CHICAGO, Nov. 7.—Statistics covering registration of new passenger cars in Indiana during September reveal that there was a drop of 17 per cent in the total as compared with the preceding month. Fords declined the sharpest with a loss of 37 per cent. Low-priced vehicles (excluding Fords) were off 1 per cent; there was a decline of 3 per cent in the medium-priced division while in the high-priced group the decrease was 15 per cent.

Following are the detailed figures for the first nine months of 1925:

Month	Fords	Low, excl. Fords	Medium	High*	Total
Jan.	4,239	1,024	1,837	117	7,217
Feb.	3,515	896	1,533	103	6.047
March	5,778	2,042	4,031	205	12,056
April	5,002	2,292	3,641	243	11,178
May	4,819	2,205	3,413	175	10,612
June	4,176	1,982	2,920	153	9,231
July	4,314	1,965	3,245	164	9,688
Aug.	2,816	1,868	3,274	181	8,139
Sept.	1,774	1,845	3,154	153	6,926
Total	36,433	16,119	27,048	1,494	81,094

*Includes miscellaneous cars not named.

The foregoing statistics were compiled from figures furnished to MOTOR AGE by Indianapolis Auto Trade Association, Indianapolis, Ind.

Mayor Sticks to Fire Horses

MILWAUKEE, Oct. 17.— Complete motorization of the local fire department is opposed by Mayor D. W. Hoan who has refused to accede to the request of his appointee, Fire Chief Steinkellner, and will block all efforts to completely motorize the department. Mayor Hoan's objection is based on his theory that motor apparatus cannot negotiate heavy snowdrifts and that some horse-drawn equipment should be maintained for use in stations near recently annexed suburbs where heavy snow is apt to be encountered in winter. Motor vehicle men in Milwaukee hold that a properly powered fire truck can go through any mud or snow obstacle as well as horse-drawn vehicles if not better.

BLACK & DECKER CHANGES

TORONTO, Nov. 7.—R. W. Sommerville has been appointed Canadian sales manager of the Black & Decker Manufacturing Co. Ltd., succeeding A. J. Hopkins, who resigned to go south. Mr. Sommerville has been associated with the company as its Ontario and western sales representative for some time.

CANADA NASH DEALERS

TORONTO, Nov. 7.—Breay-Nash Motors, Ltd., Ontario distributor of Nash motor cars, reports, that it has allotted the Nash franchise to the following dealers: H. S. Young, Aylmer, Ont., H. Holland-Hurst, Haileybury, Ont., Cook's Auto Service, Kingston, Ont., J. W. McLaughlin, London, Ont., Geo Spackman & Son, St. Thomas, Ont., Nash Motor Sales Co., Windsor, Ont.

INDIA DEALERS MEET

SAN FRANCISCO, Nov. 7.—Tire dealers to the number of 125, selling the products of the India Tire and Rubber Company in every city of the Pacific Coast, met in annual meeting at San Francisco at the call of J. M. Alderfer, president of the corporation. The meeting, which lasted two days, also took the form of a celebration of the fourth anniversary of the entry of the India company into the Pacific coast.

FLINT BUYS BRANCH

SAN FRANCISCO, Nov. 7.—The Flint Motor Company has purchased the business and good-will of Collier, Brooker & Broad, Flint distributors for the San Francisco territory, and are operating it as a direct factory branch. The three partners in the former distributing firm remain with the new branch. C. H. Collier becomes manager, with J. S. Brooker and Charles Broad as his assistants. C. M. Steves at the same time was appointed manager of the Pacific coast zone for the Flint Company.

Spring Rush Continues in Cleveland, Dealers Assert

Industrial Authorities Expect Heavy Demand Will Continue Throughout Year

CLEVELAND, O., Nov. 7.—All phases of business in the automotive industry here are riding high on a "permanent" wave of prosperity.

This, at least, is the cheering word which came today from manufacturers, wholesalers and retailers alike as they completed check on October production and sales records. October's output of automobiles here, far in excess of the production record for the corresponding month in 1924, kept abreast with the pace set early this spring which has continued without cessation or sign of let-up since, factory executives said.

Parts manufacturers made similar announcements, while wholesalers and retailers of both cars and accessories did likewise. Indeed, October proved itself a lucrative period for most everyone in Cleveland whose livelihood is dependent upon the automotive industry.

The current month, car makers said, might witness a slight reduction in production—a usual seasonal retrenchment which will be temporary. Production of greater proportions than ever, they predicted, would follow along about the first of the year. Parts manufacturers have a different story. Their production, they opined, will continue at the present high level throughout the winter.

OVERLAND DEALERS MEET

DECATUR, Ill., Nov. 7.—Distributors and salesmen of the Overland and Willys-Knight cars in the Illinois territory assembled here to discuss trade problems, the guest of W. C. Starr, local distributor, C. P. Kilbourn, assistant general sales manager of the Overland company, was the factory representative present and delivered the principal address.

Firestone Planning to Push Rubber Growth in Mexico

AKRON, Nov. 7.—Harvey S. Firestone, president of the Firestone Tire & Rubber Co., has announced that he is planning to extend his operations to every part of the world where there is a possibility of growing crude rubber for American consumption under favorable conditions.

In addition to the Liberian project, where work has just been started on a $100,000,000 development program, Firestone's latest activity is the leasing of 35,000 acres of rubber plantation land in the province of Tobasco, Mexico.

For several months the company has had forces at work in Tobasco, perfecting the organization of the huge plantation there. In that time buildings and roads have been constructed, and Indian laborers brought in from the jungles of the isthmus of Tehuantepec.

Along Automobile Row

CINCINNATI, O.—Announcement was made this week of the change of the representation of the Cleveland Six in the Cincinnati territory from the Hoadley Motor Car Company to the Hodge-Long Motor Company.

RICHMOND, Va.—The Butler Motor Company, Chrysler dealer, is one of the latest automobile sales agency to be formed in Richmond.

ST. LOUIS.—The formal opening of the new factory branch, Indiana Truck Company was held recently. A sales meeting was held during this opening, the Indiana Truck Corporation being represented by J. W. Stephenson, president, and E. A. Kightlinger, vice president charge of sales.

ALBANY, Ore.—Lloyd Templeton has returned to Albany's automobile row and has secured the distribution of Hudson-Essex cars in Linn County.

SALT LAKE CITY.—The Auto Exchange has been opened as a home for the used car department of Richardson-Bower, Inc., Dodge distributors and dealers.

CINCINNATI, O.—C. Brum of the Brum Motor Car Company has been given the agency for the Rollin car in the Cincinnati district.

CHICAGO.—The Bazek Motor Company has opened sales quarters at 8609 Commercial Avenue as South Chicago representatives of the Auburn.

ST. PAUL, Minn.—The Twin City Motor Car Co. has opened a retail community agency for sale of Hudson and Essex cars in charge of W. G. Heitmiller, who has appointed Peter Ehlens as service manager.

MILWAUKEE.—R. C. Zastrow, Inc., is the style under which the reorganized partnership of Zastrow & Burkert, Dodge Brothers car and Graham truck dealers of Racine, Wis., will operate in the future.

CHICAGO.—The Auburn Chicago company has been incorporated with 200 shares of no par value capital by R. S. Pruitt, F. G. Mason and P. Lee.

BURLINGTON, Ia. — The Burlington Cadillac-Nash company has filed its incorporation papers listing $20,000 capital to conduct its sales, service and garage business.

ELGIN, Ill.—The L. & G. Chevrolet Sales Company, has been organized here with capital stock of $25,000. A garage and sales agency has been opened at 141 South Grove Avenue. The members of the company comprise W. E. Graf, R. S. Lord, and H. C. Daniels.

PORTLAND, Ore.—The Art Mackenzie Motor Company has incorporated to handle the down town retail sales of Chrysler cars and have opened quarters at 105 North Broadway.

CHICAGO.—M. De Tulio has announced the addition of H. C. Sandusky as his assistant in the sale of Isotta-Fraschini, Excelsior and Austro-Daimler cars. Mr. Sandusky was formerly Chevrolet distributor for Texas.

DULUTH, Minn.—The Lang-Nash Motor & Tractor Co., as a result of adding the Ajax line in this territory, has moved into larger quarters.

GREENFIELD, Mass., Oct.—Athertons, accessory and tire dealer, has been incorporated as the Atherton-Hawes Co., with Fred E. Atherton as president and Arthur L. Hawes, formerly of Natick, Mass., as treasurer. A radio department has been added.

SPOKANE, Wash.—Richard Cole of the Eldridge-Buick company won the firm's sales contest held last month. A radio set was given as prize.

CHICAGO.—R. P. Miller has moved into his new Lincoln service station at 104th and Michigan, one of the largest exclusive Lincoln service stations in the city.

WINSTON-SALEM, N. C.—Twin City Motor Company, Ford dealer, of which F. J. DeTemble is president, has leased a $90,000 three-story fireproof structure, which will be occupied when completed by June 1.

WALNUT RIDGE, Ark.—J. J. Sharum, president of the Sharum-Hopps Motor Company, local Ford dealer, is having two store buildings remodeled to be used as assembly rooms for Ford cars and succeeding Floyd Ross who resigned.

CHICAGO.—I. Karno, associated for some time with the J. Toman Motor Co. at 6139 Cottage Grove Avenue, has been promoted to the position of sales manager, succeeding Floyd Ross who resigned.

COLUMBUS.—F. E. Avery, Oakland dealer, has opened a downtown used car branch store at 245 North Fourth Street, for the convenience of his customers in used cars. E. H. Hart has been placed in charge of the branch store.

EASTHAMPTON, Mass. — Lyon Motor Co., Ford and Lincoln dealer, has been reorganized and placed under the management of Peter Roberts, who has been for four years a salesman for the Automobile Sales Co., Inc., of Springfield.

PORTLAND, Ore.—Glenn C. Stater and Ralph G. Parker, both Portland automobile men, are the new owners of the Ford agency in the Pendleton, Ore., district. The business will be conducted as the East Oregon Motor Company.

COLUMBUS.—The first subagency for the Packard Motor Car Co. in Columbus has been established with the opening of the Tetlow Motor Co., at 2118 North High street.

LAYTON, Utah.—Lucius Laudie, owner and manager of the Layton Auto Co., has disposed of the business to four or five others and will retire in the immediate future. He has been a Ford agent for nine years.

CHICAGO.—With the retirement of the Louis Geyler company from the automobile field, both Case and Gardner will be handled as factory accounts in Chicago. Case will be handled by the Hampson-Board Co., at 2515 South Michigan, with display room at 2534 South Michigan, now occupied by the Davis Motor Co., Gardner will maintain a factory distributing depot at Twentieth and Michigan under the direction of Helm Walker, formerly local manager for the Pilot.

CLEVELAND, O.—Announcement has just been made by O. C. Tyner, president of the Jordan Ohio Company, local Jordan distributor, of the appointment of the Fifth City Motor Sales Company, as an associate Jordan dealer in this city.

MILWAUKEE. — Robert Lewis, star salesman for the West Point Garage & Sales Co., Willys-Overland dealer of Milwaukee, has been appointed manager of the company's used car department.

DAVENPORT, Ia.—H. W. Neuman of the Neuman Machine company, distributor for the Jordan, Auburn and Elkhart cars, has added the Studebaker agency to his list and will establish Studebaker service.

CHICAGO.—The Locomobile Company of Illinois has moved into its new building at Twenty-fourth Street and Michigan Avenue.

ST. LOUIS.—Venable Johnson, formerly sales manager of the Johnson Automobile Company, Ford dealer, has been promoted to manager of the company and J. E. Pelinski, leading salesman of the company for eight years, to sales manager.

ST. PAUL, Minn.—M. J. Owens, manager, of L. W. Jordan Co. has bought and reorganized the Moberg Auto Co. of Bemidji, Minn., as M. J. Dwens, Inc., to sell Dodge Brothers cars in that district.

EASTHAMPTON, Mass.—L. A. Rust has added the Hudson and Essex agency to his Chevrolet line and has opened a new store.

SAN ANTONIO, Tex.—The Travis Automobile company, Hudson-Essex dealer here, was incorporated this week.

CHICAGO.—Three women, Minnie Stutzky, Agnes Johnson and Helen Frazen have incorporated as the Service Auto Wreckers, Inc., 84 West Randolph Street. The firm will buy and sell automobiles and all parts and accessories.

BOSTON.—The Luxor Manufacturing Company, of Framingham, Mass., has just leased a large salesroom in the former United States Tire Company building where it proposes to sell its Luxor Taxicabs at retail.

SALT LAKE CITY.—The Richards Motor Co., headed by George F. Richards, as president; George F. Richards, Jr., as secretary, and Joel F. Richards, as manager and treasurer, has been organized here to handle the Chrysler car.

SPOKANE, Wash.—Spokane Battery & Ignition company has opened a new speedometer department with A. J. Richards in charge.

SAN FRANCISCO.—Fry-Schloss Motor Company has been formed by George W. Fry and Ansel J. Schloss to sell the Chrysler in the Mission district.

CHICAGO.—J. G. Shepard, retail sales manager of the Wills Sainte Claire Company of Illinois, has been made wholesale manager of the branch. Clyde G. Longnecker has succeeded Shepherd as retail sales manager.

MULTNOMAH, Ore.—Wilcox Brothers, Ford dealers, have recently completed a new garage and modern and fully equipped repair shop.

CINCINNATI, O.—The factory franchise of the Cincinnati district for the Velie Motor Car Company has been placed in the hands of the Norwood Velie Company, George Meixner, proprietor.

BOERNE, Tex.—Ed Herpel has sold the Ford dealership franchise for this territory to Harry A. Paige of Houston. Mr. Herpel is a member of the firm of Herple-Gillespie, Ford dealer, of San Antonio.

CHARLOTTE, N. C.—The E. and W. Motor Company, of Charlotte, was incorporated by Lane Etheredge and George Wilson, Jr., each of whom is a Ford dealer here. The new corporation, which has a capital of $50,000, will engage in the sale of Lincoln cars, taking over the Lincoln department of the Etheredge Motor Sales Co.

CHICAGO.—The B. L. Finney Motor Sales, Packard dealer, has opened a new sales and service home at 120 East 111th Street.

DULUTH, Minn.—The Duluth Rickenbacker Sales Co. and the Northern Motor Co. have united under the latter name at 210 E. Superior Street. The Northern Co. was Oldsmobile sales agent in the Duluth and Range districts.

MILWAUKEE.—Matt Kissinger, formerly general manager of the Wisconsin Magneto Co. of Milwaukee, has been appointed Metropolitan dealer for Willys-Overland in this city and has founded the Kissinger-Overland Co.

DECATUR, Ill.—J. D. Deiper, proprietor of the Midway garage, has taken the Auburn agency for this city. It is the first time in many years the Auburn has been locally represented.

PORTLAND, Ore.—The Pacific Automotive Service Company, Inc., has changed hands, having been purchased by Charles H. Mead and Clayton A. Sharp, who have been connected with the trade in this city since 1906. The new firm will be known as the Gabriel Snubber Sales and Service—Mead & Sharp retains the Gabriel line, Splitdorf, Purolater and the Johns Manville Lines.

With the Associations

Buffalo Has Sales School

BUFFALO, N. Y., Nov. 7.—Buffalo has inaugurated in one of its public schools a free course in automobile salesmanship, believed to be the first of its kind ever established in this country.

The course is under the direction of the city board of education, and the Buffalo Automobile Dealers' association. It deals with the fundamentals of motor car salesmanship. The instructors are Carlton C. Proctor, executive secretary of the automobile dealers' organization; Walter M. Ladd, president of the Reo-Ladd Motor Corporation; Albert L. Sawyer, secretary and sales manager of the Pierce Arrow Sales company and former service manager of the Pierce-Arrow factory and member of the department of public instruction. Mr. Sawyer's theme will be the relation of service to sales.

The lessons are to be held at Elm Vocational School. The course will be arranged in unit lesson form, and will comprise lectures and practical demonstrations, covering a period of eight weeks, three evenings a week. In addition lectures will be given by prominent Buffalo automobile dealers and sales managers. The graduates will be assured positions in the organizations of the automobile dealers of Buffalo.

Atlanta Meeting Dec. 7

ATLANTA, Nov. 7.— Monday, Dec. 7, is the date that has been selected by the executive committee of the Atlanta Automobile Association for the annual meeting of the organization, at which time officers will be elected for the ensuing year, and plans for 1926 activities discussed. The meeting will be held at the Capital City Club.

The nominating committee includes D. C. Black, Robert H. Martin, John E. Smith, R. N. Reed, Fred Tegder and W. R. C. Smith.

One of the principal reports of work the past year will be that of the legislative committee, which succeeded in bringing about the defeat of every measure that could be termed as detrimental to the automotive industry at the 1925 summer session of the Georgia State Legislature, and secured the passage of three or four important measures favorable to the industry.

Memphis Tire Dealers Elect

MEMPHIS, Nov. 7.—Peter J. Quigley, of the Quigley Tire and Rubber Co., has been elected president of the Memphis Tire Dealers' Association. A big delegation from Memphis will attend the national convention in St. Louis and extend an invitation by Memphis for the 1926 national meeting.

S. Carolina Fights Tax

CHARLESTON, S. C., Nov. 7.—Under the leadership of J. Gilmore Smith, president, the South Carolina Good Roads Association is carrying on a vigorous fight against the automotive war excises. The association has prepared a petition addressed to the South Carolina delegation in Congress and a supply of these petitions has been mailed to motor vehicle dealers, distributors and owners of parts and accessory stores in the state, asking their complete co-operation in the campaign.

Foster Heads Boston Boosters

BOSTON, Nov. 7.—Charles M. S. Foster, elected president of the Automotive Boosters Club at its annual meeting here, has called a meeting of the executives to appoint committees and plan for different events during the winter. There will be dinners at least one a month leading up to the big annual banquet during motor show week to which many of the prominent accessory makers and their executives will be invited.

The other officers chosen were Mason T. Rogers, vice president; J. Raymond Dade, secretary; W. C. Scott, treasurer; G. V. Sammett, Daniel Tannen, O. C. Lighty and S. F. Stowers, directors. At the first meeting of the officers a tentative list of committees were selected, and these will be acted upon at the November meeting.

Mr. Foster represents the Liquid Company, of New York City; Mr. Rogers, the Burton, Rogers Company, Boston; Mr. Dade, Sparks-Withington Company, Jackson, Mich.; Mr. Scott, Biflex Corporation, Waukegan, Wis.; Mr. Sammett, Bell, Timer Company, Boston; Mr. Tanner, I. Sonneborn, Inc., New York City; Mr. Lighty, Champion Spark Plug Company, Toledo, O.; Mr. Stowers, Lincoln Products Company, Chicago.

Tire Dealers Pick Quinn

ST. LOUIS, Nov. 7.—C. V. Quinn of the Reid-Quinn Tire Co., treasurer of the Associated Tire Dealers Inc., of St. Louis, has been elected chairman of the entertainment committee to succeed the late S. L. Chorlins.

Peoria Plans Show

PEORIA, Ill., Nov. 7.—At a meeting of the Peoria Automotive Association, it was decided to stage the fifteenth annual automobile and accessory show the third week of February. A committee to handle the coming event was appointed, comprising P. K. Norman, A. C. Thede, L. E. Graham, Bruce Rutherford, and C. A. Roadstrum. It was voted to make a larger appropriation than ever before in order to insure a larger and more attractive display.

Seek Opinion on Show Selling

NEW YORK, Nov. 7.—The show department of the National Automobile Chamber of Commerce has sent a questionnaire to all exhibitors at the annual show in New York City to determine the consensus as to the proposal that exhibitors refrain from soliciting orders during the show.

Sufficient replies have not been received to indicate the trend of opinion but the Automobile Merchants' Association of New York, Inc., at a luncheon meeting voted against the proposal on the ground that it is impractical and cannot be enforced. The question was raised as to exactly what is meant by "solicitation" and just where such solicitation during a show would begin.

The association adopted resolutions commending the N. A. C. C., the N. A. D. A. and other organizations for their work in arguing for repeal of the automobile excise taxes before the ways and means committee in Washington recently.

Closed Car Week, just observed by association members through individual displays, was described as a success, but Harry G. Bragg, general manager, said that closed car week next year, though observed in the same way, would be made even more effective through wider advertising and illumination and decoration of Automobile Row.

Joint Association Formed

SAN FRANCISCO, Nov. 7.—Owners and operators of automotive vehicles of all kinds, as well as distributors and dealers in these vehicles, and manufacturers of equipment in Oregon have organized a state-wide association under the name of the Oregon Motor Conference, according to reports received by officials of the San Francisco Motor Car Dealers' Association.

Included in the organization are the Oregon Auto Freight Association, the Oregon Automobile Dealers' Association, the Oregon Automotive Trades Association, the Oregon Motor Stage Association, the Oregon State Motor Association, the Portland Draymen's and Warehousemen's Association, and the Portland Industrial Traffic Club. The association was brought about because of the experience of all the organizations named that they could accomplish more when banded together than when operating each in its own individual field.

Problems of operation, distribution, sales, traffic, road-building and maintenance, taxes and license fees are to be taken up, and the strength of the state-wide association used to obtain the passage of legislation giving owners and operators of commercial vehicles, and dealers in automobiles, a square deal.

October Is Best Sales Month in Birmingham

Lower Priced Cars More in Demand but All Dealers Express Satisfaction

BIRMINGHAM, Nov. 7.—The automobile business had its record month of sales so far in Birmingham during the month of October. Dealers in all classes of cars sold in this city report exceptionally good sales on the new cars. The less expensive makes have been more in demand than the expensive cars, but all dealers have been well satisfied with the results of the month's business.

Sales on used cars have continued to be slow, though they too, have shown a slight improvement during the last 30 days. All dealers have been allowing trade-ins on a strict basis of value, and for that reason the condition of the used car market has shown an improvement.

Accessories shops and departments have had exceptionally good business this month, according to reports, and the tire business has been steadily improving in this section notwithstanding the increased prices that were put into effect several months ago.

Credits are in excellent condition in Birmingham, the dealers report. Very few re-possessions have been reported on new cars during the last 30 days in Birmingham and there have been not many used cars turned back because of failure to take up the notes.

Birmingham automobile men are anticipating their largest Christmas automobile season and are making plans and preparation accordingly. This expectation is based on the exceptionally good conditions and good demand in this section. The tone of all reports from the dealers is optimistic.

ONTARIO TITLES GAIN

TORONTO, Nov. 7.—Approximate figures prepared by the Motor Vehicles Branch for the Province of Ontario, up to October 1, show that to date 297,000 passenger cars, 35,000 trucks and delivery cars, 4,000 motor cycles and 943 trailers, have been registered, an approximate total to date of 336,943 licensed vehicles. The Department of Public Highways estimates that before the close of 1925 motor vehicles in the Province will have reached 350,000, thus eclipsing the 1924 record by some 40,000 registrations.

NEW CHEVROLET DEALERS

NEW ORLEANS, Nov. 7.—W. F. Doyle, sales manager of the zonal branch of the Chevrolet Motor Company, reports a number of new Chevrolet dealerships in Louisiana and Mississippi, which is in line with the expansion program of the Chevrolet company for the two states named.

The new dealerships include:

Winnsboro Chevrolet Co., Winnsboro, La., with H. A. Love, manager, and B. S. Landis, president; Lewis & Gage, Port Gibson, Miss., with L. E. Lewis, active manager; Motor Sales Co., Picayune, Miss., with Messrs. B. Graves, Seal and Barron as incorporators; Hover & Mulbert, Hammond, La.; Quin Chevrolet Co., Tylertown, Miss, with L. S. Quin, president; L. D. Melton, Arcadia, La.; Davis Chevrolet Co., Flora, Miss., with Miles Mosely, president, and W. C. Davis, manager; Andress-Hutchins Chevrolet Co., Hazlehurst, Miss., with W. L. Andress, Chevrolet dealer at Brookhaven, Miss., president, and Mr. Hutchins, formerly sales manager Pate Motor Co., Ford dealers, Jackson, Miss., in active charge; Jefferson Auto Co.; Bassfield, Miss.; Lowery & Ruffin, Mansfield, La., with R. A. Fraser, active manager; Homer Chevrolet Co., Homer, La., with H. B. Robinson, sole owner; Ross Chevrolet Co., Oak Grove, La., with W. A. Ross, president; Joyner Motor Co., Pelahatchie, Miss., with H. E. Joyner, manager.

STEVENS JOINS OLDS

LANSING Mich., Nov. 7.—Herbert C. M. Stevens, formerly chief engineer of the Sunbeam Motor Company, Ltd., Wolverhampton, England, has been appointed consulting engineer of the Oldsmobile organization, it is announced by I. J. Reuter, president and general manager of Olds Motor Works. Mr. Stevens is well known throughout England and Europe for his long and important activities in the automobile industry, having been responsible for the production of the Sunbeam, Talbot and Darracq group, which is one of the largest motor corporations in Europe.

Details Complete for Next Year's French Grand Prix

Four Heats and Final with Drivers in Three Groups Is Plan of Board

PARIS, Oct. 25.—(by mail)—Four heats and a final will constitute next year's French Grand Prix race for 91½ cubic-inch cars, to be held on Miramas track, near Marseilles. The competitors will be divided into three groups and will be obliged to run a distance of about 62 miles. The fastest in each group will be qualified for the final. All those not having qualified will run in fourth heat and the fastest of these will be admitted with the others for the final over a distance of 300 miles.

This method of running the race has been adopted on the assumption that there will be a big list of starters and that it will be unsafe to send them all way together. There is nothing at present to justify the belief that the number of starters will be higher than usual, and since the war the average number of starters has been 13.

Sunbeam will not race next year, but the English firm will be replaced by the French Darracq, which is under the same management as Sunbeam. Eight-cylinder supercharged 91½ cubic inch cars are under construction. Fiat has both two-stroke and four-stroke racing cars almost completed. Alfa Romeo is not expected to race next year. Delage, Bugatti and the Italian O. M. are practically certain starters.

Provisionally the date of the French Grand Prix has been fixed at June 27, but Indianapolis having protested that this is too near Memorial Day, there is a proposal to postpone it to July 7. This is the first time the French race will be run under purely track conditions.

Dealers in Southeast See 1925 Tire Sales Record

ATLANTA, Nov. 7.—Managers of the larger tire manufacturing concerns with southeastern headquarters in Atlanta interviewed in regard to the outlook for tire business in the territory this fall and winter, almost without exception predict that the last quarter of 1925 will result in the hanging up of a new sales record for the tire industry in this district.

This is largely indicated by the heavy orders jobbers and factory branches have been receiving from the retail dealer trades in the Southeast during the last three or four weeks, and the fact that automobile sales in this section during the first nine months of the year—January to September inclusive—were as large as they had been for this period in the past four or five years.

All indications are that 1925 sales, regarding the year as a whole, will be the largest by far they have ever been in the history of the tire business in the Southeast, in spite of the lull during the latter part of the summer. The volume of present business indicates that the dealer trades in this district are carrying the largest tire stocks they have ever carried before at this season of the year.

SQUEEKS and RATTLES

THE GOLD-FISH BOWL

"Off'cer, thish shervice 'sterrible—'s gettin' so lately a gen'man's got no privacy 'tall"

—Judge.

At sixty miles
Drove Willie Smidder;
He lost control
His wife's a widder.
—Town and Country, Pennsburg, Pa.

They also serve who stand and wait until the traffic cop says "go"—and they don't have to serve time either.

—B-C-A News.

She: I'm just wild about a yacht!
He: Do you think you could behave yourself in an automobile.

—Princeton Tiger

"My man went away in a huff."
"Is that so—I didn't know he had a car."

—Wisconsin Octopus.

Save me, please,
From Lizz McNabb
She always says,
"Let's take a cab."
—Notre Dame Juggler.

Bill Turpin sneered
At careful folk;
He hasn't sneered
Since his axle broke.
—Pitt Panther.

Ever hear of the "Cinder Car?"
I'll bite.
It's a used Cole.
—J. R. H.

There are probably more people in the country today who have been kicked by a motor car than by a horse.

—B-C-A News.

Boy: I just bought a used car.
Friend: Cheerio! a rattling good investment . . . Shake!

—Williams Purple Cow.

"Do you like walking down hill?"
"Goodness, no, my heel always catches."
"Fine, let's drive up this mountain."

—C. C. N. Y. Mercury.

VACATION ECHOES

Wife: Now John, is there anything we've forgotten?
John: (sarcastically) There's the piano, my dear.

—London Opinion.

CAR AUCTIONS CANCELLED

ST. LOUIS, Nov. 7.—It has been decided to discontinue the used car auction which has been held on Saturday mornings at a public market lately by the Selkirk Auctioneering Co., acting for six members of the St. Louis Automobile Dealers' Association. The affair never proved to be the success it was hoped it would be largely because of the bad weather. Never for many years has the month of October been so unpleasant as it was this year.

CRAWFORD IS PROMOTED

CHARLOTTE, N. C., Nov. 7.—Joe Johnson, manager of the Carolinas branch of the White Motor Truck Company, has resigned and departed for Florida to enter the real estate business. Byron Crawford, salesman, is promoted to branch managership. Mr. Johnson formerly was southeastern wholesaler manager of this company, with headquarters at Atlanta.

New Car Sales Hold Up Well in Salt Lake City

SALT LAKE CITY, Nov 7.—New car sales are holding up well. Business is as good as it was a month ago, and while the present good weather lasts is not likely to fall, dealers believe.

Sedans, Coupes—in short closed cars, continue to lead. This was not generally true of the Ford sales, however. Dealers say they are looking for everything to be in the closed class in the near future.

In point of population, city business is a little better right now than the country business, but there is no doubt that this will be reversed later. Every one is looking for a good volume of business from the farmers this fall and early winter as a result of the excellent crops which are selling at big prices.

Several dealers are making big efforts to dispose of their surplus used-car stocks. Some of them are rather heavily stocked, but taking this city as a whole the number of used cars on the market is not unduly heavy. Used Fords are now reported to be well in hand, stocks being lower than for a long time.

"Yankee" No. 2000

Here's the way to cut brake lining

The quick, easy "YANKEE" way

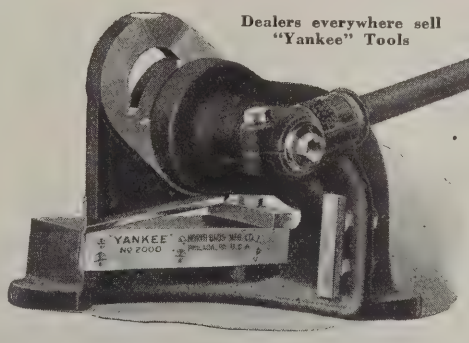
When you have a hurry-up lining job, time counts. That's when a "Yankee" Brake Lining Cutter comes in handy.

One stroke of handle cuts the lining cleanly, and quickly. No time lost looking for something to rip it apart.

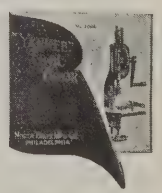
Not only on fast jobs, but on every lining job day in and out, the convenience of this dependable cutter, is worth while.

"YANKEE" No. 2000 Cutter

Can be fastened to bench or floor, or mounted on board so it's portable. Lever operates a rack and pinion movement. Knives are highest grade steel. Adjustable in case of wear.



Capacity, 3/8 x 6 in. Cuts belting also. Extreme length, 11½ in. Height, closed, 7 in. Open, 8¼ in. Handle length, 13 in. from center. Weight 22 lbs.

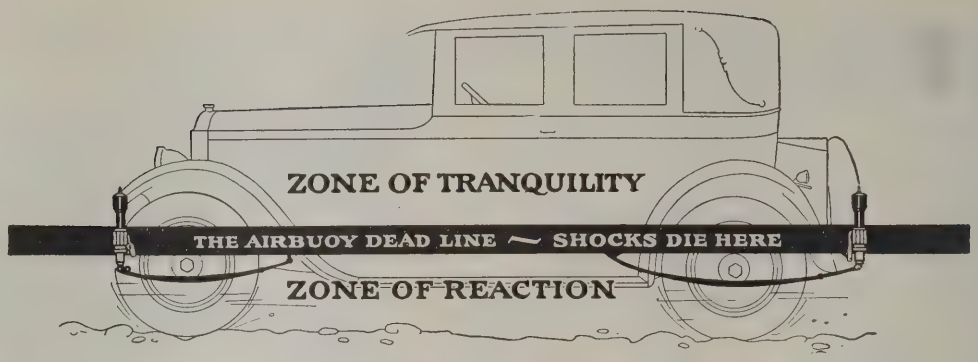


Some other "Yankee" Tools

Ratchet Breast Drills
Ratchet Hand Drills
Automatic Feed Bench Drills
Automatic Feed Chain Drills
Ratchet Tap Wrenches
Vises, Removable Base

"Yankee" on the tool you buy means the utmost in quality, efficiency and durability.

Dealers everywhere sell "Yankee" Tools

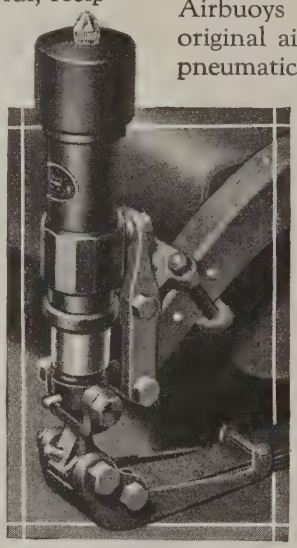


Have you a copy? Every mechanic finds this free "Yankee" Tool Book interesting and profitable. Write for your copy.

NORTH BROS. MFG. CO., Philadelphia, U. S. A.

"YANKEE" TOOLS

Make Better Mechanics



Why an Airbuoyed Car Rides Like a Pullman

PULLMAN comfort needs more than steel rails and ballasted roadbeds, more than heavy leaf springs. Above and beyond all these, the car is floated on powerful, reciprocating shock absorbers.

So also with Airbuoyed motor cars. Above and beyond their steel springs and balloon tires, they are steadily balanced on compressed air, regulated and controlled by hydraulic power. Every one of the four channels, through which road-shock reactions may reach the frame, is guarded by an Airbuoy. And in the Airbuoys those reactions are not only arrested; they are eliminated.

Below the Airbuoys are the springs, axles, wheels and tires—bouncing, bending, twisting and shimmying. Above the Airbuoys is the car frame, supporting chassis, engine and body—all smoothly gliding along—their balance constantly maintained.

Airbuoys are a further development of the original air-springs for automobiles. Their pneumatic-hydraulic operation (air and oil) combines the extremes of elasticity and power. Their simple sturdy construction—no springs, ratchets, belts or cables—assures a long life at highest efficiency.

Transferred from old car to new one, they operate perfectly for hundreds of thousands of miles.

Mile for mile, Airbuoys are the most economical shock eliminators obtainable. And in actual performance they surpass equipment costing more than twice their price.

DISTRIBUTORS

To Distributors who appreciate, and can adequately represent a product with all the elements of unquestioned leadership, we can offer a profitable and permanent relationship in territories not already closed.

MOTOR AGE

Vol. XLVIII | Chicago, November 19, 1925 | No. 21

Summary and Index of Important Events in

This Week's Automotive News

Detailed Stories from* MOTOR AGE *Staff Writers and Special Correspondents Appear in News Section Beginning on Page 32

AUTOMOTIVE manufacturers begin retrenching as sales volume starts to decline. Dealers report stocks low and declare Christmas campaigns will be big boost. Page 32.

Delage refuses to race in French Grand Prix next year. Says new 91½-inch cars are too dangerous and serve no good purpose. Page 42.

Thompson Research Laboratories developing carbon monoxide consumer to be used also as car and bus heater. Page 35.

Chrysler insurance plan is upheld in New York federal district court and state superintendent is enjoined from revoking license. Page 35.

Space details now arranged and exhibitors are making plans for booth decorations and number of cars to be displayed at big national shows in New York and Chicago. Page 36.

Benjamin Cram, automobile economist, sees more buying and even greater production in 1926 than in 1925. Page 36.

House ways and means committee in Washington votes to recommend reduction in automobile, truck and accessory war taxes. Page 37.

Florida automobile dealers are now receiving cars shipped to border towns in Georgia and driven across line. Page 37.

AMBITIOUS plans for expansion are voted at Automotive Equipment Association convention. Show is greatest ever held from business standpoint. Page 33.

Tom Milton wins Armistice Day race at Charlotte speedway. Page 43.

All October business records are broken in Cleveland by dealers and builders. Page 43.

Unusual color schemes are featured at annual automobile salon in New York. Page 37.

Oakland breaks all former production records in October with output of 8,088 cars. Page 39.

American race records may be given European recognition as result of decision by international association. Page 39.

Necessity of increased trade interest in national automobile shows is emphasized by Manager Sam Miles. Page 38.

Dodge Brothers sets new mark in sales and profit for first nine months of 1925. Page 38.

Main hall of Coliseum, seventh annual show of Automotive Equipment Association

A. E. A. Show Reveals Progress in Design of Accessories and Equipment

THE trend in modern automotive equipment finds a parallel in that of modern automotive design wherein radical changes have been superseded by improvement in detail.

It is possible, indeed, to apply to a good many things which faithfully year after year make their appearances at national shows that well known expression of one motor car builder "Constantly improved but no yearly models."

What is true in the designing and building of automobiles is also true of the accessories, fitments and machinery that play their part in the evolution of the great automotive industry in all its phases.

It is quite evident that modern automobile design is standardized to such an extent that radical changes are the exception. To-day we see refinement; a polishing up of details. More colorful bodies. Usefulness.

Exactly so in automobile acessories and shop equipment. There are new things, of course, but many of these are only the result of constant endeavors to improve former designs and add to their usefulness.

Old Timers Are Present

"What's new at the show?" we ask. And many of us pass rows and rows of the exhibits and say half heartedly "Nothing much, same line of stuff." We forget sometimes in memory of frills of former shows the "constantly improved but no yearly model" slogan.

We forget many of the companies exhibiting at the seventh annual show of the Automotive Equipment Association in Chicago last week have been in business many years with a product or products that have stood the test of time and in many cases have been but little changed since their inception. They have proved their usefulness.

Novelties come and go, but the practical things stay.

And so in gazing back upon this show we are tempted to take our hats off, first, to the old timers who consistently exhibit year after year with practical and sound merchandise and, secondly, to the younger concerns who are in step with modern trends for useful things and who exhibit equipment that commands respect from the trade.

Trend Toward Colors

A superficial examination of the things shown last week reveals quite forcibly the trend towards colors in automotive equipment of every kind.

Just as the motor car makers have seen fit to finish their cars in colors rather than plain black, so have the accessory makers adopted colors for their products. It is true also of the makers of shop equipment.

The accessory maker is right on the job to match the car makers' products. Where a car maker finishes some of his cars, let us say, in a certain shade of brown, we find bumper manufacturers on the job with a bumper finished in exactly the same shade to match. Trends in accessories follow those of car design. The Buckeye Brass & Mfg. Co., Cleveland, for example, displayed a line of bumpers in a variety of bright colors to match current models of passenger cars.

Color also is used in the merchandising of things not always so readily gazed upon as a car or bumper. There was at the show a maker of hand tire pumps, the Neora Mfg. Co., Waterbury, Conn., with a line of pumps attractively finished in bright colors such as red, blue and gray. This was not done to match a particular make

f car, but to furnish a ready appeal when the car owner omes into the dealer's establishment. Color catches the ye long before the spoken or written work takes effect.

The show itself was colorful. Movable display devices leverly driving home a message from the manufacturers ried with stationary apparatus adorned with clusters of nulti-colored light bulbs. Then there was the magnifient gray Pierce-Arrow coach belonging to Black & Decker, to be used by the latter company in connection vith mechanical clinics to be held in various parts of the ountry. This coach has incorporated in it all the comforts of home in addition to carrying at the rear a comlete line of Black & Decker products. A 110-volt Kohler ight plant furnishes current for the tool equipment and hus it becomes quite an easy matter to demonstrate nywhere these tools under actual working conditions.

So far as the accessories and equipment are concerned here were no frills, but naturally some makers took advantage of their opportunities to bring to the show novelties to attract attention. The Victor Mfg. & Gasket Co., Chicago, brought to the show an immense gasket, a faithful reproduction of the cylinder head gasket used on the Studebaker Special Six. This gasket measuring some 7 or 8 ft. in length was hand made and of excellent workmanship. Then, there was The Piston Ring Co., Muskegon, Mich., with an immense piston ring 6 ft. in diameter. This, it is stated, is the largest ring ever made. Suspended from it was a tiny ring 1 in. in diameter, used for air compressor work.

Canned Goods in Evidence

As in former shows of this kind the makers of canned goods were on the job with a display of products known wherever motor vehicles are operated and maintained. There is not always something attractive about a tin can filled with a liquid or a box of powder and consequently such booths often are passed by because "there's nothing new."

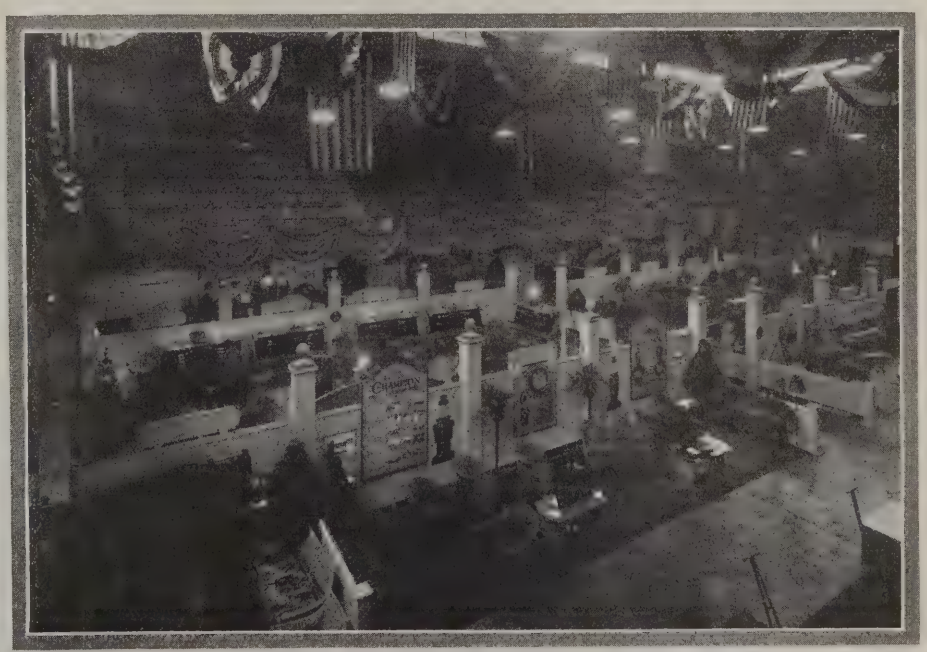
And yet, you will find among many of these canned goods items that have been on the market many years longer than some makes of motor cars or mechanical devices.

There was Van Cleef Bros. of Chicago, for instance, with the well-known line of tire cut fillers and gasket shellac; the Simoniz Co., Chicago, with its preparation for shining up and maintaining car lustre, Brake Juice, a tar remover and Corol, a rust preventive; Warner-Patterson with its liquid solder; Nu-Back Mfg. Co., St. Louis, radiator liquid and repair enamel; Kant Rust Products Corp., Rahway, N. J., with its rust preventive and the Buckeye Cleanser, a soap made by Davies-Young Soap Co., Dayton, Ohio.

Those who looked over the show carefully saw a little of the romance of automobile racing. What? Racing stuff at a show for dealers and jobbers? Yes. Just this.

Several makers of products used in passenger vehicles took the opportunity to tell the world about their achievements on the race track. Everybody loves a winner and the winners were shown.

Take spark plugs. They have an immense task to perform in a racing engine turning over better than 5000 r.p.m. And so at the show we saw the Champion Spark Plug Co., Toledo, Ohio., playing up its achievement in racing and at the same time expounding the use of sillimanite for a plug insulator in its every day type of plug for the motorists. The booth of the Indianapolis Tool & Mfg. Co., Indianapolis, smacked of racing with its "The Winning Gears" sign and illustration of drivers who used these ring gears and pinions in their mounts. And we saw The Indiana Piston Ring Co., Hagerstown, Ind., showing how its rings performed in the 122 cu. in. Duesenberg racing engines this year. Nor must we forget the oil companies. There was White & Bagley Co., Worcester, Mass., with Oilzum a trade name of long standing years before the supercharger gave the added kick to racing engines.



Stronger and Lighter Materials

Metallurgy has done the same thing in the accessory field as it has for the motor vehicle industry. It has given us stronger and lighter materials. Tools, while not differing in fundamental design, have been made more useful and dependable by better materials. Example: J. H. Williams & Co., Buffalo, N. Y., now has a line of wrenches made from chrome-molybdenum steel, by far stronger and lighter than carbon steel. Result: Mechanics have better tools. A case of refinement again.

Better materials are used in the fitments for motor cars and in the case of shop equipment we find not only better materials and better finished apparatus, but equipment in which the human element has been largely eliminated and the chance for error made very remote.

Some of the excellent performance these days with motor vehicle clutches is due in no small part to manufacturers. Much clutch trouble of former days was due to faulty facings of the disks and it probably can be safely said that the present-day success of clutches of the disk disk type is due to ground facings, which do not vary the thickness of a hair in their makeup.

That is why such concerns as Johns-Manville, Inc., New York; Multibestos Company, Walpole, Mass; The Raybestos Co., Bridgeport, Conn., and others must not be passed up at the shows as having "nothing new."

North hall of Coliseum

South hall of Coliseum

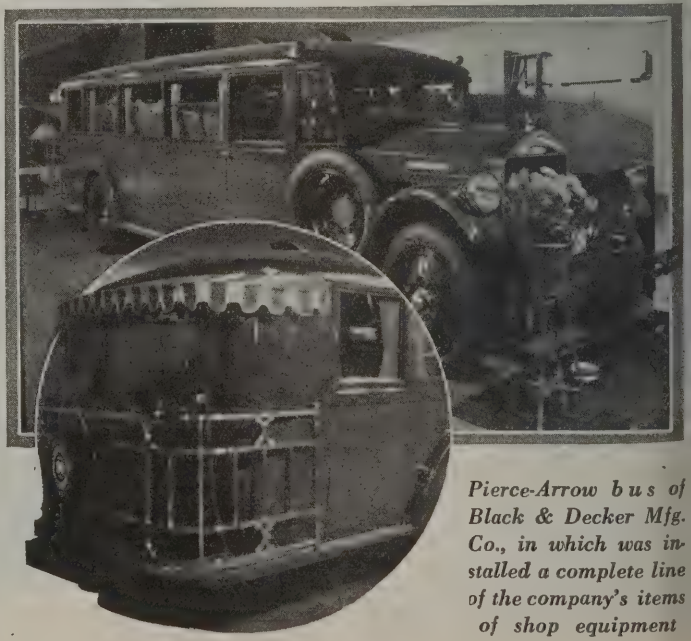
There was much evidence that manufacturers had in mind the automobile mechanic and service man by making his product more easily identified. Burgess-Norton Mfg. Co., Geneva, Illinois, for example, now furnishes its piston pins with the number etched into the surface showing exactly its diameter and length. This makes it possible to get the standard or oversize pin for a piston as the job may require and there is no danger of the mechanic picking up a wrong size.

Engine parts makers were there in abundance showing such products as timing chains, valves, timing gears, axle shafts, etc. In many of these exhibits the processes involved in the manufacturing of these parts was shown thus adding a little educational touch to the show here and there. Among such concerns was the Thompson Products, Inc., Cleveland, Ohio, makers of valves, bushings and starting cranks; Detroit Steel Products Co., Detroit, springs, and other parts; Timing Gears Corp., Chicago, timing gears; Federal Mogul Corp., Detroit, bronze back bearings, bronze bushings, cored and solid bars, connecting rod bolts, etc.; American Auto Parts Co., Detroit, car springs; Goodrich-Lenhart Mfg. Co., Hamburg, Pa., engine testing valves, wiring assemblies, brake shoes, electric cables, etc., and the N. A. Petry Company, Inc., Philadelphia, Pa., makers of tuning up valves, dash controls, foot pedals, etc.

Gasket Exhibits of Interest

One cannot help but be impressed with the excellent materials now obtainable to make a tight joint between cylinder head and block, front end gear case cover, oil pan joints, axle housing plates and the 101 other places where it is desired to retain air, water, gas or lubricant. To that end the exhibits of the manufacturers making gaskets and packings were of interest. Many of these companies have consistently put their product into the field for a great many years and notable among these concerns are the Thermoid Rubber Company, Trenton, N. J., Fitzgerald Mfg. Co., Torrington, Conn.; Vellumoid Company, Boston. Mass., McCord Radiator & Mfg. Co., Detroit, Mich., and Victor Mfg. & Gasket Co., Chicago.

Naturally a large per centage of the show is given over to electrical equipment with a variety of designs and purposes. Aside from the concerns already mentioned making electrical equipment, A. C. Spark Plug Company, Flint, Mich., was on hand with its line of well known plugs and A. C. speedometer for Fords, Forrest Electric Co., Newark, N. J., battery chargers, test sets, etc.; Mosler Metal Products Corp., Mt. Vernon, N. Y., spark plugs, timers, intensifiers, etc.; French Battery Co., Madison, Wis., flash lights radio batteries, dry batteries; Edison Lamp Works of General Electric, Harrison, N. J., bulbs; Yale Electric Corp., Brooklyn, N. Y.



The Blackhawk Mfg. Co., Milwaukee, Wis., showed a very complete line of its Speed wrenches, hand tool grinders, water pumps, and similar items and A. Schrader's Sons, Inc., Brooklyn, N. Y., who have become one of the shining lights of the accessory industry showed their well known tire valve, pressure gages, etc.

Naturally some of the booths were crowded with a variety of material almost too numerous to mention. Various concerns who have been in business for many years have added items from time to time that have appreciably swelled their list. Some of these makers have equipment not only for the motor car, but for the shop and service station as well. Under such headings we find concerns like Edelmann & Co., Chicago, Appleton Electric Co., Chicago, Imperial Brass Mfg. Co., Chicago, and others.

We have already stated the trend of the accessory and parts makers to follow the trend of automotive design toward simplifying and beautifying their product. Although the following concerns exhibited nothing radically new, their product showed tendency toward refinement and greater usefulness: Indianapolis Pump & Tube Co., Indianapolis, Indiana, The Auto Compressor Co., Wilmington, Ohio, Lincoln Products Co., Chicago, Thompson Products Company, Cleveland, Ohio, Gemco Mfg. Co., Milwaukee, Wis., Advance Auto Accessories Corp., Chicago, Columbus-McKinnon Chain Co., Columbus, Ohio, Spencer Mfg. Co., Spencer, Ohio, Bell Mfg. Co., Boston, Mass., Gilfillan Brothers, Inc., Los Angeles, Calif., Walker Mfg. Co., Racine, Wis., American Hammered Piston Ring Co., Baltimore, Md., Lyon Metallic Mfg. Co., Aurora, Ill., Frank Mossberg Co., Attleboro, Mass., Laminated Shim Company, Long Island City, N. Y., and the Cooper Mfg. Co., Marshalltown, Iowa.

NATIONAL SHOWS ISSUE
And Specification Number
of
MOTOR AGE

Will be published January 7, 1926, and will contain descriptions of brand new 1926 models and about 40 pages of up-to-date specifications of passenger cars, trucks, taxicabs, tractors and motorcycles, and many other special editorial features.

Pierce-Arrow bus of Black & Decker Mfg. Co., in which was installed a complete line of the company's items of shop equipment

What the Show Visitors Saw in the Individual Exhibits

BUMPERS finished in colors to match the colors of automobile finishes were put on display at the show or the first time by the Central Brass Fixture Company, of Springfield, O. Bumpers of this character will be included in this company's future catalog fferings. The C. B. and F. Company elieves the demand for cars of different ues will create a large demand for umpers to harmonize.

Among the interesting displays of umpers was that of the Badger Manuacturing Corporation, of Milwaukee, Vis., which, in addition to specimens of s older products, offered the first showng of its Badger Ultra Guard Round Bumper with steel rear members. This s a massive looking tubular bumper nameled in black with nickle finish. t was designed both for severiceability nd attractiveness.

The Reliance Manufacturing Company, f Massillon, Ohio, which occupied booth Vo. 348, interested many of its visitors vith the Reliance Phosphor Bronze ockwashers, which is a new product vith this organization. This is a nonorrosive washer for use in radios and utomotive devices where it is desired or contact with electric current.

Shopsutes for Mechanics

Something that should appeal to the nechanic in the automotive shop was ound in the Shopsutes which have been dded to the line of the Crawford Manuacturing Company, Inc., of Richmond, Va. The Crawford Company was located n booth 342. The Crawford Shopsute s a big, roomy one-piece khaki overall. Sizes 36 to 44, inclusive sell for $4.50 nd size 46 sells for $4.75.

Attendants at the booth of the Sterling Manufacturing Company, Cleveland, Ohio, caught considerable interest on the part of callers with a designer's model of a Radiola Battery Tester. The tester s simple in design and operation and will be ready for the Christmas trade where it is believed it should have a good appeal.

The Hall-Thompson Company, Hartford, Conn., was on hand with an artistic display of its Wonder Worker products, the red togged and be-goggled Wonder Worker mascot being much in evidence. Wonder Worker products include such items as Wonder Worker Brilliant Lustre, tire veneer, auto soap, car and road oil remover, compression grease, cup grease, tire cement, etc.

Keystone Reamer & Tool Company, Millersburg, Pa., at booth 168 was showing its new Keystone Standardized Piston Pin Reamer of helical flute design. This reamer is standardized the same as the company's 1106 reamer. The new device offers a reamer with an extreme spiral. In the foreground of the booth was a large display of taps, dies, screw plates, etc., while the show marked the first appearance of the company's catalog "Tools That Do the Job Right."

Considerable attention was attracted by the constant flow of a gas flame through a design of tubing at the booth of the Manhatten Electric Supply Company, Inc., of New York. Investigation revealed that the stunt was a demonstration of the Neon Gas Tube used in the Manhatten's B eliminator. The company was showing its new "Manhatten B Power," a B eliminator which gives a voltage up to 135. It was also showing its regular line of Red Seal electrical and radio products.

On this and the following pages MOTOR AGE presents descriptions of products exhibited at the A. E. A. Show which were not announced until the opening day of the show and therefore constitute items entirely new to the trade. There also are mentioned things which concerns of long standing recently have added to their line, but which have not previously been described in MOTOR AGE. Quite naturally some of the exhibitors had no brand new items, but displayed their wares substantially the same as in the past. In view of the fact that most of these concerns have been in the field with excellent products for many years, we mention here also the exhibits of such concerns.

At booth 175 the Continental Rubber Works, Erie, Pa., displayed samples of its wide range of products including such items as rubber mallets, blowout patches, dust caps, fan belts, automatic windshield cleaner tubing, etc. Explaining the presence of a reel carrying 500 feet of Vitalic Air Hose those in charge of the display announced that the company is prepared to sell this hose in such lengths hereafter. Heretofore the hose has been offered in lengths of 25 and 50 feet.

That such products as valves can be worked into an inviting display setting was demonstrated at the booth of the Toledo Steel Products Company, Toledo, Ohio. Conspicuous boards in the front of the booth presented valves for specific makes of automobiles while a large board in the rear and tables held other Toledo Steel units.

The Elite Manufacturing Company, Ashland, Ohio, had two new products to show the trade, one being its Reliable No. 50 Hydraulic Jack and the other its Reliable Jump Jack. The former is designed for protection against leakage and it is for general garage purposes. It lists at $50. The Jump Jack is a jack for quick changing curve. The company had an electrically actuated display demonstrating its Reliable No. 7 Balloon Tire Jack while it displayed others of its products.

Moto-Meter Company, Inc., Long Island City, N. Y., provided one of the show's conspicuous landmarks in its huge exhibition Moto-Meter design. This is one Moto-Meter that will fit no current automobile. It measures something more than two feet across the face of the dial and around three feet from the base of the cap to the top. Samples of the revamped De Luxe Moto-Meter and Standard Moto-Meter were shown at the booth. Each model now has a gold dial instead of the black dial as formerly while the retaining rings are embossed instead of plain. It makes them more attractive. Prices will remain unchanged and the revamped models will be in production Jan. 1. Jobbers can turn in old models on new ones by prepaying shipping charges.

The Continental Piston Ring Company, of Memphis, Tenn., which claims the distinction of being the only piston ring manufacturing concern in the south had its usually inviting display, this time in booth 189. Both the Elastic Oil Ring and the Elastic Piston Ring, well known to the trade, were presented on a board in the back ground.

Bumpers seemed to get a big share of the departures at the A. E. A. show this year and evidence to this effect was found again at the booth of the Harvey Spring & Forging Company, Racine, Wis. "Harvey's New Bumpers and Fender Guards" drew much attention. The bumpers and guards are made of three bars of 5/8 in. spring steel, the steel structure and design giving the units unusual resiliency and shock-withstanding qualities. An unusually wide bumping surface is also afforded.

Dolls Tell Story

Harvey's new bumpers are in black enamel and nickle trimmed. The company also showed springs and spring oilers.

The Protexall Company, Abingdon, Ill., holding forth at booth 195 did not keep the spectator guessing long as to what it had for the market. A long line of large dolls told the story. Each was dressed in a Protexall one-piece garment.

Sparks-Withington Company Jackson, Mich., signalled its invasion of the radio field with a showing for the first time of Spartan Radio Sets. They are of

the five tube tuned radio frequency variety. One of the models lists at $75 and the other at $58. Hand tinted views of the Sparks-Withington plant at Jackson were displayed to commemorate this company's silver anniversary. Of course Sparton horns were conspicuous in the exhibit.

Clifton Manufacturing Company, Waco, Texas, quartered for the show at booth 203 employed an impressive method of showing some of its auto fabric equipment. In the booth was a miniature automobile dolled up with a hood and radiator cover, top cover, and a seat cover and canopied by an automobile tourist's tent—all belonging to the company's line.

Troubles that befall the American automobile tourist were aptly illustrated on a novel map that formed part of the display of the Frank Rose Mfg. Co. of Hastings, Neb. On different sections of the map the tourist was found in some new grief. A good hand tire pump would have helped the tourist out of the difficulty on many occasions—and that is one thing the Frank Rose company sells. Another thing is a line of grease guns.

Temco Electric Motor Company, Leipsic, Ohio, received many vistors who were interested in this organization's electric drills, grinders and other shop equipments. A display rack for jobbers' show rooms was exhibited which carries six drills and grinders.

Bushings reigned supreme at booth 106 which was occupied by the Johnson Bronze Company of New Castle, Pa. This was a bright looking display and well arranged. Dealers' stock assortments of bushings were displayed, one of piston pin bushings, one of steering knuckle and tie rod bushings and one of spring bolt and general purpose bushings.

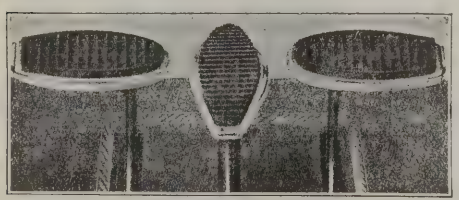
King Radio Receivers commanded the central position at the booth of King Quality Products, Inc., Buffalo N. Y., while displays presented the company's lines of such products as piston pins, piston pin screw sets, steering knuckles, shackle bolts, etc. New Shackle bolts were also shown.

New Ford Radiator Shell

McCord Radiator & Mfg. Co., Detroit, announced and displayed a new Ford nickle-plated radiator shell. This radiator shell is for Ford models from 1917 to the current 1926 designs. The booth exhibited also two gasket display boards for jobbers or service stations or other large gasket handlers. One board holds a complete assortment of ring gaskets and exhaust type gaskets, over 2000, while the other board shows exhaust or manifold type gaskets to fit all popular cars, there being about 400 gaskets in this assortment. The booth also displayed a cabinet for showing cylinder head gaskets in the dealer's place of business. The cabinet has roller bearing drawers with a locking device to prevent the drawers from coming entirely out and has several other convenient features.

The Curtis Style Y Direct Pumping Air Compressor for private garages and small public garages was one of the interesting things at the booth of the Curtis Pneumatic Machinery Co., St. Louis, Mo. This is a new product. It sells for $90 and can be used anywhere where an electric light socket is available for attachment. The outfit is on casters which can be removed along with a pushbar handle if it is desired to use the compressor as a stationary facility. There is a compression gage and the company recommends the device especially for balloon tires.

Russell Manufacturing Company of Middletown, Conn., had its latest contribution to the shop on the floor of the show. This is the Rusco Brake Lining, Drilling and Counter Sinking Machine which has been out only a few weeks. The machine is said to be particularly adapted for brake service stations and it will handle any size of brake band.



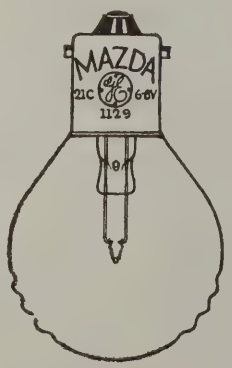
Apcó Manufacturing Co., Providence, R. I., in booth 216 introduced its Anti-Shimmy, which is a spring designed to take the wobble out of Ford wheels. It snaps onto the steering rod. The company also displayed its Anti-Rattlers, Auto Radiator Heaters and a new type of outside oiling system, all for Fords.

(Continued on next page)

Some New Products at Automotive Equipment Show

FULTON PEDAL PADS

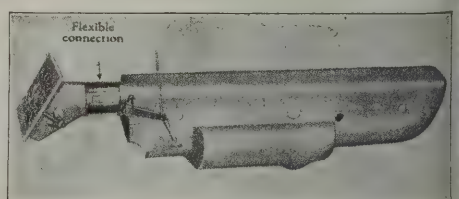
RUBBER pedal pads for the 1926 Fords are made by the Fulton Company of Milwaukee, Wis. These come in sets of three and sell at a list price of $1 for the set. A new model accelerator for all Fords including 1926, is also being produced, this selling for $1.50 and being so designed that it can be located 4½ in. from the brake pedal to obviate the danger of stepping on the accelerator when attempting to apply the brakes.



Fulton pedal pads for 1926 Ford

The Fulton Company also have a new truck mirror with 20 in. arm, plate glass being used in the mirror portion of the device. This sells for $1.25.

NATIONAL LAMP BULB



A NEW type bulb with a wrinkled surface is being made by the National Lamp Works of General Electric Company, the purpose of this being to reduce the glare when double filament bulbs are used. This change in the spherical surface is required when one bright filament is above the other for use in getting a depressed beam for passing an approaching car. For the sake of uniformity it is also being used with a single filament bulb, although its effect is inappreciable with this type and the plain glass bulb is just as satisfactory as the wrinkled type when a single filament only is employed. At the exhibit of the National Lamp Works the effect of improperly placed filaments and other details of lenses and reflectors which affect adequate and inadequate lighting was shown by means of screen on which the light from the various lamps was thrown.

Wrinkled bulb used with double filament lamp

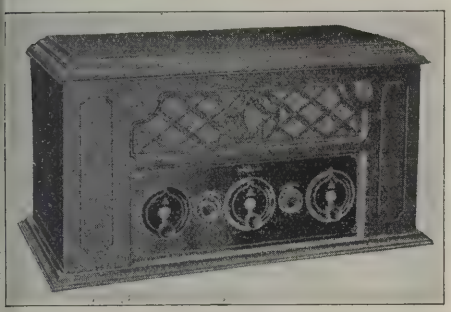
MONROE HEATERS

A LINE of heaters for Chevrolet, Dodge Brothers, Chrysler, Overland, Maxwell and Ford is made by the Monroe Auto Equipment Mfg. Co., of Monroe, Mich. These heaters are of manifold type and carry warm air to the car by means of register in the toe board. A conveniently operated handle on the dash controls the valve and either gives more or less hot air. Heaters are aluminum

Typical manifold heater made by Monroe

with the exception of Chevrolet which is cast iron. Prices range from $1 to $7.50, the heater at $1 being a sheet iron model used on Ford cars.

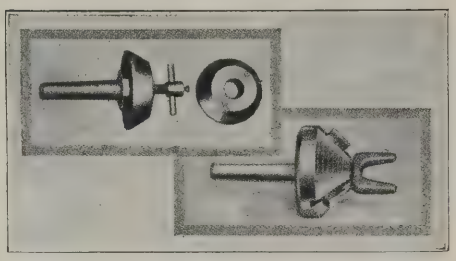
NEW LAMP



A NEW lamp for the 1926 Ford car was shown by the Cincinnati-Victor Company of Cincinnati, Ohio, this lamp being equipped with a Brown reflector. The lamp attaches to the fender in the manner used in 1926 Fords.

Some New Products at A. E. A. Show

(Continued)

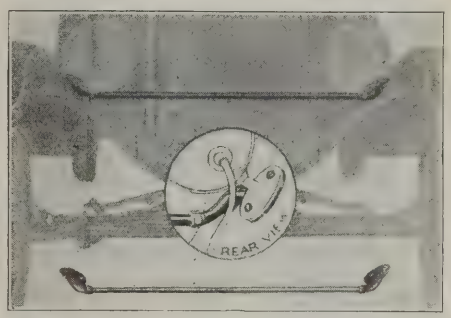


NEW APEX RADIO SET

APEX De Luxe Receiver. Apex Electric Mfg. Co., Chicago, Ill. This Apex radio product combines the company's Super Five Receiver with the Apex Entertainer (loud speaker) house in a complete unit. The receiver is so

Apex receiving set

constructed that it permits installation of certain standard types of battery eliminator equipment. With such installation it can be operated from the electric light socket, thus doing away with the everyday type of A and B batteries and chargers. Solid walnut cabinet. Size 29⅝ by 15⅝ by 18 in. high. Price $135, including Apex Built-in Entertainer, but without accessories. Slightly higher west of Rockies and Canadian prices 40 per cent higher.



ADAPTERS FOR HOLDING PISTONS

Cut shown above

ADAPTERS for holding pistons in a lathe, South Bend Lathe Works, South Bend, Indiana, are made in two styles, A and D. The former is a cone adapter to be used for turning pistons although it is especially designed for grinding work. The three adjustable jaws which slide in dove tails milled in the cone have special screws for locking them securely in position. The taper shank is ground to fit the spindle of the lathe and the cone is highly polished and graudated in quarter inches to take pistons from 2 3/8 to 5 in. Price of style A is $15. In the style D two rings, a large and small size are furnished and additional rings for larger or smaller pistons can be purchased. The two rings being turned to a 60 deg. taper, the same as a lathe center, fit into the skirt of the piston very accurately. The piston is turned by means of a driving dog. Price $9.50.

MARQUETTE LAMP AND FENDER SUPPORT

MARQUETTE Lamp and Fender Support for New Ford. Marquette Manufacturing Company, St. Paul, Minn. Recommended by the makers because of its neatness, simplicity and strength in

Marquette lamp and fender support

service. It is said to prevent vibration which soon results in loosening and fender rattle. Attached beneath the Ford lamp brackets with same bolts. No holes to drill in installation and can be put on in few minutes. The support is made in two styles, nickle and black enamel. List price, black enamel $1.40; nickle, $1.80.

(Continued on next page)

What Show Visitors Saw in the Individual Exhibits

(Continued from page 14)

That the Apco Timer for Fords is as "steady as a clock" was demonstrated with a display in which a clock face featured.

The Price-Hollister Company, Rockford, Ill., made use of cut away samples and display charts to present the merchandising virtues of its Jumbo Giant Transmission for Fords.

Very attractive Christmas packages for Williams Accelerators were on display at the booth of Williams Brothers Aircraft Corp., of San Francisco, Cal. The Christmas boxings are for both the Senior and Junior models. Another thing seen at this booth was a showing of Safe-Tie Nuts for Ford transmission bands. Then there was an accelerator merchandiser in the shape of an easel display board for the dealer.

A new jobbers' display board of welding, cutting, carbon burning and lead burning equipment was a feature at the booth of the Imperial Brass Mfg. Co., Chicago, Ill. There also was a new jobbers assortment case for compression coupling fittings in addition to a showing of other products.

One of the show's highly interesting display boards was in the booth occupied by the Modine Mfg. Co., of Racine, Wis. This company is the maker of the Modine Super Spirex Ford Replacement Radiator. The display board explained the construction of the radiator.

A new one sprung at the show by the Gladiator Mfg. Company, Auburn, Ind., was the Gladiator Air-Vac Automobile Vacuum Upholstery Cleaner. This is a small vacuum cleaner for the autombile seats, etc. The suction is created by the automobile engine, a connection being made to the intake manifold. Control is by a control cock at the dash. List $5.

Another new Gladiator product was the "Air Flex" Air Cleaner, a cleaner which it is said cannot be injured by backfire and which will not interfere with the carbureter adjustment or increase gasoline consumption. Price for Ford or Chevrolet cleaners $5. Company will furnish other prices.

New Air and Water Station

The Romort Mfg. Co as a new offering showed the Romort Air & Water Station using a Safety Tire Inflator which registers before inflation the amount of air desired in the tire. The station is built for an illuminated top without glass to break. It has a special radiator filler and a new air valve which enables the operator to reach difficult places. The company also showed a working model of its Advertising Air Station, which provides places on its sides for advertisements.

Klaxon Company, Anderson, Ind., took occasion at the show to introduce Klaxon No. 18 high frequency horn to list at $12.50, deliveries Jan. 1. The company also announced two new horn models on the motor-driven line, the 8C and the 12C, listing at $3.50 and $5 respectively. The price of the hand signal has been reduced from $5 to $4.

Bushings and bearings had another big inning at the booth of the Buckeye Brass & Mfg. Co., of Cleveland O., while Splitdorf Electric Co., Newark, N. J., presented its new socket wrench assortment in addition to such products as Bethlehem caps, spark plugs, radio and radio parts and other electric and radio products.

A new item of shop equipment was shown at the booth of the Canedy-Otto Company, Chicago Heights, Ill. This was the Canedy-Otto Motor Drive Sensitive Drill, which has been designed for any sensitive high-speed work up to ⅜ inch. The drill comes complete with motor, belt, switch, and necessary lamp cord at $44 to the dealer.

Chas. O. Tingley & Co., Rahway, N. J., showed a new clincher flap and a count-

er display box for each of its products. The company has been well known as a handler of blowout patches, plaster patches and flaps.

A photograph of a carload shipment of Pedrick Heat-Shaped Piston Rings was passed around to callers at the booth of the Wilkening Mfg. Co., Philadelphia. The picture had just been taken and the big consignment was going to Cummings & Emerson, A. E. A. jobbers at Peoria, Ill.

The Dearborn Equipment Co., Kalamazoo, Mich., exhibited display boards of its line of shop tools for Ford, Fordson and Chevrolet. It also had a good display of burnishing machines, motor stands, axle stands, etc.

It was not difficult to identify the headquarters of "Dutch Brand" goods, handled by Van Cleef Brothers of Chicago. Aside from the women running the hat checking place the "Dutch Girl" at Van Cleef's booths was the only representative of that sex on the Coliseum floor. The occasional feminine visitor is excepted. The "Dutch Girl" was a part of the big show.

Phinney-Walker Company, Inc., of New York occupied a booth with its display of clocks and watches for the automotive trade and there was plenty in gaskets at the booth occupied by the Victor Mfg. & Gasket Co., of Chicago.

Stone Mfg. Co., of Chicago, handling rims, rim parts and tire carriers had a new counter display for tire carriers and a new counter cabinet for rim parts.

Protection to the car and its human freight seems to be the goal of the American Chain Co., of Bridgeport, Conn., long known as the makers of Weed chains, while a complete line of bumpers also shows the trend of automotive merchandising, toward a more practical and safe vehicle. The exhibit of the Wolverine Bumper and Specialty Co. of Grand Rapids, Mich., also showed a variety of bumpers, both of the flat bar and round type.

Protection and Safety Keynote

Protection to property as well as safety for the car and its occupants is exemplified by exhibits at the show, the former feature being well brought out at the display of the Fraim-Slaymaker Hardware Co. of Lancaster, Pa., this display including padlocks of all sorts and sizes as well as chains with locks for use in protecting the spare tire from theft.

But protection is not necessarily confined to those things which appear to the casual observer. Under the fine exterior of the modern car is a net work of nerves, the wires that carry the electrical current to operate the horn and lights. Light circuits go here and there, under the body, across sheet metal edges and frame corners, where in spite of the most careful installation trouble is likely to occur at some time. Here the fuse, used on many cars is provided to take care of the emergency and prevent loss of battery current and possible fire hazard. Complete lines of fuses were shown by the Chicago Fuse Manufacturing Co. of Chicago and the Bussman Manufacturing Co of St. Louis. Mo., the former company also displaying a radio fuse designed to protect the filaments from possible overload from a stray connection with the "B" battery circuit.

Time was when lights were needed to light up the road, then to light the road with minimum interference with the vision of the fellow driving in the other direction, but now lights are made for many purposes, to park with, to signal with, to read by in enclosed cars and for purposes of decoration. These various types of lamps and possibly some others not mentioned, were shown by the K-D Lamp Co. of Cincinnati, Ohio, and the Culver Stearns Mfg. Co. of Worcester, Mass., the latter also having a radio set on display.

The realization is becoming more general that the receipt of profits should start rather than end with the completion of the sale of the new car, for from the time it enters the owner's hands, there is a continual opportunity for additional business and profits. Jacks, luggage carriers and tire pumps, such as are handled by the Wm. E. Pratt Mfg. Co. of Chicago, find ready sale. Other items displayed which come in this same classification are the visors, made by the

(Continued from page 15)

REAMER GRINDING ATTACHMENT

THE Sioux expansion reamer grinding attachment, Albertson & Company, Inc., Sioux City, Iowa, is especially designed for grinding both straight and spiral expansion reamers. The reamers are held between centers which are hardened and ground. A micrometer adjustment assures alignment of the reamer so as to insure grinding the reamer straightly and accurately. A gage for adjusting the tooth rest assures proper clearance on the reamers. There is an adjustable stop which insures perfect grinding of the cutting surfaces of the reamer without injury to other parts of the latter such as pilots or guides. A double screw adjustment adjusts the ways to running clearance. The capacity is up to 2½ in. diameter and 15 in. in length. The attachment complete with holder for a diamond dresser is priced at $65.

Reamer grinding attachment

SIOUX VALVE SEAT REAMER SET

Cut shown above

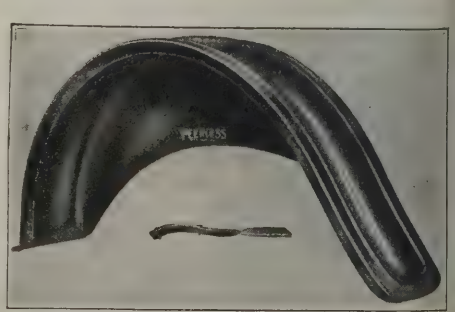
THE No. 38 Sioux standard valve seat reamer set, Albertson & Company, Inc., Sioux City, Iowa, will handle approximately 90 per cent of all engines. It comes complete in a neat metal case and contains the following equipment:

1—No. 192 Roughing reamer—45 deg., will handle valve seats from 1⅜ to 2¼ in. diameter.

1—No. 193 Valve seat reamer—45 deg. will handle valve seats from 1⅜ to 2¼ in. diameter.

1—No. 194 Nickel tooth reamer—15 deg. will handle valve seats from 1⅜ to 2¼ in. diameter.

1—No. 195 Nickel tooth reamer—75 deg. will handle valve seats from 1⅛ to 1⅞ in. diameter.



1—No. 196 Nickel tooth reamer—75 deg. will handle valve seats from 1½ to 2⅜ in. diameter.

8—Sioux pilot stems ranging from $\frac{5}{16}$ to ⅜ in. in standard and oversize.

The set complete in a metal case lists at $38.00.

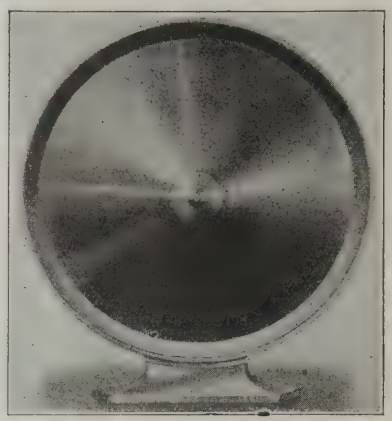
FENDER FOR FORD TRUCK

PEERLESS Commercial Fender No. 7. The Corcoran Mfg. Co., Cincinnati, Ohio. A general purpose rear fender for Ford truck. It will fit any 1926 Ford truck chassis and match up with the standard front fender.

Peerless rear fender for Ford trucks

Some New Products at A. E. A. Show

(Continued)



"Amberola," the new American Bosch radio set

NEW BOSCH SPARK PLUG

IN the American Bosch exhibit is a new spark plug shown for the first time at any equipment show. This is type P-115, a two piece heavy duty Ford plug designed for the truck, and of course being usable on car models as well. It can be taken apart and cleaned if necessary. The line of Bosch radio equipment makes its first Jobbers' Show appearance. On display is the Bosch radio receiver known as the Amberola, also the Ambotone, the Bosch Wood-cone reproducer, also the Junior Ambotone, a smaller reproducer, and the Nobattry, the Bosch "B" battery eliminator.

The Amberola is a 6-tube radio receiver, the exterior design of which is very pleasing. The Ambotone reproducer has the exclusive Bosch feature of a wood reproducing cone. This cone is 18 in. wide and gives accurate reproduction of sound. The Junior Ambotone is a smaller reproducer with the cone directly mounted to wood. It follows the same principles used in constructing the Ambotone as far as the actuating mechanism is concerned, and derives its mellow tone from the use of wood.

"Ambotone," the American Bosch wood cone reproducer

APEX RADIO CONSOLE

Cut shown above

APEX Baby Grand Console. Apex Electric Mfg. Co., Chicago, Ill. An artistic radio cabinet. Will accommodate any type of A and B batteries and necessary chargers or eliminators. The console is equipped with the Apex Entertainer (loud speaker) and measures 48 by 18 by 36½ in. high. Price $225, including Apex Super Five Receiver and Apex Built-in Entertainer, but without accessories. Prices west of Rockies slightly higher; Canadian, 40 per cent higher.

(Continued on next page)

What Show Visitors Saw in the Individual Exhibits

(Continued from page 16)

Pennsylvania Piston Ring Co. of Cleveland, Ohio, decorative radiator caps as made by the J. C. McAdams Co. of Long Island City, N. Y., cutouts made by the Cooper Mfg. Co. of Marshalltown, Iowa, accelerators made by the W. H. Thomas Mfg. Co. of Spencer, Iowa, and curtain lights and fittings made by the Hastings Mfg. Co. of Hastings, Mich., the latter concern and the Pennsylvania Piston Ring Co. also making piston rings.

After the car has run a few thousand miles it needs inspection and lubrication and after it runs ten thousand miles it needs piston rings, and possibly other items. From that point on the market for shop business broadens and the parts maker finds an opportunity to serve and profit by serving. The item of axle shafts alone has been the main stay of W. D. Foreman of Chicago, a line of piston pins also being produced. Piston, pins and piston pin locking screws are the product of the Spencer Smith Machine Co. of Howell, Mich; valves are made by the Jones Motor Valve Co. of Detroit, Mich., while leather items such as belts, clutch facings and discs for fabric type universals are produced by the Hide Leather and Belting Co. of Indianapolis, Ind.

Time was when the so called mechanic went under the car with his trusty pliers and monkey wrench and parked there for a week or more, but "them days are gone forever." Today its the well equipped shop that gets the business.

Even the crawl-under part of the job has to a great extent been rendered an obsolete procedure, rendered so by chain hoists, such as are made by the Wright Mfg. Co. of Lisbon, Ohio, while the attachment of new equipment requiring the drilling of holes through tough steel is made easy through use of the products of such concerns as the United States Electric Tool Co. of Cincinnati, Ohio, and Fleming Machine Co. of Worcester, Mass., these concerns also make other items of electrical shop equipment such as bench and portable grinders.

Vise an Essential Item

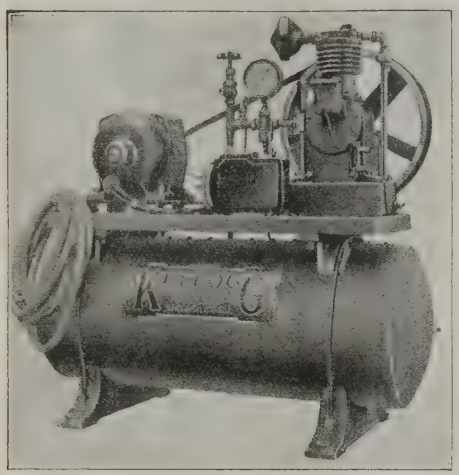
Sometimes we are inclined to pay a lot of attention to the complicated machinery, that which involves the use of electricity or specially constructed mechanism and forget the common items that we use all the time. Just try to do a job of any kind on the running board of a car and see what is most needed. It is the sturdy vise, which is practically an integral part of any bench, the lack of which adds great difficulty to the simplest job. A well rounded line of these essential items was shown by the Chas. Parker Co. of Meriden, Conn.

In overhauling the car it is often found necessary to replace some of the electrical units in order to get the best possible operation of the engine. Here we find use for such items as timers, made by the Milwaukee Motor Products, Inc., of Milwaukee, Wis., the ignition coils made by the Jefferson Electric Co. of Chicago and battery terminals and tools as made by the Ohio Parts Co. of Cincinnati, Ohio.

Small tools, which like the vise are often overlooked are made by the Crescent Tool Co. of Jamestown, N. Y., specialists in the production of adjustable wrenches and pliers, also by North Bros. Mfg. Co., well known for their Yankee line of screw drivers, breast drills and radio tools.

Like the vise and screw driver, sometimes forgotten because accepted as a matter of course is another item, without which the car could not run; the lowly wheel, sturdy as the hickory from which it is made, and the product of the Bimel Spoke and Wheel Co. of Portland, Ind.

PACKARD CABLE ASSORTMENT

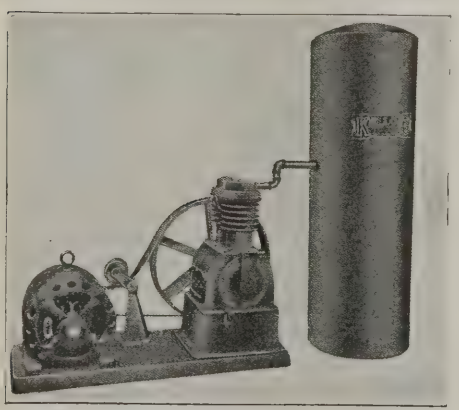


In the November 12 issue of MOTOR AGE, page 23, there appeared a description of The "Merchandiser," a display board containing Packard Automotive Cables, but the name of the manufacturer was omitted. These items are the products of The Packard Electric Co., Warren, Ohio.

Some New Products at A. E. A. Show

(Continued from page 17)

KELLOGG AIR COMPRESSORS

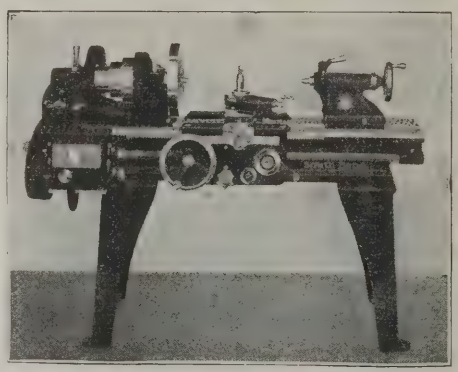


FOUR new air compressors were displayed by the Kellogg Manufacturing Company of Rochester, New York. The Bearcat model, for small service stations comprises a tank and on top of the tank the electric motor and air pump. The compressor will fill a 12 by 36 tank from

Kellogg "Bearcat" compressor for small service stations

110 to 150-lb. pressure in approximately 10 minutes. With 110 volt A. C. motor the price is $186.50, with direct current the price is $195 and with 25 cycle, 110 or 220-volt current the price is $204. In either case the motor is 1/3 h.p.

Another new compressor is known as model E. M. 1222, this being a two stage compressor. This compressor has copper inter-cooler and is provided with ball bearings. A patented constant level lubrication system is used which eliminates oil from the air. An oil gage shows the amount of oil in the reservoir of the



Kellogg model E. M. 132 compressor for paint spraying

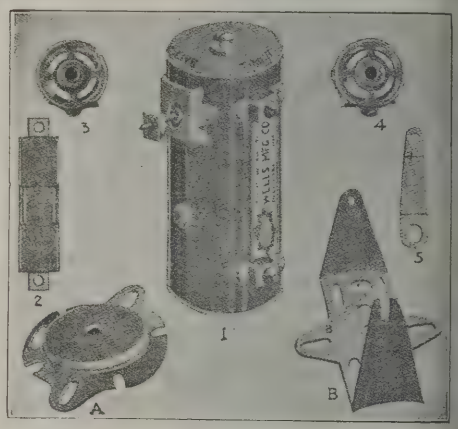
pump. Prices range from $350 to $400, depending on type of motor and tank included in the outfit.

Another new compressor is E. M. 132 and 142 to be used for spray painting, sand blasting and operation of pneumatic tools. It is capable of delivery from 20 to 40 cu. ft. of air per minute at pressures up to 100 lbs. It is made in several sizes with motor ranging from 5-h.p. to 10-h.p. at prices from $780 to $995. The outfit is equipped with a vertical tank of 80 gal. capacity. The compressor only without electric motor or tank may be obtained for $390 for model 132T and at $410 for model 132TL.

NEW SOUTH BEND LATHE

AN 11-inch quick change gear lathe, South Bend Lathe Works, South Bend, Indiana. This lathe follows closely the general line of South Bend lathes and is particularly adapted for use with a cylinder re-grinding and re-boring attachment, adapters for holding pistons for grinding and turning and the numerous other fittings handy for the automotive shop. The lathe has an 11¼ swing over bed and is made in four sizes taking from 12 to 36 in. between centers. The swing over the carriage is 7⅝ in. and there is a ⅞ in. hole through the spindle. The quick change gear box provides 48 changes for cutting threads from 2 to 112 per inch including 11½ in.

New South Bend lathe



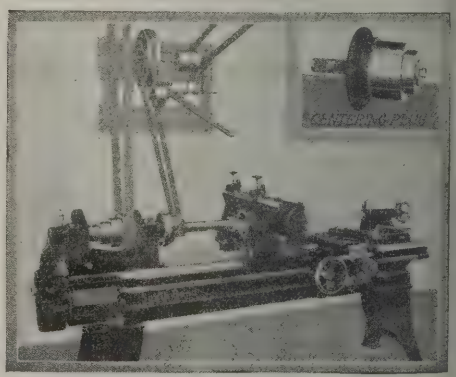
pipe thread. In addition a wide range of automatic feeds, coarse or fine is instantly obtainable. This lathe may be supplied at extra cost with a milling and keyway cutting attachment, taper attachment, hand wheel draw-in chuck, quick acting lever type draw-in chuck, thread indicator, tool post turret, internal or external grinding attachment, etc. It requires ½ h.p. to drive it.

LUPTON STORAGE CABINET

A NEW steel storage tool cabinet for the use of garages and service stations is being put on the market by David Lupton's Sons Company, Detroit. It provides slanting shelves, subdivided to provide suitable places to keep reamers, drills and other special tools. Steel drawers are provided for expensive tools such as micrometers and gages while flat shelves at the bottom with more space take care of larger tools. The price is $35.

WELLS FITSALL COIL

WELLS Fitsall coil, Wells Manufacturing Co., Fond du Lac, Wis., designed with two brackets to service all cars. There is no complicated wiring and it can be quickly installed by anyone. Besides the two brackets the coil can be had with a condenser, 6-volt resistance, 12-volt resistance and a ground



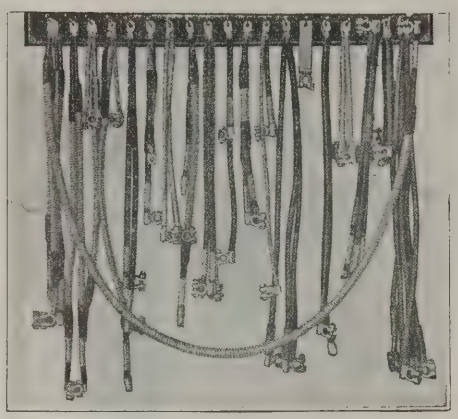
Wells Fitsall coil

strip, all of which are shown in the illustration. Price coil only $6, condenser $1, brackets 30 cents, resistance 30 cents and 35 cents, and ground strip 5 cents.

REGRINDING ATTACHMENT

A PRACTICAL attachment for regrinding engine cylinders on a South Bend lathe, South Bend Lathe Works, South Bend, Indiana. The cylinder block is supported on an adjustable fixture which rests on the cross slide at the top of the angle plate. The centering plug which fits the large hole bored in the angle in the angle plate is used to locate the cylinder concentric to the lathe spindle.

Lathe attachment for regrinding cylinders



The small pilot ring attached to the end of this plug enters the cylinder hole. After centering the block is clamped to the angle plate. The countershaft drives the ball bearing grinding spindle at 4000 r.p.m. The outfit comes in various sizes to fit lathes 16 to 24 in. and ranges in price from $300 to $350.

Some New Products at A. E. A. Show

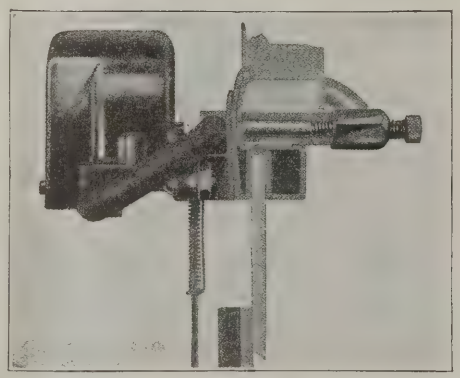
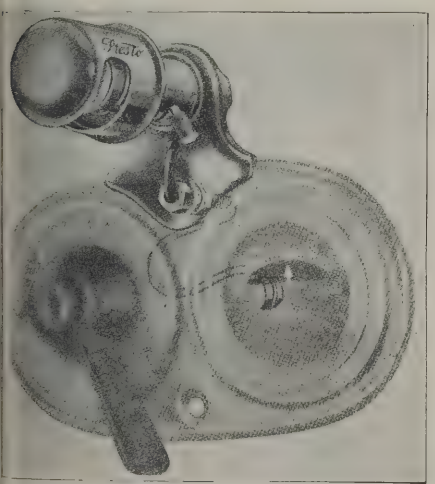
REPLACEMENT BATTERY CABLES



A NEW assortment of replacement battery cables for the most popular cars is being featured by the Whitaker battery Supply Company of Kansas City, Missouri. This assortment includes a display board and contains 56 assorted cables for Chevrolet, Dodge Brothers, Buick, Ford, Studebaker, Overland, Willys-Knight, Maxwell, Star, Hudson, Essex, Oakland and Packard. This is known as No. 2 assortment, the list price being $7.55. A new cable terminal is also available. this being known as the Fitzall elbow. It can be used for either positive or negative, right or left. The sleeve portion which fits over the terminal has a double taper meeting in the middle so as to fit either tapered or straight battery posts. It is made of red brass and is lead coated, the list price being 50 cents each.

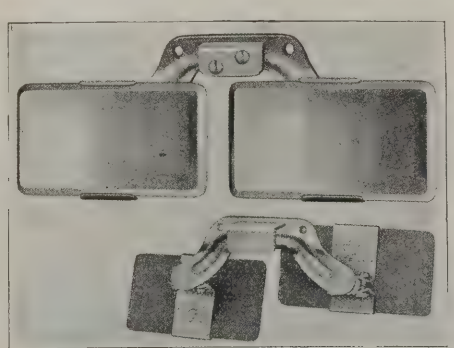


Whitaker replacement battery cables

TRICO WINDSHIELD WIPER

A NEW windshield wiper operating on the vacuum principle is being produced by Trico Products Corporation, Buffalo, New York. The mechanism of this windshield wiper is completely enclosed and is mounted together with the wiper on the outside of the windshield. It is secured by a tube through which the air is carried. Shut off is on the inside. The unit is especially designed for Ford closed cars, the list price being $5. The same company is producing a tandem mirror for use of both driver and passenger, the list price being $7.50.

Trico windshield wiper



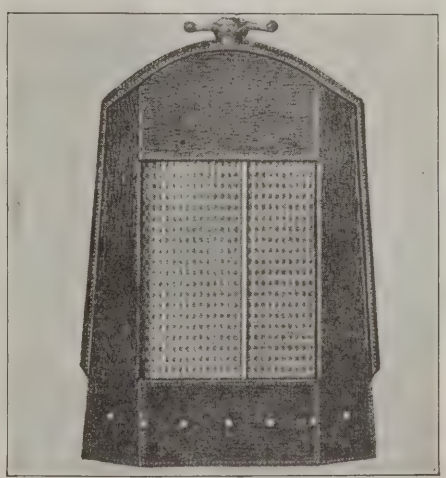
PRESTO LAMP FOR 1926 FORDS

Cut shown above

THE Presto panel-lamp for 1926 Ford dash, Metal Specialties Mfg. Co., 338 N. Kedzie Avenue, Chicago, designed to be used in connection with the switch panel on the present model Fords. No drilling is necessary as installation is made by removing the top bolt and replacing it with a hollow bolt through which the wire runs from the light to the ammeter connection. The price complete with bulb, wire, switch is $1.

THOMAS RADIATOR COVER

THOMAS Dash Control Radiator Cover. Thomas Auto Top Company, Muncie, Ind. The cover is controlled much on the order of a window shade, a leader extending from the curtain (under the hood) to the dash where it can be managed by the driver and fastened. The cover is constructed of water-proofed and durable material and is designed for practically all makes of cars. Protects shell as well as sides of radiator thus preventing freezing at bottom.



Kokomo dual mirrors

LE COMPTE PEDAL PADS

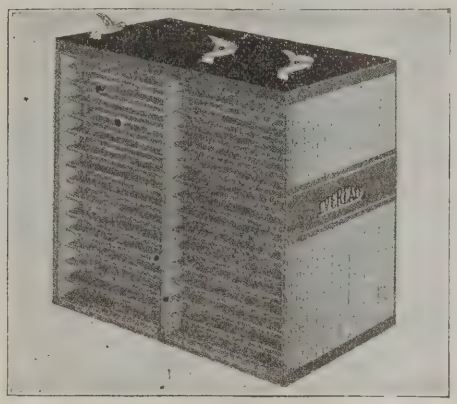
PEDAL pads for the 1926 Ford including a rubber corrugated center together with nickel plated brass rim and ears are the product of the LeCompte Mfg. Co., of Newark, N. J. The ears make it a simple matter to attach the pads, these being merely bent under to hold them in place. Another device put out by the same company is an oil tester for Ford cars. It replaces the lower pet cock in the flywheel housing. A wire extension runs from this valve through the running board shield and to check up on the oil it is only necessary to pull on this rod in order to let oil flow from the lower opening. A spring return is provided to close the oil cock after a test has been made. The list price is 75 cents. The same company has a repair type of crankcase arm for use on the Ford engine. A change has been made in this so that it is now provided with eccentric bushings to make it a simple matter to line up the bolts with the hole in the crankcase arm.

NEW BRAKE LINING

FOR use on heavy duty service the General Asbestos & Rubber Company of Charleston, S. C., are now producing a folded and molded brake lining. This is applicable on taxi brakes, also on trucks and busses. Lining is made of one piece of fabric folded over at both sides so that the edges meet in the middle. It is then molded under high pressure and temperature.

Thomas radiator cover

KOKOMO DUAL MIRRORS



DUAL MIRRORS are made by the Kokomo Automotive Mfg. Co., Kokomo, Ind. Mirrors of this type provide rear view vision for both occupants of the front seat. The two individual mirrors can be separately adjusted to any position by means of ball and socket construction. The list price is $2.50 including the two mirrors and the combination bracket.

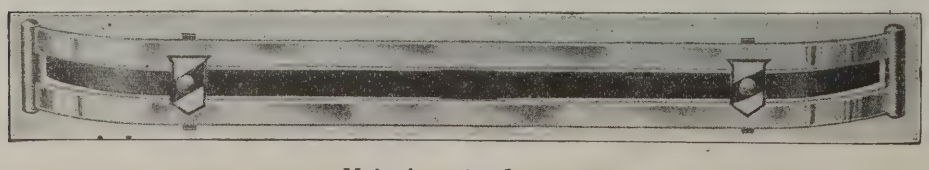
Some New Products at A. E. A. Show

(Continued)

NATIONAL "B" BATTERY

A NOVEL type 45 volt "B" battery is being made by the National Carbon Co., Inc., of New York City. This is known as Layerbilt and by means of cells of rectangular section eliminates a lot of the dead space which is present when cylindrical cells are used. In addition to this feature it has only three soldered connections, due to a special construction. There are no soldered connections between cells, but the negative electrode of each cell is turned over and covered with carbon to form the positive electrode of the next cell. In this manner trouble due to internal loose connections is reduced to a minimum. The list price is $5.50 and the battery is recommended for sets having four tubes or more where the drain on the battery is heavy.

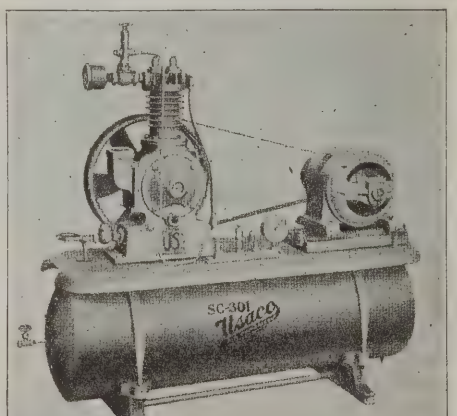
Layerbilt "Eveready" B battery of National Carbon Co.



Another item by the same company is a unit cell lantern known as No. 4753 the special feature of this being that it is designed to take standard cylindrical cells instead of requiring cells of special shape. This makes a more commercial article and one that can be used in practically any district where electrical service of any type is available or where there are hardware stores or other stores handling flash light batteries. This lantern lists at $4.

Eveready dry cell lantern No. 4753

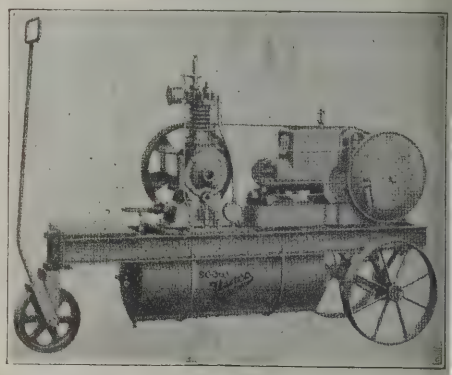
MAJESTIC SPRING BUMPERS



MAJESTIC spring bumpers, Metal Stamping Company, Long Island City, New York, made of heavy oil tempered spring steel bars fastened to substantial tubular ends, and reinforced with ornamental clips. It is made to fit all popular makes of cars in widths of 1½ in. for small cars to 2 in. for the larger models. Prices range from $12 to $22.

Majestic spring bumper

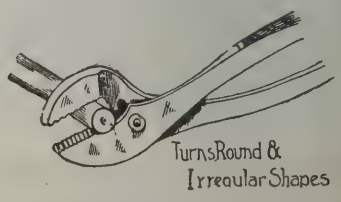
U. S. AIR COMPRESSORS



THREE new items of compressing equipment are being put out by the United States Air Compressor Company of Cleveland, Ohio. These are especially designed for paint spray equipment. One known as model SC-301 consists of a 3 in. by 3½ in. air cooled single cylinder compressor together with 1½-h.p. electric motor and 30-gal. tank suitable for pressures up to 200 lbs. This model sells for $256 while the same outfit, except equipped with a 2-h.p. gasoline engine, sells for $270. A portable outfit known as model SC-303 is similar except that the tank capacity is 22 gal. and the working pressure 150 lbs. It is provided with 2-h.p. gasoline engine and sells for $304 list. A third model is capable of handling two paint guns at one time. It consists of a 4½ by 3½ in. air cooled single cylinder compressor together with 3-h.p. electric motor; price, $306.

Usaco model S. C. 301 compressor

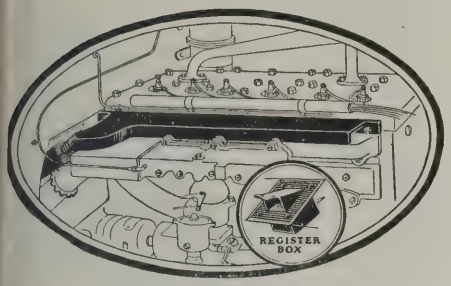
NEW PYRENE PRODUCTS



PHOMENE, a foam-type fire extinguisher and Chromine, an anti-freeze solution. Both articles are produced by the Pyrene Manufacturing Company, 560 Belmont avenue, Newark, N. J. Phomene is said to be effective on all classes of fire including such high combustibles as gasoline, oil, grease, etc. It is recommended by the makers as a valuable protection in garages. Three gallon tank furnished complete with one charge and hanging hook. Additional charges promptly supplied on order. Chromine, the anti-freeze solution in liquid form is shipped in 50 gal. drums equipped with spigot. Said to prevent radiator freezing at 15 degrees below zero. One charge in radiator is said to last all winter without evaporation.

A portable model Usaco compressor

GIANT GRIP PLIERS



A CLEVERLY designed pair of pliers known as Giant Grip No. 444 is a new Red Devil tool made by Smith & Hemenway, 263 Broadway, New York City. The pivot point of the pliers is offset and the teeth of one jaw are set at one angle and in the other jaw at the reverse angle. This gives the tool somewhat the characteristics of a Stillson wrench so that it is possible to take a grip on a round piece of iron or irregular shaped piece and push on one handle of the pliers only. The construction takes care of the grip and makes it unnecessary to clamp tightly on the two handles of the pliers. The design of the jaws is such that they are practically parallel or have portions which are practically parallel so that nuts up to ¾ in. in width may be securely and easily held. This is accomplished by means of the shape given to the jaws and by the two pivot points available as in conventional pliers. The tool lists at $1.

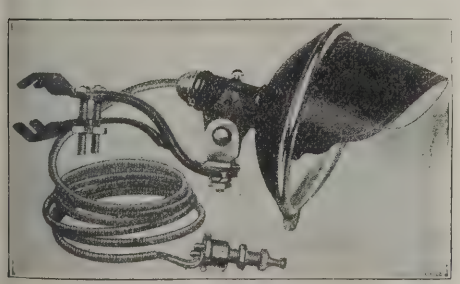
Giant grip pliers

Some New Products at A. E. A. Show

(Continued)

RED CAT HEATERS

Cut shown above

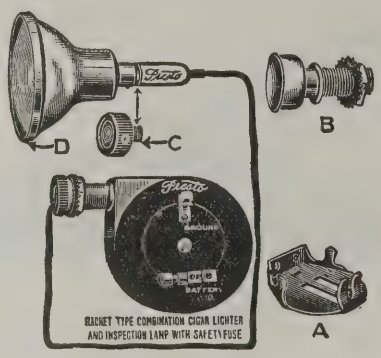


RED CAT heaters made by G. A. Roth Mfg. Company of Hastings, Nebr., are now made for Dodge Brothers, Star, Hudson, and Essex, as well as for Chevrolet and Overland, the first four named being new. The heaters are of the manifold type carrying air to the car body by means of a register box located in the toeboard. The Dodge heater lists at $9, the Star at $9.50, the Hudson at $8 and the Essex at $9.50.

PRESTO CIGAR LIGHTER AND LAMP COMBINATION

THE No. 310 Presto Automatic Rewinding ratchet type cigar lighter, dash type, Metal Specialties Mfg. Co., 338 N. Kedzie Avenue, Chicago, is equipped with 12 ft. of cord held in position without any return pull of the lighter because of the patened ratchet feature. It is equipped with a patented safety fuse. The lighting element or tip is encased in hard rubber to protect fingers from heat. Lighting element is large enough to light entire end of any shape cigar or cigarette. Has safety switch button on tip. With 12 ft. of cord and with either 6 or 12 volt tip, price $5.50.

DELTA ROADLITE

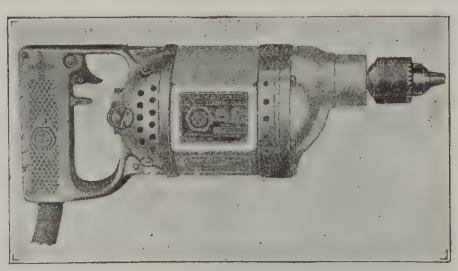


DELTA roadlite, Delta Electric Company, Marion, Indiana, made with two types of brackets, one called a clamp bracket assembly and the other a pedestal type. They are respectively known as models 50 and 51. The mountings for No. 50 are on the brace rod between headlights, on headlight supports, bumper or bumper brackets or fender braces. No. 51 can be mounted on any fender position, cowl, either running board or on splash pan in front of the radiator. The light itself is brass, nickel trimmed, hand buffed. It has a 4 in. reflector and a visor is integral with the lens ring. The visor slides around to any position. A push and pull type switch is furnished for mounting on the dash. The price with either bracket $4.50.

Delta Roadlite

BIFLEX FORD BUMPER

A NEW bumper for use on Ford cars is announced by the Biflex Corporation of Waukegan, Illinois. This is a parallel bar bumper known as No. 1500 which sells for $12.50.



Presto cigar lighter and lamp

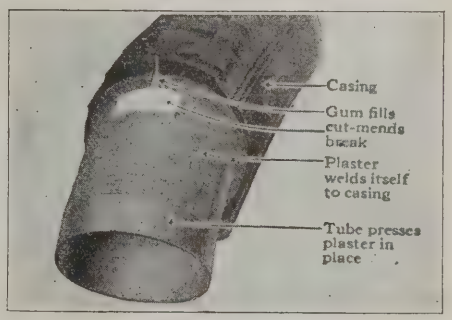
BLACK & DECKER DRILL

Cut shown below

A NEW heavy duty ¼-in. drill is being marketed by the Black & Decker Mfg. Co., Towson, Md., the price being $38. The motor is ¼ h.p. and is provided with ball bearings. The chuck speed is 3,000 r.p.m. This motor is especially designed for heavy work and makes possible the drilling of more holes per minute than would be possible with a motor of less power. The high power and high speed of this drill make it suitable for driving Fleming valve seating stones. The drill can also be used in connection with battery repairing and tire repairing.

Black & Decker heavy duty drill

KANT-RUST SPRAY TANK



A TANK for use in spraying the underneath side of a car and the springs with Kant-Rust is provided by the Kant-Rust Products Corporation, Grand Central Palace, New York, to dealers who wish to use this method of lubricating and protecting cars. The tank is sold for $45 and a rebate is allowed on every 10 gal. of Kant-Rust in addition to the regular discount. In this manner the initial cost of the tank is gradually rebated to the dealer making the purchase.

WESTINGHOUSE LAMP BULB

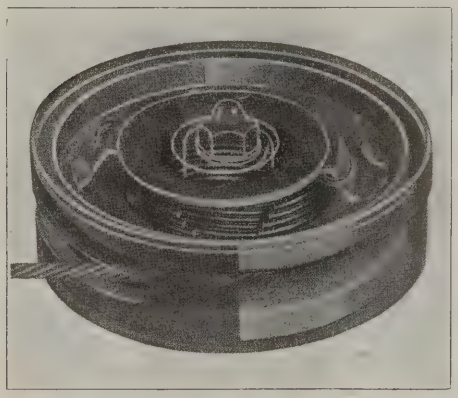
THE new type lamp bulb with the wrinkled surface for use with the two-filament type is also produced by the Westinghouse Lamp Company. At this exhibit a novel device was used for proving that the deflection of the rays of light was complete. A photo-electric cell was employed and the light rays were allowed to operate on this cell. By means of delicate instruments the interruption of the rays of light could be made to operate a buzzer. Walking in front of the light would operate the buzzer or deflecting the rays of light downward would accomplish the same purpose. The arrangement was so made that either the light or the absence of light on the photo-electric cell could be made to operate the buzzer, thus making a very spectacular testing device.

LAS-STICK CASING PLASTER

LAS-STIK Casing Plaster. Las-Stik Patch Mfg. Co., Hamilton, Ohio. Put on the market to meet the need for a cold repair that anyone can apply to a nail hole or blowout without the aid of special tools and heat. It serves as a self-vulcanizing boot that welds itself to the casing, carrying a filler patch that fills the break. Repair is said to be complete, keeping out water and dirt. Packed 12 to a carton. Standard shipping carton contains six dozen. Dealers' prices range from $1.80 per dozen to $5.40 per dozen less 10 per cent discount for orders of six or more dozens.

Las-Stick casing plaster

BENZER GLASS INSULATORS



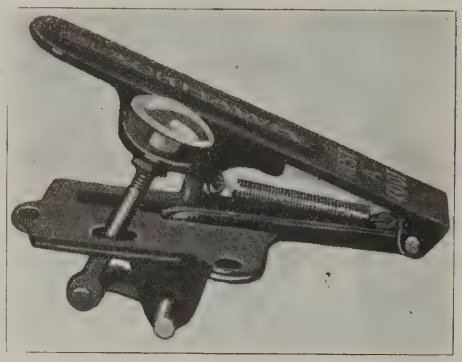
BENZERIZED Glass Insulators. Benzer Corporation, Myrtle and Cooper avenues, Brooklyn, N. Y. This is a radio product. It is said the Benzerized Glass Insulators improve broadcasting reception by delivering a maximum of antenna energy to the receiving set. Naturally they do not absorb water and they do not retain surface moisture. The insulators are made of special heat treated glass which is unaffected by weather extremes. Made in one size, four inches long.

Some New Products at A. E. A. Show

(Continued)

BLACKHAWK ACCELERATOR

A MOST novel accelerator was shown at the booth of the Blackhawk Mfg. Co. of Milwaukee, Wis., this having a foot rest at the side which automatically adjusts itself to the position in which the accelerator pedal is being used. With the ordinary type of foot rest, the foot is at a certain angle for 15 miles per hour and at another angle for 30 miles per hour. One position may be comfortable while the other may not be. With this device, the rest moves down as the pedal is depressed, but can not move down by itself. Then when the pedal is released, the rest also comes up to the right position. This makes it possible to hold the foot at any convenient angle and still have the support of the foot rest. The list price is $3. A number of new wrench assortments were featured at the Blackhawk exhibit, while water pumps for thermo-syphon cooled cars were also shown, covering equipment for Chrysler four, Maxwell, Overland and Fordson, the first three being $8 each and the Fordson being priced at $15.



WEED LEVELIZERS

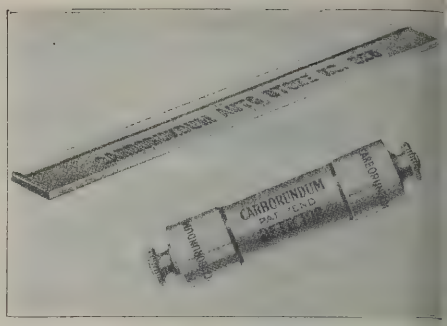
Cut shown above

THE newest product of the American Chain Co., Inc., Bridgeport, Conn., makers of the well known Weed chain, is the Weed Levelizer which in addition to proportioning the resistance of a car body's upward speed, counteracts this by providing a cam which reduces the levelizing when the car spring is in the normal position to an amount that does not retard the free action of the spring, but allows it to follow small irregularities of the road. When, however, due to the car hitting a medium or large bump, the levelizer wheel is rotated away from the normal, the full levelizing needed is again put into play. There are no adjustments on the device nor are there any places to oil and it is stated that some cars have gone 50,000 miles without any attention to the levelizers.

VAN DORN DRILL AND VALVE GRINDER

VAN DORN heavy duty drill valve grinder and 8 in. bench grinder, Van Dorn Electric Tool Company, Cleveland, Ohio. The heavy duty drill has been brought out to meet a demand for operating cylinder hones and operates at comparatively slow speeds. The company also has added an electrically driven valve grinder together with an 8 in. bench grinder.

Blackhawk Accelerator



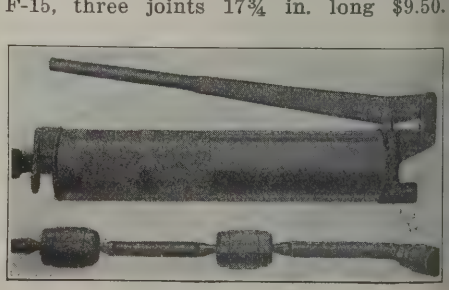
FLEXO SERVICE CAN

NEW Dover Flexo Service Can. Dover Stamping & Mfg. Co., 385 Putnam avenue, Cambridge, Mass. This is a convenient device in car servicing. It has a flexible pouring tube which stores inside the can when the can is not in use as means of preventing damage while in stock or in shipment. Flexo Service Cans of 5 gallon capacity list at $5 each and cans of two gallons capacity list at $3.50 each.

Flexo service can

Additional descriptions of new products will appear in a later issue of Motor Age.

CARBORUNDUM AUTO STONE



Cut shown above

A CARBORUNDUM auto-stone which can be used in place of a fine file is a product of the Carborundum Company, Niagara Falls, New York. In the finishing of interrupter points, for example, when they have become pitted and burnt a stone of this kind can be used in place of the magneto point file. Ignition instruction books often call for honing the points and this auto-stone makes this procedure possible.

Another item is a carborundum detector for use in radio sets which require a crystal detector. Carborundum has the advantage that it is not necessary to hunt for sensitive spots in order to make a detector operate. The carborundum auto-stones sell for 50 cents each and the detector at $1.50 each list.

THURO LUBRICATOR

THURO Semi-Automatic Super High Pressure Lubricator and Thuro Flexible All-Steel Universal Ball Jointed Hose. Larkin Automotive Parts Co., Dayton, Ohio. Both the lubricator and ball jointed hose are shown in illstration. The Thuro lubricator is designed for lubricating cars, trucks, etc., especially where the volume of such work to be done is sufficient to require speed and effective operation. It is convenient to fill with oil or grease and feeds automatically, with no screw action. Operation is fast and easy. Two sizes 1¼ lbs. and 2¼ lbs. capacity. The Thuro ball jointed hose can attach to the Thuro lubricator but is recommended by the makers for all sizes and styles of hand compressors. The ball joints swivel in all directions and make the attachment very flexible. List, F-13, two joints, 12¾ in. long $6.50, F-15, three joints 17¾ in. long $9.50.

Thuro Lubricator

Periodic Maintenance Cuts Service Costs

Prevention Rather Than Cure Advocated by Engineers as Means for Greater Satisfaction of Car Owners and More Profit for Dealers

By DONALD BLANCHARD

INTEREST at the service engineering meeting held in Chicago, Nov. 9 and 10, under the joint auspices of the service committee of the National Automobile Chamber of Commerce and the Society of Automotive Engineers, centered around the general topic of reducing the cost of service to the car owner by prevention rather than cure.

Among the major subjects discussed in this convention were periodic maintenance, piece work compensation of mechanics, corrosion of engine parts, service tools, trouble diagnosis and fuels.

Following the address of welcome by O. B. Zimmerman, International Harvester Co., G. Frank Lord, Durant Motors, Inc., presented a paper in which he emphasized the importance of periodic maintenance service as a means of preventing trouble and urged that car manufacturers assist their dealers in establishing systems which would bring owners into the shop at regular intervals for inspection, lubrication, and adjustment.

Although performance and cost of production are prime considerations in the design of a car, D. C. Hinckley, Hinckley-Myers Co., pointed out that often these objectives could be attained in a new model without making it necessary for the repairman to increase his investment in service tools materially. He cited one make of car which has had four new models in recent years on each of which small changes in the hubs had made it necessary for the service station to provide itself with a special wheel puller. To illustrate his point further, Mr. Hinckley suggested that crankshaft gears could be designed so that the repairman could handle a larger number of cars with a fewer number of pullers.

Discuss Corrosion of Parts

At the session on corrosion of engine parts, the speakers were M. A. Thorne, Tidewater Oil Co., and Frank Jardine, Aluminum Co. of America. This trouble is evidenced by noisy operation, looseness in the timing chain, blow-by the pistons and discoloration and pitting of parts. It is caused by sulphurous and sulphuric acids, resulting from the combustion of the sulphur content of the fuel, together with the water produced by combustion and the moisture contained in the air drawn in by the carbureter. As a direct result of combustion about 9 lbs. of water are produced for each gallon of fuel consumed but, of course, a major portion of this goes out of the exhaust.

The only successful way, according to Mr. Jardine, of preventing condensation on and consequent rusting of the cylinder walls, is to provide a lubricating system that will supply oil to these surfaces as soon as the engine starts. This requirement is met by the splash system. In pressure systems, he recommended placing the pump in the sump as in a higher position it might not be able to lift a cold, viscous oil; the use of a 30 mesh or coarser oil screen; oil lines ½ in. or more in diameter; a by-pass around the oil screen so that clogging will not stop circulation; clearances at the connecting rod bearings of .0015 in. on the diameter and .006 to .008 in. at the sides; and the use of light oils in winter.

On engines and parts to be stored for any considerable length of time in cold weather, he recommended a protective coating of castor oil as it has been found to be more resistant to the destructive action of water than mineral oil.

Diagnosis of trouble was covered in a detailed manner by J. C. Talcott, Pierce Arrow Motor Car Co. In this paper, each unit was taken up separately, the symptoms of trouble were described and the interpretation of these symptoms given.

The paper presented by John Squires and Carl Breer of the Chrysler Corp., was really a history of the development of an organization to service the Chrysler. Much trouble was experienced also as a result of the failure on the part of the dealer service man to follow factory instructions, particularly as regards adjustments.

A real instruction book was also emphasized as an important factor and an effort is made to get dealers to have one of their service men spend half an hour going over this book with each new owner.

Leakage past valve stems changes mixture proportions desipte the effectiveness of the carburetion and manifolding with resultant loss of power, inincrease in crankcase dilution and rough operation, according to Frederick Alberty who recommended the use of the felt packing at the top of the valve guide to insure tightness at this point. A method of testing an automobile which informs its owner as to its condition, was described by F. E. Edwards.

Chemical Factory on Wheels

The automobile is a chemical factory on wheels, according to Dr. T. A. Boyd, General Motors Corp., who talked on fuel from the service standpoint. He explained that the raw materials consisted of air and gasoline and that the output consisted of carbon dioxide, carbon monoxide, water and nitrogen.

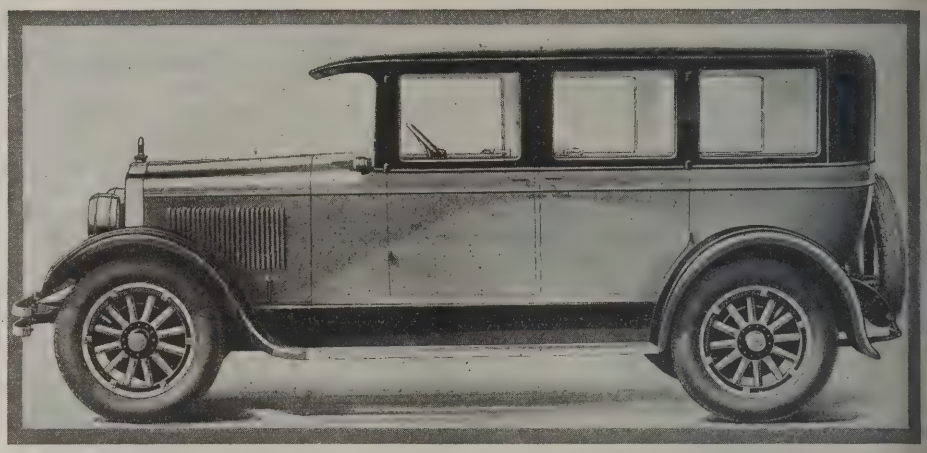
Not much trouble is experienced with foreign matter in fuel, provided the channels of supply are kept clean. Some cracked gasolines will give a brown residue which will deposit itself on heated parts such as manifolds and carbureters. The formation of this residue, which results from improper manufacture, is accelebrated by storage in a warm place. It may be removed most easily with acetone. In addition to corroding iron and steel parts, sulphur in the fuel will also attack brass and copper parts in some cases.

Among the devices described by Donald Blanchard in his paper were the Cadillac crankcase ventilating system, the Marmon purifier, the Kingston aerator, the Bijur chassis lubricating system, the Rushmore steam cooling system and the Oakland harmonic balancer. Discussion following this paper centered chiefly around steam cooling.

Judging from expressions of opinion at the Question Hour, which closed the convention, the car factories are sold on piece work compensation of service mechanics. It was pointed out that it is likely to be an important factor in getting men who are now going into other industries because of higher pay, to enter the service business as the piece work plan enables them to earn as much or more than they could obtain elsewhere. A number of examples were cited where the adoption of this method has turned losses into profits.

Some Pertinent Thoughts From the S. A. E. and N. A. C. C. Service Convention in Chicago

By getting owners to adopt a plan of periodic maintenance, which would bring their cars into the service stations at regular intervals, much trouble could be avoided and the cost of operation reduced. Correct diagnosis of trouble is important and frequently wrong interpretation of symptoms results in unnecessary work being done for which the owner is charged.



Piece work compensation fosters the introduction of modern shop equipment which results in better work at less cost.

Engineers should give more attention to the service tool equipment already in dealers' service stations when making changes in car design.

Peerless Enters Field of Medium Price Six

New Model Known As the 6-80 Series Offered in Six Body Styles. Price of Standard Sedan Is $1595. Engine of Car Maker's Design to Be Built by Continental Motors

By LESLIE S. GILLETTE

The five-passenger sedan listing at $1595 will be the first model Peerless will produce on its new line of six-cylinder cars. Balloon tires and hydraulic four-wheel brakes are standard equipment

ENTERING the medium price six cylinder field with a sedan at $1595 and mounted on a 116 in. wheelbase chassis employing a 3¼ by 4⅝ in. L-head engine and four wheel brakes, the new car of the Peerless Motor Car Co. will broaden their dealer's line which hithertofore consisted of a larger six and an eight cylinder model.

While six body styles will be offered on the new model known as the 6-80 series, production is being concentrated at the present time on the standard four door sedan. It is the intention of the Peerless company to announce a new body model each succeeding month and plans have been perfected to have both a four door close coupled sedan and a two door sedan available at the national automobile shows.

Plan 3-Passenger Coupe

Early in the new year a three passenger coupe will be ready with a 3-5 passenger sport roadster next, followed by the remaining model which will be a five passenger touring car. With the exception of the $1595 standard sedan referred to, prices for the other body styles have not yet been decided, but it is understood that the standard sedan will have the highest list with the prices scaling down to the five passenger open car. The last mentioned model will be ready in time to enter the open car selling season in spring.

The new models have an exterior appearance which resembles the lines of the larger six very closely while the design of the chassis is characterized by its conventional and exceptionally sturdy layout. An unusual feature of the chassis for a car of this size is the depth of the frame which is given as seven inches. The seven bearing engine is assembled with the single plate clutch and three speed transmission forming a unit powerplant supported in the frame at four points. Metallic universal joints at either end of the propellor shaft transmit the drive to the semi-floating rear axle, which provides a gear ratio of 4 5/11 to 1. Lockheed four wheel hydraulic brakes and 30 by 5.77 in. balloon tires are standard equipment.

Through special attention paid to the angularity of the spring shackles and the graduating of the springs themselves, exceptionally easy riding qualities are claimed for the new model. The rate of acceleration is also said to be unusual while the car is credited with a high speed of better than 70 m.p.h. and a speed of 42 m.p.h. in second gear.

Although conceived and designed in the Peerless shops, the engine is specially constructed for the new car by the Continental Motors Corp. This is the first of a series of engines to be built outside of the Peerless plant for a number of years. Rated at 25.35 h.p. and with a piston displacement of 230.2 cu. ins., the new powerplant develops 68 actual brake h.p. at 2,800 r.p.m. on the dynamometer. The peak torque is stated to be 149.5 ft. lbs. at 1,100 r.p.m. A new type of high turbulence combustion chamber and special valve timing are two of the important factors contributing to the high output of the engine.

Gray iron cylinders are cast en bloc with the upper half of the crankcase having the flange for the pressed steel oil pan 2⅞ in. below the center line of the crankshaft. The detachable cylinder head is secured by 22 steel studs. Each of the seven main crankshaft bearings is held in a heavily ribbed bulkhead which runs from one side wall of the case to the opposite side wall. The carbon steel crankshaft is of massive construction employing 2⅜ in. diameter main journals and weighing 54¾ lbs.

The specially attractive all Bakelite steering wheel on the Peerless Six is apparent in the photograph of the front compartment. The tredle type of foot accelerator should be noted

Gray Iron Pistons

Connecting rods of "I" beam section have a bearing diameter at the big end of 2⅛ in. with a length of 1⅜ in. At the upper end the gray iron pistons are secured by a 1 in. diameter piston pin formed from solid bar stock and locked in the piston by a set screw. An additional locking device in the form of snap rings at the ends of the pin is also provided. Hand fitted to the cylinders, the pistons are provided with three rings each $\frac{3}{16}$ in. wide above the pin, the bottom ring being a special oil control type and of Drainoil brand.

A new developed low pitch Morse chain No. 54, 1¼ in. wide and making for unusual quietness provides the front end drive for the accessories and camshaft. Adjustment for the timing chain is provided for in the movable generator —ignition unit mounted on the right side of the engine. The pressed steel timing case cover can be removed without disturbing the engine mounting making the chain and gears readily accessible, while all gears are marked to facilitate retiming of engine.

Both valves are interchangeable, the head diameter being 1⅝ in., the length 4 45/64 in., stem diameter ⅜ in. and the lift 21/64 in. for both.

Located in a position on the outside of the crankcase near the carbureter, the oil pump is driven by helical gears off the crankshaft, the take off being placed on a line between cylinders number 5 and 6. This pump incorporates the oil pressure relief valve in the same

casting, the unit being secured to the crankcase by four bolts. By removing six additional bolts, the pump cover may be detached exposing the spur pump gears. Lubrication is by the full pressure system, oil being forced through tubing to each of the main bearings. Through the hollow crankshaft oil passes to the connecting rods while the cam shaft bearings are oiled by passages drilled in the crankcase. Other parts are lubricated by mist, the surplus oil falling back upon the oil pan tray and is screened before entering the oil pan proper. There is another screen of circular shape below the screen from which the oil is drawn by the pump above. As a further guard against impurities in the lubrication system, a Purolator oil filter is bolted on the dash.

A plain tube cross throttle type of Stromberg carbureter model OX-2 with a nominal outlet size of 1¼ in. is bolted to the cast integral intake and exhaust manifold.

Electrical Units

With the exception of the 6-8 volt U. S. L. make of battery, the electrical units are of Auto-Lite manufacture. Both starter and generator are mounted on the right side of the engine, the former carrying the S. A. E. mounting and an outboard type of Bendix drive employing an 11 tooth pinion. The generator which is mounted on a separate support casting is driven from the front end chain by a special spring drive at 1 1/5 engine speed. On this special casting the semi-automatic advance distributer unit is placed and is driven from the generator drive by spiral gears. The accessibility of this type of construction is demonstrated by the fact that either the distributor or generator can be removed without affecting the other.

Between the transmission and the engine a single plate dry disk, Borg and Beck clutch, model No. 10-QL is employed. The tens pline 1½ in. clutch shaft is supported at either end in roller bearings and carries a graphite throw-out collar requiring no attention or lubrication.

The gearset is of Detroit Gear Machine Co. manufacture with special modifications and provides three speeds and one reverse of the following ratios:

Low: 3.11 to 1.

Second: 1.70 to 1.

Third: 1.00 to 1.

Reverse: 3.78 to 1.

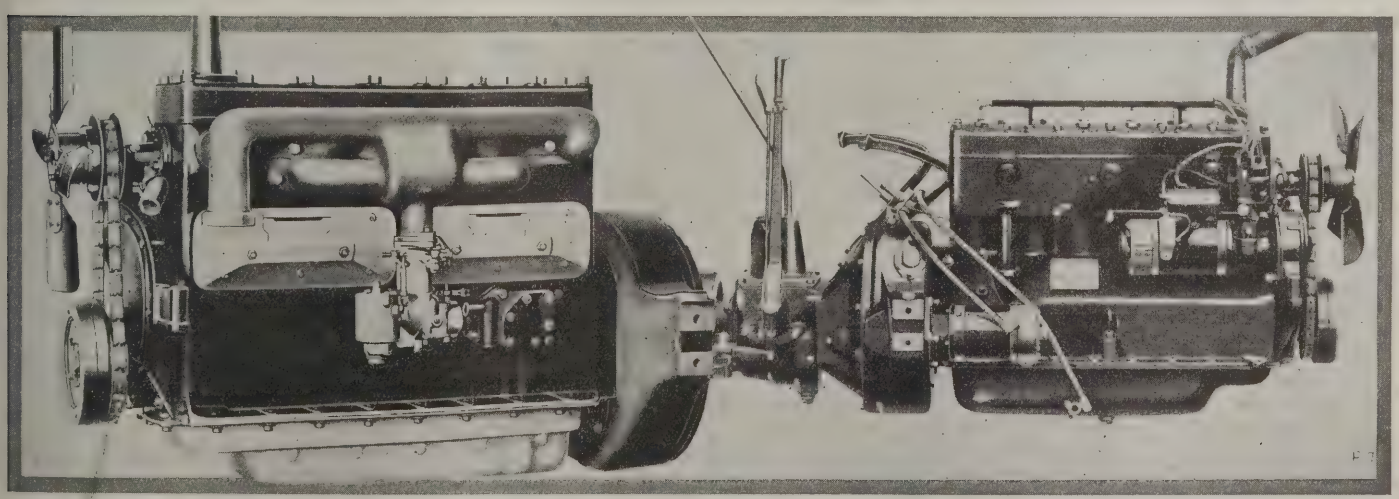
A simple linkage is employed to connect the emergency brake lever with the transmission brake. The dimensions of the brake drum are 7 in. diameter by 2 in. wide.

A two inch tubular propeller shaft with an oil-tight metal universal joint at either end transmits the power to the semi-floating Columbia make rear axle. Except for slight modifications, the axle which is designed for the Hotchkiss form of drive is identical to Columbia-axle model number No. 12035. A standard gear ratio of 4.45 to 1 for all body models is provided, the teeth on the 9¼ in. diameter ring gear being 49 and those on the pinion 11.

Lockheed hydraulic brakes of the external expanding type having drums 14 in. in diameter and 2½ in. wide are used on both axles. The thickness of the friction lining is $\frac{5}{32}$ in. and the width 2 in. Brake anchors are set 45 deg. ahead of center giving ¾ wrap on the brake bands and making for more effective and smooth operation. Following customary practice the master cylinder of the braking system is bolted to an extension on the clutch housing.

The front axle is a Columbia model No. 1200-H of "I" beam section with the $\frac{15}{16}$ in. diameter steering pivot pins at an inclined angle. As on the rear axle, Timken roller bearings are employed. Steering knuckle thrust is taken by a radial ball bearing which together with the Ross cam and lever type steering gear provides easy turning of the wheels. The gear ratio is 11½ to 1, while the turning radius in either direction is approximately 20 ft. Steering wheel whose diameter is 18 in. is of attractive design and formed throughout of Bakelite with the short throttle and spark levers and the horn button mounted in the center.

Semi-elliptic springs are employed, those on the front being mounted above the axle while those on the rear are underslung, the dimensions being 37¾ in. long by 2 in. wide with 8 leaves on the front and 54¼ in. long by 2¼ in. wide with 11 leaves at the rear.



A rugged straight tapered frame is provided for in the new car. The maximum depth of the side channel members is 7 in. The thickness of the stock is ⅛ in.

Standard tire equipment consists of 30 by 5.77 in. balloon tires mounted on Firestone "A" rims attached to 12 spoke artillery wheels. In addition Gabriel snubbers are used all around while the chassis lubrication is by the Alemite system.

Semi-Elliptic Springs

All bodies including the present sedan will be of composite wood and steel construction while the exterior finish will be in three color lacquer with suitable striping. On the closed cars a fine grade of mohair plush will be employed for the upholstery with genuine Spanish leather used on the two open cars. In addition to the usual dash instruments which are mounted in a panel embodying the radiator design, a gasoline gage is installed which together with the following items are fitted as regular equipment. Windshield wiper, rear view mirror, rear traffic signal, cowl lights, transmission lock, snubbers all around, foot rest, robe rail besides a dome light and curtains on the closed cars.

The headlights which are nickeled to correspond with the radiator are fitted with special lens and a single 21 c. p. bulb with the dimmer control mounted in a combination switch on the metal dash. All interior hardware on the closed jobs including the rotary window regulators, will be given a bright and dull silver finish. Ready for the road but excluding passengers, the sedan model weighs 3310 lbs. with 1715 lbs. of the weight taken on the rear wheels.

Left: The combined fan and water pump unit on the front of the cylinder block and the Lanchester vibration dampener are apparent in the three-quarter view of the Peerless Six engine; right: Right hand side view of the complete Peerless Six power plant showing the simple linkage between the hand brake and the transmission lever

Questions and Answers on Dealers' Problems

BUILDING ▲ ELECTRICAL ▲ FLAT RATES
SHOP ▲ LEGAL ▲ PAINT & TRIM ▲ ACCOUNTING

Adjusting Zenith Float Level

Q.—What is the proper float level on the Zenith carbureter and when installing new needle valve and seat, how is this float level checked?—Cliff Green, 601 Pleasant View, Trenton, Mo.

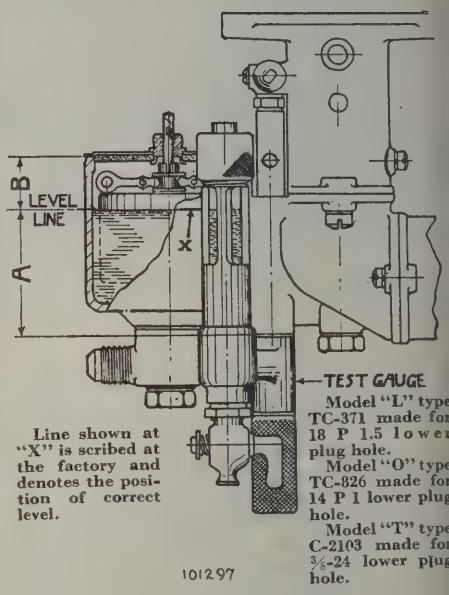
Whenever possible, it is well to have this work done by an authorized Zenith service station, as a special test gage is needed in order to accurately check the float level. As different size gages are needed for different carbureters, it might not pay the average repair man to have this equipment. The data necessary for checking the gasoline level in the float chamber, however, is given in the table and in the illustration which shows a section through the carbureter.

Where a special gage is not available, it occurs to us, that an approximate test might be made by drilling a small hole in the float chamber cover through which a small round stick painted black might be inserted. This method would prove somewhat difficult, however, because the float very nearly fills the float chamber, and does not leave much room for inserting the stick.

Another Method

Another method would be to drill a small hole at the proper level line, as determined from the table and another very small hole slightly below it and a third one slightly above. The gasoline should flow through the lower hole and just barely moisten the middle hole and should not flow through the upper hole. After it was found that the level was correct, the float could be removed and the carbureter dried out and the three holes soldered up again. In making a test of this sort a test tank should be used located 30 inches above the carbureter.

The only place any adjustment of the level should be attempted is at the Needle Valve Collar, its relative position on the Needle Valve determining the point of closing of the Valve. Remove the Float Cover from the carbureter, draw out the wire holding the lever weight axles and remove the needle valve entirely from the cover.



Take a knife or any sharp instrument, and mark around the needle valve at the lower side, of the collar (the side towards the point). This will show the original setting of the collar in case it is found necessary to bring it back to this position.

To lower the level, scratch a mark on the needle valve 1/32 of an inch above the collar. Provide a block of hard wood through which a hole slightly larger than the largest diameter of the needle valve has been drilled. Put the needle valve into this, with point down. Now, with a flame soften the solder holding the needle valve collar on the valve, first wetting it with soldering acid or paste, and when the valve is free in the collar tap it down to the upper mark, or 1/32 of an inch. Allow it to cool, thus again setting the solder, and replace in the float cover. This will lower the level.

If further lowering is found necessary repeat the above, but never go further than 1/32 of an inch at a time. Next, replace the cover on the carbureter, press the needle valve down tight against its seat with the finger and mark a line around it at the upper edge of the boss on the cover that takes the thread of the dust cap. Remove the cover from the carbureter and with the fingers bring the mark on the valve back to the above position and see what position the lever weights are set. If they are not horizontal it means that you have gone too far, that the travel of the valve will be insufficient and that the float mechanism will not function properly. This travel should not be less than 5/64 inch.

To raise the level, move the collar towards the point of the needle valve. To do this grip the needle valve between two blocks of wood in a vise. Provide a piece of copper or brass tubing which can be slipped over the upper end of the valve and against the top of the collar. Tap lightly on this tube to move the collar and be very careful not to mar or bend the needle valve. Never bend the lever weights to change the level, and do not put additional gaskets under the needle valve seat.

Before reassembling the float chamber cover, see that the counterweight levers swing freely and do not bind in the needle valve collar.

Line shown at "X" is scribed at the factory and denotes the position of correct level.

Model "L" type TC-371 made for 18 P 1.5 lower plug hole.

Model "O" type TC-826 made for 14 P 1 lower plug hole.

Model "T" type C-2103 made for 3/8-24 lower plug hole.

INSTALLING A FIELD FUSE

Q.—Is it possible to put a field fuse on an American Bosch generator used on Essex cars and if so how should it be connected.—G. & J. Stromer, Battery Service Station, East Main street, Gillett, Wis.

Such a fuse can be installed if desired, and should be connected between one end of the field and the third brush or may be connected between the other end of the field and ground. The latter connection would be the easiest to make as only one end of the fuse would have to be insulated.

Planning Your New Building

By TOM WILDER

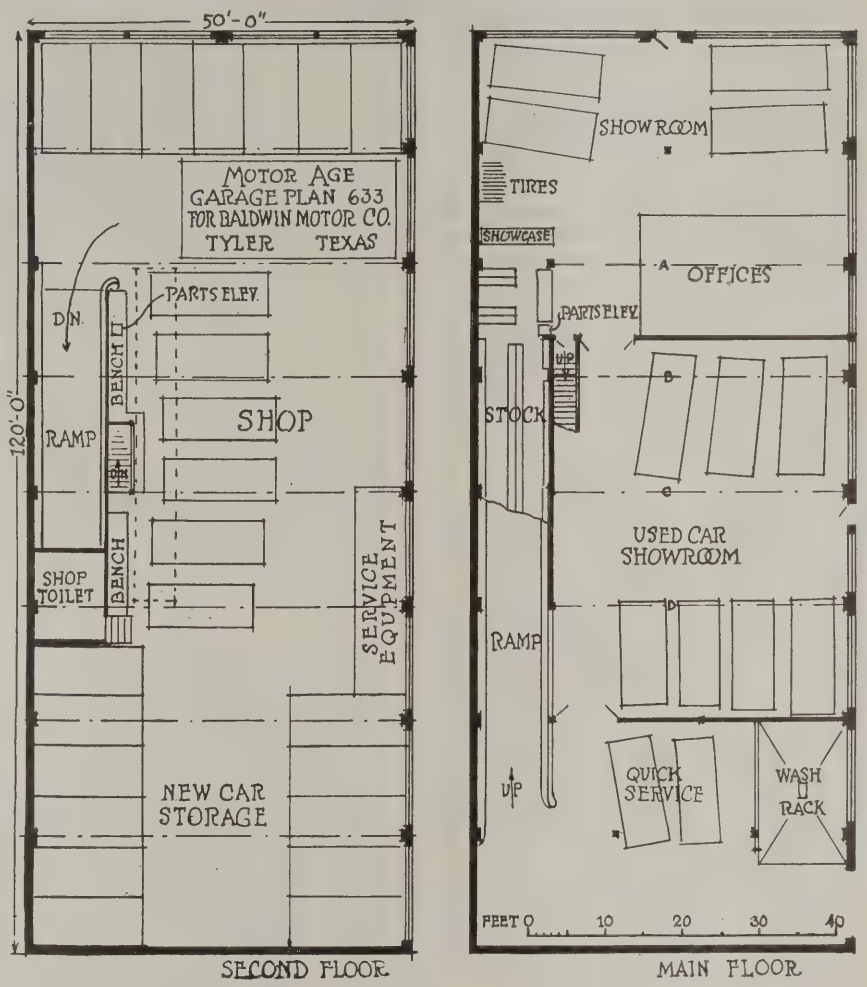
The READERS CLEARING HOUSE

Adding Second Floor to Old Building

Q.—We have read with considerable interest suggestions that you have given others regarding building layouts for automobile business. We now plan larger quarters for ourselves and will appreciate your suggestions. Our present building is one story. A penciled sketch herewith shows arrangement and size. We want another floor and think that the space now occupied by the shop would make an ideal used car sales room. A quick service space might be left beside ramp leading to shop on second floor. Surplus new car stock might also be kept on second floor.

Our present new car salesroom seems large enough—50 by 40 ft. but the front needs modernizing. Possibly a side entrance for cars would be better, however, the street in front is wider. We often wish that we could move cars from shop or wash rack without having to drive out into the street. We like the idea of having the office in the center of the building adjoining parts room, and where view of both salesrooms might be had.

The service station employs four or five men. We carry about $6,000 parts, a few tires and accessories.—Baldwin Motor Company, Tyler, Tex.



Ramp Reduces Space

We have tried to carry out this plan embodying the ideas you have suggested relative to your showroom and quick service station. It is always difficult to introduce a ramp into a building as narrow as 50 ft. in width and no doubt you will be disappointed when you see how the back part of your building has shrunk, because of the introduction of the ramp. We have reduced the width of the ramp to the minimum in order to have it kill as little space as possible and believe we have succeeded quite well in arranging it to avoid awkward turns and congestion both at the top and bottom. The only features we do not like is the lower end and the space reserved for quick service and wash rack. This should be three or four feet wider and if you can steal a little space from your office and a little from the used car showroom, we think it would be well to add it to this part so that there would be room for cars to pass coming in and going out.

By using 39 ft. girders at A—B—C and D supporting the second floor the floor arrangements will not be dependent on any column and this space may be rearranged without interfering in any way with the construction.

You have given us no details as to the construction of your present building and therefore we have gone ahead as if we were planning a new building and no doubt the addition by reason of extensive alteration etc., will be virtually a new building.

As you suggest it is much better to bring the cars into your showroom from the inside than the outside and consequently we have arranged an entrance at the rear between the offices and the

Usually a ramp is a difficult thing to plan into a 50 ft. building and this is no exception.

stockroom. The stockroom is planned for accessories and parts and a dumb waiter or electric elevator is planned to take parts to the shop on the second floor. You will note that this elevator does not stand in a vertical line, but slants to avoid the ramp. The elevator is not large, but undoubtedly large enough to carry 90 per cent of the parts going to the shop. The ramp will have a 20 per cent grade supposing that the second floor is 13 feet above the first.

TEXAS LIEN PROCEDURE

Q.—We have in our shop a Studebaker car which was left here for repairs, and after we had made all repairs and had the car fixed up the man that owns the car wrote us a letter telling us not to fix the car. We then mailed him a bill for same which was $415. At that time he was in Arkansas and since then we have not heard from him. He told us when he left the car here that the Insurance Co. would pay the bill as he had it insured, but we have never heard from them. Now we want you to tell us how we can dispose of this car and get our money out of it. We have had the car here and ready for 60 days or more.—W. E. Norvell, Malakoff, Texas.

Chapter Eight (8) Article 5665 of the Texas Statutes (1920) gives you a lien on the repaired automobile, authorizing you to retain possession of the car until your charges for repairs are paid. Where no price is agreed upon then the charges must be reasonable and the customary and usual charges. After holding possession for 60 days without payment the repairman should notify the owner to pay the charges, and if such charges are not paid within 10 days after this notice then the garagekeeper, after 20 days notice of intended sale, may proceed to sell the repaired property at public sale and apply the proceeds to the payment of charges and costs and pay over the remaining balance to the owner. If the owner's residence is beyond the state or is unknown, the repairman is not required to give the ten days notice to the owner before proceeding to give notice of sale and advertising the public sale of the property.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

A Half Way or Thorough Job on Main Bearings

Q.—Would it be advisable to loosen all the main bearings on a D-45 Buick six and slip in an upper bearing half when the old one is burned out, or would you advise tearing down the engine completely, removing the crankshaft and lining up the four main bearings? — Wisconsin Reader.

On a car as old as this one, it is probable that the crankshaft journals are worn undersize, so that the new main bearing would not fit properly. Accordingly from a mechanical standpoint it is much better to tear down the engine and remove the crankshaft, also checking the crankshaft journals to see that they are not eccentric. One point to keep in mind is the value of the car as compared to the cost of doing the job. If the car is not worth spending very much money on, it might pay to try the first method of slipping the bearing in place, although there is quite a chance that the bearing improperly fitted would pound out in a short time.

Q.—Some mechanics have the idea of taking up the front and center main bearings on a Ford engine just by loosening the bearing and tearing out the shims, and leaving the rear main bearing alone. I do not think that is a good job, do you.

If this is repeated it draws up the front and center main bearings and tends to spring the crankshaft. To keep the crankshaft properly lined up the same number of shims should be removed from all three bearings.

Q.—What would cause the connecting rod bearings on a 490 Chevrolet to crack up and fall out of the bearing if the bearing was properly fitted and had plenty of oil? The oil pump was working all right. My idea is that the rod may be twisted or bent.

A twist or bend in the rod may cock the piston or cause the upper end of the connecting rod to knock against the piston boss, but we do not believe that it would cause the bearing to crack up. This might be due to poor material in the babbitt or it might be due to the babbitt not making good contact with the connecting rod itself, so that the bearing material was not well supported, and had tendency to flex and eventually crack.

Q.—How many one thousandths does 1/64 inch equal and how many one thousandths does 1/32 of an inch equal?

We are publishing a table of decimal equivalents of 64ths which should be of service to you as well as other MOTOR AGE readers.. When you have any fraction and have no table of decimal eqivalents always divide the top figure of the fraction by the lower figure of the fraction. In the case of the fraction 1/64 you take the figure 1, put a decimal point after it and add as many ciphers as you need and divide this by 64.

Table 24.—Decimal Equivalents of Fractions of One Inch.

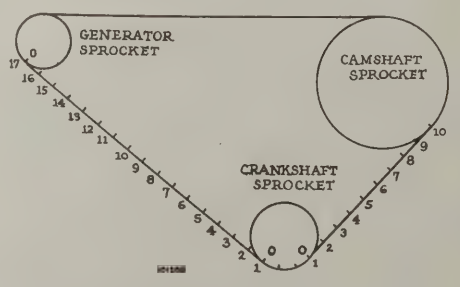
We are publishing a table of decimal equivalents of 64ths which should be of service to you as well as other MOTOR AGE readers.. When you have any fraction and have no table of decimal eqivalents always divide the top figure of the fraction by the lower figure of the fraction. In the case of the fraction 1/64 you take the figure 1, put a decimal point after it and add as many ciphers as you need and divide this by 64.



Q.—Would light weight pistons improve a Ford Coupe in obtaining more speed and power? Are regular Ford piston rings used in these pistons.

In general the lighter the piston the higher speed can be obtained from the engine. If you refer to aluminum alloy pistons, it is customary to use a concentric ring, but recommendations will be given by the piston manufacturer.

REPLACING TIMING CHAIN ON A STAR

Q—Give instructions for installing new timing chain on Star car where old chain has broken.—W. L. Mauk & Son, Eakly, Okla.

An illustration is given showing the crankshaft sprocket together with the camshaft and generator sprocket. On the crankshaft sprocket there are two teeth marked with the letter O and on the camshaft and generator sprocket there is one tooth so marked. The engine should be turned until the center mark on the flywheel is in line with the indicator which will leave the marked teeth of the crankshaft sprocket in the positions indicated. With the chain in place you can start counting the teeth on the chain beginning with No. 1 which is the tooth at the O mark on the crankshaft sprocket. The tenth tooth should register with the O mark on the camshaft sprocket, while the seventeenth tooth should register with the O mark on the generator sprocket. The exact setting of the generator sprocket is not so essential as the camshaft sprocket although if properly set it will facilitate timing the ignition.

Setting sprockets and chain to get correct valve timing

Larger Oil Groove Stops Oil Leakage

Q.—I am asking for some information about the rear main bearing of a Hupmobile model R-13 which has an oil leak. This oil comes out of the rear end of the oil pan, but I think it comes through the rear main bearing, which I believe is worn side ways. Would like to know if the bearings in this engine are poured in the block or if they are of the replaceable type. In changing bearings is it necessary to take the engine out or can they be replaced without doing this.—General Mechanic.

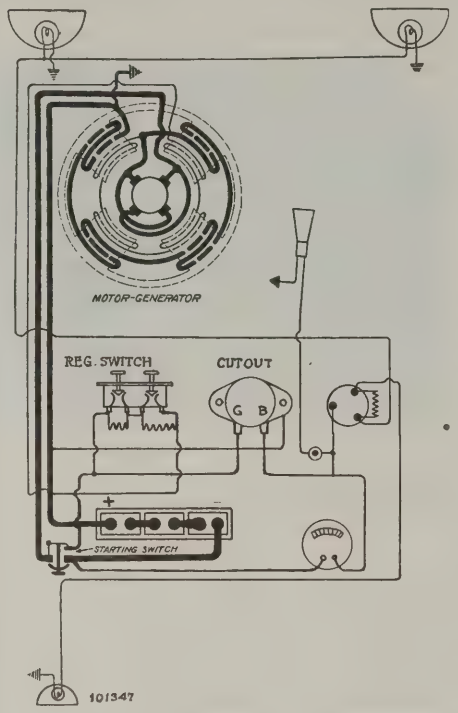
The trouble is usually due to slight wear in the rear main bearing, lower half. This bearing takes the end play of the crankshaft and in some cases the oil thrower, which is a ring on the crankshaft touches the groove in the lower half of the rear main bearing and this has the tendency to cause oil to work out into the pan. The remedy is to remove the engine pan and take off the lower half of the rear main bearing and see that the groove is large enough so that the oil thrower on the crankshaft does not touch it. If necessary an entire new cap can be used, but you can determine this when you see how much the ends of the cap are worn. If the wear is slight, enlarging the groove somewhat will overcome this condition.

GOOD WORKMANSHIP HELPS ON OTHER ENGINES ALSO

Q.—Being a subscriber to MOTOR AGE for some time past and having enjoyed the benefit of other mechanics' experience, I now wish to reply to the item published on page 26 of October 1, 1925, issue signed by the Main Garage, Kenton, Ohio. Having had considerable experience on Essex 4 cars myself I have in the past run into the same trouble as they are having, once in No. 2 and once in No. 4 cylinder. I have found the only remedy was the perfect alignment of the connecting rod and the perfect fitting of connecting rod bearings. Because of the fact that these motors have a very long stroke and fairly heavy rods they are prone to slap to the side under compression, if the rod is cocked or if rod bearing is somewhat faulty. Shorting the cylinder will also stop a noise of this character.—Ira W. Thornton, Pomeroy Motor Co., Longview, Wash.

Clearing Up Electrical Trouble

EDITED BY A. H. PACKER



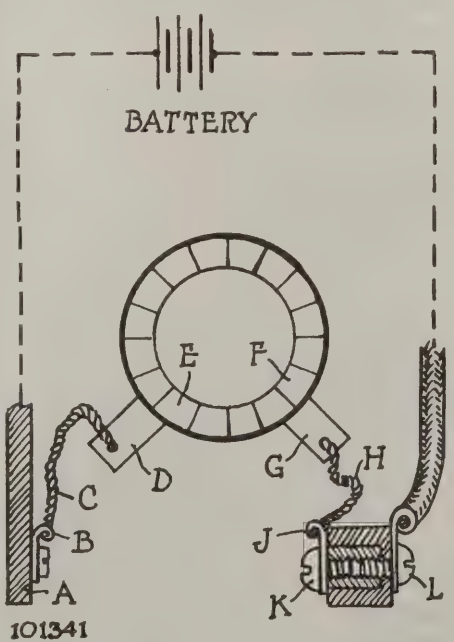
The READERS CLEARING HOUSE

Replacing the Regulator on a Grant Six

Q—I have been a subscriber and reader of Motor Age for several years, and have received lots of good information from your Reader's Clearing House columns. Now I have a question of my own to ask, and would appreciate seeing the answer published in your valuable magazine.

I have been having trouble with an Allis-Chalmers motor generator as used on Model V Grant 6. The motor works fine, but the generator only works occasionally. I have had the unit out and tested thoroughly, but believe the main trouble to be in the relay regulator. I have removed the old relay regulator from the switch panel and mounted a Basco regulator on the dash; together with the fuses and dimming units. I would like to know if there is any way to use a straight cut-out on this type of generator and if there is any other way of regulating the output of the generator than by the system I now have.—L. G. Devaney, 406 W. Cass Street, Roseburg, Ore.

A regulator of this sort may be replaced by a conventional cutout and a switch with resistance units on the back. We are showing a diagram which gives a method of changing the circuits. The resistance units on the back of the switch may be made out of iron or German silver wire. Stove pipe wire might be tried at first and one coil should be twice as long as the other. With this system it is desirable to use an ammeter so that you will know how much charging current is being produced. When starting up the engine the two buttons on the regulating switch may be pushed in so as to short out both resistance units. This will give the maximum charging current. Then as the current increases the left hand button drawn out will effect some reduction in the charging current. The right hand button controlling double the resistance will have more effect and with both buttons out we have the maximum effect. If the current still goes too high it will be necessary to use different resistance coils using either smaller wire or a greater length of wire.



This method of regulation is simple but necessitates watching the ammeter

HUNTING FOR A POOR CONTACT WHICH IS MAKING GENERATOR OVERHEAT

Q.—We are having trouble with Auto-lite generator model GJ on a Chevrolet superior, on which the armature gets hot and after a few weeks burns out. It is the third armature we have installed. We have also installed new brush holders and brushes and the armature runs true and free. The bearings are perfect. It was tested for shorts and grounds. We also had two electrical service stations check up the generator, but it seems to be a puzzle to everyone. We had it run on the test bench at different speeds, and without the cutout, but it heats up in three minutes. It seems as if the ground brush is at fault as it gets hot as the armature. Could you suggest anything to overcome this before we install a new generator? —Universal Garage, 24 Hartford Avenue, New Britain, Conn.

If you are using rewound armatures there is a possibility that the laminations in the old cores are shorted together from having rubbed the pole pieces at some time or other. It is also possible that the winding is incorrect or that the wire which is used is too small. You say that the armature turns freely, but we wonder if you have tested it with field current flowing. To do this you can lift the main brushes and run current through the field only and then see if the armature turns easily. It will usually turn a little harder than with no current flowing, but should not rub or bind at any particular place.

Points at which to make voltage tests to run down cause of heating

From what you say about the brush heating up we think there is a high resistance where the brush pig tail or shunt connection is attached to the brush. To thoroughly check the internal portions of the generator to make sure there is no high resistance you should use a voltmeter and test as indicated in the sketch we have made. A voltage reading from A to B would locate a high resistance between the pig tail terminal and the frame of the generator. A test from B to C would find a poor connection between pig tail and terminal, a test from C to D would locate a high resistance between the brush and its shunt connection or pig tail. In all of these tests you should get practically no voltage when the generator is running and delivering 10 or 12 amperes to a battery.

A voltage test from the brush D to commutator segment E just under the brush would show the loss of voltage due to the brush contact, while a test from F to G would show a similar condition at the other brush. In this manner you can test from G to H and from H. to J, from J to K and from K to L. There will be of course, a slight loss at each of the points mentioned, so that the voltage from E to F might be 7.9 while the voltage from A to L might be 7.7. Practically all of this voltage however, should be lost between the commutator and the brushes.

Some Lamp Flare Is Normal

Q—Please advise why the lights on an Overland 91 flare up and down as the engine speed increases or decreases. The size of the bulbs makes no difference.—Earl Bowman, Oneida, Ill.

Some flare in the head lamps is normal, as a fully charged battery will show a voltage of 6 just after the starter has been used, and a voltage of 7.5 as soon as the generator begins to send charging current to it. If the bulbs do not burn out, you probably have merely a normal condition. If the bulbs burn out frequently, it may be that you have a high resistance at some connection between the generator and battery. This is difficult to locate without a voltmeter. If a voltmeter is available, you can take readings from the frame of the car to various points on the generator to battery circuit while the engine is running and the generator is charging 10 or 12 amperes. For example, if at one side of the ammeter you found a voltage of 7.3 and at the other side a voltage of 8, it would show a poor connection in the meter, which would result in excessive voltage at the lamps.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Influence of Flat Rate Seen in Equipment Show

IN looking over the displays and especially the shop equipment at the seventh annual A. E. A. show which was held in Chicago last week, we are smitten by developments that have taken place in automotive shop machinery and fitments to further the cause of flat rate.

Talk with most any maker of equipment today and he will tell you that with his line of wrenches, hoist, tire changing machine, brake lining machine, valve refacing machine and so on, that the work can be done in very much less time than with the old hand methods.

What's the reason? Flat rate, to be sure.

Makers of equipment have studied the flat rate schedules of the car manufacturers and have brought out new or revamped old equipment to make it entirely possible for the shop to come under the wire on these schedules on time, or even less time.

We must remember that most flat rates are based, not upon the time it takes a cracker-jack mechanic to do the work, but the time the average man requires for the operation. A skilled man almost always comes under the wire in less time (although we admit there are some time schedules given out by makers of flat rate that cause many a man to go without lunch to break even) and a fairly handy man with the right equipment is sure to beat even the efforts of the highly skilled man without equipment.

Lately, many shops have gone into specialized forms of service, such as brake lining work, engine overhaul, electrical work and battery work, painting and top work, and so on. Those who do this almost always install equipment that cuts down the time factor. And so, at the show mentioned above, we saw many new machines and shop furniture that make it possible to do a certain job better and do it in less time.

Not only that but these makers of equipment have sensed the need for apparatus that disregards the human element. No two men read a micrometer alike, for example and when you leave something to the discretion of a mechanic who may not do the same thing in the same way from one day to another you are getting intro trouble.

That's why we see gages and templates that accurately set cutting tools, position reamers or whatever the case might be, so little is left for the mechanic to do but press the button and set the machine going.

Then, while the machine is in operation the mechanic can go to work on some other job and thus the shop production, the number of jobs, is materially increased. A manufacturer recently told us that in some shops wherein his machines have been placed the shops were able to profit nearly $30 per day on that machine alone.

THINGS THAT HELP FLAT RATE

A well placed service entrance encourages car owners to frequent the service station to take advantage of flat rate system of repairs. It is not always possible to have the service entrance on a main or side street, but this should always be done where possible

MOTOR AGE'S FLAT RATE FORUM

No. 40

FLAT RATES FOR BUICK BODY OPERATIONS

Manufacturer's Official Designation			Charge
1	Body Bolts—Tighten all		$1.45
2	Bumper—Install one door bumper		.50
3	Bumpers—Adjust all door bumpers		.75
4	Doors—Tighten all hinge, lock and check strap screws		.95
5	Door Handle—Install one	open models	.60
		closed models	.95
6	Door Hinge—Install one	open models	.75
		closed models	1.20
7	Hood Laces—Install new	one side	.60
		both sides	1.20
		both sides double	2.70
8	Lock—Door—Free up all	all models	.50
9	Lock—Door—Install new	open models	1.70
		closed models	2.40
10	Rattles—Remove all from body and hood. (Operations 1, 3, 4, 7 and 11 in combination)		4.80
11	Windshield—Tighten windshield post nuts and top anchor screws		.60

See Flate Rate Manual

Aberdeen, S. D.

To the Editor of MOTOR AGE:

Kindly advise us what data you have available on flat rate prices for general garage work. We are very much interested in this important subject and will appreciate any information and suggestions you may have to offer.

SOUTH DAKOTA STATE AUTO TRACTOR AND ELECTRICAL SCHOOL.

See MOTOR AGE'S Flat Rate Manual which covers service operations on practically all makes of American cars. It was published in the April 30, 1925, issue but is sold separately for 50 cents.

Importance of Good Accounting

As it now stands there are a great many men engaged in the servicing and repairing of automobiles who primarily are mechanics and who as a class know little or nothing about accounting. In fact many of them dislike bookkeeping and accounting so much that they would rather go broke than give the proper thought and time towards the establishment of records to show their costs of doing business. Without such records a shop will go broke and because for one thing labor almost invariably will be sold at a loss in such a shop.

Automobile repairing never will be a business of good credit standing until bookkeeping and accounting will be given as much or more attention than equipment and men.

EDITORIAL

Parts Must Be Recognized

LONG ago Henry Ford recognized the commercial importance of the automotive replacement parts business. He lost no time working out a plan whereby this business, as related to the cars and trucks he manufactured, would bring profit to both himself and to his dealers. The plan worked. Many a car manufacturer today would be glad to do a volume of business in motor vehicles equal to the volume of Mr. Ford's parts business.

The vital factor in the Ford parts plan was that it made it easy for the car owner to get parts for his vehicle no matter where he might be. He didn't have to hunt up an authorized Ford dealer to buy genuine Ford parts, and yet in every sale of Ford parts a dealer made a profit.

Owing to the growth of the reconditioning and rebuilding business, both for the car owner and for the promotion of used car sales, there has grown up a strong demand for parts for practically all makes of cars. In very few cases are the manufacturer's parts obtainable as in the case of Ford, but enterprising manufacturers have made available to the trade and the public full lines of dependable parts for practically every make of motor vehicle. And in consequence there has grown up a tremendous business in the distribution of standardized and trade-marked replacement parts for motor vehicles.

The magnitude of this business was revealed in Chicago this week when the first exhibition of the National Standard Parts Association was held at the Hotel Sherman. The parts business is no insignificant factor in the automotive equipment field.

Preventive service is more profitable than extensive repairing.

Show 'Em and Sell 'Em

THE new merchandising campaign planned by the Automotive Equipment Association has for its slogan "Show 'Em and Sell 'Em." At the same time the A. E. A. merchandisers will continue to "Ask 'Em to Buy." As we have frequently pointed out in these columns one of the most effective ways of asking people to buy merchandise is to show them the goods. And the voice with the strongest appeal is the price tag. No matter how good nor how beautiful merchandise may be the average consumer does not formulate a positive desire to possess it until he knows what it will cost.

The most successful accessory merchants give the widest possible display to their goods. Their sales increase in proportion to the number of items that are exhibited where customers can see and examine them. An automotive merchant who makes a success of Christmas selling told in last week's MOTOR AGE how he put tables in his store and filled them with articles in various price groups. Many items that he had considered slow moving were snapped up. He found his turn over was speeded up. It paid him to show his merchandise with prices plainly marked. It was his most effective way of asking people to buy.

There are some classes of automotive merchandise, however, that must have more than a casual showing in order to win over prospective buyers. Cars must be demonstrated. But a real demonstration and not merely a trip around the block with the salesman or the dealer's driver at the wheel is the better way to show 'em and sell 'em. A dealer selling one of the most expensive cars advertises a 100-mile demonstration trip for prospective buyers over any route the customer selects. Another successful dealer selling a popular priced car invites prospective buyers to take a car out alone and drive any way they want to. "If you drive it you will want it," he says, and his sales records seems to prove the case.

If you show your merchandise in the right way you surely are asking them to buy.

Now for the two-car family and then before you know it every other person will be rolling his own.

Lower Prices Coming

THERE is excellent prospect of a general price reduction affecting all kinds of automotive merchandise. It comes from the decision of the Ways and Means Committee of the House of Representatives to recommend repeal of the tax on trucks, parts, tires and accessories, and reduction of the tax on passenger cars from 5 to 3 per cent. These tax savings, if they become effective, will enable automotive merchandise to be sold to the public at lower prices without in any way impairing the profits of the trade.

The automotive industry has felt that it is entitled to complete elimination of the war taxes on its products. But since the passenger car has been the largest producer of revenue under the excise tax it appears that the Ways and Means Committee could not quite agree to give up so generous a contributor. It might have been done by making income tax reductions smaller, but it seems that income tax payers, who are much fewer than automobile owners, make a louder noise.

At any rate there is definite prospect of automotive tax reduction and there is still the possibility that on the floor of Congress the complete abolition of these taxes will be accomplished.

Car Producers Begin to Retrench

Although Sales Show Decline No Sign of Danger Is Seen

Most Dealers Enter November With No Stocks and Christmas Campaigns Promise Boost

PHILADELPHIA, Nov. 18.—New car sales have shown a marked drop during the last two weeks. Production has not shown a corresponding decline, but as a general condition retrenchment is the rule at the factories. The slowing-up of output after such a period of record-breaking activity as marked the entire month of October would naturally be expected to take some little time. The current surplus of product over sales to consumers cannot be considered a danger sign, as most of the dealers in the leading lines went into November with virtually no stocks on hand.

The prospects of Federal tax reductions on automotive products are having an effect on the production plans of the manufacturers. If the House Ways and Means Committee had decided to eliminate the levies entirely, the producers would be preparing for a somewhat higher level of business next year than is now the case. But even so, the saving to automotive buyers of about $70,000,000 a year, as provided in the bill in its present form, should prove a good stimulant to sales.

Lower taxes are not the only sign of good automobile business ahead. The generally high level of business activity in the country and the constantly expanding volume of foreign sales combine to promise a continuation of the prosperity in the automobile industry at least during the first half of 1926. But the automobile producers have seen slumps develop suddenly and unaccountably before, and they will not be unprepared if the unexpected happens.

It is regarded as fairly certain that December will be a month of rather low activity, especially in sales of new cars. This condition has now become a familiar yearly action, but efforts are being made to bring automobile selling during the holiday season more into line with the brisk business done in other retail lines.

TUDOR NAMED RECEIVER

KOKOMO, Ind., Nov. 14.—Robert L. Tudor, of this city, has been appointed receiver for the Pioneer Automobile Co., the holding organization which owns the real estate and plants of the old Apperson Brothers Automobile Co., following the filing of a suit in Howard county circuit court by the National Lead Co. petitioning such action. The Apperson Automobile Co., which leased the plants in July, 1924, when it was formed by the Don C. McCord-Rothchild interests, is not affected by the action.

ERWIN LEAVES PARAFLECTOR

MINNEAPOLIS, Minn., Nov. 14.—W. B. Erwin has resigned as vice-president and director of the Paraflector Company. His resignation is effective December 15 and he plans to remain in the automotive industry.

First National Motorbus Show Opens in Detroit

DETROIT, Nov. 14.—The first motor bus show to be held by bus and accessories manufacturers opened this evening at Convention Hall under the title of the First National Motor Bus Show. At the originating of the show less than six weeks ago, it was planned to make it an annual event. The opening tonight, and the enthusiasm with which it was marked makes it an assured event.

Some of the more important manufacturers who are exhibiting are the Yellow Coach and Manufacturing Company, Graham Brothers, The Fageol Company, the Six Wheel Company, Commerce Motor Truck Co., Denby Motor Truck Company, Ruggles Motor Truck Company, Chevrolet Motor Company, Gotfredson Corporation, Reo Motor Car Co., The Studebaker Corporation, American National Omnibus Co., and Dorris Motors, Inc.

A. M. A. Holds Annual Dinner During A. E. A. Show Week

CHICAGO, Nov. 14.—The annual dinner of the Automotive Manufacturers' Association at the Auditorium Hotel Tuesday evening was one of the most largely attended dinners of A. E. A. convention week. About 400 members and guests of the A. M. A. were present.

Addresses were made by G. F. Disher, president of the association; Arthur Heath Onthank, chief of the domestic commerce division of the Bureau of Foreign and Domestic Commerce, and Pat Barnes, soldier of fortune and radio announcer.

Mr. Disher pointed out some means by which he believed the cost of distributing merchandise could be reduced. He said the manufacturers of automotive products have attained as great efficiency as the manufacturers in any other lines, but that the cost of distribution is abnormally high. He recommended that retail dealers buy stocks more often and in less quantity in order to keep down the investment in inventory. He also recommended that the buyer for the automotive wholesaler be in close touch with the sales department.

Mr. Onthank described surveys which the Department of Commerce has made in various sections of the country to determine buying habits and power of the people. He told how these surveys may be used profitably by the automotive manufacturers.

National Standard Parts Meeting and Show Opens

More Than Ninety Exhibitors Have Booths at Chicago Exhibit—1926 Course Planned

CHICAGO, Nov. 16.—The National Standard Parts Association today opened a convention and exhibit at Hotel Sherman which will continue through Wednesday. Delegates arrived early to register and indications point to a very interesting meeting and show. About 136 delegates are expected to have reported before the sessions close. Ninety-four exhibitors have booths in the show which is being staged on the mezzanine floor of the hotel. It is said that a large number of applications for exhibition space were rejected, all of these, of course, being non-members.

According to those close to the association's activities the thread of discussion in the convention will largely involve the future status of the parts jobber. How to put the parts jobber on a sound business basis will be the big thought. Approach to this problem was made by the association's merchandising committee by means of survey and study.

The exhibitors in the show are as follows:

Accurate Gear Co., Springfield, Ohio.
American Hammered Piston Ring Co., Baltimore, Md.
American Steel Export Co., New York City.
Automotive Gear Works, Inc., Richmond, Ind.
Bock Bearing Co., Toledo, Ohio.
Brodie Company, Ralph N., Chicago, Ill.
Buckeye Brass & Mfg. Co., Cleveland, Ohio.
Burd High Compression Ring Co., Rockford, Ill.
Burgess-Norton Mfg. Co., Geneva, Ill.
Cleveland Inner Ring Co., Cleveland, Ohio.
Cleveland Piston & Mfg. Co., Cleveland, Ohio.
Dall Motor Parts Co., Cleveland, Ohio.
Dalton & Balch, Inc., Cleveland, Ohio.
Detroit Steel Products Co., Detroit, Mich.
Elgin Machine Works, Elgin, Ill.
Fafnir Bearing Co., New Britain, Conn.
Federal Mogul Corp., Detroit, Mich.
Felt Products Mfg. Co., Chicago, Ill.
Fostoria Screw Co., Fostoria, Ohio.
G H Mfg. Co., Baltimore, Md.
G-H Tension Ring Co., Inc., Baltimore, Md.
Gill Mfg. Co., Chicago, Ill.
Hide Leather & Belting Co., Indianapolis, Ind.
Houpert Machine Co., Long Island City, N. Y.
Indianapolis Tool & Mfg. Co., Indianapolis, Ind.
W. H. Jahns, Inc., Los Angeles, Cal.
James Motor Valve Co., Detroit, Mich.
Johnson Bronze Co., New Castle, Penn.
Kalamazoo Loose Leaf Binder Co., Kalamazoo, Mich.
Kant-Skore Piston Co., Cincinnati, Ohio.
Keasbey & Mattison Co., Ambler, Pa.
King Quality Products, Inc., Buffalo, N. Y.
Lake Erie Metal Products Co., Bedford, Ohio.
Mackay & Austin, Inc., Oakland, Cal.
Mallory Electric Corp., Toledo, Ohio.
Milwaukee Die Casting Co., Milwaukee, Wis.
National Bushing & Parts Co., Inc., Minneapolis, Minn.
New England Auto Products Co., New Haven, Conn.
Ohio Piston Co., Cleveland, Ohio.
Orange Bearing Co., Orange, N. J.
Packer Auto Specialty Co., Chicago, Ill.
Parts Mfg. Co., Cleveland, Ohio.
Penn Rivet Corp., Philadelphia, Pa.
Pennsylvania Piston Ring Co., Cleveland, Ohio.
Republic Gear Co., Detroit, Mich.
Scully Steel & Iron Co., Chicago, Ill.
Smalley Accessories Corp., Chicago, Ill.
Society of Automotive Eng., Inc., New York, N. Y.
Spencer-Smith Machine Co., Howell, Mich.
Staff, J. Wadsworth, Saginaw, Mich.
Standard Sales & Service Co., Plainville, Conn.
Star Products & Machine Co., Cleveland, Ohio.
Swartz Mfg. Co., Freeport, Ill.
Thompson Products, Inc., Cleveland, Ohio.
Timing Gears Corp., Chicago, Ill.
Twentieth Century Brass Works, Minneapolis, Minn.
United States Asbestos Co., New York, N. Y.
United States Chain & Forg. Co., Pittsburgh, Pa.
Universal Drive Shaft Co., Cleveland, Ohio.
U. S. Bearing Co., Indianapolis, Ind.
Van Norman Machine Tool Co., Springfield, Mass.
Warner Gear Co., Muncie, Ind.
Wel-Ever Piston Ring Co., Toledo, Ohio.
Western Gear Co., Detroit, Mich.
Whitney Mfg. Co., Hartford, Conn.

A. E. A. Votes to Expand Its Activities

Show Declared Best Ever Held From Business View

More Orders, Better Contacts, and Finer Displays Are Features of Seventh Exhibition

CHICAGO, Nov. 14.—From a business standpoint the seventh annual show of the Automotive Equipment Association, which ended here today, was the greatest the association ever has held.

Manufacturers, particularly those who exhibited new or improved products, reported at the close of the exhibition that they had taken more orders than ever before at a like occasion.

More contacts were made, more inquiries received and more interest was shown on the part of the jobbers present than ever before in the history of the association.

One prominent manufacturer, who introduced a new product, reported that he had added more than 100 wholesale dis-

E. V. Hennecke, new vice-president of A. E. A.

tributors during the show, and that orders had been taken that would insure top production for the next six months.

A large amount of order taking was done, although ordinarily the A. E. A. show is more of a meeting place where lines may be shown and lasting contacts begun, than it is an order receiving department.

Nearly every manufacturer who exhibited declared that more actual business was written in the first day of the display, than had been done during the

(Continued on page 43)

Heard at and About The A. E. A. Show

The Bonney Forge and Tool Works of Allentown, Pa., held a special meeting of salesmen and a sales conference all day Nov. 8 in Chicago, the day before the A. E. A. show. All sales representatives with the exception of the export department were present at the session, at which it was announced that the system of listing Bonney products has been changed. The company now lists direct to the retailer.

* * *

Roland S. Boreham of Los Angeles has been appointed wholesale representative in the coast territory for the Ernest Holmes Co., Chattanooga, Tenn., manufacturers of wreckers and shop equipment. B. H. Dirks will travel the wholesale territory surrounding Salt Lake City for the Holmes company, it was announced. The Holmes concern has more than trebled its floor space in the last year to meet growing demand for its products.

* * *

R. W. Jones is leaving Frank Mossberg Co. after sixteen years of association with that firm, to become assistant salesmanager in the western sales district for the American Wire Fabrics Corp., with headquarters at Chicago.

* * *

Van Cleef Bros., Chicago, celebrated the close of the "Home-Coming Sales Contest" among field representatives of the company, with a dinner during the A. E. A. show.

* * *

Two general sales sessions were held Nov. 9 and 10 at the Hamilton Club by district and overseas representatives of Walden-Worcester, Inc., of Worcester, Mass.

* * *

The Gates Rubber Co. Denver, held its annual sales conference and banquet Saturday at the Hotel LaSalle.

* * *

The Cincinnati Victor Co., Cincinnati, held a sales dinner at the University Club Wednesday evening.

* * *

Fred Cole has been added to the directorate of the Romort Mfg. Co., Oakfield, Wis., succeeding Will Zinke.

* * *

The Kales Stamping Co. of Detroit, held its annual sales organization dinner Nov. 9 at the Congress Hotel.

* * *

The Manley Manufacturing Co. announces a reduction in price on the Manley Wrecking Crane No. 101, from $118 to $100. The No. 101 is a 2½ ton size.

* * *

All the field service men of the Lyon Metallic Manufacturing Co., Aurora, Ill., were called in from their territories to

(Continued on page 34)

Merchandising Program Is to Extend Throughout U. S.

Convention Also Votes to Merge With M. & A. M. A. if Latter Approves—Ozburn New President

CHICAGO, Nov. 14.—Renewal and expansion of the merchandising program of the A. E. A., which made the slogan "Ask 'Em to Buy" famous three years ago, was decided upon by the Automotive Equipment Association at its tenth annual convention here this week. The old slogan will be revived and a new one, "Show 'Em and Sell 'Em," will be used in promoting the campaign.

The association appropriated $50,000 for this work and authorized the merchandising department to employ two capable field men to assist in carrying the merchandising plan to all sections of the country.

This action was taken following a report read by Arthur R. Mogge, mer-

N. F. Ozburn, new president, A. E. A.

chandising director, outlining the plan to organize meetings of jobbers and their salesmen and dealers in all parts of the country to promote the better merchandising of accessories, equipment, service parts, and service. This plan was tried out early this month in New York state when a group of jobbers held three meetings at which speakers told them how to keep their places and dealers' places busy this winter. These jobbers were enthusiastic about the plan and declared it had already brought profitable results.

L. A. Safford, chairman of the merchandising committee during the past year, presided at the merchandising session and urged all members to support this campaign. W. T. Morris, retiring

president of the A. E. A., was selected as new chairman of the merchandising committee.

Another outstanding action of the convention was the voting of authority to the board of directors to consummate the proposed merger with the Motor and Accessory Manufacturers' Association provided the latter association approves the merger at its annual meeting in January. Thus there is presented the possibility of the two associations becoming one before the next annual convention and show are held. This action was unanimous.

It was decided to hold the convention and show next year at the Coliseum in Chicago the week of Nov. 8 to 15. There was some sentiment in favor of changing to a later date, but the majority preferred the early part of November. By vote of the convention, attendance at the show next year will be more restricted than for the last two years. It will be open only to members and invited guests, as this year, but invitations will be extended to jobbers only if they show enough interest to file applications not later than 30 days before the show opens.

The new president of the association, elected at the annual convention here this week, is N. F. Ozburn of Ozburn Abston & Co., automotive jobbers, Memphis, Tenn. The new vice-president is Earl V. Hennecke of the Moto-Meter Co., manufacturers, Long Island City, N. Y. The retiring president is W. T. Morris, of the American Chain Co., Bridgeport, Conn. Mr. Ozburn steps up from the vice-presidency of the association.

New directors were elected as follows:

District 1—Three year term: George W. Fleming, Fleming Machine Co., Worcester, Mass.; two year term: Charles S. Owen, Chapin-Owen Co., Rochester, N. Y.; one year term: R. P. Greene, Wetmore-Savage Auto Equipment Co., Boston, Mass.

District 2—Three year term: R. W. Shreiner, General Auto Supply Co., Harrisburg, Pa.

District 3—Three year term: D. S. Brisbin, Columbus-McKinnon Chain Co., Columbus, O.; two year term: B. N. McGregor, Packard Electric Co., Warren, O.

District 4—No election.

District 5—Three year term: F. H. Suter, Shadbolt & Boyd Iron Co., Milwaukee, Wis.

District 6—Three year term, F. J. Tenk, Tenk Hardware Co., Quincy, Ill.; one year term: H. E. Patterson, Warner-Patterson Co., Chicago.

District 7—No election.

District 8—Two year term: H. J. Banta, The Banta Co., Los Angeles, Cal.

District 9—One year term: W. P. Kearney, Dominion Chain Co., Niagara Falls, Ont.

New officers of the association were installed at the Saturday morning session, which was the concluding session of the convention.

The total number of exhibitors at the show was 225 and 212 of these were manufacturers of automotive equipment.

(*Continued on page 43*)

(*Continued from page 33*)

attend the A. E. A. show in Chicago. A sales conference was held in Aurora previous to the opening of the show and on the day of the show opening all automotive jobbers handling Lyon products were taken by automobile to Aurora where they inspected the Lyon plant, were served with dinner, and returned that evening to Chicago.

* * *

The Cuno Engineering Corp., Meriden, Conn., manufacturers of the "Electric Match" and other smoking equipment for automobiles announced at the A. E. A. show that a new factory building has been completed to increase the facilities of the plant.

* * *

Romort Mfg. Co., Oakfield, Wis., announced at the show a discount of 40 per cent to jobbers on their air tower, in place of the 30 per cent formerly prevailing.

* * *

Burgess-Norton Mfg. Co., Geneva, Ill., hereafter will mark all their piston pins with the size and stock number.

* * *

A dinner for distributors was held Tuesday evening by the Champion Spark Plug Co. of Toledo.

* * *

James Motor Valve Co. of Detroit, gave a dinner to representatives Wednesday evening.

* * *

An interesting entertainment was provided daily at the Illinois Athletic Club for the wives of distributors by the Lincoln Products Co., Chicago. Luncheon and bridge was the program.

* * *

Announcement was made by President C. M. Burgess of the Burgess-Norton Mfg. Co., Geneva, Ill., of the resignation of R. E. Espey as secretary and sales manager of the company and the appointment of F. E. Burgess as secretary. Mr. Burgess formerly was assistant treasurer of the company and will continue to discharge the duties of that office also.

* * *

The Indiana Piston Ring Co. has purchased the plant of the old Testor-Hartley Motor Corp. of Hagertown, Ind., and is remodeling it to form an addition to its own factory. The new plant is expected to be in full operation by Dec. 1, when it is hoped that the daily capacity will be about 100,000 Perfect Circle piston rings.

* * *

Automobile factory service managers and a number of other guests were entertained at dinner Wednesday evening of A. E. A. convention week by E. H. Spears, sales manager of David Lupton's Sons Co. of Detroit. Following the dinner a round table discussion was held on problems of servicing motor vehicles and the distribution of parts and supplies. Talks were made by all the service managers present, two representative jobbers, two manufacturers of shop equipment and three representatives of automotive business papers.

* * *

A. D. Geiger has been made manager of the Boston branch of the Black & Decker Manufacturing Co., succeeding Dan G. Caywood.

* * *

P. M. Southworth has returned to "X" Laboratories, Inc., as advertising manager. He formerly occupied the same position with the Nestles Food Co.

* * *

The Canadian Auxiliary of the A. E. A. held a banquet Wednesday evening at the Chicago Athletic Association, at which W. P. Karney, vice president of the Dominion Chain Co., Niagara Falls, Ont., acted as toastmaster. About 25 jobbers were present and discussed problems for next year.

* * *

The Apco Manufacturing Co of Providence, R. I., held its annual dinner and sales conference, the Sunday before the show opened, at the Congress Hotel.

* * *

The Rees Manufacturing Co. of Pittsburg held a dinner for salesmen at the Congress Hotel Monday evening.

* * *

President C. M. Burgess of the Burgess-Norton Mfg. Co., Geneva, Ill., announced at the show the inauguration of a parts insurance plan whereby the company guarantees each B-N piston pin to be within .0002 plus or minus for diameter, 1/64 in. for length, and not more than .0002 out of round and with no taper. Hardness is guaranteed to be correct and the pin to be satisfactory in every way to the purchaser. If not it can be returned at the company's expense for exchange. A certificate is issued by the shop in which the pin is installed. The plan provides for compensation for damage incurred on account of a broken B-N pin installed by a competent mechanic, if the pin contained a flaw, providing the pin has not been altered in any way after leaving the factory. This plan was designed especially to appeal to those who demand only geuine parts.

* * *

Bert Close, for a number of years president of the firm of Berry & Close, Philadelphia, manufacturers' agents, has been made sales manager of King Quality Products, Inc., Buffalo, N. Y. Frank Berry will continue the business of Berry & Close with the same lines.

Automotive Division Gives Another Expert to Dodge

WASHINGTON, Nov. 14.—Homer E. Elder, statistical expert of the Automotive Division, U. S. Department of Commerce, has resigned that position to head the research department of foreign sales for the Dodge Brothers Motor Company, with headquarters in Detroit. Mr. Elder's successor in the department has not as yet been appointed.

The acquisition of Mr. Elder's services, marks the second official Dodge Brothers has taken from the department within the last six weeks, the first being Percy Owen, formerly chief of the automotive division who has been made director of foreign sales of Dodge Brothers.

Thompson Now Developing Carbon Monoxide Consumer

Device Also to Be Utilized as Automobile and Bus Heating Apparatus, Designers Say

CHICAGO, Nov. 14.—A carbon monoxide consumer, which can be utilized as a car or bus heater, is being developed and is said to be near perfection by the Thompson Research, Inc., Cleveland, O. Although the device is not in production as yet, and the company is unable to say when it will be, it has been tested on various cars at the laboratories, has been inspected by the Cleveland city engineer, and is declared to have been found very effective.

As is so often the case in chemical research, the product desired is secondary in importance to the by-product of the developed reactions.

The corporation began the development work with the intention of providing a carbon monoxide consumer for automobiles. The bureaus of health in various cities have found that life is being shortened by the inhaling of monoxide coming from automobile exhausts and lying close to the pedestrian level of the larger cities. It is reported that the city of Paris is to enforce the use of a recent French invention which prevents this condition.

Instead of developing a device to absorb the monoxide, which, by its nature, would require replacement of the absorbent substance at intervals, the Thompson laboratories studied the possibilities of burning the noxious gas, that is, convert it into carbon dioxide, a harmless vapor.

It was found, however, that by the time the exhaust gases reached the muffler their heat had so decreased, that the monoxide would not burn except under compression. Compression was out of the question because it would retard the power of the engine.

After prolonged tests, it was found that a certain catalytic agent would raise the temperature of the mixture of monoxide and air to a heat of sufficient intensity to allow explosion by an electric spark.

As soon as this was discovered, it was found that great heat was generated by the burning of the monoxide since it had no explosive power. The idea then was conceived, that the air used to cool the device might be pumped into the bus for heating purposes. This would obviate the escape of exhaust gases in the car interior.

A possible development of the principle, which the company has not lost sight of, is that the heat developed by the consumer might be used in large plants, for the formation of additional steam power, or the heating of factory buildings.

The apparatus is built to take the place of the ordinary car or bus muffler. It is to be compact in size and will have much the same appearance as the muffler.

Attached to the end of the exhaust pipe, is an expansion chamber, in which the carbon monoxide is mixed with inflowing air, regulated to the proper proportions by aerators in the front of the expansion chamber. The expansion chamber further serves the purpose of preventing compression of the mixture, which would decrease the engine's power.

From the expansion chamber, the mixed gas is nozzled down and passed into a cylinder which is drilled with tiny holes. Surrounding the inner cylinder is the catalyst, and extending into the firing chamber which surrounds the whole, is a spark plug, fired from the distributer and thus synchronized with the engine.

The carbon dioxide then passes out as exhaust.

Surrounding the combustion chamber is an air jacket, into which the air passes through venturi tubes, and after circulating through the jacket, is piped into the bus interior.

Selling Cars Too Slow For Him

OGDEN, Utah, Nov. 14.—Harbertson Brothers, automobile dealers of this city, are recovering from a shock. About six months ago they engaged James H. Carlson, 40 years of age and married with one or two children, to serve as a salesman. Carlson did well and was making many friends in the city when he suddenly left for parts unknown taking with him a Nash car belonging to the firm and about $2,000 in money and property obtained by means of forged checks, the victims being his employers, merchants and bankers of Ogden. The man is said to have a police record. He is believed to have acted as an automobile salesman in California and Detroit. He is of dark complexion, with dark hair though nearly bald and weighs nearly 200 pounds. His height is about 5 feet 10 inches. The serial number on his car, a 1920 model, is 136223, and the engine number is 219512. Police have started a wide search for the man.

SPACE DEMAND HEAVY

CLEVELAND, O., Nov. 14.—The demand for truck space in the Cleveland automobile show, January 23 to 30, is far in excess of the space available, it was announced today by the exposition management. It was pointed out, however, that arrangements for alloting additional space for commercial cars are under way. Drawing this week for passenger car space revealed a condition similar to the condition faced by the commercial car exhibitors. From every viewpoint, this year's show is going to be the biggest, by far, in the Fifth City's history.

Chrysler Insurance Plan Upheld in Federal Court

New York District Judge Enjoins State Superintendent from Revoking License

NEW YORK, Nov. 14.—The petition of the Palmetto Fire Insurance Co. for an injunction to restrain James A. Beha, state superintendent of insurance, from revoking the company's license in New York, was granted in a decision by Judge Rogers in the United States District Court this week. The petition had been filed after Beha had indicated that he would revoke the license on the ground that the Chrysler-Palmetto automobile insurance plan constituted a violation of the laws and public policy of the State of New York.

The court overruled Beha's contention that this was a suit against the state and could not be maintained in federal court without the state's consent. The court held that while the state had power to exclude a foreign insurance company from doing business within its limits or to impose on it conditions deemed proper as precedent to its right to do such business the state could not forbid contracts of insurance relating to risks within its limits from being made between a citizen and a corporation in another state since such an attempt would violate the citizen's liberty to contract under the Fourteenth Amendment to the Constitution.

Whether Chrysler-Palmetto insurance contracts made under the Michigan laws were valid in New York was not regarded by the court as within its purview, but merely whether the license of the Palmetto, if its business does not violate New York laws, can be revoked because of the manner in which it does business in a third state where that business is valid.

The Court held that the Ohio decision refusing to enjoin the state insurance commissioner there from revoking Palmetto's license hinged upon the Ohio resident agent law and New York has no such law. The Court held also that in making its contract with the Chrysler Corp. in Michigan and in acting under that contract Palmetto was not doing business in New York and that "where applications for insurance are obtained in a state by an agent of a foreign company and forwarded by him for acceptance or rejection to a company outside the state the company is not doing business in the state wherein the applicants reside."

WITHERS JOINS INDIA

AKRON, Nov. 14.—W. C. Withers has just joined the sales force of the New York branch of the India Tire & Rubber Company. Withers will cover the metropolitan territory. He has been in the tire selling field for 12 years. He formerly did special sales work for Goodrich out of New York and has represented Republic in and around New York City.

Exhibitors Now Plan Booth Decoration for Big Shows

Space Details Arranged, Arrangements Can Be Made as to Display Methods

NEW YORK, Nov. 14.—With space drawings out of the way and the dimension and shape of spaces available to each individual exhibitor, the decks have been cleared for action in final preparation for the National Automobile Shows in New York and Chicago, with which the New Year will be ushered in. For the cars and taxicabs only one such function was necessitated, but in the case of the accessory manufacturers, a supplemental drawing was held, disposing of the final remaining spaces.

The official figures show that 50 makes of passenger cars will be on display in Grand Central Palace, New York, during the week of January 9 to 16, and one less at the Coliseum in Chicago, January 30 to February 6. In addition, eight makes of taxicabs will be on exhibition at each show.

The accessory division of the New York show, as it now stands, will have on display the products of 156 accessory and parts manufacturers. In the same lines the Chicago exhibition will have a total of 117. These totals may be increased later if additional space can be provided.

With the single exception of the Du Pont Motors, listed only at New York, the same car makers will occupy spaces at both the national shows. This is not the case with the accessory exhibits, the divergence between the two lists being considerable.

With exact details of the spaces available, the car makers are now in a position to decide how many models may be displayed to advantage, and the accessory men to formulate plans for decoration of their booths. The general decorative scheme has not been disclosed for either show, but it is understood that most elaborate plans are being worked out.

The National Automobile Chamber of Commerce, sponsoring both the New York and Chicago shows, will pay particular attention to the trade periods at the coming shows. With the realization that much of the buying for next year's production will be completed at the two displays, exhibitors will be urged to have their displays as complete as possible by 10 o'clock on the Monday morning of each show. The trade periods will be from 10 a. m. to 1 p. m. on each Monday and Tuesday, during which hours the factory representatives, distributors and dealers will be at liberty to inspect everything and talk business without interruption.

NEW VELIE DEALERS

MOLINE, Ill., Nov. 14.—New dealers added to the organization of the Velie Motors Corp. include:

G. J. McMaster, Lanesboro, Minn., Gilbon Garage, Peekskill, N. Y., John H. Dennis, Albany, N. Y., Hester Motor Service, Henerson, N. C., Fred Cornall, Carbondale, Pa., Diffley Motor Company, Everett, Wash., Gregory Garage, Johnson City, N. Y., Minor Motor Company, De Witt, Ia., Rockwell's Garage, Elmira, N. Y., H. R. Eby, Shannon, Ill., L. H. & R. L. Robinson, Winters, Cal., A. P. D'Artenay, Dixon, Cal., Sorenson & Clariborne, No. Sacramento, Cal., Rutherford Bros., Oroville, Cal., Benicia Garage, Benicia, Cal.

FRESNO PLANS CONGRESS

FRESNO, Cal., Nov. 14.—The sales congress of the National Automobile Dealers' Association, which in the past has been held only in San Francisco and Los Angeles, in this state, also will be held in Fresno, November 30, this year. All dealers in the San Joaquin valley, and other territory tributary to Fresno, will attend this meeting and take an active part in it, while other dealers from any and all sections of California are invited as part of the audience.

TRUCK CO. SALE NOV. 23

SPRINGFIELD, O., Nov. 14.—Interest now centers in the sale and reorganization of The Kelly-Springfield Motor Truck Company at 2 p. m. November 23 at the plant by Receiver Pearl A. Lewis. It is expected that three bids will be submitted, according to reports, although it has been the understanding that an eastern syndicate will probably make the high bid. It is assured that the company will be placed on a sound financial basis and that the plant will be operated with a large force.

Moon and Diana Dealers See Big Southern Demand

ATLANTA, Nov. 14.—That closed car demand in the Southeast this year gives every indication of establishing the best winter record in the history of the automobile business in this district appeared to be the consensus among the dealers in Georgia, Florida and North and South Carolina, handling the Moon and Diana line, who attended a sales conference in Atlanta held by the southeastern branch of the Moon Motor Car Co.

The immense cotton crop in the South this season, sufficiently large to insure growers one of the biggest financial returns in the history of cotton growing in the South, is resulting in a brisk closed car demand in all parts of the Southeast which bids fair to continue unabated through the coming winter months.

MACK REPORTS PROFIT

NEW YORK, Nov. 14.—Mack Trucks, Inc., reports net profits of $2,614,205 for the third quarter of 1925, after charges. After allowing for dividends on first and second preferred stocks of $284,436, the balance equalled $6.86 a share on 339,750 shares of common. Total net income for the first nine months of the year, after charges, was $7,268,052, or $18.88 per share on the common. Net income for the first nine months of 1924 was $4,795,938, or $13.98 a share on the common.

Cram Sees More Buying and Greater Production in 1926

Economist Believes Present Owners Will Purchase Higher-Priced Cars Than Formerly

DETROIT, Nov. 14.—As excellent a business year as 1925, if not a better one, is looked for in 1926 by Benjamin H. Cram, nationally known automotive economist. Not only will general business be better, employment as widespread and wages better, Cram declares, but he predicts automobile production and sales will be larger than in this year; more new car owners will appear and better cars will be bought. He adds, however, that used car values will be lower than now and while this will help the used car buyer it will interfere with the man seeking to trade in his old car for a new one.

"With 1925 drawing to a close, after an excellent setting for all things automotive, thought is directed to 1926 and its potentialities," Mr. Cram declares. "Without question it will be an excellent business year, and as such, should carry with it another large volume of automobile buying. Money should be more plentiful than in the present year, and with more confidence in the business structure generally, should be more extensively employed. This means creation of business opportunities, general employment and increased incomes.

"There will be an increased volume of automotive buying, though possibly not a largely increased sale of units. We mean by this there will be an inclination to buy better cars on the part of those ordinarily buying in lower ranges. Manufacturers and dealers in the lower priced lines will probably see many of their present owners ascend into better grades—many more than in the ordinary business year. To compensate for these they must develop and sell a new group of owners—persons formerly without cars. More first buyers will buy in better grades because of improved economic status, but there should be a greater number of first buyers than ever before, the large percentage of whom will be in the lower grades.

"There will be a tendency to quicken the general automotive market through many buyers coming in with cars practically new which they seek to trade on better cars. The result of this will be a general lowering of used car valuations and prices. So many cars of one to three years' use will be offered on the used car market there will be practically no market for the cars older than this."

COOK TO KANSAS CITY

NEW YORK, Nov. 14.—Colin Campbell vice president of Durant Motors, Inc., announces the appointment of W. S. Cook as sales manager of the Kansas City wholesale office, vice W. I. Nelson, resigned. George Bandy, Jr., was appointed sales manager of the Memphis wholesale office, succeeding Mr. Cook.

Unusual Color Schemes Are Featured at Annual Salon

Natural Hues of Birds Used by Designers in Automobile Painting Effects

NEW YORK, Nov. 16.—Birds occupy an important place in the twenty-first annual automobile Salon which opened at Hotel Commodore yesterday and closes on the 23rd. The colors which Nature lavishes upon the feathered songsters have been adapted to motor car bodies and a stuffed bird from whose plumage the new shades have been designed is exhibited with each Lincoln car thus adorned.

Last spring Lincoln obtained from museums 60 stuffed birds distinguished for their beautiful color effects. Heretofore it has been unwritten law that two or multi-colored cars must harmonize. The stuffed birds were studied by experts in an attempt to adapt to car bodies those strongly contrasting colors which Nature paints without disocunting harmony of effect. Special paints were devised to approximate these clashing effects of colors new to automobiles, and Lincoln at the salon shows a dozen such bodies, the color design of each being after the bird shown with it.

Several other makes of cars are featured by new color designs. They are offered to the people who like to have their cars talked about and the makers anticipate little difficulty in selling such cars even to people already owning the more conventional models.

This Salon is the largest ever held. The 111 cars, each an individual job, occupy all the space on the ballroom floor except the kitchen. The exhibits fill three ballrooms, three private dining rooms, three foyers, the main lobby and two end rooms. This will be a million dollar Salon, since the average price of each car will amount above $8000.

One feature is a gold-plated Isotta Fraschini eight chassis. To finish this job Capt. Hugo V. D'Annunzio, son of the Italian poet and president of the Isotta Motors Co., importers here, spent 65,000 lire.

The Rolls Royce exhibit is distinguished by four cars whose coach work was done by New England concerns and modelled after the lines originated by Barker of London. Four leading coach builders also exhibit special Rolls bodies. This is said to be the first time that coach designers have been able to equip the Rolls chassis with bodies of their own design. Also there is one Rolls with needle-work upholstery, upon which two and a half million hand stitches were lavished.

The exhibiting carrossiers include Blue Ribbon, Brewster, Brunn, Derham, deCausse, Dietrich, Fisher, Fleetwood, Holbrook, Judkins, Le Baron, Locke, Merrimac, Rollston and Willoughy. The custom bodies of the designers are mounted on nineteen chassis representing six nations—Amilcar, Brewster, Cadillac, Cunningham, Duesenberg, Franklin, Isotta-Fraschini, Lancia, Lincoln, Locomobile, Marmon, Maybach, Mercedes, Minerva, Packard, Pierce-Arrow, Renault, Rolls-Royce and Wills Sainte Claire.

Firpo Gets Diana Franchise

ST. LOUIS, Nov. 14.—The company of Luis Angel Firpo, the noted athlete and pugilist contender for the heavyweight championship of the world and now a successful merchandiser of automobiles, has been granted the Moon Diana franchise for Northern Argentine.

It is well known that at the time of his departure from the United States after his famous battle with Jack Dempsey, Firpo's intentions were to devote his time entirely to the promotion of his automobile business, and at that time several manufacturers were anxious to have him take distribution of their cars for his home territory; where he enjoys a tremendous prestige and popularity.

Since that time, Firpo, with a ready supply of capital, has established a strong automobile selling organization with the finest sales room and service equipment in South America, handling a large volume of sales in the Argentine territory.

CHANDLER ASSISTS PRESIDENT

NEW YORK, Nov. 14.—Henry T. Chandler, who has been associated with the Vanadium Corp. of America since Jan. 1, 1923, as metallurgical engineer at the Detroit headquarters, has been appointed assistant to the president. Prior to his association with this concern he was engaged in research and development work in the automotive field. From 1914 to 1920 he was in charge of the research laboratory of the Ford Motor Co. and for the next three years he was with the C. H. Wills organization as metallurgical engineer. His headquarters continue at Detroit.

OVERLAND DEALERS MEET

DECATUR, Ill., Nov. 14.—W. C. Starr was host to 80 dealers and guests at the Orlando hotel recently at a Willys-Overland dealers' banquet. An eight-page booklet was issued to commemorate the evening and a program of music preceded the formal talks. Mr. Starr presided, B. A. McDonald, president of the Commercial Trust company of Chicago, spoke on "Automobile Financing" and T. E. Bennett, wholesale manager for the Starr company told of 1925 results and plans for next year. J. B. Dorris, district manager for Willys-Overland, discussed features of the factory franchise.

House Committee Votes to Reduce Car War Taxes

Would Repeal Excise on Truck and Accessories and Cut Levy on Automobiles

WASHINGTON, Nov. 14.—Repeal of the two and one-half per cent tax on trucks, tires, parts and accessories and reduction of the tax on passenger automobiles and motorcycles from 5 per cent to 3 per cent definitely has been decided upon by the House Ways and Means Committee.

The action of the committee will result in a saving to truck users of approximately $7,800,000 next year and to tire and accessory users will represent a saving of $22,737,000. As a result of the reduction from 5 to 3 per cent on passenger cars, it will mean a saving of approximately $40,000,000 to passenger car purchasers.

Under the new schedule the 1926 tax revision will mean roughly a reduction for the automotive industry of about 50 per cent. The automobile taxes of all kinds brought in $124,686,745 for the fiscal year of 1925, and it was estimated that the 1926 tax would net the government about $141,000,000. Under the revised schedules this would be cut during 1926 to about $71,000,000 for the automotive industry's share of excise taxes.

Florida Dealers Getting Cars from Georgia Town

ATLANTA, Nov. 14.—Two additional destination points for new cars intended for Florida dealers have been chosen as a means of overcoming the freight embargo existing in that state, Valdosta, Ga., and Madison, Fla., the two new points of destination selected. Northern and eastern manufacturers are therefore now consigning their cars intended for the Florida dealer trade to these two points and to Jacksonville and Sanford, Fla., and after unloading at these places the cars are serviced and sent under their own power to dealers in various towns and cities of Florida.

In this manner the freight embargo is being entirely overcome, and dealers in Florida are obtaining their new cars without difficulty.

Business in Florida this season is described as little less than phenomenal so far as new car sales are concerned. It is several hundred per cent better than last season at this time, and certain to establish a record this winter far surpassing any previous winter season in that state. In many instances, dealers advise, purchasers offer bonuses as high as $500 for immediate delivery of a new car.

HUDSON-ESSEX OUTPUT

DETROIT, Nov. 14.—October production of Hudson Motor Co. approximated 25,000 cars against 27,000 in September and 27,500 in August.

Necessity of Trade Interest in National Shows Is Urged

Sam Miles Leads Disscussion as to How Whole Industry Can Realize Exhibits' Importance

NEW YORK, Nov. 14.—The necessity of increasing trade interest in the New York and Chicago national automobile shows was emphasized at a luncheon given by Sam A Miles, manager of the show department of the N. A. C. C., at the Engineer's Club and attended by representatives of the Motor and Accessory Manufacturers' Association and various automotive trade papers.

Discusssion developed that with 1925 promising to be perhaps the largest production year in the industry's history, with motor stocks acting as the bellwether of the bull market on the New York Stock Exchange, and with many recently added models to be displayed at lower prices, interest of the public in these shows was expected to be larger than ever; but it was realized that there must be greater interest in the national shows on the part of the trade itself if the exhibitions were to attain and retain maximum value to the industry.

Various means of attaining this end were considered with special emphasis upon the value of the two trade days at the New York show, Monday and Tuesday. This year these days have been advanced from the latter to the fore part of the week to accommodate factory officials and others who find it difficult to leave their home offices for New York before Saturday or Sunday. But the conviction was expressed that the value of these trade days, even on Monday and Tuesday, would be somewhat discounted if what is called the "hotel headquarters" practice were continued.

It has become the custom among factory representatives and others to make their headquarters at hotels during the show, and for this reason it has often been difficult for dealers to find just the men they wished to talk with.

It is probable that the N. A. C. C. will take some steps to impress upon exhibitors the necessity of attendance at the show itself upon the part of their representatives. The opinion was expressed that at each booth at least one representative qualified to discuss the product technically, as well as a saleman, should be present at all times.

It was regarded as especially necessary that car engineers be present at the booths. At previous shows there has been considerable difficulty in locating representatives who are technicians in contradistinction to salesmen. In this regard the Society of Automotive Engineers will co-operate.

It is probable that at least one special meeting of the Metropolitan Section of the S. A. E. will be held in New York during show week. Efforts will be made, as far in advance as possible, to spread throughout the trade special information about the show which will emphasize the value of 100 per cent trade attendance, particularly on the Monday and Tuesday trade days.

Although the number of manufacturer exhibitors has decreased this year from 51 to 45, the number of models on display will be about the same as last year.

The importance of focusing the attention of the entire trade on the two national shows is illustrated by the recent action of the N. A. C. C. in declining to participate as an organization in the Philadelphia Sesqui-Centennial celebration. This action was based upon the conviction that the undivided attention of the association should be preserved for every effort toward making the New York and Chicago shows truly national.

The suggestion that exhibitors should refrain from soliciting orders during the show has been abandoned. The questionnaire sent to exhibitors by the N. A. C. C. show department evoked an almost unanimous disapproval of this suggestion as impractical and impossible of enforcement.

The show department is making every effort to emphasize the value of wholehearted trade interest in the two trade days. The suggestion was made that such interest would be encouraged by distributing among the exhibitors and their representatives badges which would classify the branch of the industry in which each individual is concerned. It was also suggested that some plan of registering trade attendance at the show might be worked out, but lack of facilities at both Grand Central Palace and the Coliseum in Chicago discouraged the carrying out this suggestion.

Mr. Miles solicits from all those interested ideas as to how the vital importance of trade interest in the national shows may be impressed upon the whole industry.

Dodge Brothers Sets New Mark in Sales and Profit

NEW YORK, Nov. 14.—New high records in the number of cars sold, gross profits, and net income for the first nine months of 1925 are announced by Dodge Bros., Inc.

Net sales were $175,284,031, against $155,170,714 in the corresponding period last year, and net income, after depreciation, but before interest on debentures, federal taxes and dividends, was $25,435,427, as compared with $14,642,055 in the same period last year

After all charges, earnings were equal to $6.33 per share on 2,434,524 shares. Third quarter earnings were $8,872,115, or $2.25 per share.

The report shows that the company sold 203,546 cars in the first nine months of this year, exceeding any previous like period since 1914, when the company sold 249,000 cars to Sept. 30. The company has sold 1,430,961 cars for a total price for cars and parts of more than $1,229,000,000. Loss from debts amounted to only $33,000.

Tire Makers See No Reason To Expect Decline in Prices

Additional Raw Material Release Has Little Effect on Market, Brokers Say

AKRON, O., Nov. 14.—Recent predictions that there would be a reduction in tire prices early in 1926 are not justified by the action of the crude rubber market within the past few weeks, it is pointed out by leading tire manufacturers. If any change takes place it is more likely to be an upward price revision.

Spot rubber has held firm for the last two months around $1 a pound. The future market also has been exceptionally strong, with heavy buying reported for months in advance. British and Dutch planters are said to have been able to contract for practically all of their 1926 output above 55 cents a pound, if they so desired.

The additional release of 10 per cent more rubber Nov. 1 under the Stevenson restriction act, making the total allowance for export 85 per cent of production, has had practically no effect on the market, Akron brokers state. The release has been counteracted largely by a shortage of labor in the rubber producing countries.

Before the last increase, Sept. 15, prices of tires were based on rubber costing 55 to 60 cents a pound, so that even a big drop in the rubber market would not justify an immediate lowering of tire prices. Rubber for immediate delivery has not been as low as 55 cents since the middle of May, and it went as high as $1.20 a pound in July.

Even with the series of price increases put into effect this year, manufacturers point out that tires are selling only slightly above the 1923 level. Economies in manufacturing and reduction in overhead have brought about large savings to the motorist.

Contrary to general expectations a revised report of the Department of Commerce, just made public, shows that dealers' average stocks of casings as of Oct. 1 are only slightly larger than a year ago. Inner tube stocks are heavier.

Returns from 35,331 dealers show 2,000,150 casing on hand, or 56.6 per dealer, and 283,552 balloon casings, or 17.5 per dealer, compared with 1,402,879, or 53.6 per dealer, and 135,366 balloon casings, or 16.3 per dealer a year ago.

200 HEAR N. A. D. A.

NEW ORLEANS, Nov. 14.—More than 200 automobile distributors, dealers and salesmen gathered in the Roosevelt Hotel in New Orleans, at the meetings of the "sales congress" team of the National Automobile Dealers' Association. The principal speakers were A. R. Kroh, sales specialist of the N. A. D. A., and H. D. Bullock, western sales manager for "System," who was borrowed from the publishing company by the N. A. D. A. for this special group of sales congresses throughout the country.

Oakland Breaks All Prior Output Marks in October

Production for Month Is 8,088 Cars and Shipments Total 8,003 During Period

PONTIAC, Mich., Nov. 14.—The Oakland Motor Car Company broke all previous monthly sales records during October when 8003 cars were shipped to dealers.

As the factory has not yet caught up with dealers' unfilled orders these figures are practically synonymous with retail sales.

The production at the factory was 8088 cars, a single car more than the production quota set for October. The factory sales for October beat the previous high monthly sales record of February 1924 by 14½ per cent. It also was more than 146 per cent greater than the sales in October of last year and represents a 63 per cent increase over September of this year.

The present daily production will be gradually increased through November, December and January, and to this end $750,000 has been spent in providing the necessary equipment to make possible the expanding Oakland Six production program.

Particularly impressive records of retail sales were made in the large metropolitan cities of the country where competition is keenest. Among the larger cities, where Oakland enjoyed the greatest October retail sales in its history and ranked exceptionally high in new car registration are included Chicago, Detroit, Cleveland, Pittsburgh, Indianapolis, Buffalo, Rochester, Syracuse, Youngstown, Wichita, and St. Louis.

Two Appointments Made to Distribution Meeting

WASHINGTON, Nov. 14.—The appointment of George A. Waddle, manager of dealers' relations of the Goodyear Tire & Rubber Company, of Akron, and F. B. Caswell, vice-president of the Champion Spark Plug Company, of Toledo, to represent their respective industries at the forthcoming National Distribution Conference, to be held here December 15 and 16, was announced this week by the Chamber of Commerce of the United States.

Representatives of the automotive industry, body builders and allied industries will also be appointed to participate in the conference.

The prime purpose of the chamber in calling the conference, as set forth in the agenda, declares: "As a means of eliminating trade abuses, and the establishment of standards of business practice to counteract business waste, the conference has been called. It is proposed to create a business tribunal to be known as a Joint Trade Relations Committee."

Ford First Car in Wisconsin

MILWAUKEE, Nov. 14.—Distinction of being the first automobile registered in Wisconsin goes to a Ford, a 10-horse power model, seating four passengers. This and other interesting facts have been brought to light by George A. Brown, chief of the division of records and elections in the office of the secretary of state of Wisconsin, who has been poring over the early records of the industry.

A. F. Zimmerman of Madison possessed the first automobile license issued in the state, the car being the Ford mentioned above. Early records are inaccurate and incomplete because until a few years ago, it was possible for an automobile owner to have the license on one car transferred to another without paying any additional fees. For this reason, there are shown many transfers of automobiles to different parties who then did not have the license renewed.

Illinois Car Titles Show Slight Decline in Month

CHICAGO, Nov. 14.—There was a drop of 2 per cent in total registration of new passenger cars in Illinois during October as compared with September. Had it not been for the fact that Fords gained 110 per cent over the preceding month, the loss, so far as total registration is concerned, would have been much greater, as there were declines in all other price divisions.

Low-priced cars (excluding Fords) were off 22 per cent while the decreases in the medium and high-priced groups were 26 and 6 per cent respectively.

Following are the detailed figures for the first ten months of 1925:

Month	Fords	Low, excl. Fords	Medium	High*	Total
Jan.	4,060	2,275	5,748	808	12,891
Feb.	3,424	1,718	4,977	612	10,731
March	5,714	2,729	6,416	784	15,643
April	9,010	3,755	8,801	861	22,427
May	8,751	3,644	8,014	899	21,308
June	6,473	3,400	6,383	828	17,084
July	8,499	4,305	8,787	1,035	22,626
Aug.	4,686	3,218	6,646	720	15,270
Sept.	1,831	3,145	6,292	661	11,930
Oct.	3,953	2,430	4,652	615	11,650
Total	56,401	30,619	66,716	7,823	161,560

*Includes miscellaneous cars not named.

The foregoing figures were compiled from statistics furnished to Motor Age *by Robinson's Advertising Service, Springfield, Ill.*

FLINT PICKS MORRIS

FLINT, Mich., Nov. 19.—W. O. Crabtree, salesmanager, Flint Motor Co., announces the appointment of George R. Morris as assistant sales manager. L. F. Barrett has been appointed regional manager for the Eastern territory with headquarters in New York.

U. S. Race Records May Be Given European Recognition

International Association Votes Change in Laws Allowing America to Present Marks

PARIS, Oct. 30.—(by mail)—American automobile records doubtless will obtain European recognition by reason of the action taken by the International Association of Recognized Automobile Clubs at its annual meeting held in Paris yesterday. This gathering voted a change in the statutes by which a national club will have the right to delegate any part of its powers to another club or association.

The United States has always been represented in Europe by the Automobile Club of America, which having no control over racing avoids discussion on this subject, and neglects to submit American records for European and world recognition. The rules of the Internationl Association having been changed, it is understood that the A. C. A. will transfer its sporting representation to the American Automobile Association, the practical outcome of this being that American speed records which at present have no standing in Europe, will obtain international recognition.

Colonel Drake, one of the European representatives of the A. C. A. has just left for America and is understood to be in favor of requesting the A. A. A. to take a position on the international association. William S. Hogan, also an A. C. A. delegate, is favorable to this transfer of power.

Germany was admitted to the International Racing Board at the recent meeting, but Switzerland and the Scandinavian countries, having no automobile industry, were merely admitted in a consultive capacity, without the right to vote.

Detroit Registers 7,366 Automobiles in October

LANSING, Mich., Nov. 14.—Seven thousand three hundred and sixty-six passenger cars were titled in Wayne county during the past month, figures just released by Secretary of State Charles DeLand Show. This is one of the best fall months that Wayne county has ever experienced.

Of the total, 5,353 were closed models, the remainder, 2,013 being roadsters and touring cars.

Ford gaining momentum after a slack period led the field with 3,421. Of this number 1,812 were open jobs and 1,609 closed models. It was the only make of cars in which the open cars sales exceeded the closed models.

A total of 876 new trucks were titled with Ford again in the lead with 577 trucks. Twenty-one new tractors were titled, 19 being Fordsons and two Gotfredsons.

Along Automobile Row

MONTREAL.—Chevrolet Motor Sales Co. of Montreal, Ltd., has incorporated here.

SPRINGFIELD, Mass.—Observing the fourth anniversary of the opening of the new Buick salesroom, the Springfield Buick Company threw open its latest addition, a two-story structure that will house the Buick car maintenance department on the second floor and the G. M. C. Truck and Yellow Cab salesrooms on the ground floor.

WILMINGTON, N. C.—M. C. Borst & Co., local distributor for the Chrysler automobile, will erect a new home here. The building will not only provide a home for the Chrysler agency but will be sufficiently large to take care of 100 automobiles for storage.

CINCINNATI. — Robert Puthoff, 1816 Freeman Avenue, one of the largest used car dealers of Cincinnati district and a sub-dealer of the Oakland and Studebaker cars, has leased his business for five years to Walter Schott, proprietor of the Schott Auto Company, and largely interested in the Wood Motor Company, distributors for the Auburn.

LOS ANGELES.—Walter M. Murphy Co., Hudson and Essex distributor, Los Angeles, announces the appointment of the Al G. Faulkner, Inc., as a metropolitan dealer in Los Angeles.

HENDERSON, N. C.—The Vance Motor Co. is a new corporation in Henderson, which has just been chartered and organized to handle selling of the Chrysler automobile. R. S. McCoin is the president, C. E. Winston vice-president, and A. B. Webster, secretary and treasurer.

ROCHESTER, N. Y.—G. F. LaFountaine and Company has opened a new automobile finishing plant occupying the entire third floor of the Cayford Garage, one of the largest in the city. The new automobile shop specializes in painting, lacquering, upholstering and body and fender repairing.

SEATTLE.—W. E. Navin, veteran automobile representative, has been named sales manager of Central Chevrolet Company, Inc. This company now owns Jackson Chevrolet, Westlake Chevrolet and Varsity Chevrolet.

BUNCETON, Mo.—Tom Etter of this city has accepted a position with the Cline Motor Company of Booneville, agents for the Chevrolet automobiles in this territory.

McMINVILLE, Ore.—E. M. Briedwell will open a new garage in the Woodmen Building and will handle the Star. Briedwell formerly had the Ford agency which he sold out to Gilbert and Tilbury.

DALLAS, Tex. — The Auburn-Dallas Company, organized for the purpose of handling Auburn automobiles in the Dallas territory was formed this week.

SEATTLE.—Ralph E. King, salesman for the William O. McKay Company, authorized Ford dealer of Seattle, is the possessor of a Fordor sedan presented to him during the last week by Branch Manager R. W. Hines, because of his success in winning a two months' contest held by 29 dealers in this territory.

VANCOUVER, B. C.—The Locomobile Sales, Ltd., of this city has incorporated.

DAVENPORT, Ia.—William Lane, for 17 years in automotive sales business in this territory, has joined the Neuman Machine Co., which lately took over the Studebaker agency, and Walter Gibbs, with the Western Motors Co. former Studebaker agency, has joined the Neuman staff.

MONTGOMERY, Ala.—A. S. Heilborn announces the formation here of the Alabama Acceptance Corporation, the purpose of the company being to specialize in the handling of automobile paper. The capital stock is $1,000,000, and is backed by prominent Alabama business men.

FOND DU LAC, Wis.—The Voell Auto Sales Co., Hudson-Essex and Cadillac dealers of this city has purchased a site on South Main Street and will erect a new garage and salesroom at once. The new home will be ready for occupancy by March 1.

LOS ANGELES.—The Lukavisky Motor Company, Gardner dealer, Los Angeles, recently occupied its new sales and service building in the heart of the residential district of Los Angeles.

CLEVELAND, O.—One of this week's announcements of interest along automobile row is the appointment of C. G. Powers as sales manager of the Stearns Motor Sales Company. For the last six years Powers has been sales manager for the Towell Cadillac Company here.

MILWAUKEE.—Walter Denchel, who has been identified with the automobile business here for the last eight years, has joined the sales force of the Kraatz Motor Co., Hupmobile dealer on North Avenue.

COLUMBUS, O.—The Miller-Main Nash Co., is the name of a new concern, a partnership composed of Fred W. Heiser and J. W. Stallsmith, to handle the Nash and Ajax lines. A service station and general repair shop is also operated.

BOSTON.—P. A. Williams, Jr., celebrated the first anniversary of his entering his new sales and service building at Springfield, Mass., last week with a luncheon attended by men prominent in business activities of all kinds. It was held in the showroom where he displays his line of Dodge Brothers cars and Graham Brothers trucks.

ROCHESTER, N. Y.—Archer R. White has been appointed dealer in Davis cars in this territory and has opened a sales and service station at 523 Court Street.

COLUMBUS, O.—The Columbus Bumper Sales Co., has been chartered with an authorized capital of $10,000 to take over the bumper and automotive accessory business at 389 Chapel Street, Columbus, which has been operated by L. T. McCann for three years under his name.

COEUR D'ALENE, Ida.—P. J. Broderick, Chevrolet dealer, has recently completed a new garage in the Lake City.

CHICAGO. — The Kullberger Motor Sales, Inc., Reo dealer, opened its new sales and service station at 1441 East Seventy-first Street with the presentation of a Reo brougham to Alderman Meyering on behalf of the business men of the ward, by Mayor W. E. Dever.

NEW YORK.—O. H. Pease, New York Willys-Overland service manager, announces the addition of an upper floor of 37,500 square feet at the factory branch service building, 521 West Fifty-seventh Street, and the addition of 20 mechanics to the service force.

SAN JOSE, Cal.—Cameron & Macdonald, who for some time past have handled the Star in this territory, have given up the line and now have the Hudson-Essex franchise. This gives Hudson two dealers in San Jose, the other being Normandin-Campen Co.

LOS ANGELES.—The Troy Motor Sales Company, Nash and Ajax distributors, announces the appointment of the Allan L. Leonard Company, pioneer automobile dealers of the city, as a metropolitan dealer. Until recently Leonard had a Hudson and Essex agency.

TOLEDO.—The Toledo Paige-Jewett Co., is the name of a recent incorporation, chartered with a $20,000 capital to deal in automobile parts and accessories.

TRAER, Ia.—The C. & L. Motor Company has acquired a lot adjoining the Ford garage and will erect a new garage and accessory shop. The C. & L. company has also acquired the Chevrolet agency for this territory.

NEW ORLEANS.—The New Orleans Buick Co., which recently opened a branch at 635 N. Rampart St., has sold the branch to the recently organized firm of Orleans Auto Co., which is composed of K. W. Chancellor and Waring Hamilton, the former secretary-treasurer of the New Orleans Buick Co., and the latter sales manager of the same firm. The new firm will sell Buicks.

ASHEVILLE, N. C.—R. L. Boland, distributor, of Waynesville, has opened an Oldsmobile agency here.

ALEDO, Ill.—Howard Steven has established a Hudson and Essex agency and service garage here. His son, Joseph, of Bloomington, and Ralph Hudson, formerly in charge of the Hudson-Essex agency, will be associated with him.

MADISON, Wis.—Capital City Tire Co. of this city has moved from its location on South Pinckney Street to the quarters formerly occupied by the Fox Motor Sales Co. at 107-11 East Doty Street.

SACRAMENTO, Cal. — Hudson-Essex now have two dealers here. In addition to Arnold Bros., who have represented the line for many years, Bagwill & McShane recently acquired the franchise. "Barney" McShane of the new firm relinquished his position as Sacramento's chief of police to enter the automobile business.

NEW YORK.—Van Alstyne Motor Corp., Hupmobile distributor, has opened a branch in the Washington Heights section at 1231 St. Nicholas Avenue with F. A. Blank as manager.

CHICAGO.—Leokady Tafel, Philip A. Tafel and Frank Tafel, Jr., have organized the Tafel Auto Sales, Inc., and will buy and sell used motor vehicles at 907 Diversey Parkway.

CLEVELAND, O.—O. N. Bashaw, president of the Bashaw-Oakland Company has just announced the appointment of H. A. Ruskin to the sales department of the company.

ATLANTA.—The Bay Tire Co., Inc., is a new distributing firm at Mobile, Ala., organized recently for the handling of tires and automotive equipment.

KALISPEL, Mont.—The W. B. Lewis Auto Company has moved into a new location in the Armory Building, and in addition to carrying a complete line of auto equipment is also agent for Overland and Reo cars.

CLEVELAND, O.—The Indiana Cleveland Truck Corporation, has been chartered with an authorized capital of $10,000 to deal in trucks and tractors.

DES MOINES, Ia.—The Overland Huntzinger Company has leased half the Payne Motor Building at 1312 Locust Street for display purposes and is showing its new models at that location.

DETROIT.—A. W. Handy is the latest Ford dealer to open in Lansing. Ground for a modern sales and service building has been bought at 1140 S. Washington Street that city, and construction is scheduled to start immediately.

SIDNEY, O.—The Hudson-Essex Sales Co., has been chartered with an authorized capital of $10,000 to sell Hudson and Essex motor cars and accessories, and operate a general garage.

ATLANTA.—R. L. Boland, of Waynesville, N. C., is a new distributor for the Oldsmobile line who recently entered the filed at Asheville, N. C., handling the Oldsmobile in that section of the North Carolina territory.

POMEROY, O.—The Pomeroy Chevrolet Co., to be located in Main Street, has been chartered with an authorized capital of $10,000.

KIRKLAND, Wash.—Ed Blau has taken the Chevrolet agency here which will be known as the Blau Chevrolet Company.

With the Associations

Burt Heads Race Drivers

CHICAGO, Nov. 14.—At the annual meeting of the Central Race Drivers' Association here, the following officers were elected for 1926: Andy Burt, president, J. A. Turner, vice president, M. A. Markham, secretary, and George Ketcham, treasurer. The board of directors now includes Harry Hienly, William Claus, E. E. Burback, Walter Martin, Kent Ramsey, D. D. Morris and Sonny Talamont.

All the elected officers have been connected with the racing game for a number of years. Andy Burt, as far back as 1909, drove under the A. A. A. colors against Burman, Dewitt, Buck and others. Claus was an A. A. A. driver in the days of the Brighton Beach 24-hour races.

The Central association controls nearly every dirt track in the central United States and numbers some 200 drivers in its membership. Until this year the membership was open only to drivers and mechanics but now any one connected with the automobile business will be taken in as an associate member.

The association is chartered under the laws of Illinois and is not for profit. Its object is to foster, encourage and conduct automobile races, to provide for the admission of persons owning or driving automobiles in such races, to maintain a social club for the benefit of such persons, and otherwise to promote the interests and welfare of its members.

The association maintains a benefit fund for its members who may be killed or injured while driving.

It sanctions and supports tracks and promoters who run only competition races, who keep track and stands in good condition, and who charge fair admission prices.

Paris Club Formed

PARIS, Oct. 30.—(By Mail)—On the initiative of George F. Bauer, foreign trade secretary of the National Automobile Chamber of Commerce, the American Automotive Club of Paris was officially constituted a few days ago with H. H. Kelly, assistant commercial attache, as president, Christian Lie of the Buick company as vice-president, and Charles Jeroche of the Goodyear company, as second vice-president.

Informal in character and broad in its scope, the American Automotive Club of Paris will meet monthly at noon luncheon, when it will entertain leaders of the American automotive industry passing through the French capital. General matters affecting the American automotive industry in Europe will be discussed and joint action taken when desirable. The temporary mailing address of the club is Office of the Commercial Attache, 5 Rue de Chaillot, Paris.

Leaders of the industry and prominent Americans in France who are charter members of the club comprise S. D. Briggs (Chrysler), Alexander Lie (Ford), Christian Lie (Buick), Arthur Lumsden (Goodrich), Charles Jeroche (Goodyear), and Keith Goode (Harley Davidson).

Three Associations Merge

CHARLOTTE, N. C., Nov. 14.—The Automotive Merchants' Association, the Automotive Service Association, and the Car Dealers' Association, the three automotive organizations of this city, Monday consolidated into one big organization to be known as the Charlotte Automotive Merchants' Association.

Officers of all three organizations resigned and new officers were elected for the new organization and a new set of by-laws were adopted. The new association will hold two meetings a month.

The officers elected are: K. A. Grice, who was president of the service association, president; Fred Anderson, who was president of the car dealers' association, and Caldwell McDonald an officer of the service association as vice presidents. Miss Francis Hendren, who served as secretary-treasurer of all three organizations will continue in that capacity for the new organization.

Six directors were also elected: Lee A. Folger, J. P. Harriss, J. H. Huntley, H. D. Horton, Tom Glascow and W. C. Montgomery.

Denver Dealers Elect

DENVER, Nov. 14.—At the last meeting of the Denver Automobile Dealers' Association the following officers were elected for the ensuing year:

Myron L. Smith, president of the Sharman Automobile Company, president Ralph Fischel, vice-president Norton-Buick Automobile Company, vice-president. Thomas Braden, secretary-treasurer.

The following board of directors was chosen:

H. E. Parkinson, Denver-Franklin Automobile Co.; Ray Young, vice-president O'Merra-Young Automobile Co., Vernard Mahoney, Murphy-Mahoney Motor Co., Tom Savage, Savage Motors Co., and Ward Thompson of the Cullen-Thompson Motor Co.

Service Stations Join

SPOKANE, Wash., Nov. 14.—Independent service stations here have been organized into a branch of the Independent Service Station Owners, Inc., for the purpose of maintaining prices of gas and oil. About 50 stations are represented and it was decided that competition of the large oil companies can best be met by maintaining their prices. Officers are John Bech, president; D. L. Andrews, secretary and manager; Earl Gatewood, financial manager; H. Sorenson, membership manager.

New Bureau Planned

ST. LOUIS, Nov. 14.—Preliminary steps to organize a Sales Directors' Bureau of the St. Louis Automobile Dealers' Association were taken at a meeting of five prominent directors of sales for St. Louis Automobile Dealers at a meeting held in the office of Robert E. Lee, manager of the association.

The purposes of the organization will be full discussions of sales practices and elimination of unethical methods, such as misrepresentation of competitors' cars by salesmen.

It is planned to have monthly meetings at which some prominent figure of the automobile industry will speak. Edward S. Jordan, president of the Jordan Motor Car Co., will likely be the speaker at the first meeting. Harry G. Moock of the Hudson Motor Car Co., of Detroit, will probably speak at an early meeting.

There is also to be a set program of addresses on specific features of automobile selling, handling of salesmen, compensation for salesmen and other matters of interest by members of the bureau.

Joseph N. Kellerman of Hudson-Frampton Motor Car Co., George T. Willett of De Luxe Automobile Co., Harry C. Herring of Cleveland Motor Sales Co., L. M. Stewart of G. M. Berry, Inc., and J. W. Richardson of the Mississippi Valley Motor Co., attended the meeting at which the plans for the bureau were formulated.

Winter Care Emphazied

ST. LOUIS, Nov. 14.—A bulletin on the winter care of automobiles has been sent to all members of the St. Louis Automobile Dealers Association by Robert E. Lee, manager.

In this bulletin Lee calls attention to the necessity at this time of the year of carefully going over automobiles that are to be used during the winter, which include about 99 per cent of the cars in St. Louis. The old practice of putting the car away for the winter is obsolete, he said.

The bulletin calls attention to the need of winter oil for the crank case, summer oil not being suitable when the thermometer is below 25 degrees. The same warning applies to the lubrication of rear axles and differential gear boxes.

The right proportion of radiator solution must be used when the temperature drops below 30 degrees and these proper proportions are definitely stated in the bulletin and on a card enclosed with it to be posted in all service stations.

Generators and batteries must be checked up and prepared for winter weather.

Owners are warned to have their gas lines cleaned, vacuum tanks freed from sediment and floats examined for corrosion or holes.

Delage Refuses to Race in Next French Grand Prix

1925 Winner Says 91½ Inch Car Too Dangerous to Drive and Serves No Good Purpose

PARIS, Oct. 30.—(by mail)—As a protest against the 91½-inch racing rule, which he considers has developed a dangerous and unsatisfactory type of car, Louis Delage stated yesterday that he would not compete in next year's French Grand Prix. The announcement was made in an after-dinner speech at the Automobile Club of France when the Delage drivers were presented with the first and second prizes won by them in this year's French race.

Delage states that he has not taken this decision because one of his drivers was killed this year, but in order to draw attention to the fact that modern racing cars are too fast for safety and no longer have any direct influence on automobile construction.

"There are not more than six drivers in the whole of Europe capable of handling a modern 122-inch racing car on the road at its maximum speed. As a consequence victory merely goes to the best driver or the one willing to take the greatest chances. Because there is more power than the drivers dare use, the cars are no longer tested to the utmost," says Delage.

Another reason for declining to start in the leading French event is that in France competition is practically confined to two firms and even the international field does not comprize more than four firms.

Delage maintains that speed should be cut down to a reasonably safe limit, the best way to do this in his opinion being to limit the cost of running—cost of gasoline and oil. Cars of 1400 pounds weight running only 7 miles to the gallon are not practical propositions, he affirms.

While not starting in the French Grand Prix, Delage will keep his racing and experimental department together and will compete in events he considers of sufficient interest. As Delage is the most important firm in France maintaing an active racing program, this decision and the criticism of the French Club which it embodies has caused a sensation.

Delivery Problem Aids Sale of Used Cars in N. Carolina

CHARLOTTE, N. C., Nov. 14.—The inability of dealers in numerous lines of motor cars to obtain supplies of new cars adequate to fill orders is a doleful situation which is developing a bright side in the continuing good demand for used cars. While the larger dealers here appear to have an average of from eight to twelve used cars on hand, it was generally said that this number is only a "satisfactory" stock.

The situation with respect to new cars is not expected to show much improvement until after the holidays, for almost all dealers are forecasting a substantial increase in buying as the Christmas season approaches.

The idea of an automobile for a Christmas gift for the family seems to be gaining in favor in this territory. Conditions in South Carolina are mixed, and ranging from fair to poor, with a few localities reporting a satisfactory demand for new cars.

Coming Motor Events

Automobile Shows

New York.....Jan. 9-15
National Automobile Show in Grand Central Palace.

Newark, N. J.....Jan. 16-23
Nineteenth annual Automobile Show under auspices of New Jersey Automobile Ex ibition Co., Chamber of Commerce Building.

Bpffalo, N. Y.....Jan. 16-23
Buffalo automobile show by Buffalo Automobile Dealers' Association in 174th Regimental Armory, Carlton C. Proctor ,manager, headquarters, Hotel Statler.

Cleveland, O.....Jan. 23-30
1926 Automobile Show under auspices of Cleveland Automobile Manufacturers' and Dealers' Association, Herbert Buckman manager, in Public Auditorium.

Lowell, Mass.....Jan. 25-Feb. 1
Twelfth autmoboile show in Memorial Auditorium by Automobile Merchants' Association of Lowell, Inc., George R. Garmon, manager, 119 E. Merrimack Street.

Chicago.....Jan. 30-Feb. 6
Twenty-sixth Annual National Automobile Show and Eleventh Annual Automobile Salon.

Washington.....Jan. 30-Feb. 6
Automobile show under auspices of Washington Automotive Trade Association in Washington Auditorium Building, Rudolph Jose, manager.

San Francisco.....Jan. 30-Feb. 6
Tenth annual Pacific Automobile Show under direction of Motor Car Dealers' Association of San Francisco, in Exposition Auditorium, G. A. Wahlgreen, 215-16 Humboldt Bank Bdg., manager.

Denver.....Feb. 2-6
Annual automobile show under auspices of Denver Automobile Dealers' Association, in Municipal Auditorium, Myron L. Smith, chairman of committee.

Providence, R. I.....Feb. 6-13
Providence automobile show under auspices R. I. Automobile Dealers' Association, Chester I. Campbell, manager, 617 Industrial Trust Bldg.

Toledo, O.....Feb. 8-13
Annual show by Toledo Automotive Trades Association in Civic Center Garage, T. J. Cooper, manager, 925 Jefferson Avenue.

Louisville, Ky.....Feb. 15-20
Louisville Automobile Show, Armory, under the auspices of the Louisville Automobile Dealers Association, J. Garland Lea, manager.

Hartford, Conn.....Feb. 20-27
Automobile show by Hartford Automobile Dealers' Association in State Armory, Arthur Fifoot, manager, Hotel Bond.

Boston.....Mar. 6-13

LUCAS HEADS FLINT BRANCH

ATLANTA, Nov. 14.—Changes in the personnel of the retail department of the Atlanta branch of the Flint Motor Co., 236 Peachtree St., have been recently announced. W. L. Shackleford has been appointed retail sales manager; George Kigler has been named service manager and J. H. Lucas general manager of the branch.

ST. LOUIS PLANS CONGRESS

ST. LOUIS, Nov. 14.—A sales congress will be conducted here by the National Automobile Dealers' Association for dealers in the St. Louis trade territory, including eastern Missouri, southern Illinois, parts of Tennessee, Kentucky and Arkansas, on December 14.

NEW GARDNER DEALERS

ST. LOUIS, Nov. 14.—New dealers added to the organization of the Gardner Motor Co., Inc., include the following:

Silver Beach Motor Sales, Chicago, Ill., Fetterman Bros., Washington Pa., Central Garage, Kingston, N. Y., Crossman Motor Co., Joplin, Mo., Daylight Garage, Chicago, Ill., Gillespie Motor Co., Springfield, Mo., Southern Garage, Bakersfield, Cal., E. E. Cronenweth, Glendale, Cal., Stagle & Rice, Pomona, Cal., Hickman-Gardner Motor Co., Miami, Fla.

All October Business Marks Are Broken in Cleveland

Increase in Sales Is 82 Per Cent Over Same Month Last Year, Report Shows

CLEVELAND, O., Nov. 14.—All October records for the retail automobile business in Cleveland were shattered last month, according to announcement just made by the Cleveland Automobile Manufacturers' and Dealers' Association.

As an indication of the large volume of business done 3,218 bills of sale for new cars were filed with the clerk of court during the month. This is an increase of 82 per cent over the number of bills filed during October last year. The number then was 1,766.

Used cars also moved with rapidity, seasonal factors being taken into consideration. In spite of weather in advance of the season 7,245 bills of sale for used cars were filed. In October, 1924, only 6,051 such bills were filed, while in October, 1923, the number of such documents was 6,251.

The October volume of business done by parts and accessories retailers and wholesalers likewise was good, although records in this phase of the industry were not broken.

PACKARD STOCK INCREASED

DETROIT, Nov. 14.—Stockholders of the Packard Motor Car Company in their annual meeting voted to authorize the increase in common stock from $30,000,000 to $50,000,000. Of the $30,000,000 common stock now authorized, only $23,770,200 has been issued. All of the present members of the board of directors were reelected. The officers of the company remain the same.

Show Is Greatest Ever Held

(Continued from page 33)

entire period last year.

Manufacturers and jobbers alike declared that 1925 had been a record year—that the only excuse for not getting business this year was the lack of aggressive effort. Nearly every manufacturer reported that he had been kept at top output to keep up with demand, while jobbers cited the number of dealers added to retail their products as the best indicator of a prosperous business.

Every manufacturer and wholesale distributor present at the show was optimistic for 1926. They are of the opinion that the coming year will set an even higher mark than 1925. The continued high production of automobiles and the ambitious plans of the motor car manufacturers for 1926 have fixed firmly in the mind of the parts and equipment makers and distributors the belief that 1926 is certain to be the high year of history.

REO MODEL REDUCED

LANSING, Mich., Nov. 14.—The Reo Motor Car Company has announced a price cut of $200 on the Sport Touring model on its "T-6" chassis. This model which was formerly listed at $1595 now sells at $1395.

New Steam Power Plant Is Developed for Automobiles

CLEVELAND, Nov. 14.—First traffic tests were conducted here this week of a new form of automobile steam power plant, built by a manufacturer of long established reputation and backed by ample Eastern capital which has not yet been interested in the automotive field.

The power unit when tested was installed in the chassis of a very well known make of taxicab, the name of which the engine manufacturers do not wish revealed.

When tests are completed the engine is to be manufactured in quantity for taxicab and bus operation by the Steam Appliance Corporation of America, which has been incorporated in Ohio. The engine was developed by W. E. Baker, formerly of Erie, Pa., and Harper, Okla., in the laboratories of Baker Motors, Inc., here.

A. E. A. Votes to Expand

(Continued from page 34)

The remainder were publications and special departments of the A. E. A. headquarters.

Thirteen new members were admitted to the association at a meeting just preceding the annual convention here this week, and these together with 27 others that have been elected since the summer meeting of the association, were introduced at the opening session of the convention.

The new members elected at this convention are:

Jobbers

Automobile Necessities Co., New York City.

Barker, Rose & Clinton Co., Elmira, N. Y.

Benton-Bailey Co., Richmond, Va.

Berner-Pease Co., Miami, Fla.

Canadian General Electric Co., Toronto.

Herman-Brownlow Co., Springfield, Mo.

Keith-Simmons Co., Nashville, Tenn.

Myers Tri-State Supply Co., Joplin, Mo.

Richard & Conover Hardware Co., Kansas City, Mo.

Van Zandt Leftwich Auto Supply Co., Huntington, W. Va.

Manufacturers

American Auto Lamp Co., New York City.

Hall Mfg. Co., Toledo, O.

Thompson Specialty Mfg. Co., Springfield, Mass.

Tom Milton Wins Armistice Day Race at Charlotte, N. C.

Harry Hartz Is 32 Seconds Behind Winner While Wonderlich Lands Third

CHARLOTTE, N. C., Nov. 14.—Tommy Milton won the Armistice Day classic at the Charlotte speedway by a demonstration of spectacular driving after gaining the lead when Earl Cooper went into the pits on his 131st lap of the 200 lap race around the mile and a quarter bowl. Harry Hartz was second and Jerry Wonderlich was third, 32 and 43 seconds, respectively, behind the winner, whose time for the 250 miles was 2:00:41.67. The average speed of the winner was 124.3 miles per hour.

Fouled spark plugs forced Cooper into the pits and caused him to lose the lead, which he gained from Bennett Hill early in the race, witnessed by approximately 40,000 persons.

Only ten of the seventeen starters finished. Others than the three winners dividing the $25,000 purse were Batten, fourth; Comer, fifth; Elliott, sixth; Hepburn, seventh; Duray, eighth; Evans, ninth; Shattuc, tenth.

McDonogh crashed into the inside railing on his 65th lap, the driver escaping injury, though his car was wrecked. DePaolo went out on his 75th lap; Hill, 109th; Reg Johnson, 53rd; Devore, 111th; Cooper, 180th; Kries, 135th. Twenty-one tire changes were made, of which Johnson made five. Milton drove the entire distance without a stop.

Vice-President Howard of Cadillac Company, Is Dead

CLEVELAND, O., Nov. 14.—Earle Clark Howard, vice-president of the Cadillac Motor Car Company, died here today at noon in the Cleveland Clinic Hospital after an illness lasting several months. Mr. Howard came here from Detroit hoping to restore his health.

Mr. Howard first joined the Cadillac organization in 1906, going to that company from the National Cash Register Company. He entered the sales department under William E. Metzger, advancing rapidly until he succeeded Ernest R. Benson as sales manager. In 1919, Mr. Howard left Cadillac to form the Lafayette Motors Corporation of which he became vice-president and general manager. Five years later he joined the Fisher Body Corporation in an executive capacity until January of the present year when he again joined the Cadillac organization as assistant to the president. Shortly afterwards he was made vice-president.

FERRIS JOINS ROAMER

LOS ANGELES, Nov. 14.—W. E. Ferris, who has had a broad experience in the automotive industry, has been appointed manager of the wholesale department of Mutual Motors, Inc., Los Angeles, Southern California Roamer distributors.

R·I·V Ball Bearings

A Better Proposition for New Agents

Thirty-two substantial new distributors have been added to our list in the last sixty days, each an active buyer of bearings.

The reason is that no *good* merchant is unwilling to make considerably *more* net profit per sale, provided the merchandise is of *known* high quality.

The *new* R. I. V. proposition is unquestionably the most generous on the American market today, when the reputation of the manufacturer, quality and assured deliveries are considered.

It means more money to *you*, if you sell ball bearings; and a fine source of new profit if you *can* sell them, but don't.

Write for this new proposition today.

Capitalize Your Plus Sales

Satisfied Buyer Is Big Help to Salesman In Getting New Leads —AND—a Big Help to Salesman's Competitors if Opportunity Is Neglected

BY CLARENCE PHILLIPS

IF the average automobile salesman could cash in on all sales of cars that really develop through the enthusiasm, favorable comment and influence otherwise of his satisfied owners there is one thing certain—

He would materially increase his commissions and have a much larger bank balance at the end of the year than he usually does.

Where he misses it is in the fact that most of the cars sold through the influence of his satisfied and enthusiastic owners—are sold by competing salesmen.

He hasn't been 100 per cent on the job.

The car he represents arouses initial buying interest which he fails in greater or lesser degree to capitalize, and into the arena romp competitors to take advantage of an opportunity which he has largely slighted or totally neglected.

Buying interest, to begin with, is a very fickle sort of thing. The fact that the buying interest in this instance originally centered about the make of car that our average salesman represented does not mean it was destined to stay put.

On the contrary buying interest often will shift with the frequency of the winds. What strikes the buyer as just what he wants right now may not make such a big hit with him a week or a month hence.

Leaving the Harvest for Others

There are many good automobiles on the market today and it is easy for the prospect to work up enthusiasm over a particular make—especially with the assistance of a clever salesman—and it often develops, as every salesman and dealer knows, that the car which the prospect first thought of buying is not the car at all he eventually purchases.

It is apparent, therefore, that a favorable selling atmosphere created by the boosting of an enthusiastic owner is something which only exists temporarily and that the salesman who would look here for additional commissions will have to work thoroughly and fast.

On the part of the man who makes his living by selling it is not good business to plant the seed and leave most of the field's cultivation to the other fellow—along with the big part of the harvest. Yet that is exactly what the automobile salesman does when he fails aggressively to follow the trail of the enthusiastic owner's selling influence.

That is assuredly what he does when he sells a car to a pleased buyer and then forgets all about him, as frequently is the case. When the salesman has a tough time delivering a car, due to the fussiness or argumentative nature of the buyer, his usual weakness is to avoid the buyer as much as possible on future occasions—which is a grave mistake.

In the first place if the buyer develops into a satisfied owner the salesman certainly wants to keep him in line for future business.

And again—it is a fairly safe bet that a buyer of that character will talk in a loud voice about the virtues of his automobile. He is the kind that speaks out in meeting and the kind it pays to follow up.

Underestimating the Opportunity

The complaint against the average salesman in this connection is not that he does not KNOW he should follow up one sale for further leads which the first sale might possibly develop, but rather, that ordinarily he does not follow up with sufficient system anl intensity.

While he realizes very well that there is a certain future-business possibility in the enthusiastic owner's influence he under-estimates the opportunity that the situation is capable of acually producing.

Were that not a fact he would spend more time and effort cultivating the ground about the initial sale—which was "plus."

A "plus" sale is one which opens possible avenues for further profits and commissions.

When the buyer of your automobile likes it well enough to talk about it favorably to others he has been sold

Sold 68 Cars in Same Neighborhood

It was super-service and intense cultivation of the field that enabled the Holzmark Motor Company, 826-28 Minnesota Avenue, Kansas City, Kans., to place 68 Overlands within three city blocks of their town. Their service was not only the talk of their customers but they made it the talk of the town by advertising it in the newspapers and by direct mail. The good will which was won among their owners was utilized by securing lists of prospects from them and vigorous campaigning among these prospects secured the sales. Their super-service was rendered possibe by the use of a card index system which with its "flags" told the managers just when to get in touch with the customers again, and this was done by 'phone, postcard, letter or personal visit, as the case seemed to demand

The satisfaction and enthusiasm of each new purchaser helped sell others until a score of cars was delivered. Left: Joseph E. Holzmark of Holzmark Motor Co., Kansas City, Kans., who kept service at such a high point that car owners helped him sell cars to their friends. Right: Irwin Holzmark, of the same organization, who hustled after prospects in work which sold 68 Overlands in three city blocks.

"plus," without a doubt. Factories and large dealers today are thinking more of the value of "owner satisfaction" than ever before. They are going to greater lengths than ever before to capitalize it wherever possible.

The manufacturer of any article wants nothing better than buyer satisfaction, for when the buyers are satisfied they compose the most powerful selling agency it is possible to place behind a company's merchandising efforts. Once winning this the manufacturer knows he is delivering goods which the public really appreciates and wants and he knows that the future prosperity of his company is fully assured.

It is the business of the salesman to seek out the indivdual case of owner satisfaction and follow its lines of influence for leads to further sales.

The value of capitalizing the favorable impression of one sale in the development of others was emphasized recently in a merchandising effort by the Wolfley Automobile Company, Oakland dealers, in St. Joseph, Mo. The experience of this company will serve to illustrate the point.

Within a period of ninety days this company sold 20 Oakland closed cars in one of St. Joseph's office buildings.

And each sale was made to an individual buyer. It was not a fleet deal.

As the story has been told, the first single sale was made to W. C. Fuller, of Swift & Company, which has quarters in the St. Joseph Stock Exchange Building. Mr. Fuller liked his buy and others in the building with whom he came in contact naturally were attracted by his new Oakland as well as by his enthusiastic comment.

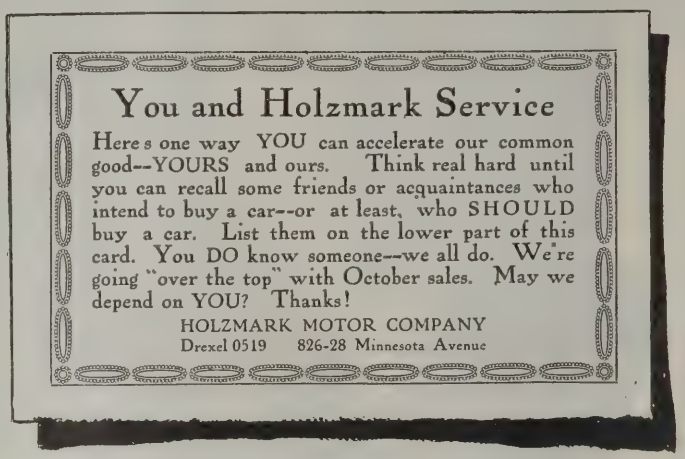
Beginning with the capitalization of interest created by the sale of this one car Wolfley salesmen perserveringly "followed up," selling one car after another and taking advantage of the new boosting from each added buyer until a full score of Oaklands had been delivered to persons having business quarters in that one building.

It is easy to imagine the buying pyschology that operated in the Live Stock Building during the period of this interesting merchandising effort. To obtain new leads the salesman only had to camp in the building from time to time, ask questions and take notes. The new Oakland buyer, proud of his car and not hesitating to tell others about it, in addition to the appearance of his car parked near the building where acquaintances could see it—created an atmosphere highly favorable to further business for the salesman.

Providing—he watched his business and cultivated the soil.

It so happened in this instance that the salesmen did not neglect the opportunity and they cashed in handsomely for their efforts.

But on the other hand, just as a speculation, let us suppose these salesmen went after the situation in another manner. Suppose that after selling the Oakland car to Mr. Fuller they thanked him kindly for his patronage



and, as salesmen sometimes do, made no special effort to hunt him up again soon thereafter and comb over his realm of influence for new leads.

The result would have been—ONE sale—and our story about the Wolfley feat would not have been told.

Bets of this sort are missed every day by automobile salesmen, not necessarily in office buildings but wherever they have delivered cars to satisfied or enthusiastic buyers. It is really not entirely necessary to the salesman's interest for the owner to *talk* much about his car. Its exhibition in the presence of friends and neighbors helps develop a favorable atmosphere for follow-up selling.

Others see the car and admire it, the salesman pays them a timely visit, they talked to the initial buyer and find he is highly pleased—and they are ripe for a direct purchase.

It is a pecularity of the human being anyhow to want the thing another has—or something like it. And it is a human trait when one has made a purchase, regardless of how much the salesman was fought and resisted, to want others to know the buy was a good one. Two forces, therefore, are at work in the interest of the salesman. That is, they are at work for him if he will stay on the job and not leave the opportunity for competitors to seize upon.

Satisfied customers furnished leads which resulted in sales for the Holzmark Motor Co., of Kansas City, Kans. This card helped provide many names for the prospect list

Our discussion touches on a phase of psychology that a subdivision salesman who has been highly successful in his line accepts as one of the first fundamentals of success in his activities. With him one sale of a lot is more than one sale—it is the open door to other possible selling opportunities. And as such he always deals with it.

In one week recently he sold subdivision lots to 18 individual buyers in a large business house whose outer guard he was fortunate through some hook or crook in passing.

Following his customary formula he capitalized the influence of each buyer to obtain additional leads.

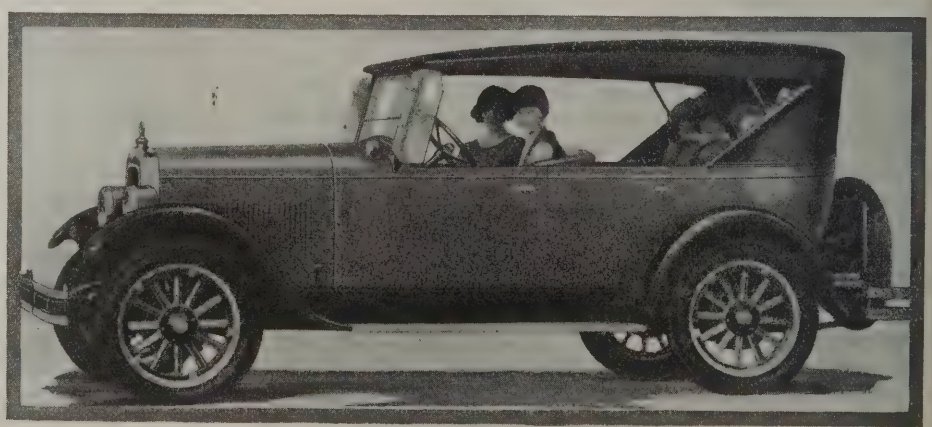
He knew his buyers would be pretty apt to tell their friends of their investments and that some of these friends possibly would be interested in the lots, themselves. While all buyers did not always develop new leads the salesman found that persistently following up sales for new leads made lead-getting much more easier than had he left that area of effort for new fields.

This man's company furnishes its salesmen with leads obtained through advertising and otherwise but he uses fewer of the company's leads than any other member of its large selling organization.

He thinks much more of the leads developed through the influence and assistance of persons to whom he has already sold lots.

That the salesman's idea is sound cannot be denied. Prospects unearthed by his plan not only have been giving thought to his proposition already but there's a chance in each case that they already have been partially sold on the proposition by one of the earlier buyers. The scheme permits him to work under conditions where sales resistance is relatively low.

This is a plan which the automobile salesman can put to profitable use in his own operations. It is much the plan followed by Holzmark Brothers, Overland dealers in Kansas City, Kans., when they placed a total of 68 Overland cars within an area of three blocks. This result speaks sufficiently for its merit.



Many automobile salesmen are constantly permitting commissions to slip through their fingers and go into the pockets of competitors simply because they do not give enough attention to cultivation of opportunities growing out of the satisfied owners' favorable comment and influence in other respects.

It is not necessary to operate exclusively in office buildings or large business institutions in order to profit by this method of follow-up.

Every car sold to a satisfied customer opens the door of opportunity, for every buyer has friends, relatives and neighbors who might be favorably influenced by his boosting.

In fact, there is such a follow-up opportunity for the salesman when an individual buys an automobile of any make in the salesman's competitive class.

Even though a competitor did make the sale it is not impossible that the salesman who delivered that car will sleep at the switch and leave cultivation of the field for further business—to the other fellows.

The Cleveland Automobile Company has recently added a touring DeLuxe model listing at $1025. Finish is in two-tone sagebrush green Duco and upholstery is Spanish leather. The model comes complete with windshield wings, rear view mirror, windshield cleaner, nickel radiator shell, bar cap and motometer, front doube bar bumper, rear bumperettes, trunck rack, body bars and trunk guarded by a loek.

Play important roles in N. S. P. A. exhibit and convention (1) J. G. Winterfeldt, show manager and a new director. He is president of the Wel-Ever Chicago Sales Co. (2) A. T. Haugh, retiring president, who presided over general convention sessions. He is vice president of the King Mfg. Corp., Buffalo, N. Y. (3) W. D. Patterson, retiring vice president, who has been to the fore in all activities since the association was first launched. He is head of Patterson Parts, Inc., San Francisco. (4) C. B. Fraser, association secretary, and one to whom a large part of the credit for the success of the show and convention is due

Maintenance Is Great Theme of N. S. P. A.'s First Annual Show

Replacement Parts Have Big Inning When Chicago Attraction Brings Manufacturers And Many Jobbers Together

THE first annual exhibit of the National Standard Parts Association, held in connection with this organizations' convention at Hotel Sherman, Chicago, November 16, 17 and 18, presented a comprehensive and colorful display of units familiar to the replacement parts division of the industry. It was strictly a parts show to the extent of about 90 per cent of the display, an interesting and impressive collection of those items that must be supplied to the motoring public if the cars sold by dealers are to be kept on the road and in good running condition. Maintenance tools, which the association holds are essentially in the parts field, were also displayed.

Consequently this show was one related directly to the maintenance end of the trade's business and it was such an exhibit that the especially privileged shop man would have enjoyed inspecting. What there was "new" in the exhibition booths represented largely recent specification changes of the car munfacturers.

Keep Step with Car Makers

Study of these different replacement units offered the suggestion that the replacement parts manufacturer has not been slow to keep step with the changes in car design. Keeping up with the procession is vital to the replacement parts industry and consequently the change in specifications of the part coming originally with the 1926 car was swiftly followed by corresponding changes in the product of the replacement part manufacturer.

Although it required close inspection to find the "new" in many of these products on display, the "new" was there in samples of units that are ready for service in 1926 car models as replacements are needed by owners, in addition to some products that are "new" on the list of the exhibitors.

There were 94 exhibitors in the show and it was staged in the commodious Exhibition Hall of Hotel Sherman, the two divisions of this part of the hotel being necessary to house all the attractions. The space available was filled but not uncomfortably, and a large number of eleventh-hour applications were turned down. With the very favorable start of the show as an annual feature members of the association were in a highly optimistic mood and it was freely predicted that the exhibit to be held one year hence will take in a considerably larger list of companies.

Good Business Show

From a "business" standpoint the show seemed to be very gratifying to those who participated. This does not mean there was a deluge of orders, for relatively little actually spot business is written at any such exhibition. But factory representatives have learned how to recognize and appraise contacts and the opportunity in this connection was wide while a number of exhibitors interviewed said the amount of actual business done on the floor far exceeded expectations. All in all the National Standard Parts Association's first annual show passed into history as an entirely satisfactory and successful event.

On the following pages MOTOR AGE presents the impression of an observer who made the round of the exhibits analytically. What he found and what he has written will give a more detailed picture of what the buyer, who in this instance was the jobber, found there.

Maintenance Is Great Theme of

THE transmission of power without slippage is one of the achievements of this age that is accepted as a matter of course, but behind the spur or bevel gear is much engineering that makes it possible for our cars to be driven silently and powerfully. Not only in design where the spiral bevel leads the gear family but also in the field of materials we find new substances developed to co-ordinate with the gears of steel, while in various applications, notably in timing valves and ignition we find the drive accomplished by means of chains of various design.

Among the exhibitors of gears, were the Warner Gear Co. of Muncie, Ind., the Indianapolis Tool and Mfg. Co. of Indianapolis, Ind., the Automotive Gear Works of Richmond, Ind., the Republic Gear Co. of Detroit, Mich., and the Western Gear Co. of Detroit, Mich. In the field of composition gears of materials other than steel we find exhibited the products of Dalton and Balch, Inc., Chicago, Ill., the Timing Gears Corporation, Chicago, and Ralph N. Brodie Co. also of Chicago. These last named concerns also make silent timing chains, another well known concern in this field being The Whitney Mfg. Co. of Hartford, Conn. The flywheel starter gear branch of the gear family was represented by the Accurate Gear Co. of Springfield, Ohio, specialists in the making of this type, while the Ralph N. Brodie Co., previously mentioned also make flywheel starter gears.

In unexpected places we find the tendency of radio to invade the automotive field, the products of the Timing Gears Corp. including a ball and socket mounting for aerial masts as well as the more conventional line of gears and chains.

PISTON RINGS, PINS, INNER RINGS

Some idea of the volume of engine maintenance work needed by the eighteen million cars in operation is obtained by a survey of the exhibits which display pistons, rings and pins, and as stocks of standard and oversize parts become more and more available to the small town garage and country shop, the lot of the wayside repairman will be made lighter.

Pistons were displayed by the Cleveland Piston and Mfg. Co. of Cleveland, Ohio, with their line of Lynite pistons, a cast iron piston also being made by this concern. Houpert Machine Co. of Long Island City, N. Y., exhibited cast iron pistons, as did W. H. Jahns, Inc. of Los Angeles, Cal., the Accuralite Co. of Muskegon, Mich., the Gill Mfg. Co. of Chicago, Dall Motor Parts Co. of Cleveland, Ohio, Swartz Mfg. Co. of Freeport, Ill., and Spencer Smith Machine Co. of Howell, Mich. Lynite Ohio pistons were exhibited by the Ohio Piston Co. of Cleveland while the Kant Skore Piston Co. of Cincinnati, Ohio, showed its line of pistons as well as those of the Permite Piston Co., the latter also being an alloy type of pistons, but of different design.

J. G. Winterfeldt, president of the Wel-Ever Chicago Sales Company, is the man who managed details of the big job of staging the National Standard Parts Association's first annual exhibit.

What the membership thought of his success in the capacity of show manager was reflected in two tributes to Mr. Winterfeldt during the convention. For one thing he was elected to a position on the board of directors, while, again, at the banquet he was presented with a bale of $1 bills which someone had quietly gathered from the delegates. It was whispered that there were between 250 and 300 such items of currency in the roll.

Pistons rings and pins are also included in the line of the Gill Mfg. Co., while the Swartz Mfg. Co showed piston pins, in addition to its piston display.

Piston rings were presented to the trade by the Burd High Compression Ring Co. of Rockford, Ill., this concern also handling the Burd Gilman shock absorber, a steel cable rebound checking device especially recommended for use with balloon tires. Other piston ring displays were those of the Wel-Ever Piston Ring Co. of Toledo, Ohio, the Pennsylvania Piston Ring Co. of Cleveland and the American Hammered Piston Ring Co. of Baltimore, Md.

Piston Pins were shown by the Elgin Machine Works of Elgin, Illinois, and the Burgess Norton Mfg. Co of Geneva, Ill., while inner rings were exhibited by the G-H Tension Ring Co, Inc., of Baltimore, Md., the Parts Mfg. Co. of Cleveland, the Smalley Accessories Corp. of Chicago and the Cleveland Inner Ring Co. of Cleveland, the latter concern and the G-H Tension Ring Co. also having a line of piston pin retaining springs.

King Quality Products, Inc had a novel display which included not only their own line of piston pins, piston pin set screws, shackle bolts and bushings, but also displayed many other items, the whole layout representing a model parts store, with various types of parts systematically arranged in their proper classification and for ease in handling. On the counter were various small items such as shims, as well as cash register and sales slip machine, while at one side was represented office space and desk facilities for the manager.

BEARINGS AND BUSHINGS

"What's the cause of a knock after thoroughly overhauling an engine?", mechanics sometimes want to know, and the answer is that the job was not thoroughly done. Something was passed up as being O.K., a worn bearing that does not fit was roughly tightened instead of being replaced or bushings which looked good were taken at their face value. Bushings and bearings for the wide variety of cars which come into the service station are made by a number of concerns, the exhibits which showed bronze bushings and other parts of brass and bronze being those of the Johnson Bronze Co. of New Castle, Pa., the Twentieth Century Brass Works of Minneapolis, Minn., and the National Bushing and Parts Co., also of Minneapolis. Bearings were shown by the Milwaukee Die Casting Co. of Milwaukee, Wis., and the U. S. Bearing Co., Inc., of Indianapolis, Ind. Both bushings and bearings were included in the exhibits of the Federal Mogul Corp. of Detroit and the Buckeye Brass and Mfg. Co. of Cleveland.

Ball and Roller Bearings

In maintenance work attention is not always paid to the condition of bearings and poor operation after the job is finished is often the result. In overhauling a transmission or axle for example, the gears may be replaced if the teeth show signs of wear and yet this may not insure perfect operation if the balls or rollers of the bearings are pitted and the races worn. Excessive clearance in the bearings means that the gears can not be kept in line. Under certain conditions of load they may be satisfactory and howl under other conditions.

An appreciation of these facts as well as adequate service stocks should assist the shop to render the best possible service. Ball bearings were shown at the booths of The Fafnir Ball Bearing Co. of New Britian, Conn., and Standard Steel and Bearings, Inc., of Plainville, Conn., while roller bearings were displayed by The Bock Bearing Co. of Toledo and the Orange Bearing Co. of Orange, N. J.

STEEL MACHINE PARTS

Valves, tappets, bolts, nuts, shafts and universal parts

Pistons, bearings and gears are essential items in the overhaul of the car, but there are miscellaneous other items that are also important, the lack of which will make it impossible to do a complete job. Valves for example need replacement from time to time, these being exhibited by Thompson Products, Inc., of Cleveland and Mackay and Austin Inc. of Oakland Cal. Valve cages, guides and similar machined parts were included in the line presented by the G-H Manufacturing Co. of Baltimore, Md., the Fostoria Screw Co. of Fostoria, Ohio, the James Motor Valve Co. of Detroit and the Star Products and Machine Co. of Cleveland.

N. S. P. A.'s First Annual Show

Pioneer directors of N. S. P. A. who took important parts in first year's activities (1) Walter T. Mills, president Auto Parts Co., St. Louis, Mo., (2) E. E. Main, president U. S. Bearings Co., Inc., Indianapolis, Ind., (3) Robert M. Schnore, president Southern Bearings & Parts Co., Atlanta, Ga., (4) V. W. Olson, secretary Automotive Service Co., St. Paul, Minn., (5) T. R. Walton, sales manager James Motor Valve Co., Detroit, Mich., (7) W. C. Stettinius, president American Hammered Piston Ring Co., Baltimore, Md., (8) C. J. Peterson, president P-D Auto Parts, Inc., Meriden, Conn., (9) Sim T. Mee, president Mee-Oaks Co., Oklahoma City, Okla., (10) W. M. Albaugh, president Thompson products, Inc., Cleveland, O.

In the booth of the Parts Manufacturing Co., were connecting rod bolts and nuts, these being packed in individual cartons for ease of handling.

A complete line of axle shafts is offered to the trade by the Lake Erie Metal Products Co., these being made of heat treated manganese alloy or chrome nickel alloy steel while a line of smaller parts for servicing Hartford and Spicer Universals is offered by the New England Auto Products Corp. of New Haven Conn.

The Almetal Universal Joint Co. of Cleveland displayed drive shafts and universal joints, their products also including a complete line of flanges and bearing hangers.

Brake lining, clutch facing, rivets etc.

Friction materials are as much needed in their right place as are the anti-friction bearings, where freedom or motion is desired. Brake lining and clutch facing are used in considerable quantities wherever a shop specializes on thorough overhauling. The exhibit of the United States Asbestos Co. of New York City included clutch facings and brake lining, also water pump rings for making the water pump leak proof, other items being asbestos wicking and sheet packing. The products of the Keasbey and Mattison Co. of Amber, Pa., are also chiefly brake lining and clutch facings.

The G-H Mfg. Co., previously mentioned has a product in the above classification, a line of clutch plates, lined and ready to use, new items in this line including plates for Buick, Cadillac, Fuller, Overland and Willys-Knight clutches.

Rivets and brake band tools were shown by the Penn Rivet Corp. of Philadelphia, a demonstration machine being in operation, showing the time saving and hence the profit making possibilities of the right sort of equipment.

TOOLS

One of the displays where machinery was running, was that of the Van Norman Machine Tool Co. of Springfield, Mass., where a piston was being brought down to finish size as would be done in the automotive shop, the Van Norman display including a large piston grinder, a small piston grinder, a valve grinder and a number of smaller items.

The Scully Steel and Iron Co. of Chicago had a display of reamers of the expansion type, one adjustment advancing blades up a ground runway, the return being effected by a stiff spring. A tapered bushing for aligning the reamer when reaming piston bushings insures accurate work. A line of socket wrenches including a variety of assortments was shown by the Packer Auto Specialty Co. of Chicago.

ELECTRICAL

An interesting coil, the product of The Mallory Electric Corporation of Toledo, Ohio, was displayed in connection with a device for measuring the current in the spark. The coil in question uses an iron circuit which is nearly closed and makes for great efficiency. The testing device is a milliammeter which is connected in series with the wire leading from the coil to the center of the distributer. In this way the repairman can make a comparative check on various coils to determine which one gives the hottest spark.

MISCELLANEOUS ITEMS

A counter balanced crankshaft for Fords was shown by J. Wadsworth Staff of Chicago, this shaft weighing 8½ pounds and selling for $19, the model,

drilled for force feed oiling selling for $25.

Another item for Fords is the Gould double reduction axle made by the Gould Detroit Axle Co. of Detroit, Mich. This replaces the left half of the regular Ford axle and gives four speeds forward and two in reverse.

Products of the Holfast Rubber Co. of Atlanta, Ga., include endless fan belts, for all cars, tube patching kits, top patching kits and an endless flap for clincher rims, the latter being a new item, intended for use on rims such as Fords where the formation of rust on the rim eventually produces punctures where the tube chafes through on the sharp particles of rust.

Another concern making a complete line of fan belts is the Hide Leather and Belting Co., of Indianapolis, Ind.

Gaskets, a complete line of 'em, was shown by National Cork Products, Inc., of Newark, N. J., and the Felt Products Mfg. Co. of Chicago, these being available in various assortments to suit the needs of various localities and service stations.

The Cleveland Piston and Mfg. Co., previously mentioned, also have an aluminum welding rod which is said to make it possible to weld aluminum parts without preheating or danger of warping. The sample kit sells for $5.00.

Another product of the G-H Mfg. Co. is an assortment of brake springs for use in overhauling the brakes on the most popular cars.

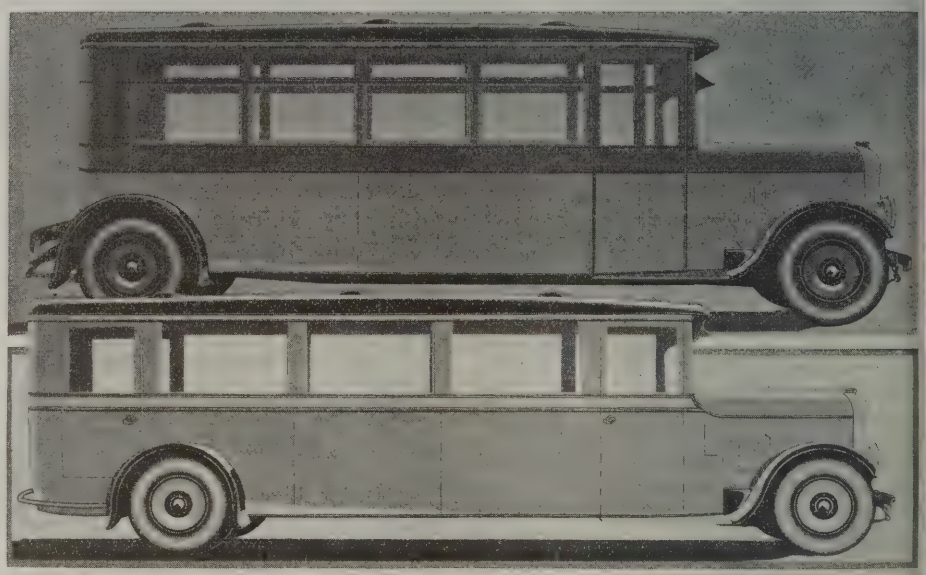
In presenting the various products handled to automotive dealers, the jobber's salesman finds it necessary to carry quite an array of circulars, catalogues and descriptions of the items he sells and this necessitates some sort of carrying case. The Kalamazoo Loose Leaf Binder Co. specialize in leather goods for this purpose, their assortment meeting practically any requirement.

A ten leaf front spring for Ford cars is made by the Detroit Steel Products Co. of Detroit, a product recommended for use with the spring being a clamp plate design to be used with the regular Ford clip and capable of taking either nine or ten leaf springs.

The United States Chain and Forging Co. of Pittsburgh, makers of bumpers and tire chains exhibited a number of wheels with tires in which its various chains were shown.

N. S. P. A. to Restrict Show Attendance

Rules relating to exhibition by non-member manufacturers and attendance at the show of non-member manufacturers will be much more severe next year than at the show just held. Rules this year while restrictive were not carried to the point of exclusiveness.



Next year, according to a decision reached in convention, no non-member manufacturer will be permitted to exhibit and no non-member manufacturer will be permitted to attend the show unless his application, unacted upon, is on file at the time of the show.

In 1926, therefore, the N. S. P. A. will stage what is popularly spoken of as a "closed" show.

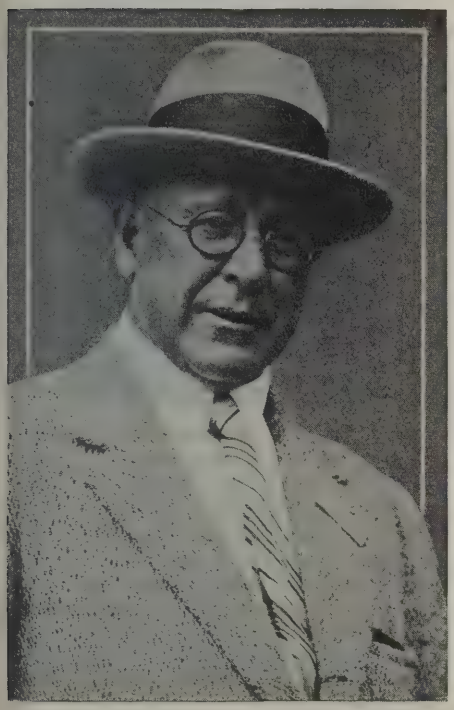
Two Additions Made to Yellow Coach Line

TWO additions have recently been made to the line manufactured by the Yellow Coach Manufacturing Co., Chicago, Ill. These are designated as the "X" 21-Passenger Pay-Enter Coach, and the "X" 17-21-Passenger Parlor Coach. The Type "X" Pay-Enter Coach is designed for city service and short interurban runs. The Type "X" Parlor Coach is built specially for intercity transportation. The same chassis is used for both coaches, with suitable rear axle ratio to meet operating conditions.

The Type X-21 Pay-Enter Coach has eight double seats, four on each side and a cross-seat at the rear seating five. All seats are upholstered in genuine brown leather. Their arrangement permits all passengers to face forward. As there is no overhang to the body, the wheel housings come under the last cross-seat and do not interfere with the regular seating layout. The Type X-17-21 Parlor Coach has four rows of de luxe type double wicker chairs on the left side and four rows of single chairs on the right, all facing forward. Seat-back cushions and arm-rests are all upholstered in genuine brown leather. A cross-seat in rear accommodates four passengers and there is a hinged observation seat alongside the driver. Emergency seats in the baggage compartment accommodate four additional passengers. In both the pay-enter and the parlor coach, a buzzer-cord for signalling operator is located on each side of coach above windows.

New 17-21 passenger Yellow coaches recently added. At the top is the 21 passenger Pay-Enter coach and below the 17-21 passenger Parlor Coach

---



BUILDING STORAGE GARAGES

A 16 page booklet entitled, "Building Garages for Profitable Operation," has been published by the Ramp Buildings Corporation, 21 East 40th Street, New York City for general distribution. This booklet is devoted especially to the Ramp type of storage garage in which this company is interested. It takes up the subjects of location, design and business management, and gives several detailed examples of the earning power of various sized garages in cities of from 50,000 to 1,000,000 population. It is illustrated with photographs of successful storage garages and contains much information of value to prospective builders of garages.

ELECTRICAL TESTING AND REPAIRING INSTRUCTIONS

Users of Weidenhoff test benches and other equipment are supplied with very carefully compiled instructions. A copy of these instructions was recently sent to MOTOR AGE and it appeared to be so interesting that we inquired to know whether other copies were available. We were informed that this is the case and MOTOR AGE readers can obtain a set of these instructions by writing to Joseph Weidenhoff Company, 4352 W. Roosevelt Rd., Chicago, Ill.

E. P. Chalfant to Be Chief Force in Parts Association

E. P. Chalfant

Convention Names M. and A. M. A. Head Its High Commissioner — Moffett Elected President—Door of Next Show Closed Entirely on Outside Manufacturers.

CHICAGO, Nov. 20.

FOLLOWING were high spots of the convention of the National Standard Parts Association which was held at Hotel Sherman, Chicago, Nov. 16, 17 and 18, in connection with the association's first annual show:

Election as president of Charles W. Moffett, of Barney's Auto Parts Co., Inc., New York City.

Amendment of constitution to provide for the appointive office of executive vice president and the appointment to this office by the board of E. P. Chalfant, president of the Motor and Accessory Manufacturers' Association and an outstanding figure in the industry. He is to assume duties Jan. 1.

Adoption of a resolution to the effect that exhibition in next year's show shall be entirely "closed" to the participation of non-members.

Adoption of a resolution to the effect that no non-member manufacturer shall be privileged to attend the show unless his application for membership, unacted upon, is on file at the time of the show.

Adoption of a resolution on "obsolescence" similar to that adopted July 31, by the Merchandising Committee and Board of Directors.

Adoption of the same "cataloging" resolution that was adopted by the Merchandising Committee and Board last July.

Mr. Moffett, the new president, succeeding A. T. Haugh, vice president of King Manufacturing Corporation, Buffalo, N. Y., represents a jobbing organization. He has been an active member of the association, having been one of the organizers. Besides being in the jobbing field he was formerly on the manufacturers' side of the association as the representative of Warren Gear Products Co., Warren, Pa. Backed up by this wide vision of the replacement parts industry it was pointed out that Mr. Moffett was excellently fitted to shoulder the executive leadership.

Chalfant Given Free Hand

Active direction of the association's affairs and the campaign for its upbuilding will be in charge of Mr. Chalfant who is given liberal powers and a free hand in this work. Preceding the action which created the office of executive vice president, in addition to a secretary, speakers declared the organization required a leader who would be not only a directing executive, but a "Landis." The selection of Mr. Chalfant seems to have been the answer to this plea.

W. M. Albaugh was elected vice president. He is president of Thompson products, Inc., of Cleveland, Ohio.

New directors from the manufacturers' side elected by the convention were W. C. Stettinius, president of the American Hammered Piston Ring Co., Baltimore, Md., W. M. Albaugh, president Thompson Products, Inc., Cleveland, O., W. M. Smith, Spencer-Smith Machine Co., Howell, Mich., and D. W. Rodger, Federal Mogul Corp., Detroit.

From the jobbers' side new directors elected were Mr. Moffett, later named president, and J. G. Winterfeldt, president of the Wel-Ever Chicago Sales Company.

There are six holdover directors.

In addition to agreeing upon a new plan for the designation of jobbers who will be invited to next year's show it was decided again to interlock the show and convention, with compulsory attendance rules prevailing.

Future location of the association's national headquarters, now temporarily in Detroit, was another matter brought into discussion with the eventual vote to leave this decision to Mr. Chalfant, the executive vice president. Feeling was expressed that headquarters should be established in Chicago.

C. W. Moffett

One of the features of the opening general session was a report by Field Secretary L. H. Bennett of an investigation of the General Motors parts mechandising plan in Canada.

A banquet was held Tuesday night at which time Mr. Chalfant's appointment was announced.

With respect to the resolution on the subject of "obsolescence" there was the following important clause:

That "the responsibility for determining what parts are to be considered obsolete, and when they are to be first so designated, as well as the financial responsibility which may attach to such determination, lies with the manufacturer, since it can only be based on the intelligent analysis of national sales figures. The items in each line should be grouped according to sales volume and at suitable intervals declaration of obsolescence issued, after which the parts affected will be manufactured only as specials, the manufacturer to be the clearing house for obtaining them, and the list price to be in proportion to the service rendered."

The chief activity in the cataloging program will be the compilation of a master list of specifications which list is to be used by jobbers in compiling their catalogs. The plan will make possible more composite cataloging, with the elimination of much duplication necessary at present.

Tire Dealers Favor Fewer Sizes As

Herbert A. Ruhnke, President National Tire Dealers Association

National Association in Convention at St. Louis Hears Department of Commerce Survey of Retail Tire Trade Analyzed.

THE sixth annual convention of the National Tire Dealers Association held at Hotel Chase, St. Louis, Nov. 17, 18 and 19, was said by members of that organization to have been the most successful ever held, in point of attendance and in point of accomplishments. The tire dealers went on record as favoring many plans which are expected to strengthen their organization and help to put their industry on a higher plane. Between four and five hundred dealers attended.

Herbert A. Ruhnke of Milwaukee was chosen president for 1926; H. V. Eva, of Duluth, Minn., vice president, and George J. Burger, of New York, the retiring president, was named secretary and treasurer.

A change in the by-laws provided for a board of directors to be composed of the three officers of N. T. D. A. and six directors to be elected. It was explained that this method would always provide a more experienced board. For instance there was but one member held over from the 1925 board. He is Art Roderick of Akron, Ohio. He has one more year to serve.

To fill the other vacancies on the board, F. P. Harper, Ft. Smith, Ark., was elected to serve for one year. A. M. O'Leary, Chicago, and Victor Shaw, Charlotte, N. C., were elected for two years and A. L. Glick, Pittsburg and A. P. Woehrle, St. Louis, were elected for three years.

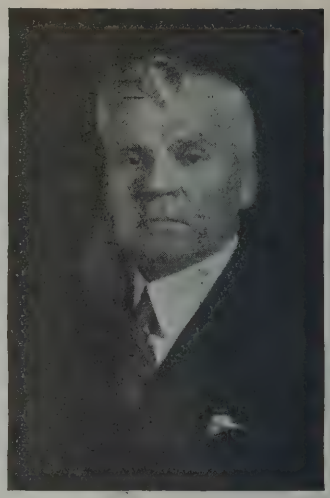
It was decided that the 1926 convention would be held in Memphis, Tenn., opening on the third Tuesday in November.

The adoption of a plan to finance the 1926 program of N. T. D. A., providing a minimum fund of $5,000, was considered the most important step taken at the meeting. Members were solicited to donate $100 each toward this chest and the amount was subscribed in a short time. However, there is no limit to the amount which may be subscribed and those members who did not attend the convention or who did not subscribe will have an opportunity to do so.

It is expected that N. T. D. A. will engage the services of a manager to devote his entire time to the building up of the organization and to the encouragement of state and local associations. Also it is planned to publish an official magazine to disseminate news of the organization.

That tire dealers favor the simplification of sizes of tires was shown by a resolution which was adopted expressing appreciation for the efforts of the U. S. Department of Commerce in behalf of tire dealers and thanking R. M. Hudson, chief of the Bureau of Simplification, and R. L. Palmerton, chief of the Rubber Division, of the Department of Commerce, for their addresses to the convention. Mr. Hudson's address concerned the simplification and standardization of sizes and types of tires and Mr. Palmerton discussed a survey of the dealers' tire stocks.

Mr. Hudson distributed to the tire men copies of his report on fewer tire sizes, prepared November 1, and then discussed some of the advantages of simplification in the varieties and sizes of tires. He showed how simplification increases the merchant's turnover, affording complete coverage of the market with smaller investment in stock. A digest of this report is published on the next page.



Interesting facts about the makeup of the retail tire trade were given by Mr. Palmerton as a result of his analysis of the survey made by his division of the Department of Commerce October 1.

Resolutions Adopted

At Thursday's session resolutions were adopted opposing the practice of manufacturers in printing and distributing suggestions as to retail selling prices.

Tire manufacturers and dealers, in another resolution, were urged to refrain from selling so-called automobile clubs and co-operative buying associations who re-sell such merchandise to their members, and likewise all so-called mileage contracts and rental service agreements were condemned as being detrimental to the interests of dealers.

A question which has been the cause of much conflict between tire manufacturers and dealers, the right of the manufacturer to retain for himself as a "national" such accounts as the large fleet owner, was attacked in a resolution which stated; "That we protest and oppose in principle, the practice on the part of the manufacturer in selling direct to the consumer, be it the so-called national or commercial account."

H. V. Eva, Vice-President National Tire Dealers' Association

Another alleged practice of manufacturers which drew the fire of the dealers was of setting up factory employes in retail businesses, the capital of such an establishment, or part of it, being furnished by the manufacturer.

Also the practice of manufacturers rebating to dealers 10 per cent on sales made by the manufacturers to certain select customers at the dealers' cost price was condemned.

Herbert Ruhnke, the newly elected president, stated in his opening address that he had not prepared a program of action for the coming year, but said he would work in harmony with the board of directors for the best interests of the tire dealer. He urged that members make their slogan for 1926, "2500 Members for Memphis in 1926."

An analysis of the report of the stock survey of the Department of Commerce, described by Mr. Palmerton was made by Mr. Burger, the retiring president, and showed that N. T. D. A. membership represented a class of dealers carrying from 201 to 1,000 tires in stock. He suggested that members again present what they considered to be a definition of a tire dealer and a committee was appointed.

This committee defined a tire delaer as follows:

A tire dealer is an individual, firm or or corporation: First—whose activities are principally directed towards the sale of new tires and tubes.

Second—who buys tires for the purpose of re-sale at a reasonable price.

Third—who carries in an established place of business, a representative stock of new tires and tubes and has adequate facilities for service.

Fourth—who has a sufficient moral and financial standing to enable him to properly conduct his business.

Government Urges Simplification

THAT a simplified list of tire sizes is greatly to be desired, and that something should be done to bring this about, is the practically unanimous agreement among the principal interests concerned with the production, sale and use of tires, as reported by R. M. Hudson, chief of the division of simplified practice, U. S. Department of Commerce.

Mr. Hudson regards the present tire situation as one of the most striking examples of economic waste prevailing in industry today. The current nation-wide interest in reducing waste in production and distribution of commonly used commodities, he says, is a challenge to all contributing to such wastes to prove the soundness of their position. He sees in the proposal for fewer tire sizes a further opportunity to demonstrate the tremendous power that exsists in co-operative action by all interests for the elimination of waste in typical American industries; and he adds that it is through the elimination of such wastes as the tire example affords that the automotive and related industries will find their greatest opportunities for future growth and development.

Diversity of Opinion

Those who are intimately acquainted with the joint efforts being made toward fewer tire sizes by committees of the Rubber Association of America, Inc., the National Automobile Chamber of Commerce, the Society of Automotive Engineers and the like, feel that progress is being made as rapidly as current conditions will permit. But others do not agree. A few even have questioned the possible value of the services which the Department of Commerce might render in bringing about the early establishment of a simplified line of tires, while a much larger number believe that action will be expedited if the department renders to the interests concerned the same service it is rendering to so many other industries having simplification problems.

Mr. Hudson has just submitted to the industry a summary of the whole situation in the hope that the several interests will soon co-ordinate their views, set up a tentative simplified line, submit it to all concerned and work thereafter to maintain that line at the minimum consistent with the real needs of the industry, the trade and the consuming public.

Practically all of the 24 prominent car manufacturers who contributed to this survey agreed that standard tires sizes could be established only as the several interests co-ordinate their views and co-operate in the application and support of whatever standards are ultimately set up.

All of the 21 truck and commercial car makers questioned agreed that simplified tire sizes would mean lower inventories, smaller investments, quicker turnover and greater economy.

Nearly all of the 47 tire manufacturers

Multiplicity of Sizes and Styles a Striking Example of Economic Waste, Declares Chief of Bureau of Simplified Practice.

represented in the survey felt that the solution of the problem rested mainly with the car manufacturers as the tire producers obviously make only what their customers demand.

Practically all of the nine wheel and rim manufacturers favored a greater degree of simplification than now prevails and were willing to co-operate to bring this about.

Fourteen manufacturers of chains favored simplification, nineteen cover makers were willing to co-operate toward fewer tire sizes, and trade and business papers as well as automotive associations generally favored the idea.

Mr. Hudson reports that one or two car makers point out that the car designing engineer should be free to specify a tire size that will fit in with the particular design of car he is bringing out. This freedom of choice, causing demand for odd or special sizes, is deplored by others who feel that selection from a well-thought out list of standard sizes is both possible and practicable. One manufacturer believes that the balloon tire is still in the engineering stage and that until more data are available on its performance it will be difficult to set standards for that class of tires.

Who Are the Tire Dealers?

The survey of the retail tire trade made by the Department of Commerce as of Oct. 1, 1925, revealed that out of approximately 37,000 retail sellers of tires responding to the Government's questionnaire only 16 per cent derive the major part of their business from sale of tires. In other words comparatively few dealers are in business primarily to sell tires, but a great majority of the merchants selling tires are engaged in other lines of the automotive business. The following figures were quoted by P. L. Palmerton, chief of the Rubber Division of the Department of Commerce:

Business Service of Tire Dealers

Selling automobiles ....39 per cent
Selling accessories .....77.9 per cent
Selling gasoline .....74.9 per cent
Operating air compressors .....53.7 per cent
Major part of business from tires .....16 per cent

It was found that only 29 per cent of the dealers operate tire repair departments.

Tire manufacturers, though enthusiastic for simplification, point out that a tire maker and a car designer are inclined to agree on a new tire size without much regard for the effect which the introduction of a new size will have on the general situation in the industry. This lack of a truly standard list and the consequent lack of regard for the dealer who has to service many different models is said by some to cause millions of waste in the tire industry. Reduction of inventories, idle investments tied up in slow moving stocks, quicker turnover, better service of supply and better quality are some of the advantages cited as coming from simplification.

Mr. Hudson reports that the production of 20 in., 21 in. and 22 in. diameter wheels, also 18 in. and 19 in. as experimental possibilities, together with the 23 in. and 24 in. diameters has thrown a great burden on wheel and rim makers, one from which they would gladly be relieved. One manufacturer questions whether the transition period is over and says time alone can tell what size is best to accept as standard. His belief is that it will be the 21 in. diameter.

"There was confusion enough in tire sizes prior to the introduction of the balloon type," says C. A. Vane, general manager of the National Automobile Dealers Association, "but since 1923 we have had the high pressure tire, the semi-balloon and the full balloon, each with a full range of sizes and models, and it is quite needless to say that only a very limited percentage of automobile dealers can stock enough tires of the different types and sizes to be able to simplification continues."

Burger Urges Relief

George J. Burger, president of the National Tire Dealers' Association, says:

"Our Association will lend any amount of assistance helping to eliminate the waste that exists in the industry. I believe, in the near future, when high pressure tires will be gradually eliminated, that some set plan should be adopted by rubber manufacturers and car manufacturers on whether at the outside one dozen tires should answer the requirements of all.

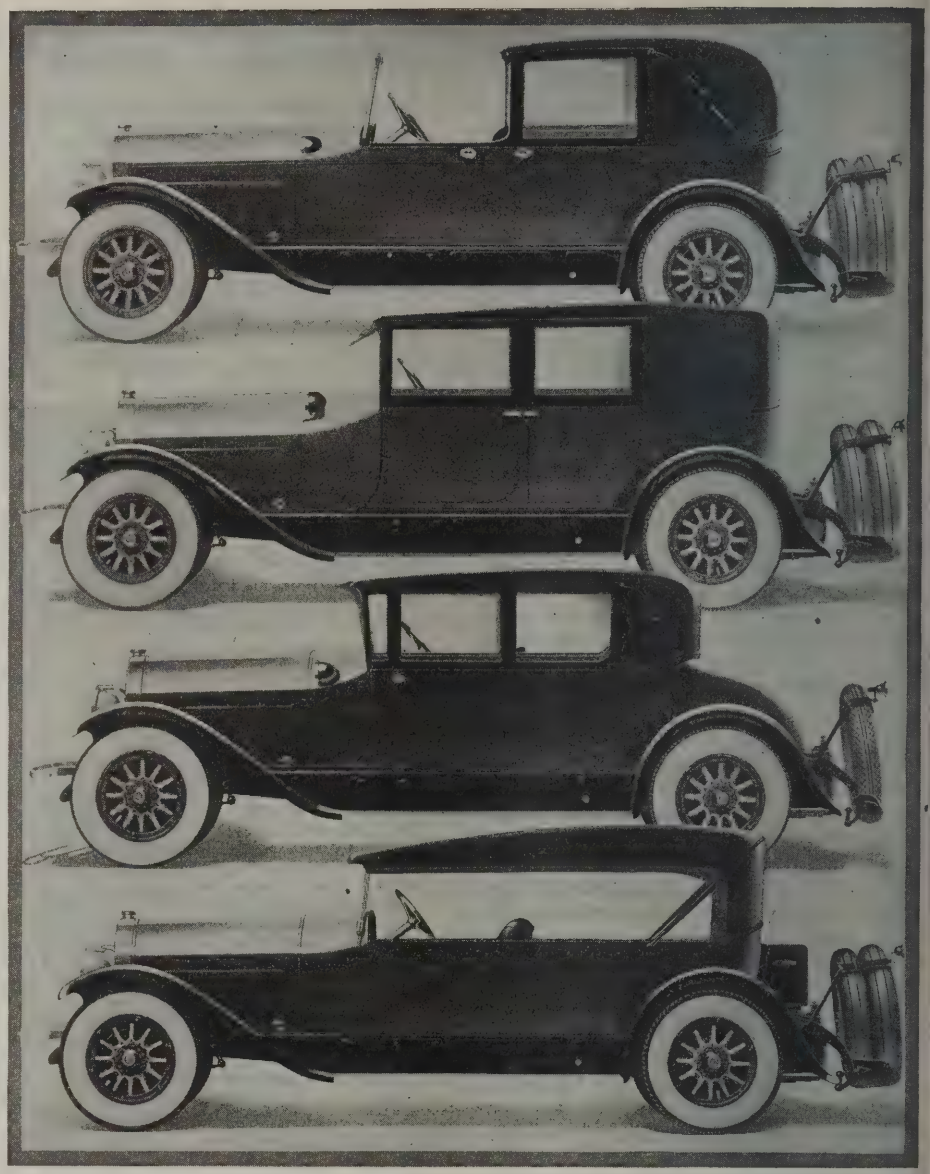
"Another feature which delays the arrival of complete simplicity is the failure so far of motor car engineers to be in complete accord in respect to proper sizes. Some of the engineers of the largest car producing units still insist on odd sizes and specifications for the new models. Their business is of such importance that the tire manufacturer cannot be adamant to their demands, so he bids for and gets the business. The other manufacturers, not being successful in getting the original equipment, have reached out for the replacement business on these models, and so have added to their sizes, and so the merry chase away from the first principles of simplification continues."

The New Model Ninety Locomobile

Chassis Includes Most Modern Features Known to Present Day Engineering; Prices Range from $5500 to $7500, Depending on Body Style.

By P. M. HELDT

THE announcement of a new Locomobile is an unusual event, for while changes in design have been made at frequent intervals, the "48" has been the one Locomobile for a great many years. The designation of the new model is based on the power it develops, it being known as Model 90, although the piston displacement is less than that of the "48."



The engine is a high speed type with L-head cylinder, detachable head, light reciprocating parts, seven bearing crank finished all over, silent chain front end drive and pressure lubrication.

A single plate clutch is used, with molded asbestos lining, reliance for smooth engagement being placed on the spring action of the deformed disc. The transmission is a separate unit, with Maag-ground gears and with ball bearings throughout. Four-wheel brakes (Bendix-Perrot three-shoe) and balloon tires are standard equipment, and as the car has rear springs 60 in. in length and shock absorbers all around, it leaves little to be desired from the standpoint of riding comfort. The wheelbase is 138 in. and the tread 58¼ in.

The prices of the chassis and of the different types of complete car are as follows:

Chassis	**$5,000.00**
Touring Car	**5,500.00**
Roadster	**5,900.00**
Coupe	**6,950.00**
5-Passenger sedan	**7,300.00**
5-Passenger sedan with division	**7,450.00**
7-Passenger enclosed drive Limousine	**7,500.00**
Brougham	**7,500.00**
7-Passenger non-collapsible Cabriolet	**7,500.00**

The engine has a bore of 3⅞ and a stroke of 5¼ in., making the displacement of the six cylinders 371.5 cu. in. The compression space is 23.5 per cent of the combined displacement and compression volume, so that the compression ratio is substantially 4.25:1. Two large size openings are cast in the water jacket. These are covered by sheet steel plates, and a water inlet manifold is bolted to these cover plates. This promotes uniform circulation of the cooling water through the jacket.

New Locomobile "90" Models. From top to bottom: Cabriolet; four-passenger sedan on new chassis; Coupe with roomy luggage space; four-passenger touring car with trunk mounted over the gasoline tank.

A water outlet boss is formed on the cylinder head at the forward end, into which is set a bellows-type thermostat.

All valves are identical in dimensions and interchangeable. The clear diameter of the valve ports is 1-25/32 in. and the lift of the valves is a few thousands over ⅜ in.

Cast iron pistons of a light design are used. These carry three rings near the upper end and an oil scraper ring near the bottom.

The piston pins, which are tubular and case hardened, are secured in one of the piston bosses by a pin screw which extends entirely through the boss and piston pin. A bronze bushing is pressed into the upper end of the connecting rod and provides a bearing for the piston pin 1⅛ in. in diameter by 1¾ in. long. At the bottom end of the connecting rods the babbitt is cast directly into the steel and no shims are used. Two standard type connecting rod bolts hold the cap in place.

The crank shaft is a seven-bearing design and is finished all over. All bearings are of 2¼ in. diameter. Crankpin bearings are 2¼ in. long while the seven main bearings are of the following lengths (front to rear), respectively: 2⅛, 1-5/16, 1-5/16, 1-15/16, 1-5/16, 1-5/16, 3-1/16 in. As may be seen from the longitudinal section, end thrust is taken up on the front bearing. Diagonal oil holes are drilled through the crank arms through which the crankpin bearings are oiled from the main bearings.

At the forward end the crank shaft carries the driving sprocket for the Link-Belt silent chain "front end" drive, and

beyond this there is mounted upon it the Lanchester vibration dampener, which is entirely enclosed within the timing chain housing and runs in oil. At its very end the crank shaft carries a grooved pulley for the fan drive.

Camshaft Serves as Oil Lead

The camshaft is drilled from end to end to serve as an oil lead for its own bearings, and is supported in four bearings of the following dimensions (front to rear): 2-5/16 x 1-15/16 in. (long) 2-9/32 x ⅞ in., 2¼ x ⅞ and 2-7/32 x 1⅛ in. The valves are operated by tappets of the mushroom type, the guides for which are held in place in holes in the top wall of the crankcase in pairs by means of yokes. The guide at the top extends slightly above a shoulder on the tappet, thus forming a pocket which catches oil and ensures effective lubrication.

The crankcase consists of two aluminum castings, the parting plane being about 2½ inches below the crank axis, which gives a very rigid supporting member.

Fuel is carried in a 21-gallon tank carried at the rear of the frame, a screw filler cap being provided which is secured by a central locking screw. The fuel tank has a 3-gal. reserve compartment and the reserve is made available by giving a half turn to a lever conveniently located on top of the tank. An interesting feature in connection with the device is that even if the operator should fail to turn the lever back to its original position when he refills his tank, the fuel supply to the carbureter will cease when only 3 gal. remains in the tank.

Fuel feed is by air pressure, a gasoline gage being mounted directly on the fuel tank, no dash gage having been found satisfactory with the pressure feed system.

A "United" air cleaner is fitted to the air inlet of the 1½ in. Stromberg Model OX-3 carbureter.

The inlet and exhaust manifolds are separate castings but are bolted together. A jacket is formed on the inlet manifold where the vertical part joins the horizontal part, which jacket communicates freely with the exhaust manifold.

With the exception of the battery, the whole of the electrical system is of DeJon make. The generator is driven from an enclosed accessories drive shaft on the left side of the engine through an Oldham type coupling, and the same shaft drives the water pump, which is located in front of the engine. The starter drives to a flywheel crown gear, engagement being by foot-shifted gears actuated by the same motion which closes the starter switch. The battery is a USL of 166 ampere-hours capacity. It is located in a battery compartment under the right splash apron, and to make the filler plugs more accessible they are offset from the center toward the outer side. The ignition unit is driven through a vertical shaft at the middle of the length of the engine on the valve side, which shaft is driven from the camshaft through helical gears and drives the oil pump from its lower end. Spark control is partly automatic, manual control being provided for high speed work.

All wiring is carried in flexible metal conduit. The spark coil is mounted on the forward side of the dash and there are also two fuse blocks on the front of the dash. On the dash directly over the engine is mounted an "engine light" which facilitates inspection, this same light serving as a general trouble light. Ordinarily this cord supplies current to a cigar lighter.

Lubrication is by the now conventional pressure system with a direct lead to each main bearing connected to the bearing cap. Oil enters the camshaft at one of its bearings and is fed through it to the other bearings. A direct-reading float type oil level gage is provided. The float being located in a pocket at the side of the oil pump. In this same pocket and concentric with the float and its stem is located a handy crankcase oil drain valve of the conical type which is operated by means of a handle at the side of the crankcase. The oil pump is bolted against the main crankcase casting and carries the usual oil strainer and relief valve.

The radiator is of the cellular type, of G. & O. make, and has a detachable, pressed steel nickeled shell. The centrifugal pump has a shaft of stainless steel.

Owing to the fact that the transmission is a separate unit there is no bell housing and the flywheel is exposed. The engine is supported from the main frame at four points.

Four Speeds

Three forward speeds and one reverse are given by the transmission. All gears are of alloy steel, oil hardened, and the teeth are ground by the Maag generating grinding system.

The speedometer drive is taken off the rear end of the splined shaft of the transmission. At the left side of the transmission is a Kellogg tire pump which is started and stopped by means of a clutch lever located in a tool box located under the left splash apron. The gear ratios in the transmission are as follows: 3.32:1 (low), 1.82:1 (intermediate), 4.35:1 (reverse). A transmission lock is provided.

Three different final drive ratios are used. A 4.15 ratio (13 and 54 teeth) is used on the roadster; a 4.5:1 ratio (13 and 58 teeth) on all other models, while a 4.75:1 ratio (11 and 52 teeth) is offered as an option. Torque reaction of the rear axle is taken on a pressed steel torque arm whose forward end is supported between rubber cushions on a frame cross member.

Rear Axle

The rear axle is of Eaton make and is of the semi-floating type with pressed steel, welded housing. Taper roller bearings are fitted on both sides of the differential, annular ball bearings in all other places. The bevel pinion is straddle mounted.

Underslung mounting of the semi-elliptic rear springs serves to lower the frame and the whole car. These springs are 60 in. long and 2½ in. wide, and they are provided with the self-adjusting spring shackles which were developed for the Model "48" a year or so ago. The front springs are 40 in. long and 2 in. wide and also have self-adjusting cone type shackles. Lovejoy hydraulic shock absorbers are fitted all around.

The front axle is also of Eaton make, the front wheel being mounted on taper roller bearings.

Sixteen inch three shoe Bendix-Perrot brakes are carried on all four wheels, the actual internal of the drums being 15-21/32 in. and the effective surface of each brake, 98 sq. in.

The brakes are equalized in pairs. While the brake pedal applies the brakes on all four wheels, the brake lever, which is located to the left of the driver's seat, applies only the rear brakes, through a special equalizing mechanism.

Steering Gear

Steering is by a Locomobile Ross cam-and trunion type steering gear, operated by means of an all wood hand wheel. Provision made whereby any looseness at the upper end of the steering column can be readily taken up.

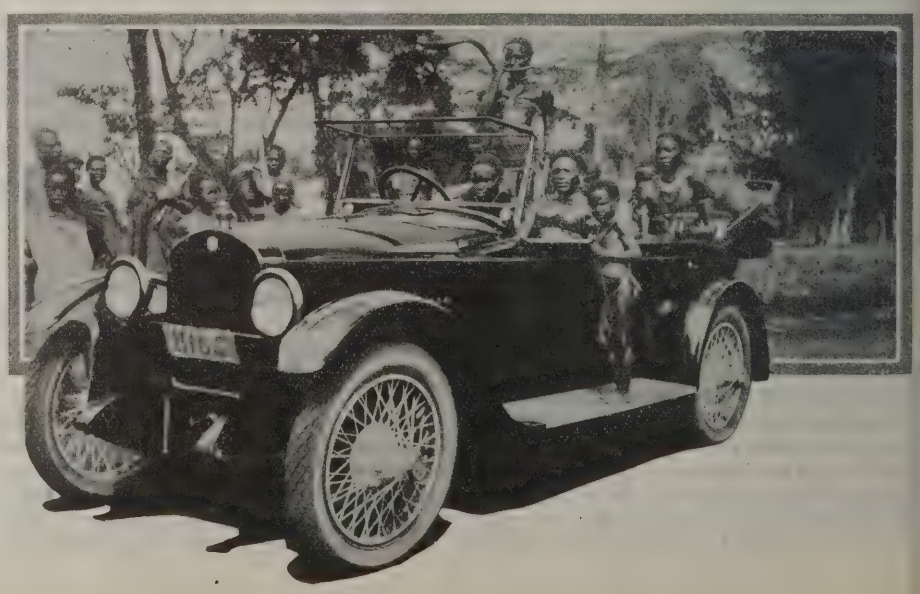
A combined dash and instrument board construction is used similar to that much seen on Europeon chassis and which is very handy where custom-built bodies are to be fitted. Thus all instruments can be mounted and all connections made before the body is put on.

The balloon tires are of the 33 x 6.75 in. size and are fitted to Firestone collapsible rims on artillery wood wheels.

All of the major tools in the tool box under the left splash guard are held by clamps or straps, so that each one is always in its proper position and can be reached instantly.

(*Continued on page* 36)

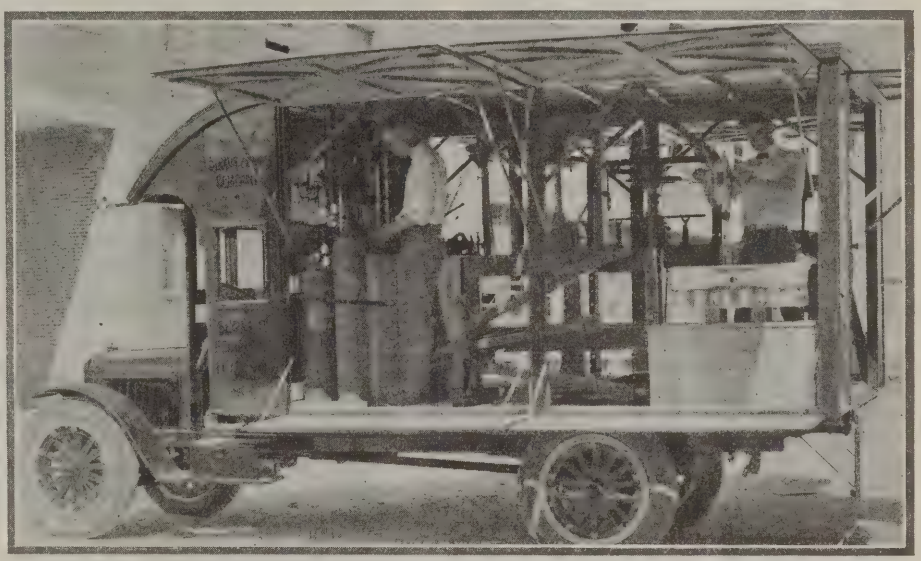
NATIONAL SHOWS ISSUE
And Specification Number
of
MOTOR AGE
Will be published January 7, 1926, and will contain descriptions of brand new 1926 models and about 40 pages of up-to-date specifications of passenger cars, trucks, taxicabs, tractors and motorcycles, and many other special editorial features.



MOTOR AGE'S PICTURE PAGES

CLOSE TO NATURE. A vivid suggestion of the joys incident to autumnal motoring is contained in the display window of the Grand Rapids (Mich.) Flint Co., which portrays a portion of Kent County's woodland. Charles Kalder, the manager, has arranged a complete hunter's camp in which no necessary piece of equipment has been omitted nor any detail of the landscape overlooked.

DE LUXE SERVICE. The Yellow Taxi Co., Reading, Pa., uses the Nash seven-passenger sedan in its service. The cars are shown lined up in front of the display rooms of J. Miller Kalbach Co., Inc., Reading dealers.



IN REGAL STYLE. A king driving his own motor car to an important court function almost upset the traditions of his people. He was King Magwa, head of the Kikuyu tribe of Kenya Colony, Zanzibar. He is shown here at the wheel of his Studebaker.

OF AUTOMOTIVE INTEREST

MORE WOE FOR THE TRANSGRESSOR. Cleveland police have adopted radio-equipped cars to aid in the apprehension of criminals. The department has eight 70-h.p. Peerless cars for squadron work, each of which will carry two receiving head sets and a loud speaker, in addition to batteries and other radio mechanism.

A SHOP ON WHEELS. The Straus-Frank Co., San Antonio, Texas, has increased its sales of shop and garage equipment 700 per cent by taking the equipment directly to the prospect by means of this truck and demonstrating at first hand the efficiency of its wares.

NEW ENGLAND'S BIGGEST AUTOMOBILE TIRE PILE. A veritable mountain of rubber tires is owned by the Fienberg Rubber Co., Cambridge, Mass.

Oil That Goes Up Must Burn Up

Q.—I would like your explanation as to why a motor with force feed lubrication that leaks oil in a stream instead of a spray at one or two bearings, consumes such an excessive amount of oil? (Taking for granted the motor does not leak oil on the outside.) I think that as long as crank case is oil tight it would not hurt if oil was streaming from one or two bearings, as is the case in a motor with splash oiling. I have had cases where I filled up the crankcase in a splash oiled motor way over the proper level after taking up all bearings and I did not notice any excessive amount of oil used, and this would be about the same condition as a motor with force feed oiling and some of the bearings leaking oil badly.—E. L. Chester, 4828 Fletcher Street, Chicago, Ill.

Apparently the two cases are similar. In the splash system however, we depend on the lower end of the connecting rod throwing enough oil so as to lubricate the cylinder walls and when the oil level is too high there is a chance that the cylinder wall will receive too much oil. In many cases this will occur with a splash system and excessive oil consumption will result.

If you found that there was not excessive oil consumption you may have had an engine with the rings very well fitted. Perhaps in the force feed system the oil comes with greater velocity and actually carries more oil to the cylinder walls than would be the case with a splash system and too much oil in the crankcase. We know it to be a fact that badly leaking bearings will cause excessive oil consumption and carbonization of the engine, so it must be true that the oil gets to the cylinder walls faster than the rings can scrape it down.

TWO CARBURETERS ON A CHEVROLET

Q.—We have just installed two 1923 Chevrolet Zenith carbureters on a 1923 Chevrolet. We are having trouble in getting it to hit evenly on all four cylinders. It hits all right on one and four, but two and three cylinders are very weak in idling. At speeds from 20 miles per hour and up it hits evenly. Have tried loosening the tappets on No. 1 and No. 4, but to no avail. We have a separate neck for each carbureter. We have not changed the jet in low speed but have made high speed jet smaller.—Clarance W. Keener, Miethe Motor Company, Georgetown, Ill.

In using two carbureters on the same engine, it is essential to have the throttles open at the same time. This means that there must be no lost motion in the rod connection from one throttle to the other. A type of ball and socket joint which has no springs and which is positive in action is recommended. It might also be advisable to replace the regular Chevrolet throttle lever with a universal clamp lever which is a standard Zenith part, this unit being somewhat stiffer and more positive in action.

The condition you are getting is a natural one for with two carbureters the velocity of the air is slight at low speeds. If you were using this engine in racing this would be no serious disadvantage for poor idling is characteristic of race car engines. The local Zenith representative recommends using standard jets, although you might use a slightly smaller choke or venturi.

Another possibility of getting better action is to connect the two intake manifolds above the carbureter with a pipe 1/2 inch in diameter or greater so as to equalize the pressure between them and compensate for any slight difference in the opening of the two throttles.

Another possible cause of unequal distribution is in the location of the throttle or butterfly valve. We understand that the shaft is crosswise of the car, so that when the butterfly valve or throttle is only partly open it sends the mixture either toward the front or rear of the manifold. If the shaft of this butterfly valve had its axis parallel to the center line of the car then there would not be this tendency.

The Readers' Clearing House

THIS department is conducted to assist dealers and maintenance station executives in the solution of their problems.

All questions are answered direct by letter, so the name and address should be given in full. This saves waiting for the answer to be published, which sometimes occurs several weeks late, depending upon the space available.

Readers' names will not be published with articles, if a request to this effect is received with the letter.

Inquiries not of general interest will be answered by personal letter only. Emergency questions will be replied to by letter or telegram.

Also state whether a permanent file of MOTOR AGE is kept, for many times inquiries of an identical nature have been made and these are answered by reference to previous issues.

Addresses of business firms will not be published in this department but will be supplied by letter.

Technical questions answered by B. M. Ikert and A. H. Packer; Legal, by Wellington Gustin; Paint, by G. King Franklin; Architectural, by Tom Wilder; Tires, by a Practical Tire Man; General Business questions, by MOTOR AGE organization in conference.

How Many Cylinders Makes a Motor and a Half?

Q.—We have had quite a debate in regard to four, six and straight eight motors. A claims that a six cylinder motor is a perfectly balanced motor whereas a four or eight is not. B contends that a four is a complete motor, and eight is two complete motors and a six motor being a motor and a half, which is the reason that practically all endurance races such as are conducted on Indianapolis Speedway have only four and eight cylinder entries. We would like to have your explanation.—East Chicago Auto Sales Company, 524 Chicago Ave., East Chicago, Ind.

While four and eight cylinder engines may have predominated at the Indianapolis races, we find that six cylinder engines were used as follows; in 1911 by Marmon and Knox, in 1912 by White and Knox, in 1913 by Sunbeam, 1914 by Sunbeam and Excelsior, 1916 by Sunbeam and in 1919 there were two Hudson cars and one Stickel.

The engines employed are chosen primarily on account of the power which they can develop whereas the choice of a four, six or eight for passenger car service, must also take into consideration, quiet operation and freedom from vibration.

The question of the causes of engine vibration is a deep one and we would recommend your getting a copy of the Gasoline Automobile by P. M. Heldt, volume one, which can be obtained at any large public library. Chapter five covers the question of engine balance. According to Mr. Heldt it is true that the six cylinder engine is theoretically perfectly balanced and where vibration does occur in six cylinder engines it appears to be due to the elasticity of the crankshaft which as the explosions occur tends to wind up and unwind which produces torsional vibration.

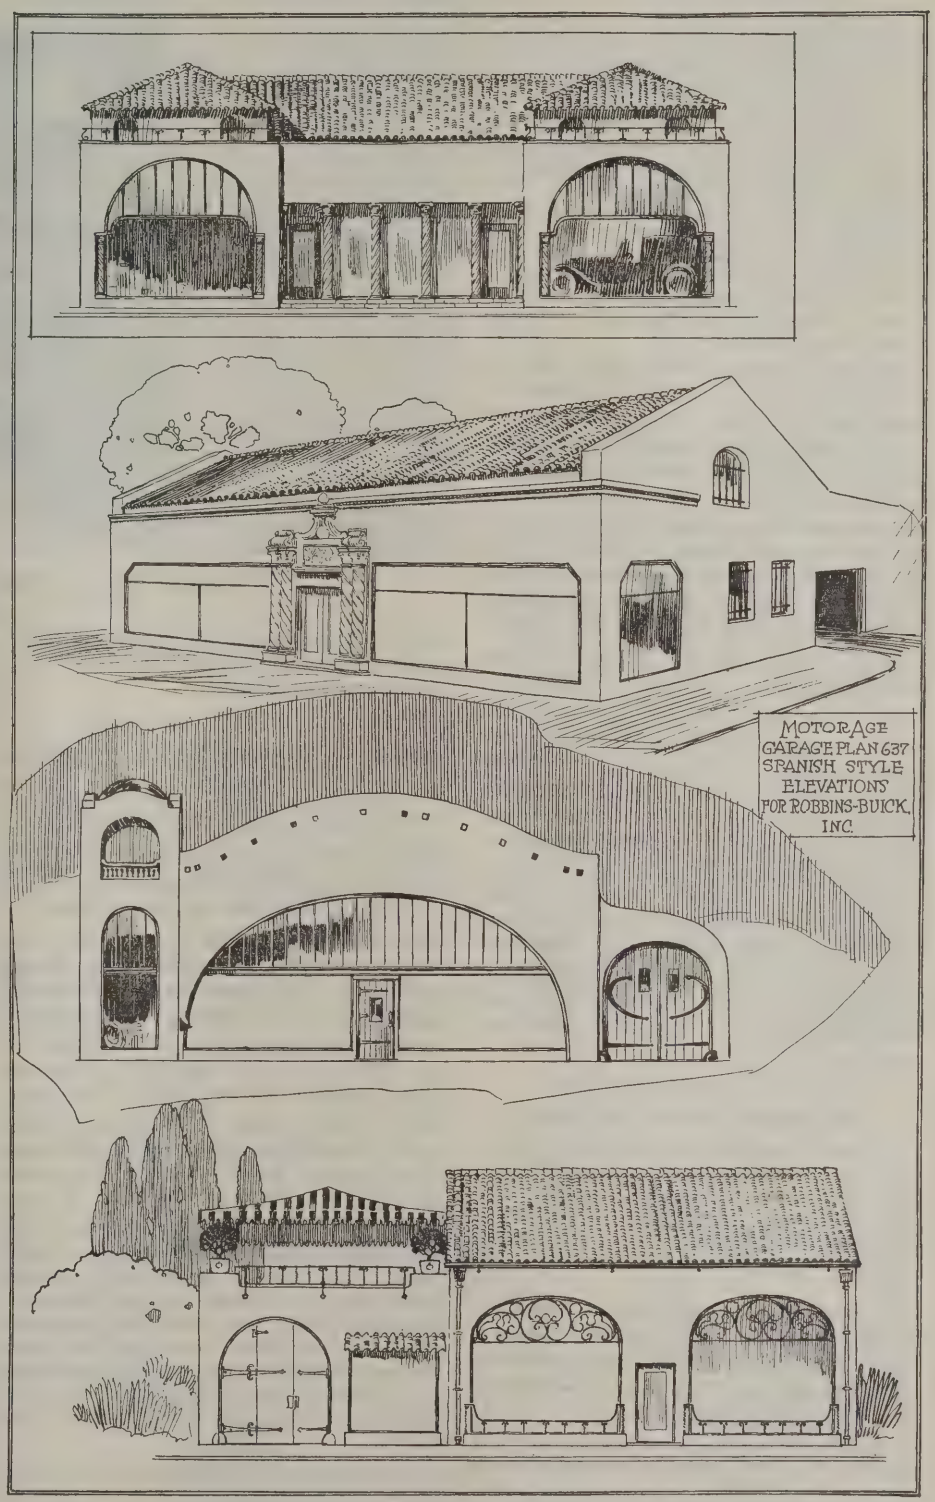
In recent years the racing engines have had to be designed for smaller and smaller cubic displacement. In order to get high power with small displacement, it is necessary to have very high engine speed. To attain high engine speed it is necessary to have light weight reciprocating parts and this factor has probably dictated the eight cylinder engine, for with the light weight parts in use a high speed approximately 5000 r.p.m. was attainable and this enabled the engine to produce a great deal of power. We do not know of any classification which makes a certain number of cylinders equivalent to a motor or two motors or to a motor and a half.

Planning Your New Building

By TOM WILDER

The READERS CLEARING HOUSE

Suggestions for Spanish Style Automotive Buildings



Q.—We are contemplating building a salesroom on a lot 58 by 93 ft., and wondered whether or not you might be able to offer some suggestions. The building is to be of Spanish architecture, of white stucco. We would appreciate anything you could do in the way of letting us have some sketches or photographs from which we might choose just what we want.—Robbins-Buick, Inc., Baltimore, Md.

As there seems to be a demand for the Spanish style of automotive building especially in the west and south where the early Spanish settlers left their imprint, we are publishing four elevations designed to help satisfy the demand. You could do well to go through a file of MOTOR AGE for the last two years as numerous pictures of buildings in this style have been published.

There is one great advantage in this style and that is that with the exception of the tile roof it is comparatively inexpensive. All that is usually needed is the frame-work of tile or even wood covered with metal lathe or some other approved frame-work upon which the stucco may be applied.

Regarding the stucco itself there is a wide variety of materials. Gypsum and lime plasters are used to a great extent both in the north and south, but the more durable cement stucco is to be preferred for nothern locations where frost and dampness are liable to damage the others. The magnesite cements are very durable for both north and south, but they are considerably more expensive and need only be considered where durability with elasticity is a desirable factor. A white stucco may be obtained by using white cements and by using considerable lime in ordinary cement for the finishing coat, or by using ordinary cement stucco and painting it white afterwards using an especially prepared cement paint.

The textures obtainable in the finish of stucco are almost innumerable. The United States Gypsum Company issues two booklets showing samples of finishes for their oriental stucco and also for interior plaster. The method of obtaining each effect is also described and you would do well to get these booklets.

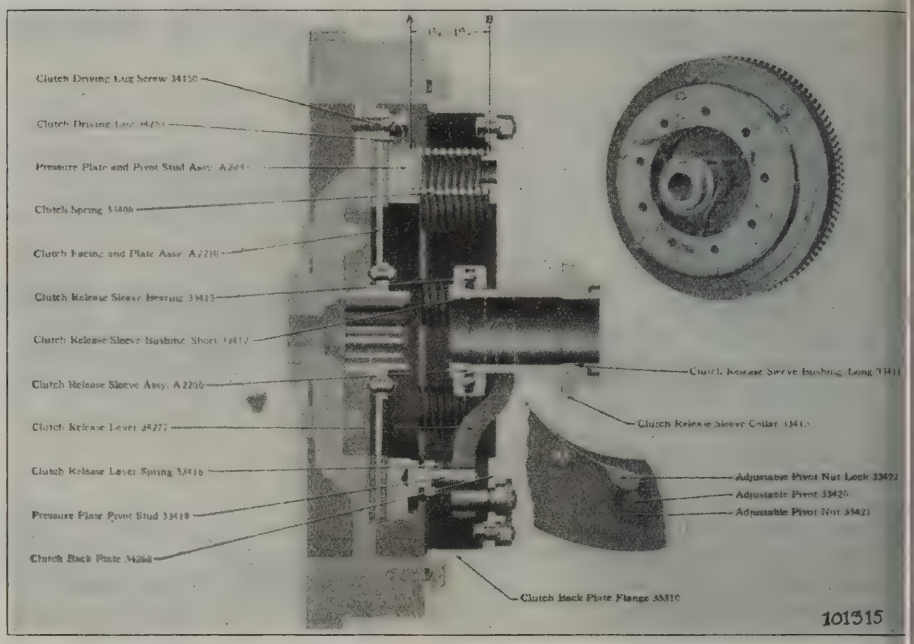
Spanish architecture furnishes an infinite variety of forms and decorations that are limited only by the builder's pocketbook

SELLING CAR FOR STORAGE

Q—I would like for you to tell me how long a car has to be held before it can be sold for storage and what steps have to be taken before it can be sold.—Lawrence Harper, Valley Junction, Iowa.

In your state there are separate provisions for repair lien and storage lien. Sale of a car for storage may be made at public auction, after giving to the owner or claimant, if found within your county, ten days' notice in writing of the time and place of such sale, and also by posting written notices thereof in three public places in the township where the property was kept or received.

From the proceeds of the sale you can pay all the charges for storage and the cost and expenses of the sale, the balance going to the owner of the property.



The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Bent Levers Gum Up The Works

Q.—We have had trouble with the clutch on a 1924 Maxwell. After it was adjusted it made a chattering noise and after driving 100 miles we took the cover off and found that the three clutch release levers were riding on the outer edge of the clutch release sleeve bearing, cutting a groove in the bearing and wearing the surface of the clutch release levers. The mechanic who adjusted the clutch said that the trouble was due to improper lubrication. It seems to me it was due to improper adjustment. Do you think it would be advisable to install new clutch release levers?—R. I. Pia, Park Garage, Cornwall-on-Hudson, N. Y.

We are showing illustration of the Maxwell clutch. The three clutch release levers should come within 1/16 inch of the clutch release sleeve bearing and the adjustment should be such that they all take hold at the same time when the clutch pedal is operated. The trouble you are having is apparently due to the clutch fingers being bent so that they slip off the edge of this bearing instead of making contact with the flat surface.

If the levers are not damaged to any extent, they can be used if bent back toward the center of the clutch, so that there is no danger of their slipping off. Lubrication for this bearing is 600-W which works in from the transmission through the hollow shaft. If insufficient lubricant is kept in the transmission or if the lubricant is too heavy and does not work through properly then the throw out bearings or clutch release bearings may suffer from lack of oil. Whether you need new clutch release levers or not depends on the condition of the old ones which only an inspection will determine.

Sectional View of Clutch Used on 1924 Maxwell

NEW TIMING CHAIN IS NOISY

Q.—We have a 1920 or 1922 Revere touring car which was overhauled lately and new timing chains and sprockets put on. They are noisy when the motor is running. They seem to be adjusted right. —D'Arcy Brothers, 7820 Langley Ave., Chicago, Ill.

It is possible that the chain was put on so as to run in the reverse direction. Most chains have arrows marked on the sides which show the correct direction in which they should be run.

Q.—Would like to know the correct timing for the valves and the correct way of timing the ignition.

The intake valve is supposed to open when the engine is 7 degrees past upper dead center and the exhaust valve is supposed to close when the engine is 11 degrees past top dead center. It would be near enough to have either event take place when the piston has gone up to top dead center and has barely started down again not more than 1/64 or 1/32 down.

Trouble Is Probably Due to a Leaking Cup

Q.—We have a 1925 Moon sport touring car with four wheel hydraulic brakes which leaks in the two rear brakes. Could we repair these without special wrenches and what do you think is causing the leaks as they are new brakes?

We understand that a new type rubber cup is now available which is not affected to any extent by the hydraulic fluid used in the system. The trouble you are experiencing is no doubt due to the old type which leaks on account of being affected by the fluid. New type rubber cups should be installed these being obtainable from any authorized Moon service station for approximately 55 cents there being two used in each brake cylinder. The pistons themselves have also been changed the later type being aluminum instead of cast iron and these may be obtained for approximately 88 cents each. The work of changing these can be done in about 2½ hours for each brake and no special wrenches are required, the conventional open end and socket wrenches taking care of the job.

Q.—Where can I get the mixture for these brakes and what kind of solution is used in making it?

The fluid used consists of a half and half mixture of commercial grade castor oil and denatured alcohol thoroughly mixed. Nothing else should be used. Castor oil commercial grade, can be obtained through wholesale paint or lead concerns.

Q.—The engine when it has new oil when the oil is cold seems to have a grin in it but when the oil is warm the grin goes away.

We do not believe the trouble is in th engine but rather in the transmission rear axle. 600 W should be used in th transmission and rear axle and if heavier lubricant is used it may be tha it does not cling to the gear teeth an when the car first starts up causes th noise to which you refer and which yo attribute to the engine.

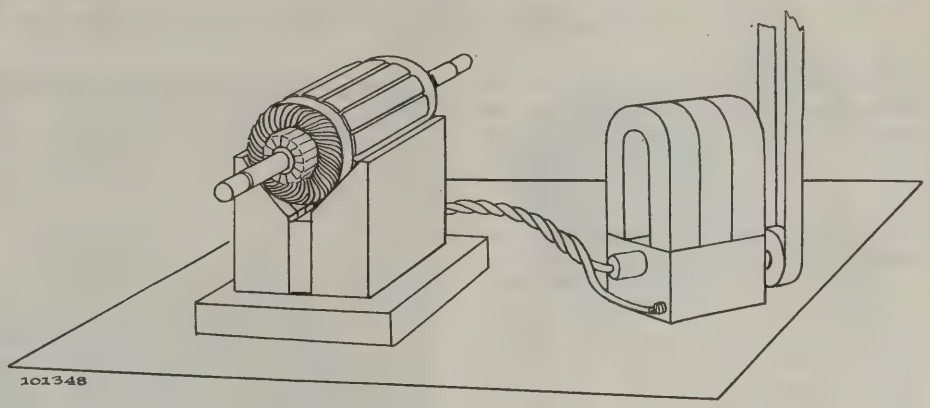
LEAVIN' 'EM OUT TO RUST

Q.—Why do some large automobi concerns leave their engines out to rust where the air can get at them befor they are good enough to use?—Howar Scott, Willard, Ohio.

It is not the engine but the cylinde block which is left out. The reason fo this is that a casting when cooled con tains internal strains which in tim causes the shape of the casting to chang Accordingly if a cylinder block is bore immediately after it is cast and is bui into an engine it will be found that th cylinders will warp in time, causing poo operation of the engine.

For this reason it is customary t leave cylinder blocks out in the air fo awhile to give them time to change thei shape before being machined. In thi respect it corresponds somewhat t shrinking goods before making garment from the material. Where production i heavy, time is not available to use thi process so that instead of allowing th casting to age they are heat treated t remove the internal strains, this havin the same effect as the longer method.

Clearing Up Electrical Troubles



EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

A. C. For the Growler in D. C. District

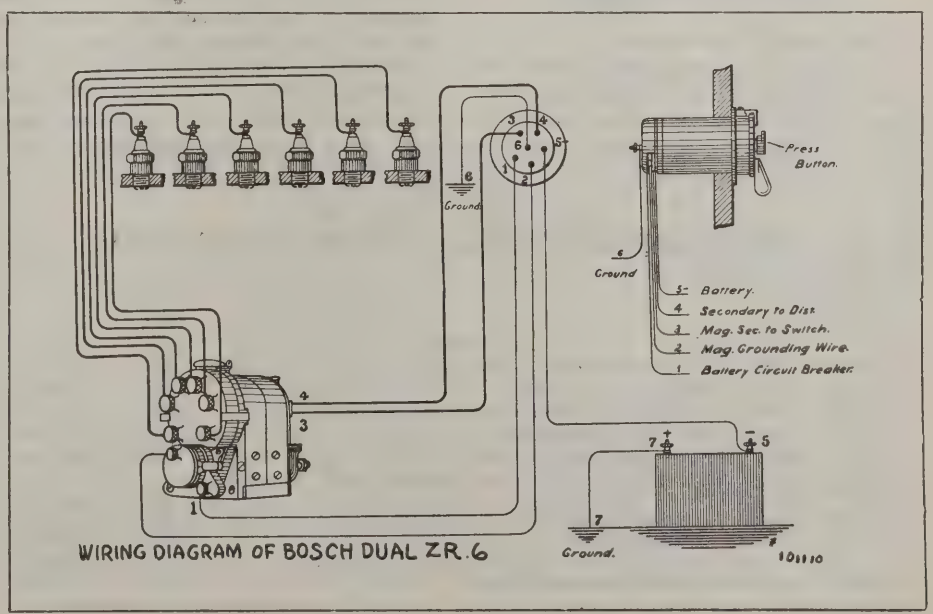
In the MOTOR AGE Clearing House I have seen articles about garage men in small places where they only have direct current having trouble testing armatures, because they have no alternating current power available. I once saw a fellow use one of the old low tension magnetoes and driving it at pretty high speed to generate alternating current. I think this fellow had a Bosch magneto with 6 magnets on it, 3 side by side and the other 3 on top of the first 3. He had a wire connected from the center terminal at the end of the magneto to one wire of the growler and the other growler wire was connected to the frame of the magneto. Some of these magnetoes are for sale for $1 or $2 at wrecking houses and it occurred to me that this might be the solution of the problem in territories where only direct current is available. —Chicago Mechanic.

We assume that the wrecking concerns will soon have to employ detectives to find the cause of the heavy demand for the obsolete type of low tension magneto. The way the magneto would be used to supply growler current is shown by a sketch.

Using an old type low tension magneto to generate A. C. for the growler

Marine Engine Uses Dual Magneto

Q. I am in need of information regarding the ignition, timing and wiring diagram of a Murray-Tregurtha reversible marine engine manufactured in Boston, Mass. This engine is equipped with a Bosch dual magneto. Although this is not an automobile engine, I trust you will be able to give me the desired information, which I assure you will be greatly appreciated.—Clarence H. Briggs, 160 S. Hill street, Dubuque, Iowa.



We are showing a diagram of the Bosch dual system. In this case it applies to the model ZR magneto, but the model DU is similar, in case that happens to be the type you are using. On the latter type, we believe that the connection to the center of the distributer is made at the front of the magneto instead of at the back. This magneto should be timed using the battery interrupter, for there are two separate pairs of points, one operating with the magneto current and one with the battery current. Their timing is not the same, one set being advanced somewhat with respect to the other. With the lever in the retard position, you can set the timing so that the spark in the battery position of the switch occurs when the piston has come to top center and has barely started down on the firing stroke. Shifting from battery to magneto will give a slight amount of advance, due to the difference in timing of the two sets of contacts, while shifting the interrupter housing by means of the spark advance lever will give additional spark advance. We do not have any detailed information on this engine, so if you require any other information which does not concern the electrical system would suggest writing direct to the manufacturer.

SOLUTION OF ELECTRICAL MYSTERY

An electrical mystery was published on page 25 of the September 24, 1925, issue of MOTOR AGE, the car in question, a Ford, firing on two cylinders after a new timer and roller had been installed.

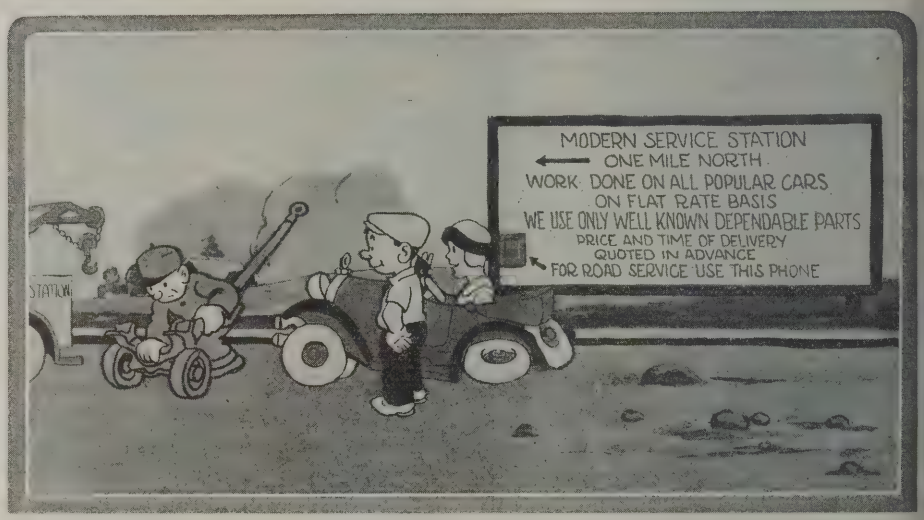
Mr. Ray Linn of Shannondale, Indiana, believes that there may be a short in the coil box or wiring. Mr. Charles H. Conklin of Long Beach, Calif., thinks that the cover of the coil box may have been put on in such away that a short circuit exists. Mr. John W. Anderson of Fort William, Ont., is hot on the trail with the assumption that the shoulder to which the small spring is attached is too high and strikes one segment while the roller is on another segment. A letter from Toews Brothers Garage of St. Pierre, Man., gives us the suggestion that the hook on which the spring is caught is bent too far out and touches one segment while the roller touches another. Limpert Brothers Garage also sent us a letter in which they also expressed the thought that the hook end of the roller arm is touching one segment while the roller is on another segment.

The answer taken from Mr. Loring's letter shows that several of our readers were hot on the trail and would have been good trouble shooters on this job. Mr. Loring says "So after about an hour we put on another timer roller and the car ran fine. The little hook that holds the roller spring was too long, making a contact between the hook and one segment, while the roller was making contact with another segment."

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Cooperation Makes Flat Rates Possible



HOW did we ever get started on the flat rate or definite charge per job idea? The public demanded it, and efficient service was necessary if profitable business for manufacturer and dealer was to continue. The co-operation of dealer and car builder, however, is essential.

The car manufacturer is best acquainted with the car construction and should establish the flat rate charges. He is, however, less familiar with the difficulties encountered in the shop, due to circumstances which may or may not be determined by the car's construction.

One flat rate manual recently received at the MOTOR AGE office gives blanks to be used by the car dealer to report time allowances which may be too high or too low. This concern realizes that a start must be made, but that the first chart or flat rate table may not be perfect. If, for example, continued reports in regard to valve grinding indicate that the time allowance is too low, then a change would be in order.

In other cases it might be found that the time is too high, that the excessive price stirs up ill will and tends to send customers to independent shops operating on an hourly basis or on a lower flat rate basis. Under such circumstances a reduction in the time allowance would be desirable if the complaint appears justified.

The dealer does not have enough experience, time or clerical facilities, in most cases to develop his own flat rate tables, but he can be of great help to the factory in supplying constructive criticism.

THINGS THAT HELP FLAT RATE

Proper advertising boosts fixed prices for making repairs as much as anything and very often much originality can be displayed by the dealer, as shown in the above illustration. As long as the shop operates on a flat rate basis it is a good plan to let the world know about it

---

Preserving Rate Tables

Chicago, Ill.

To the Editor of MOTOR AGE:

In one of your numbers I notice you ask for suggestions to make the Motor AGE Clearing House the best ever. If you will permit a suggestion I will tell you my system for keeping your weekly flat rates where I can get them at a moment's notice, the only way flat rate is of value. I use a thick 1920 260 page MOTOR AGE, labeled on the back Flat Rates—Car Classified.

The book is divided into sections, 10 pages for each letter of the alphabet. First 10 pages (A) cars. Pages 11 to 20 inclusive for (B) cars, pages 21 to 30 inclusive for (C) cars, 31 to 40 inclusive for (D) cars. I use a common ruler 1 in. wide and when I get the week's flat rate I insert the ruler in the book and with sharp knife I cut out the right page of MOTOR AGE and glue in the flat rate on the 1 in. marginal edge that I left in the book. These don't get any thicker as one replaces the other when removed. The other leaves I leave in and only cut out one at the time I get the new flat rate.

Now in doing this I find I destroy lots of valuable reference that you give in the Reader's Clearing House on account of it being on the reverse side of this flat rate sheet. I like to keep the Clearing House intact and read it at leisure as I can't always read MOTOR AGE the day it comes. Could we not have flat rate on the opposite side of the picture section sheets so they could be removed and I thought also if you gave in one week two pages of A car information on one sheet and next week also two pages on same sheet of B cars, as Buick, then we could file it alphabetically and have a ready reference in time. Motor Journal once published each week a full page wiring diagram of different car each week which we could cut out and file. I sure read with interest article No. 12 Bill Fixit radio test, page 14, October 22, 1925. It was in language I could understand. Give us some more.—G. I. D.

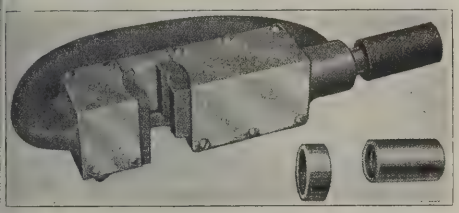
We think your system of filing the pages of the Flat Rate Forum is all right but so far as changing the make-up of MOTOR AGE is concerned we are very much afraid it cannot be done. If we rearranged the pages to put the Flat Rate Forum on the back of the second page of the picture section it would put two Reader's Clearing House pages back to back.

MOTOR AGE'S FLAT RATE FORUM

No. 41

FLAT RATES FOR CLEVELAND COOLING SYSTEM OPERATIONS

Manufacturer's Official Designation		Time Ov.	Sp.	St.	
1157	Flush radiator (chemical treatment)	⅝	⅝	⅝	hr.
1158	Clear radiator—Overflow tube	¼	¼	¼	hr.
1159	Renew radiator cap gasket	⅛	⅛	⅛	hr.
1160	Thaw radiator and refill with alcohol solution	⅝	⅝	⅝	hr.
1180	Renew one hose connection	¼	¼	¼	hr.
1181	Stop leak at hose connection	¼	¼	¼	hr.
1182	Install or renew spring in hose connection	¼	.....	.....	hr.
1183	Renew intake elbow	½	½	½	hr.
1184	Renew all hose connections	½	¾	1	hr.
1185	Tighten intake elbow	⅛	⅛	⅛	hr.



NOTE: Ov. is for models with overhead valves, Sp. is for the 1926 Special and St. is for the 1926 Standard model.

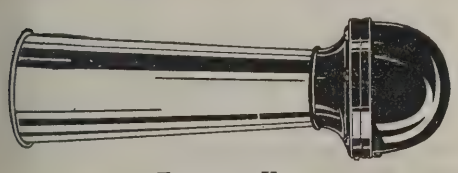
THE MARKET'S NEW OFFERINGS

The Items Presented on This Page Were Displayed at the Recent A. E. A. Show

WEAVER VISE

A PRESSURE vise for holding parts such as camshafts in a vertical position in order that gears may be pressed on was displayed at the exhibit of the Weaver Mfg. Co. of Springfield, Ill. This is intended for use with the Weaver Hi-Speed and regular presses. This vise accommodates work ranging from ⅝ in. to 2¼ in. in diameter and lists at $22.50. The Weaver display also included a new tire spreader designed to handle all sizes

Weaver Vise



of balloon as well as high pressure tires, taking sizes up to the 7.3 in. diameter balloon as well as high pressure tires up to 5 in. The tire spreader lists at $28. Another item was a special garage jack, so constructed as to get below any point on the car which is 5 in. or more above the floor. The feature of having the front wheel steering controlled from the handle is incorporated in this jack.

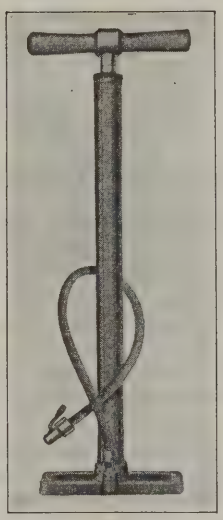
WALDEN WORCESTER GENERAL SERVICE SET

WALDEN Worcester No. 39 general service wrench set, Walden-Worcester, Inc., Worcester, Mass., contains various types of speed wrenches to fit the following cars, Chevrolet, Buick, Chrysler, Durant, Hupmobile, Willys-Knight, Packard, Dodge Brothers, Essex, Hudson, Nash, Star, Peerless, Lincoln, Studebaker, Oldsmobile, Oakland, Overland, Reo and Jordan. All told there are 39 wrenches mounted on a board 6 by 2 ft. Price complete $40.20.

TOROVOCE HORN

THE Torovoce is the name of a motor driven horn made by the E. A. Laboratories, Inc., Brooklyn, New York. The name is intended to indicate that the tone is that of a Toro or Mexican wild

Torovoce Horn



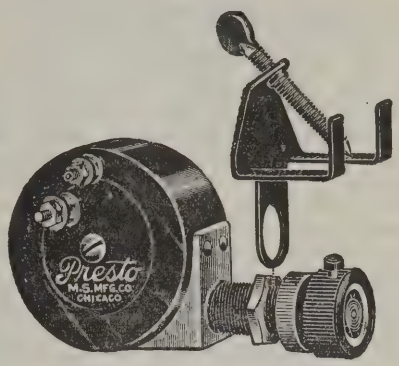
bull. The projector is nickel plated brass and the base is black enamel. It is motor driven with magnetically operated sound producing mechanism. The horn is supplied for either 6 or 12 volts and lists at $22.

LOCKTITE REPAIR KIT

IMPROVED Locktite Tube and Casing Repair Kit. Locktite Patch Company, Detroit, Mich. The Locktite Fabricback patch which goes with this outfit is said to have been greatly strengthened while a liberal piece of Locktite Plug Rubber to be used in connection with the patch is now included. The plug rubber is a chunk of specially prepared soft, pliable rubber, a piece of which is stuck into the hole. It works its way into all parts of the break before the patch is applied in several layers to repair the casing. The kits, 50 cents and $1 sizes, will include tubes of Locktite Rubber Cement.

NOERA TIRE PUMPS

COLORED automobile tire pumps. Noera Manufacturing Co., Waterbury, Conn. Here is a departure in hand pumps. By putting them out in different colors the makers declare car owners are

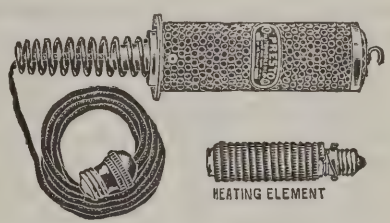


Noera Tire Pump

quicker to pick them up. The Noera company makes hand pumps in a wide variety of colors and color combinations in addition to still showing pumps in nickle finish. The colored pumps have full Noera quality in all respects. They will help brighten up the counter or window display. List price $2.50 each.

WILLIAMS SUPERRENCH

WILLIAMS Superrenches, J. H. Williams & Co., Buffalo, New York, are now to be had in chrome-molybdenum steel. Wrenches made from this material, though of lighter weight, thinner section, greater length and with narrower jaws than carbon steel wrenches with corresponding openings, naturally are far stronger. Aside from the different material used the Williams line of wrenches remains substantially the same, although the use of chrome-molybdenum steel has made possible a refinement in design and less weight.



PRESTO MATCH-LESS CIGAR LIGHTER

(Cut shown above.)

PRESTO cigar lighter, Metal Specialties Mfg. Co., 338 N. Kedzie Ave., Chicago, can be installed either through a hole, through dash, or by clamping to bottom of same. Each lighter has all parts necessary for universal mounting. Has an automatic cord rewinder that is concealed behind the dash no matter which way lighter is mounted. Lighter has 5 ft. of cord and Presto switch tip. Made in 6-8 and 12-16 volts. Price $3.

VOORHEES WELDING HOSE

ACETYLENE Welding Hose, Manufactured by the Vorhees Rubber Mfg. Co., Jersey City, N. J. The new welding hose consists of this company's regular Conqueror hose tube and body with a special oil resisting cover. It is made in green with a white stripe. Deliveries will be made after the first of the year.

Presto engine and radiator heater

NEW HEATER SHOWN

PRESTO No. 2500 electric heater for engines and radiators, Metal Specialties Mfg. Co., 338 N. Kedzie Avenue, Chicago, is now made with a heating element which can be readily removed as it screws into a socket the same as an electric light bulb. This element can be purchased separately should it be broken by accident. Price of the extra heating unit is $1.50.

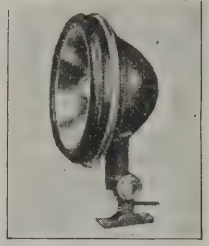
Additional descriptions of items at the show of the Automotive Equipment Association held at the Coliseum, Chicago, Nov. 9-14, will be found on the following page.

THE MARKET'S NEW OFFERINGS

The Items Presented on This Page Were Displayed at the Recent A. E. A. Show

CUNO ASH RECEIVER

A NEW ash receiver is being sold by the Cuno Engineering Corp., of Meriden, Conn., this device selling for $1. It is finished in black and nickel and attaches to the instrument board by means of a clamp. It can be attached to either wood or metal instrument board and when not in use it can be pushed back out of sight under the dash. This concern also had on display a jobber's sales kit containing one of the ash receivers, also one each of the $3, $5, and $7 cigar lighters, the latter being a combination unit which has a trouble light which can be applied to the same cord. A sample Christmas box is also included in this sales kit and shows the way these items are packed for the Christmas automotive trade.



FARRAN-OID FAN BELT

FARRAN-OID Dual-flex molded "V" type belt, The Farran-oid Company, Akron, Ohio. This belt is now made with an endless stretch-proof core which it is claimed, will not break, stretch or deteriorate under any conditions.

(*Continued from page 29*)

Cuno Ash Receiver

S. & M. Road-Lite

Farran-Oid Fan Belt

S. & M. ROAD-LITES

NOS. 85 and 95 S. & M. Road-Lites. S. & M. Lamp Company, Inc., 118 West Thirty-sixth St., Los Angeles, Cal. No. 85 and No. 95 Road-Lites have been added by the S. & M. company to supplement the No. 75 Road-Lite. They are similar to No. 75 but in larger sizes. The light is installed on the left spring horn of the car and illuminates the edge of the road. Finished in black and nickel. The reflector is 5¾ in. in diameter.

GLOBE TOOL BOX

A TOOL box for use on motor coaches is made by the Globe Machine & Stamping Co. of Cleveland, Ohio, it being known as model 8-88. It rests half on the running board and half on the front fender, being bevelled off at the forward edge so as to fit the fender and running board. The price is $7.50 list.

Chicago's Fourth Annual Radio Show Displays $250,000 in Sets

CHICAGO, Nov. 23.—Latest and most complete developments of the present-day radio industry were presented to the public beginning Tuesday of last week, at the fourth annual Chicago Radio Show in the Coliseum. The exposition continued up to 11 o'clock last night. More than 200 American and foreign exhibitors installed more than $250,000 worth of radio apparatus in the booths, including every device and form of device used in reception of wireless.

About 90,000 square feet of space on the main floor of the Coliseum, its annexes and balcony was used to exhibit the marvelous growth of the industry in the last five years.

Special entertainment features exclusive of the show proper, were arranged for each day. Scientific demonstrations and lectures were given, and stunts such as lighting by radio of an ordinary electric bulb held in the hand; frying eggs on a cake of ice by radio and brewing tea in the same manner, were shown.

An amateur set building contest was staged, for which prizes totaling $1,000 were awarded. A complete radio broadcasting station was operated in the balcony of the Coliseum throughout the week, some of the best known radio performers in America taking part in the afternoon and nightly programs.

Miss Rena Jane Frew of Beaver, Pa., winner of the Radio Diana contest under the auspices of the Radio World's Fair, New York, conducted by the same management as the present show, was presented to the public. Mrs. Flossie E. Erickson of Bloomington, Ill., was announced as winner of the Radio Diana contest for the states of Indiana, Wisconsin and Illinois.

Special features of the show opened Tuesday night when Mayor William E. Dever of Chicago, Lieutenant-Governor Fred Sterling and other prominent officials assisted at the opening ceremonies. An elaborate musical program followed.

Wednesday afternoon the Chicago Rotary Club broadcast a special program. Thursday afternoon a Kiwanis Hour was the feature. The Lions Club took charge of the Friday afternoon program.

The exposition was open to the public from 1 to 11 p. m. daily. A private session of radio dealers was held each day from 11 a. m. to 1 p. m. Conferences between dealers, jobbers and manufacturers of radio apparatus were arranged during these periods.

The exhibit was the official show of the Radio Manufacturers' Association, Inc., and those who were in charge of the management of the show included:

U. J. Herrmann, managing director; G. Clayton Irwin, general manager; Charles Glaser, executive assistant; A. Ries, in charge of registration; Charles H. Porter, director of publicity; A. Foster George, assistant director of publicity, and J. Elliott Jenkins, technical director.

Three hundred silver cups and awards were given by the management to the winners of the various contests.

Radio Battery Chart

A CHART which gives the correct type and size of battery to be used with every make and model of radio set as recommended by the set manufacturer, is published by U. S. Light & Heat Corporation, Niagara Falls, N. Y., and will be sent free on request.

For years while radio experts were working on the development of tubes, hook-ups and tuning devices, USL engineers devoted their attention to the correct battery for best reception. The correct battery balanced with a set is as important as the correct grade of oil used in automobiles.

King Neutrodyne Receiver

THE King Neutrodyne Receiver is designed and built by the King Quality Products Co., Buffalo, N. Y. This is a five tube set and a plunger type switch permits the use of four or five tubes as desired. There are three separate tuning controls and in the model 25 S an Amplion reproducer is a built-in part of the receiver. A double metal panel and condenser shield eliminates capacity effects between the condensers and between the operator and the instrument.

EDITORIAL

Tires in 1926

THE price of crude rubber remains high and the supply of the product is said to be inadequate. The British restriction policy at last has begun to restrict and from present indications the automobile industry will be confronted with a serious situation in regard to tires in 1926. American interests that have set out to grow their own rubber will not get into production on an appreciable scale for some years. Meanwhile it will pay the industry to do all in its power to conserve tires. Casings should not be too quickly discarded. An inexpensive repair frequently will greatly prolong the life of an otherwise good casing. A tube frequently is discarded as leaky when what is needed is a new valve core at a cost of about six cents. New tips, boots and other accessories can be used to advantage in getting the utmost mileage out of tires. And drivers should be urged to use care in driving over rough roads so as not to unduly damage their tires. The hoarding of tires by consumers is not to be encouraged. It merely serves to increase the apparent shortage of the product and tends to drive prices upward. Conservation of tires will go a long way toward relieving any threatening crisis in the tire supply.

Just because 1926 promises to be a year of grand opportunity—don't roll over on the other side now and sleep until Jan. 1.

Get Your Share

NEXT year is to be a year of much educational campaigning in the automotive field. Associations will strive to educate merchants as well as ultimate consumers and factories will concentrate efforts along several avenues—education for their merchandising forces and education for the person who eventually takes their products off the hands of the retail dealer.

All signs indicate that 1926 will be a year in which much money will be spent by the American public and the industry which sleeps little at the switch is the one which will come in for its due share of the profit distribution.

Automotive retailers will share in 1926 profits in proportion to their individual alertness. There is plenty chance for the dealer to tune in locally on national advertising campaigns relating to his products and now is the time that he should begin to think about his plans in this connection. Advertisements in the dealer's local newspapers will put extra emphasis on the national advertisements and remind the public that those items dealt with in the national advertisements are to be found at his place of business. Educational promotion is "advertising" in one form or another and the advertising copy which "informs" and enlightens is a type that gets results. The big thing next year will be to cash in to a maximum extent on the big volume of general public buying and good promotional effort is an effective route to this end.

The same knife which prunes the needless overhead is the one which cuts the melon.

Motorized Prosperity

STUDEBAKER'S president, A. R. Erskine, set forth some facts in an address before the recent convention of finance companies in Chicago which may not set well with the long-faced alarmist who is inclined to believe the automobile has come into our economic life as an unfortunate curse of extravagance. You meet this type of citizen every once in a while. He tells you the country can not possibly hope to thrive and continue diverting so much of its wealth to the purchase and operation of what he persists in calling "pleasure cars." He will tell you that too many people are giving up actual necessaries of life to keep their cars going. He wonders shudderingly "how they get by." MOTOR AGE's readers, alas, know this type of citizen well.

Then from Mr. Erskine:

"The post-war prosperity of the United States has amazed the world. We are getting along pretty well today. Savings bank figures disprove claims that the automobile is absorbing all the money in the country. Figures supplied by the Controller of the Currency show for the decade from 1914 to 1924 the number of savings banks decreased from 2,100 to 1,603, but the number of depositors increased from 11 to 14 million, the total deposits from 4.9 to 8.4 billion and the average amount per depositor from $444 to $605. Life insurance policies outstanding increased during the same decade from 39 to 86 million, the amount of insurance from 21 to 64 billion, and the average policy from $545 to $724."

Prosperity is more evenly distributed in America than in any other country of the world and people on the whole are more comfortable than ever before. The masses are enjoying conveniences unheard of, in a popular sense, in previous times. More people are being added to the long list of car owners day by day and more people day by day are putting surplus money in savings banks and profitable investments.

We might tell our long-faced friends that the automobile has been one of the foremost agencies in bringing about this happy condition. From time immemorial the big economic problem has been that of speeding up transportation and inter-communication. The motor vehicle has speeded up and greatly enlarged the nation's earning capacity and the additional wealth has made it possible for still others to own automobiles as well as improve the financial status in other respects.

Production Continues at High Rate

Stocks of Cars on Dealers' Floors Are Gaining Rapidly

Volume Fails to Reach Point Where it Becomes Unwieldy, However

PHILADELPHIA, Nov. 25.—Dealer stocks of new passenger cars have been increasing steadily the last two or three weeks but they have not yet become unwieldy. Production is still at an unusually high rate for this time of year and sales have not held up correspondingly.

There are indications that the stock on dealers' floors increased more than 100,000 during October and that at least as large an increase can be expected in November provided production maintains its present pace until the end of the month.

These increases are in line with sound practice thus far as dealers always have stocked extra cars in the winter months so that they may give immediate delivery on any model called for. The dealer is in a better merchandising position that he would be otherwise.

Manufacturers are expected to shut down production in time to prevent any serious overstocking. The retail financing situation is causing concern particularly on the Pacific Coast where extremely liberal terms are being extended in the case of one popular line of cars at least, despite efforts of several large manufacturers and some of the banks to keep credit terms on a sound basis. Local competitive conditions still rule

The next thirty days will see even more strenuous competition in this field. The effect of liberal new car instalment terms on used car buying is beginning to become more pronounced in some sections with manufacturers and dealers giving serious thought to disposition of the used car problem in the next six months.

One price cut was announced last week and rumors of several others are going through the industry despite the fact that material prices are on the upgrade and that wage rates have not fallen. Materials such as sheet steel and hardwood are higher now than they were a month or two ago and tires are considerably higher, though most of the manufacturers have their current commitments covered by contracts made at lower levels than are now in effect.

G. M. BUYS VAUXHALL

NEW YORK, Nov. 21.—Alfred P. Sloan, Jr., president of General Motors Corporation, announces that negotiations between that corporation and Vauxhall Motors, Ltd., of Luton, Eng., were finally consumated November 16, through the approval of the plan by Vauxhall stockholders and that the board of directors was increased from four to seven, the additional three representing General Motors. Mr. Sloan added that the English company would continue exactly as at present, under the same management. with no change in general operating policies.

DENIES PARTS RUMOR

NEW YORK, Nov. 21.—The rumor that United Motors Service would shortly take over the distribution of parts for General Motors passenger car units was officially denied by John Pratt of United Motors Service, Inc.

DODGE BROS. BUYS GRAHAM

NEW YORK, Nov. 23.—Clarence Dillon of Dillon Read & Co. today announced that the Dodge Brothers Motor Car Co. has purchased, for cash, Graham Bros., truck manufacturers. The amount of cash involved was not made public. Ray A. Graham confirmed the announcement. No change will be made in Graham Brothers personnel and distribution will continue through Dodge Brothers dealers. Graham has been steadily purchasing Dodge Brothers common stock and has declared intention of increasing his investments.

Frederick J. Haynes, president of Dodge Brothers, has been made chairman of the executive committee, succeeding Edwin G. Wilmer, who has been named chairman of the board. Ray A. Graham, secretary of Dodge Brothers, is now general manager and Joe B. and Robert C. Graham, president and vice president respectively, of Graham Brothers, now become members of the Dodge Brothers board.

Mack Trucks Declares 50 Per Cent Stock Dividend

NEW YORK, Nov. 21.—Mack Trucks, Inc., has declared an extra dividend of 50 per cent in common stock payable Dec. 31 to holders recorded Dec. 15 and Chrysler Corp. has called a stockholders' meeting for Dec. 18 to ratify the propsal to split up its common on a four for one basis.

Mack directors took no action as to the probable cash dividend policy after the increase in capitalization nor did the Chrysler directors inaugurate cash disbursements on its common.

The Mack dividend of $1.50 payable Dec. 31 applies only to common now outstanding. After the 50 per cent stock dividend is paid there will be about 673,000 shares outstanding. With no departure from the present dividend rate of $16 per year stockholders on the enlarged capital would receive $9.

A. E. A. Opens Merchandising Campaign in New Englan

Three Meetings Are Held Durin Week, With Prominent Speakers Taking Part

CHICAGO, Nov. 23.—The first big effo in the Automotive Equipment Associa tion's new merchandising campaign de signed to keep dealers busy this winte was carried out last week in New Eng land and in New York State. Thi campaign, with "Show 'Em and Se 'Em," as its slogan, was announced a the A. E. A. convention in Chicago earl in November.

Three meetings with the A. E. A. battery of speakers on the platform mad up last week's campaign.

The first meeting, for jobbers and thei salesmen, was held Thursday night a Hartford. The committee in charge wa composed of J. P. Sprague of L. L. Ens worth & Son, Hartford; L. H. Woodru of C. S. Mersick & Co., New Haven, an Frank Waters of Tarbell-Waters Co Springfield, Mass. The speakers wer Arthur R. Mogge, merchandising directo of the A. E. A.; R. W. Proctor, sale manager of Black & Decker Mfg. Co. George W. Fleming, president of Flem ing Machine Co., and A. V. Coming editor of Automobile Tsade Journal.

At a meeting at Boston Friday nigh the speakers were Mr. Mogge, Mr. Proc tor, Mr. Fleming and Ray W. Sherma editor of Motor. The Boston meetin also was for pobbers and their salesme and the attendance was over 200. Th committee in charge of this meeting wa composed of Elmer Littlefield of Wet more Savage Automotive Equipment Co. A. S. Hunt of Linscott Supply Co., an Frank Murray of Post & Lester Co., al of Boston.

The third meeting was held at Syra cuse, N. Y., Saturday night and was fo retail dealers of whom 75 were in at tendance. It was arranged by the Ona daga Auto Supply Co. The speaker were the same as at the Boston meetin with the addition of Ralph C. Rognon proprietor of a large independent repai shop in New York City.

From start to finish there was no ap plesauce or hokum handed out at thes meetings. And the listeners seemed t appreciate the points brought out by th speakers. The program was so wel balanced there was nothing tiresome o monotonous about it, and each speake talked quickly and carried his audienc along so that they got the points.

In his talk Mr. Mogge brought ou many interesting things, but one in par ticular stood out. Taking some recen advertisements of leading car manufac turers, he showed that at last the bi

N. A. F. C. Reaffirms Stand on Ideal Car Financing Terms

Delegates Bring Up Subject of Rates, Some Declaring Unfair Competition Is Rife

CHICAGO, Nov. 21.—Members of the National Association of Finance Companies, at the convention held in the Hotel Sherman here Monday and Tuesday, reaffirmed the resolutions of a year ago expressing the conviction that automobile retail times sales should be on the basis of one-third down and the balance in twelve equal monthly instalments. This action was taken after efforts to modify the resolutions to cover some of the practices now widely in effect had failed.

The delegates to the convention were much more eager to discuss rates than terms. It was brought out that the new arrangements made by several automobile manufacturers with finance companies carried rates that the majority of the companies felt they were unable to meet. Declaring that this situation was one that would in the long run have a bad effect on automobile sales, the delegates passed a resolution calling for the appointment of a committee to call upon manufacturers and set before them the factors entering into financing rates and the results that might be expected to follow from the establishment of unprofitably low rates.

Something of a sensation was caused when E. S. Hare, vice-president, Hare & Chase, Inc., said:

"The vital point today is the question of rates. In most cases where factories are advertising low financing rates they are deceiving the public because they are subsidizing the finance company and absorbing part of the cost in the list price of the car. We know the factors that go into financing rates and we know what are fair rates."

No reply was made to these charges, but inquiry developed that by no means all the companies not allied with factories believed that subsidies were granted. However, the statement was generally made that even the big financing companies could not make a legitimate profit and obtain the necessary capital for expansion on the rates under the factory plans.

Among the speakers who strongly urged adherence to the standard of one-third down and the balance in twelve payments were Henry Ittleson, president, Commercial Investment Trust, Inc., New York; C. E. Gambill, president, National Automobile Dealers' Association; A. W. Newton, vice-president, First National Bank of Chicago, and A. R. Erskine, president, Studebaker Corp. of America, Mr. Erskine adding that what the manufacturer was interested in was low rates to the consumer, which entailed standard terms and only a fair profit to the finance company. Mr. Gambill favored no-recourse plans as fairer to the dealer and Mr. Newton and Mr. Erskine were inclined to favor recourse.

A discussion on used car paper was held, with A. J. Morris, president, Industrial Acceptance Corp., New York, taking the recourse side and Mr. Hare the no-recourse side.

New directors elected were: Mr. Hare; F. R. V. Williams, Finance & Guaranty Co.; V. G. Dunnington, Manufacturers' Finance Co.; A. E. Holton & Co.; D. L. Barnes, American Investment Co.; E. W. Carter, Carter Guaranty Co.; L. M. Rocreford, Northern Finance Corp., and O. Rey Rule, Pacific Finance Co.

The membership now stands at 265, as compared with 155 who signified their desire a year ago to join the new association.

A. E. A. Opens Big Campaign

(*Continued from Page 32*)

men were thinking of something besides beauty and speed. He read extracts to show that the something else was service. Tying this up with his talk he outlined why it seemed a good thing to have the jobbers and salesmen carry the idea out to the dealers to make them see how they can sell service on a profitable basis. He drew a chart of 27 service shops covering a period of 12 months and showed that the peak time for keeping the place going 100 per cent was less than three months. From that he deducted that there was something wrong fundamentally in their operation, and that they were not reaching car owner readily.

Mr. Sherman dealt with the orgy of Christmas buying. It was interesting all through because he showed the senseless plans of millions of people who begin December 1 with a list of names and pocketful of money, fighting and worrying until Christmas Eve, when they ejaculate, "Thank God, that's done!" and wonder how they are going to meet their bills when the New Year arrives.

Then he explained that for about the same price buyers paid for useless gifts they could get the practical automotive articles—if the dealers taught the buyers to do it.

Some interesting comparative figures were given by R. W. Proctor. He showed, for example, how Packard after investigating New York, Philadelphia and Springfield branches as to service had jumped the profits from six tenths of one per cent to more than 6 per cent in a couple of years.

Mr. Fleming summed up some of the points brought out by the other speakers. Then he stated that the salesmen should be more than mere order takers. He advised them to become salesmanagers for their groups of dealers by sitting down and analyzing their problems.

Mr. Comings gave many examples of how dealers have increased their business in the winter months.

Arrangements Started for Detroit's Automobile Show

Spaces Already Reserved for 34 Makes of Passenger Cars and 12 Commercial Lines

DETROIT, Nov. 21.—Preparations for Detroit's Silver Anniversary Automobile Show to be held from January 23 to 30 have started with the signing for space reservations by representatives of 34 different makes of passenger cars and 12 lines of commercial vehicles and buses. The demand for space for the 1926 show is far in advance of any previous years. The show will be under the auspices of the Detroit Automobile Dealers' Association, and will be held in Convention Hall.

Arrangements have been made for 50,000 additional square feet of space which brings the total combined area up to 200,000 square feet.

Besides showing passenger cars and buses, commercial vehicles, accessories and other equipment pertaining to the automobile trade will be on display. Motorboats will be an added feature as will a model repair shop in full operation.

During the show, the annual convention of the Society of Automotive Engineers and of the Michigan Automotive Trades Association will be held. Other organizations directly connected with the automotive industry are expected to hold meetings during show week.

The makes of passenger cars for which space has already been reserved include: Ajax, Buick, Cadillac, Chandler, Chevrolet, Cleveland, Chrysler, Dodge, Flint, Ford, Franklin, Hupmobile, Jewett, Jordan, Kissel, Lincoln, Locomobile, Marmon, Nash, Oakland, Oldsmobile, Overland, Packard, Paige, Peerless, Pierce-Arrow, Reo, Rickenbacker, Rolls Royce, Star, Studebaker, Wills Ste. Claire, and Willys-Knight.

Space reservations for the following commercial vehicles have been made: Autocar, Chrevolet, Denby, Dodge, Ford, Federal, G. M. C., Gotfredson, Graham, Kelly, Pierce-Arrow and Reo.

NEW HUPP FINANCE PLAN

NEW YORK, Nov. 21.—The Hupp Motor Car Corp. of Detroit has completed arrangements with the Commercial Investment Trust Co. of this city for a plan to finance Hupp sales to the plan recently announced with reference to Dodge Brothers cars. Details as to the rates which will operate under this plan are not yet available but they are described as low in comparison with prevailing rates. One feature of the Dodge Brothers plan, which is understood to apply to the Hupp plan, is that in contrast to the Chrysler-Palmetto plan purchasers are not required to finance their purchases through the Commercial Investment Trust Co. or to restrict themselves to the insurance arrangement provided by the plan.

Brilliant Colors Are Principal Features of New York Salon

Plumage of Birds Used by Coach Builders in Development of Distinctive Hues for 1926 Custom-Built Cars—Interiors Harmonize

COACH builders exhibiting at the New York Salon in the Hotel Commodore which closed November 23, used colors in more profusion than ever before. Reds, greens, blues and yellows in all their combinations made the show the most colorful of its kind ever held.

Three, four and more colors were used on the same body in ground colors, moldings, stripings, and trimmings in a manner that a few years ago would have been declared revolutionary. Coach makers have been trying for individuality in their jobs, and if appearance counts for anything, they have attained it.

Ninety-seven cars were on display representing the work of 13 body builders and chassis makers. Body builders displaying were: Brewster, Brunn, Derham, De Causse, Dietrich, Fisher, Fleetwood, Holbrook, Judkins, LeBaron, Locke, Rollston and Willoughby. Chassis exhibited include Amilcar, Brewster, Cadillac, Cunningham, Duesenberg, Franklin, Isotta-Fraschini, Lancia, Lincoln, Locomobile, Marmon, Maybach, Mercedes Minerva, Packard, Pierce-Arrow, Renault, Rolls-Royce and Wills Ste. Claire.

Interior View of New York Salon.

Cabriolets or town cars were the most popular models for display, there being 25 of these shown. Limousines came next, with considerable numbers of coupes, sedans, roadsters and phaetons—the latter being mostly of the so-called sport type.

A distinct trend was shown toward more originality in color effects. Many fenders were colored to harmonize with body colors, and colored tops were quite numerous. The upper structures were given more color than ever before. In a number of cars the window frames were painted the same color as the body. Wheels, in many cases, were colored, sometimes in a harmonizing shade of the body color and sometimes in a contrasting color.

As might possibly be expected in cars whose owners can well afford to have them refinished frequently, varnish finishes predominated although there were a number of pyroxylin jobs, either dull finish or polished, on display. Glossy finishes evidently are still in considerable demand.

An interesting development in body work was the treatment of belt lines and moldings on the Salon exhibits. Some body builders, notably Fisher, still keep to the double belt line in which the upper belt ends at the winshield, while the lower one extends to the radiator. A large number of other makers, however, have given the belt a different treatment, if not eliminating it entirely.

Several jobs extend the belt line into a raised panel over the top of the hood, ending in an arrow effect at the radiator, following the practice introduced in this country by Duesenberg several years ago. At least one builder followed this practice, but ended the raised panel at the rear of the hood. Many cars had the windows outlined in molding but used no horizontal lines. Either one or two lines of striping, usually in light color, were generally used on moldings.

Wire wheels were furnished as standard equipment on about 50 per cent of the cars shown with artillery type on 33 per cent and disk on the remaining exhibits. Although a considerable number of cars carry spares at the rear, an increasing number utilized the space directly behind the front fenders for this purpose. As mentioned before, black wheels were comparatively few, nearly all jobs having colored running gear. The fenders were much wider than before. This, of course, is due, to some extent, to the use of balloon tires, but many jobs were fitted with fenders wider than would be necessary under usual practices. Metal used for fenders was of much heavier gage than before.

Upholstery materials were varied, with broadcloth predominating. Leather in the soft finishes which have been developed by tanners for automotive upholstery was used considerably both in open and closed models. One car, a Pierce-Arrow, had fabric upholstery with leather binding and edges, the first time this practice has been used by American manufacturers.

A number of coupe, sedan and limousine bodies were without outside sun visors, the roof ending abruptly and giving the job the appearance of a cabriolet or town car.

All the Cadillacs displayed had two interesting chassis features. Radiator shutters were painted the same color as the body. On either side of the body, just behind the front fenders, where many cars carry spare tires, was a box sunk into the running board. On one side the battery was carried and the other box served as a tool contained.

The use of several steps in the construction of the window frames was another feature used on a number of cars. This method graduates the jump between the thickness of the body below the window and the window itself, and makes a very pleasing change. In a number of cars the hood louvres were formed in a panel raised above the surface of the hood. Many of the louvres were striped.

Roadsters and the front doors of cabriolets were, in many instances, fitted with windows which could be lowered entirely out of sight. Side screens to operate with the front doors were furnished on many jobs. Nearly all cars

were fitted with distinctive radiator caps, while heat indicators were placed on the instrument board.

Considerable effort has been expended, apparently, in an attempt to decrease the size of body pillars. De Causse bodies on Franklin chassis had a front door and body pillar arrangement which was noticeably narrower than is ordinarily found in composite body construction. Much the same end was achieved by several other builders, the bodies by Brewster being particularly satisfactory in this respect.

Although some attempt has been made in the past to have the upholstery match the body colors, much greater progress was evident in this direction this year than ever before. Some of the colors with which bodies were painted must have been particularly hard to duplicate in fabrics, but with few exceptions all upholstery either matched or was in very close harmony with the principal body color used.

A Brunn-Cadillac cabriolet had wine-color body below the belt and same color for window frames. A vermillion belt ended in an arrow head at the rear of the hood. A Dietrich town car on Packard chassis was finished with bright green body and window frames, black molding and white striping. A Willoughby-Wills Ste. Claire town car was painted cerise with vermillion stripes.

A sport phaeton by Fisher on Cadillac chassis was painted a bright red with black molding, fenders and trim. A Holbrook cabriolet on Packard chassis was painted maroon with bright red wheels and black fenders. The lower part of the inclosed portion of the body was covered with wicker.

In a LeBaron roadster on Mercedes chassis the body was cream with green fenders and green belt ended in a raised hood panel and vermillion striping. A Cunningham limousine was painted a bluish gray with black fenders, cream wheels, black top and molding and light colored stripes. A Fleetwood body on Isotta-Fraschini chassis was painted gray-blue with cream striping below the belt and with the portion above the belt finished in polished aluminum.

A Rolls-Royce sport phaeton was solid black below the belt line and polished aluminum above. A Minerva brougham had cream-colored body, green fenders, top and trim, black wheels and polished aluminum cowl and hood. Another Fleetwood body with Isotta-Fraschini chassis had blue body, window frames and wheels, black fenders, top and molding and polished aluminum hood.

An interesting body was shown by Brewster on a Rolls-Royce chassis. The windshield was divided vertically with only the left half adjustable. Instead of an outside sun visor, and adjustable curtain mounted on a rigid frame was placed on the inside where it could be easily operated from the driver's seat. Leather was used on the inside of doors for trim and also for facing the seats. The roof structure was open, this last item being also used on several other bodies. Adjustable front seats were furnished with the adjusting levers projecting between the seats.

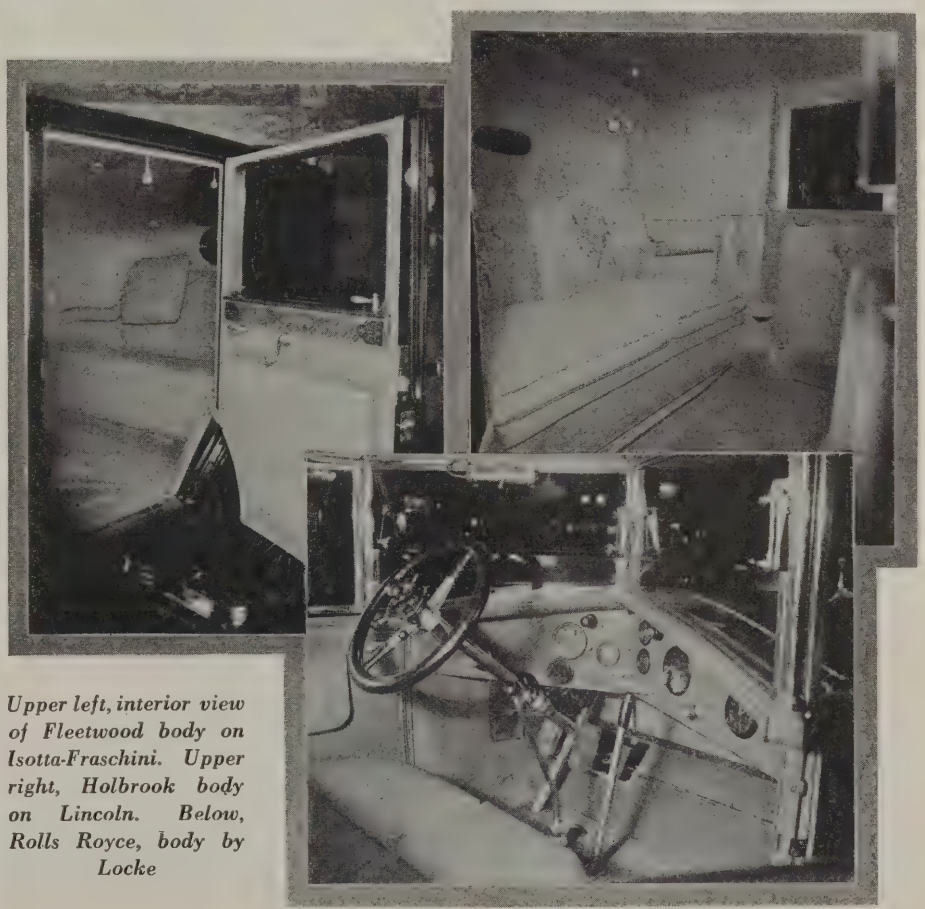
Twelve Lincolns were shown, in all of which very striking color effects have been obtained. It is said that the color schemes used are based upon the work of Mother Nature, the master artist, and each car reflects the colorful plumage of a bird.

The twenty-first annual Automobile Salon closed with a new sales record in excess of $1,000,000 for the full week. Nearly 60 per cent of the total represents coachwork as distinct from the sales of chassis.

In a large measure this remarkable sales record is attributed to the new designs in custom bodies and especially to the combinations of brilliant colors which are so effectively used both for exterior finish and interior decorations. Prosperous conditions, so general in all lines of business, were, of course, an important factor.

As a result the demand for exhibition space at the forthcoming Chicago Automobile Salon far exceeds the capacity of the Drake and a limit has been set on the number of cars each exhibitor may show. This is the first time this has been necessary in the case of the Chicago Salon and attests the increased interest in that territory for high priced chassis and fine custom coachwork.

That the year 1926 will be a banner one for motor cars de luxe was the prevailing opinion of the salon exhibitors when they gathered at a dinner on Thursday evening given by President Charles M. Fleischman of Locke & Co. Plans for increasing factory capacity was the main topic of discussion, and the spirit of co-operation was more pronounced than ever.



While excellent business was done by all the salon exhibitors it seemed that the higher priced cars were more eagerly sought after and the importers of European cars were particularly pleased with the results of this salon.

INSPECTS U. S. ROLLS-ROYCE

NEW YORK, Nov. 21.—Claude Johnson, managing director of the English Rolls Royce Co., has come to the United States to discuss with his associates the possibility of their entering actively into the airplane production field and to make his periodical inspection of the American works of the company at Springfield, Mass. He said that the new types of airplane engines to be produced by Rolls Royce in England would be revolutionary in design and performance.

THORNE MADE SALES HEAD

KOKOMO, Ind., Nov. 21.—C. J. Thorne, who has been connected with the sales departmeint of the Turner Manufacturing Co. for the last four years, has been appointed general sales manager of the concern, according to an announcement from Earl Turner, president. The new sales manager first became connected with the Turner company in the capacity of traveling sales representative, later taking a position at the plant at Kokomo.

Cadillac Is Spending Three Million in Plant Expansion

New Project Will Make Total of $5,000,000 Spent for Recent Developments

DETROIT, Mich., Nov. 21.—Three million dollars is being spent by the Cadillac Motor Car Company for additions to its manufacturing and retail facilities in Detroit. Ground was broken yesterday at the company's Clark Avenue plant, as the first step in preparing for the present expansion. Announcement of the plans was made by Lawrence P. Fisher, Cadillac president.

The new developments will include assembly and administration buildings at the plant and additions to its retail and maintenance buildings on Cass and Jefferson Avenues. Previous developments in the present schedule have been the completion of the new brass, aluminum and iron foundries and the installation of manufacturing equipment. Together the improvements will cost $5,000,000.

Completion of the new administration building will release space in the manufacturing buildings now occupied by the general offices. The assembly unit 750 ft.x125 ft. will necessitate a complete rearrangement of the interior of the manufacturing buildings for increasing production. In October, 1925, production amounted to 3200.

The present plant when completed will be in remarkable contrast to the Cadillac plant of 1921. Then it was scattered throughout the city located in 77 buildings.

RUBBER CO. TO RESUME

AKRON, O., Nov. 21.—Completion of a $1,000,000 new financing program will enable the American Rubber & Tire Co. to increase its tire manufacturing operations, it is announced by President F. C. Snyder. Operations were resumed last week after a shut down of the plant for the last four months. Orders on hand are sufficient to enable the company to run for two months, Snyder stated, and preparations are being made to increase working forces.

Several Changes Are Made In U. S. Automotive Bureau

WASHINGTON, Nov. 21.—Several important changes in the automotive division of the U. S. Department of Commerce were announced here this week by Acting Chief I. H. Taylor.

F. W. Barker, who has been with the division for about a year, has been appointed to succeed Palmer Elder, as chief of the research department, Mr. Elder resigning to go with the Dodge Brothers Motor Company.

N. C. S. Schuette, a graduate of the foreign service school of Georgetown University, will be added to the automotive staff, as assistant to both Mr. Barker and to T. Houghton, of Grand Forks, North Dakota, who has been appointed to direct the work of the foreign trade manual.

The appointment of a successor to Percy Owen, formerly chief of the division, who resigned to take over the foreign sales of Dodge Brothers, has not as yet been decided upon by Assistant Secretray J. Walter Drake. The appointment is not looked for, according to Mr. Drake, until about the first of January.

New Model 90 Locomobile

(*Continued from page 21*)

A line of two open and six closed body types is being offered. The open models have hand-buffed leather upholstery and Pantasote tops, while the closed models are all trimmed in broadcloth.

All bodies are of composite construction, with ash frames and sheet aluminum paneling. All doors are of the flush type, in both the open and closed types.

One feature of the closed models is the windshield, which is divided along the vertical center line so as to make virtually two individual shields. Very light frames of bronze are used for the glasses, so as to detract as little as possible from the field of vision. These frames are countersunk or tongued and grooved on the edges to give a rain proof effect.

On the closed models, instead of having the conventional vizor in front of the windshield, a movable vizor is provided back of the shield. This rolls up like curtain when it is not needed.

BUICK PLANS EXPANSION

FLINT, Mich., Nov. 21.—Two million dollars has been appropriated by the Buick Motor Car Company to increase the daily output of Buicks to 1,200, President Harry M. Bassett announced today. The additions to the plant and the installation of the equipment will begin immediately.

MOON CORRECTS PRICE

ST. LOUIS, Nov. 21.—Moon Motor Car Co. announces a correcton in the price quoted on the new seven-passenger De Luxe Diana sedan recently introduced. The price of the sedan is $2695, f.o.b. St. Louis, but it was announced as $2685, f.o.b. St. Louis.

N. A. D. A. DATES SET

ST. LOUIS, Nov. 21.—The following dates for sales congresses have been assigned by N. A. D. A.

St. Louis, Mo., Dec. 14.
Milwaukee, Wis., Dec. 15
Chicago, Ill., Dec. 16.
Indianapolis, Ind., Dec. 17.
Columbus, Ohio, Dec. 18.

C. A. Vane, Lynn M. Shaw, A. R. Kroh and H. D. Bullock of the N. A. D. A. staff will be on all of the above programs.

Registrations Show Trend Toward Established Makes

Factory Analyses Demonstrate That Public Is Buying Less of "Miscellaneous" Class

DETROIT, Nov. 21.—From November 1924 up to the present time, the automobile buyer has shown a decided trend toward purchasing passenger cars manufactured by companies which are regarded as the leaders in their respective fields. The car which in registrations is labeled as miscellaneous is gradually losing out, the percentage being quite noticeable as compared to a year ago.

November, 1924, the buyers of these miscellaneous makes in the various states were considerable, enough so as to cause the manufacturers to lay plans to get their patronage. Today they have started to swing over so that the lesser known makes are not enjoying the volume of sales they did in 1924.

This trend may be summarized as follows; the buyers in each class have selected what they consider the leaders in that class and are buying accordingly, other makes which are in the same class are gradually losing out. This is not only true of the lower priced field but of every field.

This trend is shown quite accurately in reports gathered by the various factories and accounts to some degree for the unusual success that certain companies have had this year. What the ultimate outcome may be is a debatable question but there is no denying that the trend is definitely towards the more established makes.

Limousine Body Co. Is Given Auburn Contracts

KALAMAZOO, Mich., Nov. 21.—The year 1926 promises to be the biggest in the history of the Limousine Body Company from the standpoint of production. A minimum average of 35 bodies a day for the next 12 months is the program laid out and the entire equipment of the plant is being entirely rearranged and realigned for that purpose.

J. D. Bobb, president of the company, reports that a contract has been closed to build exclusively for the Auburn Motor Car Company, Auburn, Ind., sedan bodies for the new Auburn "4" and brougham bodies for the Auburn "6" and "8" models.

KENNEDY BUYS PLANTS

STREATOR, Ill., Nov. 21.—Following negotiations lasting several weeks, the buildings occupied for many years by the Halladay automotive accessory manufacturing company and which have been idle since that concern moved to Decatur because of labor troubles, have been purchased by the Kennedy Manufacturing Company, maker of automobile and truck bodies. The price for the land and structures was said to be $40,000.

New Development in Car Lighting Shown to S. A. E.

General Motors Official Explains to Detroit Section His Device for Stopping Glare

DETROIT, Nov. 21.—While a new development in headlamp engineering was disclosed and other methods of combatting the menacing glare of headlamps were discussed at the Detroit section meeting of the S. A. E., the consensus indicated that present forms of headlamps when properly adjusted were satisfactory and that rigid enforcement of the headlamp law was the best solution of the problem at this time. More than 200 were present at the meeting and demonstrations which were held in the General Motors Building.

Henry M. Crane of the General Motors Corp., in presenting the paper of the evening entitled "A Possible Solution of the Headlight Problem," demonstrated the practicability of his scheme by having two automobiles, one mounting the conventional lamps and the other the suggested type, facing each other in the meeting hall.

The salient feature of Mr. Crane's device lies in its low cast, which is no greater than the simplest forms of headlighting now employed. Furthermore, it is possible to install the arrangement on any cars now in operation.

Using Crane's arrangement, the driver has the road illuminated in front of him when he responds to the dimming signal of the approaching driver, giving him full vision ahead and without causing discomfiture to the operator. This is accomplished by rotating the right hand lens nine degrees in the proper direction to give a low light on the left and a high light on the right, and the mounting of special switch for heavily dimming the left hand light.

Thus when two cars equipped with this system approach one another with their left lights dimmed there is plenty of light on both sides of the road furnished by the two right lamps respectively. More than 50 per cent of the glare is reduced with this arrangement, it is claimed. It was also suggested by Mr. Crane that to prevent the direct rays from the filament striking the eyes that the conventional type of bulb should be frosted over in the front. One of the bulbs of this type was installed on the cars and others were available for inspection.

Car Builders in Germany Arrange Payment Terms

WASHINGTON, Nov. 21.—Negotiations are going on between the Reichsbank and the German automobile industry for the use of Reichsbank credit accounts in selling German automobiles on the installment plan, the Automotive Division of the Department of Commerce is informed through consular advices.

It is stated that 80 per cent of the automobile industry has concluded an agreement with a German-American Sales and Finance Company whereby this company takes over the financing of automobile sales.

The total sales price will be paid to the delivering manufacturers and the risk of payment taken by the financing company. In accordance with this agreement, the individual manufacturers have agreed to a certain production syndicate on the basis of which credit extension will be apportioned.

First New G. M. Car Sold

PORTLAND, Ore., Nov. 21.—To H. R. Taylor of the R. Knox Roberts Company goes the honor of making the first sale in this territory of the new car built by General Motors. The purchaser is E. C. Lewis, 2102 Sandy Boulevard, Portland, who bought a coach model without knowing the name or price but is satisfied that his confidence and expectations will be fulfilled.

HIBBARD JOINS RICKENBACKER

DETROIT, Nov. 21.—J. L. Hibbard, formerly foreign sales manager of the Studebaker Corp. of America and foreign and district sales manager of the Cleveland Tractor Co. has been appointed assistant sales manager of the Rickenbacker Motor Company. He will also have charge of export sales. Mr. Hibbard was with the Studebaker Corp. from June 1913 to 1918, resigning to go with the Cleveland Tractor Company. He was at one time general manager of the Maxwell-Chalmers Company of Canada.

DENNY INSPECTS COAST

SAN FRANCISCO, Nov. 21.—M. R. Denny, assistant general service manager of the Studebaker Corporation, spent part of November in San Francisco, on an inspection trip of west coast dealers and distributors.

MURPHY IS PROMOTED

ST. LOUIS, Nov. 21.—William P. Murphy has been appointed retail sales manager of the De Luxe Automobile Co., Oldsmobile distributors in the St. Louis district according to an announcement of George T. Willett, general manager. Charles E. Moore, who succeeded Murphy several years ago as head of the parts department has been appointed head of the used car department.

ZINTL JOINS DU PONT

WILMINGTON, Del., Nov. 21.—William M. Zintl, of the advertising sales department of the Curtis Publishing Company, has been appointed director of sales of the paint and varnish division of the paint, lacquer and chemicals department of E. I. du Pont de Nemours & Company. He will assume his new duties shortly.

General Motors October Sales Gain by 40,336

Total of Passenger Cars and Trucks Delivered by Dealers Is 86,339 in Month

DETROIT, Nov. 21.—Sale of General Motors passenger cars and trucks by dealers to users in October totaled 86,339, as compared with 48,003 in 1924, an increase of 40,336.

The sales of passenger cars and trucks to dealers by the different manufacturing divisions during the past month totaled 95,703, almost double that for October 1924. It created another new sales record. The following tabulation shows monthly sales of General Motors passenger cars by dealers to ultimate consumers and sales by the manufacturing divisions of General Motors to their dealers.

Dealers Sales to Users

	1925	1924
Jan.	25,593	33,574

Oct.	*95,703	49,552

**These preliminary figures include passenger car and truck sales in the United States, Canada and overseas by the Chevrolet, Oldsmobile, Oakland, Buick and Cadillac manufacturing divisions of General Motors.*

Paris Decides to Hold 1926 Automobile Show

PARIS, Nov. 5.—(by mail)—Paris will hold an automobile show in 1926, declares Henri Cezanne, general manager of the annual French exhibition. "The efforts now being made to get an extension of the Industrial Arts Exhibition, which occupies the Grand Palais and the adjoining river bank, need not be taken seriously," says Cezanne.

It appears that the Government is not favourable to an extension of this exhibition, and that as a consequence the Grand Palais in the Champs Elysees will be available as usual.

No details have been decided on regarding the show. The probabilities are that it will open the first Thursday in October, thus preceding the London show by one week. This, however, is subject to approval by the English industry. whether there will be a single show for passenger cars, trucks, motor cycles and accessories will depend on the entries received.

N. A. D. A. Arranges Details For Chicago Convention

Meeting to Be Held at La Salle Hotel During National Automobile Show

ST. LOUIS, Nov. 21.—Officials of N. A. D. A. have announced that the Ninth Annual convention of the Association will be held at La Salle Hotel, Chicago, Monday, Tuesday and Wednesday, February 1, 2 and 3. And should the dealers demand it the meeting will be carried over to Thursday morning when, as was done last year, an open forum on dealer problems will be held by the six members of the N. A. D. A. staff.

The first day of convention, Monday, Feb. 1, will be given over entirely to a meeting of the board of directors of N. A. D. A., the first such session ever held in the history of that organization. It was decided to hold the all-day meeting because of the many matters which are to be placed before the directors for their decisions. What these subjects are has not been divulged nor will they be in advance because of the importance which attaches to them.

As Monday and Tuesday mornings are to be dealer days at the automobile show, there will be no meeting on Tuesday morning and the convention will really get under way Tuesday afternoon at 2 o'clock.

James H. Collins, research director of the Chilton Class Journal Co., will deliver the first address. His subject will be "Business Possibilities for 1926." It is expected that his discourse will consume about two hours. For the rest of the afternoon there will be other speakers, not as yet designated who will speak on subjects similar to that of Collins.

The whole of Wednesday's sessions will be devoted to business. There will be addresses on sales analysis, market analysis and kindred subjects by many of the noted men of the industry.

The whole of Wednesday's session will be devoted to business. There will be addresses on sales analysis, market analysis and kindred subjects by many of the noted men of the industry.

N. A. D. A. headquarters also has announced the program for the third annual convention of the Atlantic Coast District of N. A. D. A. to be held in the east ballroom of the Commodore Hotel, New York, January 11, in conjunction with the National Automobile show.

The program follows:

10 a. m. "Where Are Profits in 1926," James H. Collins, Director of Research Bureau, Chilton Class Journal Co.

11 a. m. "Fix Your Own Profit Goal for 1926," Harry M. Fancher, Secretary-Treasurer, Tom Botterill, Inc., Denver, Colo.

2 p. m. "Who Will Buy Cars in 1926," Edward Peyton, market analyst, N. A. D. A.

2:45 p. m. "Can the 1920 Salesman Close a 1926 Buyer," H. D. Bullock, sales specialist, N. A. D. A.

3:45 p. m. "Dealer Dollar and Used Car Sense," A. R. Kroh, merchandising specialist, N. A. D. A.

The convention will be an all-day meeting.

Fisher Body Is Expending $500,000 for Additions

PONTIAC, Mich., Nov. 21.—In order to meet the demand for an increasing number of bodies for the Oakland Motor Car Company and to provide adequate facilities for producing bodies for the new six cylinder car to be introduced early next year as a companion to the Oakland Six, the Fisher Body Corporation is expending approximately $500,000 in additional building and equipment at its Pontiac plant.

The present Fisher Body Corporation's $2,000,000 plant has been devoted exclusively, beginning two months ago, to building Oakland bodies. The building additions will add 60,000 more feet of floor space.

This enlargement for body building requirements follows closely the appropriation of $750,000 for equipment in the Oakland factories to increase production on the Oakland Six and $3,000,000 for tools and equipment to build the new six cylinder car which will be produced and distributed by the Oakland organization.

St. Louis Men Purchase Plant of Laurel Motors

ST. LOUIS, Nov. 21.—Arthur S. Sinclair, former promoter of automobile races at the Creve Coeur track, has announced that he is president of a company of St. Louisans which has purchased the Laurel Motors Corporation and its plant at Anderson, Indiana.

The Laurel Company manufactures a special cylinder head with 16 overhead valves and other parts with which Fords are turned into powerful and speedy automobiles. The cylinder head was invented by Robert M. Roff in 1917.

Sinclair stated that other St. Louisans who were officers of the Laurel Corporation were Charles Teutenberg, Norman H. Winter, B. J. Herman and William Schnarr. A St. Louis factory branch of the company has been opened at 4432 Olive street with Herman as manager. Sinclair stated that the Laurel factory at Anderson is to be enlarged.

NEW DURANT DEALER

SPOKANE, Wash., Nov. 21.—The new eastern Washington and Idaho sales zone of the Durant company has been put in charge of Harry Trueblood, formerly connected with the Durant organization at Portland. Mr. Trueblood will make his headquarters in Spokane with March-Strickle company, distributor for Star and Durant cars.

Price of Tires as Original Equipment Raised Again

Announcement Comes at Same Time As Further Advance in Crude Rubber

NEW YORK, Nov. 21.—Advance in prices of original tire equipment to automobile and truck manufacturers ranging from around $10 on small cars to from $25 to $40 on medium class machines from $110 to $125 on trucks, announced as an effort to bring the price of original equipment into line with prevailing retail tire prices, was accompanied by a further advance of crude rubber to $1.10.

London rubber stocks despite the recent increase of 10 per cent in production permitted under the Stevenson act declined 402 tons last week or 4,503 tons compared with 5,589 a year ago.

The Rubber Association of America, Inc., reports September production and shipment of high pressure inner tubes as declining from August with inventories increasing. The same is true of cord pneumatic casings and solid and cushion tires. Balloon inner tube inventories, production and shipments increased, balloon casing inventory and shipments increased while production declined.

Harvey Firestone, Jr., is quoted as saying in London that the present spread between production cost and selling price cannot last long, this opinion being opposed to that held by London stock exchange and rubber experts.

NEW JORDAN DEALERS

LOS ANGELES, Nov. 14.—The Lord Motor Car Company, Jordan distributors in Southern California, has conducted an extensive campaign to increase its dealers organization since the advent of the new Jordan models. Recent dealers appointments include the D. R. Tompkins Motor Car Company of Glendale, Advanced Motors, Huntington Park, Omer Brubaker, of San Bernardino, Wilshire Motors, of Los Angeles.

Star Plans Production of 300,000 Cars in 1926

ST. LOUIS, Nov. 21.—Colin Campbell, vice president of Durant Motors, Inc., and operating and merchandising head of the Star car factories said here last week that the Star Company expected to build and market 75,000 new Star six-cylinder cars in 1926 and about 225,000 four-cylinder cars, a total production of 300,000 automobiles. Campbell was in St. Louis in the course of a tour of inspection of the district of E. D. Knowles, Star and Durant middle west regional manager with headquarters at Kansas City.

Campbell said that average production during the ten first months of this year indicated a total output of 130,000 Star fours in 1925.

Tentative Tax Reduction Is Taken as Encouraging Sign

Industry Believes Excise May Be Removed Entirely When Bill Reaches Congress

NEW YORK, Nov. 21.—Reduction of the excise tax on passenger automobiles from 5 to 3 per cent, as tentatively planned by the House Ways and Means Committee, is regarded by the industry as an encouraging sign that before both houses of Congress finish deliberations on the bill the complete removal of these taxes will be granted.

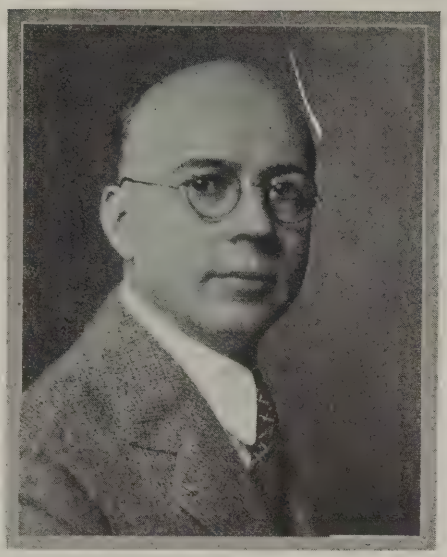
Nothing short of complete removal will satisfy the industry's conviction that, since the automobile is no longer a luxury but a necessity, it should not be subjected to such taxes.

The decision of the committee to recommend complete removal of excise taxes on trucks, parts, accessories and tires is hailed with satisfaction by the manufacturers of these necessities. The opinion is expressed generally that if the committee, as an initial suggestion, is disposed to go as far as this complete removal and a reduction of 2 per cent on passenger cars, it is not improbable that a further reduction will be made, especially since it is understood that the Senate finance committee is inclined to grant additional hearings on the subject when the bill reaches the Upper House.

Automobile taxes in 1925 amounted to $124,686,745. Of this about $94,000,000 represented the taxes on passenger cars and trucks. Reduction of the tax on passenger cars from 5 to 3 per cent would amount to about $39,000,000. Complete removal of this tax thus would result in a saving to purchasers of new passenger cars amounting to an average of $29.

If the 5 per cent tax is reduced only to 3 per cent the average saving would be $17.40. The tax on trucks is estimated to yield about $31,000,000, which in turn, if completely removed, would revert to purchasers at least so far as members of the N. A. C. C. are concerned.

Whether the tax be only repealed in part, or in toto, there will arise to the industry—and chiefly to the 40,000 dealers—a problem the solution to which is now being attempted by R. A. Brannigan, attorney for the National Automobile Chamber of Commerce, who has been in Washington the past ten days.



The problem is this:

Who's to pay the tax on passenger cars, trucks, tires and accessories which the 40,000 dealers will have on stock the day the law becomes effective?

Admittedly the purchaser will not pay it. So far as he is concerned the tax is repealed and if he can't purchase a car for future delivery after the tax is repealed he will wait until that date and get it tax free.

The answer to the question, according to Mr. Brannigan, can only be met by a retroactive clause in the measure which will permit a rebate to dealers of the stock on hand the day the new tax law becomes effective. Efforts to have this retroactive clause written into the bill are now being urged on the committee by representatives of the automobile industry now here working on the problem.

New Reo Sales Manager

C. A. Triphagen, who has succeeded R. W. Rueschaw as sales manager of Reo Motor Car Co.

HUPP EIGHT SALES GAIN

DETROIT, Nov. 21.—Sale of Hupp Eight for the first eleven months of this year will be approximately 13,500, according to O. C. Hutchinson, general sales manager of the Hupp Motor Car Corp. Since the reduction in price, the sales have continued at a higher rate than they did shortly after the car was introduced. Hupp officials claim that the number which will be sold up to the end of the month will make the Hupp Eight the largest selling eight-cylinder car in the world. The sales of Hupp Six have been showing a continued and steady gain since their introduction.

India Reports Net Profit of $27.70 on Common

AKRON, Nov. 21.—The sales of India Tire & Rubber Company, for the first six months of 1925 were $2,220,221, or 89 per cent greater than for the corresponding time past year, according to J. M. Alderfer, president, in a letter to India stockholders.

"Despite the fact that our plant ran to its fullest capacity from January to September, we have been constantly behind on orders for the last seven months," Mr. Alderfer stated. "Our daily production has increased far beyond anything that has ever before been necessary."

Net profit after taxes, for six months, ending June 30 was $314,655, which, after preferred dividends, was equivalent to $27.70 a share on the common stock.

Charlotte Used Car Market Disturbed by Repossessions

Stocks Are Low but Dealers Fear Effect on Volume of New Sales Involving Trades

CHARLOTTE, N. C., Nov. 21.—Serious disturbances of the used car market here and at other important points in this territory were attributed by dealers and distributors here to offerings of repossessed cars by finance companies. This situation developed in the middle of November, and, though expected in a measure, has become more serious than the dealers say they expected.

Some of the larger dealers of Charlotte reported that the market has been upset, while others indicated that conditions with them were not quite so gloomy.

The Charlotte Automotive Merchants' Association, car dealers' division, at its last meeting, engaged in a general discussion of this problem. The tacit decision of the membership was that nothing immediately can be done to remedy the situation.

Stocks of used cars in this city are low, and the dealers are not apprehensive of loss from that source, but the condition of the used car market may have some important bearing on the volume of sales of new cars through trades involving used cars, according to several dealers.

Eldridge-Buick to Occupy New Spokane Home Dec. 1

SPOKANE, Wash., Nov. 2.—On December 1 Eldridge-Buick company will occupy their $150,000 three-story and basement home which is now under construction, A. S. Eldridge of Seattle, president, has announced here. The building is one of the few strictly Class A structures in the city and has several features not found in many auto homes in the Northwest.

A spiral ramp leads from the street to the roof where storage space is made available. The ramp is on a 7 per cent grade and 20 feet wide to the second floor where the service department will be. Light is provided by the absence of columns and steel sash; columns are more than 40 feet between spans.

An elevated driveway from the third floor, across an alley and a vacant lot to the Northern Pacific Railway tracks, will make unloading a car of machines a matter of two hours for two men while it now takes four men to unload and put into the warehouse a car of machines.

C. G. ELECTS OFFICERS

DETROIT, Nov. 21.—At the annual meeting of the stockholders of the C. G. Spring & Bumper Company of Delaware, the board of directors was reelected. At a subsequent directors' meeting the following officers were elected for the ensuing year: Chirtsian Girl, president; Charles Getler, vice-president; Fred A. Cornell, vice-president and secretary; M. D. Harrison, treasurer.

Along Automobile Row

BUFFALO, N. Y.—The Leffl Motor Sales Co., has completed alterations in its showroom and service station costing about $10,000. This company deals in Hudson and Essex.

ST. LOUIS.—A branch to be devoted exclusively to Lincoln sales and service has been opened by the Owen-Baskey Motor Co., Ford and Lincoln dealers, at 3333 Washington Boulevard, adjoining the company's main quarters. Albert L. O'Neil is in charge. A used car department will be opened of which Lyman B. Yancey will have charge.

HOOD RIVER, Ore.—The Twin Peaks Motor Company has been incorporated by E. E. Elliott, P. S. Riffe and S. S. Paxon. This company will handle the Star and Durant.

WATERLOO, Ia.—The H & M Chrevolet Company, C. J. Halverson and W. F. Marshall, has purchased the new garage at Fifth Street and Rock Island Lines tracks, now under construction.

COLUMBUS, O.—The Bill Orman Company has been chartered with a capital of $20,000 to take over the sales and service business of Henry & Tetlow, agent for the Hudson and Essex.

MEMPHIS. — The Price-Barwick Co., Ford dealer, entertained 50 employes with a banquet to celebrate the most successful month ever experienced by the firm.

SAN ANTONIO, Tex.—The Barry Motor Company has been appointed distributor and dealer for the Paige-Jewett lines in San Antonio and Southwest Texas. Mr. Barry was formerly with the Paige-Jewett firm in Colorado.

RUSSELLVILLE, Ark.—Vim Rye, proprietor of the Rye Motor Company and local dealer for Dodge Brothers cars has purchased the Bowers Motor Company and the Buick agency from Eddie Bowers. He will continue the Buick agency.

ATLANTA.—Dealers handling the Peerless line in the South Georgia and Florida territory, with the exception of dealers in the Tampa, Fla., district, have been advised by the Peerless Motor Car Co., of Cleveland, O., that the Lanford Motor Car Co., 928 Main Street, Jacksonville, Fla., has been appointed distributors of the Peerless line in the above territory.

NORTHAMPTON, Mass.—Frank S. Parsons, Reo dealer, has had plans prepared for a new show room adjacent to his large garage, part of which is occupied by the Hampshire County Used Car Exchange. Meanwhile he will use half of the last named building, having leased his former quarters to the New England Telephone & Telegraph Co. for its motor fleet.

CHICAGO.—The Chicago Flint Co., 2500 South Michigan Avenue, has changed its status and is now wholesale distributor for the Flint car in the Chicago district, instead of a branch of the Flint Motor Company. H. J. Rosenberg continues as head of the organization.

TAMPA, Fla.—One of the finest automobile buildings in the state of Florida, including sales rooms and service station, will be constructed here by the Peninsular Motors Corporation, handling the Studebaker line in Tampa, it has been announced by S. O. Metchik, vice-president and general manager of the company.

NORTHAMPTON, Mass.—Chase Motor Co., Ford and Lincoln dealer, has bought the sales and service building erected for Girard Motors Co., and recently used by the Shaw Motor Co.

NEW ORLEANS.—Charlie Landry, for eight years manager of the service and parts department of the Universal Motor Company, Ford dealer, has bought the entire service and parts outfit of the Universal company and opened a new service station with Graeme M. Ton, former stockman for the Universal.

DETROIT.—Thomas Brooks, Inc., Detroit distributor for Moon and Diana, has opened the first of a number of sales and services in this district at 507 Main Street, Royal Oak, Mich.

GREENFIELD, Mass.—Herbert F. Allen has been appointed Chevrolet dealer here in place of the Manning Motor Co.

CHICAGO.—The Quinlan Motors Company, Moon and Diana distributors, announces the opening of a new retail branch at 2029 S. Michigan Avenue. F. E. Walsh, former Moon and Diana distributor of Des Moines, is in active charge as manager. Quinlan also announces the opening of a service station at 2645 S. Wabash Avenue for the convenience of Moon and Diana owners and dealers.

HOMER, Mich.—A. E. Adams and Warren Clark, owners of the Ford sales and Service Garage have sold their business to Earl Durbin and Victor Rademacher of Carson City, Mich., who operate a Ford garage in that town.

MILWAUKEE.—Rinden Garage of 389 Atwood Avenue, Madison, Wis., has been appointed Moon-Diana dealer.

VANCOUVER, Wash.—W. E. Knight, who has been for a number of years associated with the Portland branch of the Mack International Motor Truck Corporation, has been made manager of the new headquarters here.

CHICAGO.—The wholesale department of the central western district of the Oakland Motor Car Company, in charge of E. M. Lubeck, has moved its headquarters to the London Guaranty Building from 2426 South Michigan Avenue, which premises will now be occupied by Community Motors, Inc., retail Oakland representatives.

SEATTLE.—The Huebner Motor Company of West Seattle has taken the agency for the Chevrolet line. The concern is composed of Bob Huebner and James Preston.

ATLANTA.—The southern branch of the Durant Motor Co., in Atlanta, advises that a new direct distributing branch will shortly be opened at Jacksonville, Fla., to handle the company's dealer trade on the Star and Durant lines in the Florida territory. The company is now constructing a warehouse at Jacksonville, and has established temporary headquarters for that state at 918 W. Main Street, Jacksonville.

CHICAGO.—The Chicago branch of the Davis Motor Car Co. has been closed and its business in the future will be handled by the R & V Service Co., 2530 South Michigan Avenue, all other Davis dealers in this territory having, for the present, direct factory connection.

NEW YORK.—Garland Automobile Co. has purchased the sales branch heretofore conducted by the Rickenbacker Motor Co. on Broadway between Fifty-sixth and Fifty-seventh Streets, with sub-branches at 1296 Bedford Avenue, Brooklyn, and 2396 Grand Concourse, the Bronx.

DETROIT.—Nash sales for Mt. Pleasant have been taken over by Dr. Frank Hackett and William Carroll. The sales room will be located at the corner of Broadway and Franklin Streets.

OGDEN, Utah.—A new Utah Oldsmobile agency to be known as the Maus-Hedges Oldsmobile Co. has opened up here with headquarters at 2200 Washington Avenue.

OAKLAND, Cal.—Bell & Boyd, Willys-Overland dealer here, announces the opening of a new store exclusively for used cars. The store has all the appearance and decorations of a new-car show room, and 50 rebuilt used-cars are to be kept on display at all times. The cars will be sold on a basis of transportation and mileage.

WESTFIELD, Mass.—J. W. McLeod has taken the agency for the Hudson and Essex in this territory.

ST. LOUIS.—Earnest J. Krause, Inc., Rolls-Royce distributor and Moon dealer is in the process of liquidation. Earnest J. Krause, Jr., president, recently filed a voluntary petition in bankruptcy listing assets of $44,000 and liabilities of $64,000.

CEDAR RAPIDS, Ia.—Walter Arnold, district representative for the Ford Motor Company, was host last week to 75 dealers and guests from Johnson, Cedar, Benton, Jones and Linn counties at Cedar Rapids.

MILWAUKEE.—De Somers Motor Co. of Milwaukee, Wis., Chrysler dealer, has changed its name to W. C. Goerke Motor Co. Alex De Somers is no longer with the company whose new officers are W. C. Goerke, president, P. W. Wendeborn, secretary-treasurer and Hugh Horn, vice-president.

KELSO, Wash.—The Fred Hess Motor Company which operates garages in Kelso, Longview and Ryderwood, will open a branch in Kalama, Wash, managed by Fred Horn. The Hess company has the Ford, Fordson and Lincoln distribution.

CHICAGO. — The Auburn Automobile Co., 3914 South Wabash Avenue, has become a direct factory branch of the Auburn company and in the future will be known as the Auburn Chicago Co., 2449-51 South Michigan Avenue. F. P. Popp is branch manager. H. L. Wood, who has relinquished his Moon dealership, will take over the dealer business from Edward & Crist.

NEW ORLEANS.—P. L. Adams of the Adams Motor Car Company, announces that his company has just inaugurated the flat rate system in its servicing of Cleveland cars.

CANTON.—The Nash-Ajax Motors Co., 615 12th Street, N. E., has been chartered with an authorized capital of 500 shares, no par value designated, to deal in automobiles and supplies.

DETROIT.—A. S. Healy, associated with the wholesale tire business in Detroit for many years has opened a new K. O. Tire Store at 12243 Twelfth Street. A radio department is being conducted jointly with the tire business.

OAKLAND, Cal.—E. A. Hamlin, general manager of Hamlin & Wichman, Hudson and Essex dealer here, has been elected president of the Oakland Motor Car Dealers' Association. Charles L. Hebrank, head of the Hebrank, Hunter & Peacock Co., Chandler, Cleveland and Hupmobile dealers, was re-elected treasurer, and Robert W. Martland, veteran manager of the organization, was unanimously re-elected to that post.

PITTSFIELD, Mass.—Berkshire Auto Co., 109 South Street, has taken over the franchise for the Cadillac for this county, formerly held by Berkshire Cadillac Co.

ST. LOUIS.—Weber Implement and Automobile Co., St. Louis Hupmobile distributor, has opened a used car department at the southwest corner of Locust and Nineteenth Streets under the management of Emil Weber.

ROCHESTER, N. Y.—The Yonk-Foster Nash Company has been organized here as a sub-agency to the Mortimore Motor Car Company, Nash distributors in this territory. E. J. Yonk, wholesale manager of the Mortimore company, is president of the sub-agency but will also retain his position with the distributing company.

DECATUR, Ill.—E. G. Hedges, local Oakland dealer, is retiring and has been succeeded in the agency by Robert R. Peck.

MILWAUKEE.—Quality Chevrolet Co. has been formed at Rhinelander, Wis., to deal in automobiles. Capital stock consists of 100 shares at $100 par or $10,000.

NEW ORLEANS. — The Glenny-Buick Company has announced the appointment of John Milandin as service superintendent to succeed C. J. Lelleher, who resigned to enter the real estate business.

With the Associations

Iowa Indorses Roads

DES MOINES, Ia., Nov. 21.—More than 200 automotive merchants of Iowa, here for the seventh annual convention of the Iowa Automotive Merchants' Association, gave unqualified approval to the good roads plan as outlined by Governor John Hammill in his address before the convention. The governor outlined the road building plans for the next three years, which include the construction of eight principal roads extending east and west and five north and south.

Featuring the meeting of the first day were three group conferences, the tire dealers constituting one group, battery and electrical men making up another, and dealers interested mainly in garage, service and maintenance, the third. Tire dealers interested themselves in a discussion of time payment plans for selling tires. It was brought out that under Iowa laws, a tire dealer selling tires on the time payment plan has little or no protection. Tire dealers recommended that the association promote legislation which would protect the tire dealer who finds it necessary to use the time payment plan of selling new tires.

Approval of the new battery rental law was voiced by the battery and electrical men who also discussed business methods. Flat rates and "gyp" practices were items of interest to the garage group.

The organization of the association for the coming year will include four committees: Dealer Relationships, Customer Relationships, Legislative, and Vigilance. The committee on dealer relationships will endeavor to promote better understanding and feeling between dealers, the committee on customer relationships will adjust differences between customers and dealers, the legislative group will sponsor beneficial legislation, and the vigilance committee will investigate and expose fraudulent practices.

Beginning December 1 a concentrated drive for new members will be made by the association. The goal set is for a membership of 2,000 active dealers. The drive will be directed by district chairmen, who will help county chairmen organize and direct the efforts of assisting dealers.

At the election preceding the close of the convention the appointment of T. W. LeQuatte as secretary-manager was confirmed and all officers re-elected. They are: W. E. Wissler, Des Moines, president; C. A. Morris, Waterloo, vice-president; and F. M. Rankin, Ft. Dodge, treasurer. Directors were chosen as follows: District No. 4, C. D. O'Harrow, Waterloo; district No. 6, Ray Van Brunt, Sioux City; district No. 11, L. M. Millsap, Cedar Rapids; district No. 12, H. J. Lytle, Davenport.

New Mayor Heads Dealers

SYRACUSE, N. Y., Nov. 21.—Charles G. Hanna, mayor-elect of Syracuse, has also been elected president of the Syracuse Automobile Dealers' association. Mr. Hanna is the Ford-Lincoln dealer here, head of the Charles G. Hanna Co., Inc. As president of the organization of dealers Mr. Hanna hopes to find time from his duties as mayor to bring about solution of many problems with which dealers are confronted. The stolen car problem is among them.

Detroit Holding Contest

DETROIT, Nov. 21.—Members of the Detroit Automobile Dealers' Association are staging a master salesman contest under the direction of the association. The contest will run during the months of November and December, ending at midnight, December 31.

All 74 members of the association are taking part. Prizes will be awarded on a points basis, one point being awarded for selling the car and two points for delivery. The rating salesman of the different organizations will be awarded a gold watch. Reports will be made weekly to the association during the period of the contest showing the standing of the different salesmen. The prizes will be awarded at a dinner to be tendered the winner and members in January.

The contest is the first of its kind ever held by the association and if successful may become an annual event.

Rochester Picks Burch

ROCHESTER, N. Y., Nov. 21.—R. D. Burch, of the Burch-Buell Motor Corporation, was unanimously elected president of the Rochester Automobile Dealers' Association at the annual meeting held this week. Other officers elected were: vice-president, J. J. Williams, of J. J. Williams, Inc., secretary, Oscar W. Stanley, of Swope Stanley Motors, Inc., treasurer, G. W. Frisbie, of Thomas J. Northway, Inc., directors, G. Norton Mortimore, Mortimore Motor Car Company, E. M. Alling, Alling and Miles, Inc., and J. E. Hansen, Rochester-Packard Motors.

Sunday Closing a Success

CHARLOTTE, N. C., Nov. 21.—The Sunday closing program of the 55 gasoline filling stations within the limits of this city has proved entirely successful, according to reports submitted at a meeting of the Charlotte Automotive Service Association, which promoted this innovation here. An effort now is being made to influence the automobile storage houses to cease the sale of gasoline, tires and oil on Sunday, these houses having reported a tremendous increase in their Sunday gasoline sales.

Atlanta Boosts Christmas Sales

ATLANTA, Nov. 21.—Due to the unusual degree of success that crowned the efforts of the Atlanta Automobile Association in the co-operative Christmas advertising campaign held last year, the association will again sponsor a similar campaign during the approaching Christmas season, but on a more extensive scale than heretofore.

The present plan is to have an advertising copy expert perpare a series of sales-building ads that are published at regular intervals in the Atlanta daily newspapers for several weeks prior to Christmas, the costs of this advertising to be shared by the members of the association on a co-operative basis, as was done last season.

The campaign last year resulted in a volume of automotive business in Atlanta, particularly in accessory and equipment lines, that far surpassed any previous holiday record in the history of the business in this section. As this advertising is thought by members of the association to have been largely responsible for this success, the campaign this year will be larger and more extensive.

Milwaukee S. A. E. Meets

MILWAUKEE, Nov. 21.—Thomas Coleman, vice-president of the Madison-Kipp Corporation, was the principal speaker at the first fall meeting of the Milwaukee section of the Society of Automotive Engineers, held at the Blatz Hotel. Mr. Coleman had as his topic "Engine Lubrication" and since he has given years of study to this problem, he presented facts of great interest to club members. In addition Mr. Coleman, with A. Fisher of the Waukesha Motor organization is scheduled to present a joint paper on the same subject at the national meeting in Detroit in January.

Battle Creek Dealers Meet

BATTLE CREEK, Mich., Nov. 21.—The Battle Creek Automobile Dealers' Association held its first fall meeting at Post Tavern hotel this week. About 60 dealers and salesmen heard Thomas T. O'Brien of the Reo Motor Car Co. discuss dealers' problems.

Urge Parking Enforcement

MILWAUKEE, Nov. 21.—Strict enforcement of the parking regulations, especially as they apply to the downtown and night parking provisos, is demanded by the Milwaukee Garage Owners' Association, which claims that thousands of automobiles are now permitted to park in the downtown streets throughout the night without having their lights burning. Tourists are permitted to violate virtually all of the city's parking regulations, the garage men claim, and are not molested.

Cliff Durant Building New Car for Memorial Day Race

Harlan Fengler Is Working with Him In Design of Promised Sensation

LOS ANGELES, Nov. 21.—R. C. "Cliff" Durant has started construction in Los Angeles of the first of a fleet of fast racing cars which he plans to enter in the next Indianapolis race. Because of the rapid development of automobile racing and the favor with which it is being received all over the world, Durant feels that the time has arrived to inject more competition into the game.

Durant is building the new cars, which are declared to embrace sensational features, with a view to realizing his life's ambition—that of winning the great Indianapolis classic. It will be remembered that Durant came close to winning this race a few years ago and he now believes that with the reduction in size of the cars he can win the 500-mile grind next Memorial Day.

The services of Harlan Fengler, famed racing pilot, have been engaged by Durant together they have designed a race car which includes many improvements on cars built in the past.

Two of the cars are expected to be ready for speed trials on the Culver City track early in 1926. It is Fengler's plan to complete the entire fleet of cars in time for the Indianapolis race. The power plant designed for the cars is of 91 cubic inch displacement—the smallest motor ever attempted in auomobile racing. According to Fengler, close to 8000 revolutions per minute will be possible in the new motor as compared to 6800 revolutions in the 122 cubic inch car.

Aside from the new mechanical features of the cars, the general appearance will offer something absolutely new and novel.

Little Rock Holds Second Annual Closed Car Show

LITTLE ROCK, Ark., Nov. 21.—Little Rock's second annual closed car show was held this week with large crowds in attendance. Roy E. Steuber was manager of the show committee consisting of W. L. Owen, Henry C. Thomas, Miss E. C. Currie, and A. L. Woolfolk. The Little Rock Automobile Dealers Association staged the show.

Cars were exhibited by the following:

Ray Robinson Motors, Jordan; Madison-Smith Cadillac, Cadillac; O. A. Cook Auto Sales Co., Studebaker; Little Rock Motor Car Co., Hudson and Essex; Little Rock Buick Co., Buick; Laser Motor Co., Moon, Pierce-Arrow and Diana; Green Chevrolet Co., Chevrolet; Franklin Motor Car Co., Oakland and Franklin; Wright-Mann Motor Car Co., Star; Davis Motor Co., Star; Cook Automobile Co., Willys-Knight and Overland; Jennings-Mott Motor Co., Chrysler; S. R. Thomas Auto Co., Dodge Brothers; Whitney Harb, Ford; Freeman and Freeman, Ford; Shoemaker Bale Auto Co., Ford and Lincoln; Owen-Hill Motor Co., Hupmobile and Packard; Arkansas Nash Motor Co., Nash and Ajax.

Coming Motor Events

Automobile Shows

New York.....Jan. 9-15
National Automobile Show in Grand Central Palace.

Newark, N. J.....Jan. 16-23
Nineteenth annual Automobile Show under auspices of New Jersey Automobile Exibition Co., Chamber of Commerce Building.

Bpffalo, N. Y.....Jan. 16-23
Buffalo automobile show by Buffalo Automobile Dealers' Association in 174th Regimental Armory, Carlton C. Proctor ,manager, headquarters, Hotel Statler.

Cleveland, O.....Jan. 23-30
1926 Automobile Show under auspices of Cleveland Automobile Manufacturers' and Dealers' Association, Herbert Buckman manager, in Public Auditorium.

Montreal .....Jan. 23-30
1926 Motor Show under the auspices of Montreal Automobile Trade Association, Theo Dorian, manager.

Lowell, Mass.....Jan. 25-Feb. 1
Twelfth autmoboile show in Memorial Auditorium by Automobile Merchants' Association of Lowell, Inc., George R. Garmon, manager, 119 E. Merrimack Street.

American Cars Used as Anti-Soviet Arguments

PARIS, Nov. 2.—(by mail)—American automobiles are made use of as an argument against bolshevism in a poster published in France by the Cercle d'Etudes Economiques et Sociales of Lille.

The poster shows on one side 25,000 automobiles in Soviet Russia, a 12 to 14 hour working day, and the workmen going to the factory on foot. In contrast to this it is shown that in capitalistic America there are 17,726,000 automobiles, the working day does not exceed 8 hours, and one workman out of every ten goes to the factory by automobile.

The poster points out that Henry Ford, who employs 50,000 men, began life as a mechanic, that the chief of the River Rouge plant was originally a pattern maker, and that the chief inspector of Ford's factories began life as a floor sweeper. This poster is being extensively placarded in the manufacturing centers of Northern France and in the industrial suburbs of Paris where Soviet influences are at work.

INDIA DEALERS MEET

AKRON, Nov. 21.—Seventy dealers attended the annual conference of Pacific Coast distributors of India tires, at the Whitcomb Hotel, San Francisco, October 19 and 20. J. M. Alderfer, president of India Tire & Rubber Company, presided at the meeting.

Florida Dealers Are Doing Phenomenal Fall Business

SANFORD, Fla., Nov. 21.—That automobile dealers in all parts of Florida are enjoying this fall an almost phenomenal volume of business in the sale of new cars is shown by the fact that more than 350 carloads of new cars have reached Sanford the past month, this city having been made the railroad destination for automotive equipment from the northern and eastern factories.

Serviced here, the cars are then dispatched under their own power to dealers and distributors throughout the state. The total value of cars reaching Sanford the past month has exceeded $650,000. Thousands of new cars are also being unloaded at Jacksonville and driven to points throughout the state, distributors at the important cities throughout Florida having selected these two cities as destination points due to the freight embargo which exists throughout the state, and would otherwise interfere seriously with receipt of new cars by dealers.

At present more than 100 carloads of automobiles are en route to Sanford, and it is estimated that the total will average about 100 carloads weekly during November, making the two months of October and November the largest by far in the state's history in the sale of new automobiles by Florida dealers and distributors.

Schebler Announces Price Reductions on Model S

INDIANAPOLIS, Nov. 21.—The Wheeler Schebler Carburetor Company of this city yesterday announced a heavy price reduction on nine package out-fits of the Model S Schebler carburetor, including out-fits for Models 7U and 7Z Continental motors; Lycoming, model C; Falls motor, model 6 cylinder; and out-fits for the Oakland 6 of 1916 to 22; and the six of the same make for the years 1917 to 1920; the Olds 4, 1921-1924, the Olds 6, 1917 to 1920, and the Rollin 4, 1924-1926.

The reductions follow:

Motor Car	Size in.	Old list	New list
Cont. 7U & 7Z	1	$28.50	$20.00
Lycoming-C	1	28.50	20.00
Oakland 6 '16-'22	1	26.50	21.50
Oakland 6, 1923	1¼	32.00	24.50
Olds 6, '17-'20	1	28.50	21.50
Olds, 4, '21-'24	1	28.50	21.50
Falls, 6 Cyl.	1	30.75	24.50
Rollin 4, 1924-'26	1	28.50	21.50

Milwaukee Sees New Parts Business Record This Fall

MILWAUKEE, Nov. 21.—Activity in the parts industry in this city is establishing a new high record for the fall season according to information gleaned from a survey of the situation locally. Manufacturers unite in reporting a marked improvement during September and October with employment greater than it has ever been at this period of the year.

Similar conditions are expected to obtain throughout the month of November and December and well into 1926. Prospects for next year are most encouraging.

It is expected however that a seasonal decline in retail sales of cars will bring a corresponding reduction in production among the car builders, and which will be reflected back to the car parts manufacturers. Accordingly September and October have probably established peak records in production and employment among the parts manufacturers for the current year.

Even with the seasonal decline, indications point to a better condition during November and December than in the corresponding months of last year.

Prices and Weights of Current Passenger Car Models

BACKED BY 35 YEARS OF "KNOW-HOW"

13 Years Before the First Ford—

Since 1890—35 years ago—Miller has been building *dependable* vehicles; adopting new ideas, but clinging always to the good old ideals—honest workmanship and sincere service.

Miller BUILT "Since 1890"

Popularity

There is just one test for any product, and that is—DEMAND.

The ripple of applause that greeted the pioneer Miller Bus has become a thundering endorsement that will not down.

Miller Busses dot the highways from coast to coast, and back again. And still the orders come piling in! Many from distant ports, too. For the news of Miller *proved performance* has spread half-a-world away. Two great factories are hard put to keep delivery schedules. What better proof of merit than this evidence of enduring prosperity!

Write today for detailed specifications, and some mighty interesting facts and figures.

The A. J. MILLER CO., BELLEFONTAINE, O.

WHY DEALERS WANT SOUND FINANCING

Time Sales of New Cars Should Be on Basis of One-Third Down and Balance in 12 Months, Without Retailer Endorsing Notes, Declares President of N. A. D. A. at Convention of Automobile Credit Bankers.

By C. E. GAMBILL

C. E. Gambill

President of the National Automobile Dealers' Association and Hupmobile distributor and dealer in Chicago.

AUTOMOBILE financing stands today at the cross roads. Upon its decision rests not alone the future of finance companies, but the future of the motor car industry itself.

An important question presents itself as we prepare to go into the year 1926. That question is "Shall automobile time payment be the handmaiden of legitimate credits, or shall it become credit perversion to make an extra dividend holiday?"

No one today questions the legitimate use of the major portion of the automobile time payment business. The people of this country have accepted it as a commonplace that automobile ownership, being a direct operating item in the daily life of mankind can rightfully be paid for out of current income.

In arriving at this point it must not be forgotten that we have been helped by a great national prosperity and that our general gains have been ample to absorb without serious shock, the minor losses and inconveniences caused by this re-adjustment. But the time has come to ask ourselves how much farther can we trust to general business conditions alone, and disregard those precautions which good business demands we take to preserve what we have and to get what in the future may rightfully be ours.

Right Basis Declared

Approximately a year ago the National Association of Finance Companies was formed here at Chicago and adopted as its basic principle, that the safe limit of automobile time payment financing was reached when sale was made for one-third down, and a deferred balance completely payable within 12 months for new passenger car business.

The original position of the National Association of Finance Companies might have been a mistake, in so far as it attempted to fix details, since we have seen during the past year a general disregard by some of the largest finance companies of its promise. Yet with the spirit of that declaration we are most heartily in agreement, for behind that utterance was the thought that there is a limit of safety beyond which credit terms cannot go, and this at least must be respected as sincere effort to map those limits.

Nearly two years ago the National Automobile Dealers Association stated the principle in virtually the same words as were adopted at the finance association meeting here a year ago. As an organization we have had no reason to retire from that position. There may be periods in the domestic situation when because of general prosperity modifications may be made of this policy, but we do not believe that the time has yet come to substitute a more liberal policy for the one then declared. We regard the keenest danger from a modification of this principle as coming not from the direct financial loss that might result from individual sales of automobiles, but as a wiping out of all sense of the importance of determinable credit limits.

This fear is supported by our own knowledge of human frailty. Attacking the barriers of good credit are the ambition, the greed and the recklessness of automobile manufacturers, dealers and credit bankers themselves.

Interpreted in concrete terms we have the following practical situation confronting us as we go into the new year:

Huge Production Facilities

Automobile manufacturing plants have been built up to a capacity of around 6,000,000 units a year. Even with the unprecedented business of 1925 this means that actual production was only about 70 per cent of productive capacity. There is a tremendous temptation to automobile manufacturers to keep plants operating at full capacity, because the nearer this can be done, the more certain is the manufacturers' control over his productive costs and the certainty of his profits.

Time payments have enabled manufacturers and dealers to flatten out some of the peaks of automobile sales, but it is extremely doubtful if any method can ever be devised by which an equal volume of sales can be made in all months or within quarterly periods.

Delivery movements based upon unsound time payments may be an impetus which seemingly will further flatten

out these peaks, but in our opinion such deliveries themselves are filled with more danger than the seasonal slackness of sales themselves. It is the repossession danger which is feared by every substantial dealer in the business today.

This fear is not based wholly upon imagination. The business still has within the experience of even its newcomers, the memory of practices in the truck industry from which that industry is just again beginning to lift its head. That was the effort to place motor trucks in the hands of people financially incapable of making a satisfactory down payment, and relying upon the earning capacity of the truck itself over a long period of months to pay the deferred balance. Usage to which the vehicle was put often depreciated it so severely that months before the final installment was due, the value of the vehicle was less than the unpaid equity with the result that operators left vehicles standing in vacant lots and upon the roadside when defaulting payments.

In the case of the truck, the buyer had the added incentive of making his own living from the ownership and use of the vehicle. With the passenger car there is not the necessity of possession as a tool of income that was entailed in truck ownership.

Methods of Financing

There are three methods used today in automobile financing, each of which has its own advantages and penalties. One is the time payment sale without recourse, another requires dealer endorsement upon all paper, and a third is non-recourse with a re-purchase agreement which in effect amounts to endorsement. Finance association records of a re-possession show a remarkable record of credit without loss, because the finance company either has had the dealer endorsement guaranteeing them against loss, or the facilities of dealer organization to repossess the automobile and resell it for the finance company account.

Even in those time payment transactions without recourse the finance company has universally "loaded" the rate in advance of experience to protect themselves against what experience alone can prove or disprove. When the experience has been favorable, it is true that these charges have been reduced, but there is a point beyond which even finance companies cannot go, based upon the law of averages and statistical experience. If in the era into which we are going, limits of safety are to be disregarded, this means that higher initial rates must be charged on non-recourse paper to protect the finance companies against bad deals, which again creates sales resistance for the dealer which may curtail his merchandising yield. If on the other hand safeguards are to be weakened and the dealer endorsement required, the finance companies are subjecting the dealer to a risk which they themselves are unwilling to take, and which may work disaster upon the dealer and force the finance companies to establish car merchandising and car repairing departments of their own. This to handle the vehicles that would have been handled by the dealer, except that he has been put out of business by universal bad practice.

In this connection we will say that we believe it is extremely unwise and a matter of poor business practice for either manufacturers or finance companies to insist upon dealer endorsement of finance company paper without also permitting the dealer to set up a reserve against the possibility of repossession and resale. If the dealer is to be a guarantor of the integrity of the buyer, then he should be allowed a guarantor's privilege of a reserve for such endorsement.

Automobile discounts to dealers today are practically the same that were fixed in the days when fully 95 per cent of automobile sales by the dealer were for cash. Since these discounts were fixed, conditions radically different from those of the early days have crept into automobile merchandising and the dealer's margin between gross discount and net profit is today a very narrow one. That original discount never contemplated the time payment business as it now exists, and certainly no provision was made in the original discount to cover the item of guarantee of time paper.

Indeed, careful reflection would indicate that the most desirable handling of this paper from the dealer's standpoint is for finance company acceptance of it without endorsement from the dealer at all. Dealers are constantly contending with the commercial bankers for adequate credit requirements and one of the most serious of these handicaps is the view the banker takes toward the contingent liability of the dealers' endorsed paper. Elimination of endorsed paper, we feel would put the banker in a frame of mind where he would grant larger sums of credit for merchandise stocks than he is now willing to extend.

This attitude of the bankers toward contingent liabilities has been one of the prime factors driving dealers to finance companies for floor plan financing, a function which in our opinion, should never be undertaken except from dealer capital or from bank loans.

Dealer-Banker Relations

This question of the dealer's relation with his banker for years has been a ticklish one because of the marked difference between the character of the automobile dealer loans and the character of the run-of-the-bank loans. The banker in most instances still tries to measure the automobile dealer's credit requirements by the same standard of net worth that he applies to the jeweler, the hardware merchant, or the dry-goods man without grasping the important bearing that merchandise turnover has upon credit extension. The jeweler with a capitalization of $25,000 may be satisfied with a credit line of $10,000 while in the automobile business, this much credit is required by a dealer who may not rate more than $7,000 as is indeed the average in 75 per cent of the towns of the country where 65 per cent of the automobiles are sold today.

But the jeweler is turning his stocks but once in 15 months, and the hardware man and the dry goods man likewise, while the average automobile turnover is 6.6 times per year. It is apparent to all of us in the automobile business that the commercial banker must take into consideration this marked difference in turnover in favor of the automobile merchant as against other merchants, when establishing credit lines.

But if automobile dealer endorsement is to be required on customer paper, then the dealer should be permitted to make a charge, say of two per cent, for making out the finance papers, looking up the references, handling the insurance documents and last but not least but most importantly, guaranteeing the payment of the deferred balance in case of default by the customer.

The automobile dealer is staking his business future

MOTOR AGE here presents an address by C. E. Gambill, president of the National Automobile Dealers' Association, before the National Association of Finance Companies in Chicago, Nov. 16.

Mr. Gambill offers not only some highly interesting observations on the subject of automobile financing, but he makes a statement of the N. A. D. A.'s position on various phases of this important question.

NATIONAL SHOWS ISSUE
And Specification Number
of
MOTOR AGE

Will be published January 7, 1926, and will contain descriptions of brand new 1926 models and about 40 pages of up-to-date specifications of passenger cars, trucks, taxicabs, tractors and motorcycles, and many other special editorial features.

upon a relationship which legally can be terminated anywhere within from five to thirty days. His obligations may be assumed for a period of as high as five years (for example a building in which to operate) leaving him high and dry if a franchise is cancelled with pending liabilities without sources of income adequate to meet them.

Danger of Sales Pressure

While the bulk of manufacturers no longer force unwanted automobiles upon dealers, there is always the temptation among manufacturers to put on sales pressure to the utmost limit. While the factory is learning the true condition in the field, the dealer may be suffering deadly financial pains. Is it any wonder then that the dealer helps the finance company to tear down the bars that provide safety to his business *future*, if he can but secure some peace of mind for his business *present?*

The dealer in this dilemma may readily yield to the suggestion of a small down payment and longer terms in order to move automobiles from accummulating stocks, but this is a hypodermic that helps over the present with a possible dreadful toll of the future.

Under the present practice of trading automobiles, it is doubtful if the great majority of owners of automobiles in the price class below $1,000 keep a new automobile longer than two years. What is to be the term limit so far as trade-ins are concerned? Are time payments to be extended to such a limit that the buyer with his used car is back in the market for a new automobile before all liens outstanding against the car, offered as a down payment, have been paid?

On a twelve months basis, most automobile dealers feel reasonably sure that the majority of their sales will be in such condition that if there was a change in the domestic financial situation, repossession could be made with minimum of loss to the dealer as well as to the finance company. But who will be so hardy as to proclaim that he can forecast the exact business future of the nation for the next 24 months or even the next 18?

Another point which the finance company must remember, is that it stands as a trustee for the automobile dealer as in the matter of an adequate down payment.

What constitutes the down payment in the average transaction of today? Generally a used automobile.

The Used Car Danger

To illustrate your responsibility suppose we consider a $1,500 new car deal with a $500 trade-in. The finance company in this transaction is called upon to finance a deferred balance of $1,000 on the new car. But this isn't all of the picture. A few weeks later the finance company is advised by the dealer that he has a buyer for the used automobile and that he wants 60 per cent of the resale price financed. That means $300 more for the used car. The finance company has financed $1,300 of the total with two automobiles (both used cars now) as security and with two possibilities of repossession as against one.

It is important therefore that finance companies, to protect themselves, should insist upon proper operation of the used car department by the dealer at all times if he is to be a desirable finance customer. There is no way by which the dealer in the selling transaction can correct the mistakes made in the buying transtaction. The finance company's peril begins the day the dealer buys at an excessive price, and not the day he sells. If the dealer overallows when buying, it is a certainty that he will attempt to over-price when selling and used cars sold too high come back when the customer realizes that he still owes on the car more than it is worth.

We believe that the finance companies must recognize in addition to the individual feature involved in a financing there must be a selection of automobile dealer risks for credit, and that time sale financing just as open credit or bank ratings, must be provided only for those who have business judgment and ability to run their business upon business lines, as well as an inclination to make good their promises.

It is no longer possible for finance companies to plead ignorance of requirements of dealer responsibility. The National Automobile Dealers' Association has shown finance companies and bankers how automobile dealers can be judged worthy of credit. In its great work on budget and chart control of dealer income and expenses, of accounting systems for dealer records, of comparative profit and loss statements, the National Automobile Dealers' Association has provided a yardstick for every bank and finance company to measure every dealer requiring credit facilities. We are distributing model set-ups, which finance companies can check against the operations of the dealers to whom they are extending finance facilities, and unless there is at least a willingness and a spirit to work toward the aims set out in those budgets, we believe finance companies are treading upon dangerous ground in extending credit to dealers for their time financing.

N. A. D. A. Recommendations

In conclusion may we summarize the foregoing recommendations of the National Automobile Dealers' Association as follows:

1. We recommend that all finance companies adhere to the previously laid down rule of requiring a one-third down payment and completion of the deal within twelve months on new car financing.

2. We recommend to commercial bankers that they revise their standards of commercial credit to allow greater credit to automobile dealers with fast turning lines of merchandise than to other merchants whose lines move more slowly. Turnover should be given greater stress in determining ratios of credit to net-worth.

3. We recommend absolute elimination of all dealer endorsement of customer paper as a means of removing a legal contingent liability which is not understood by the commercial banker and which shortens the actual credit granted by banks to dealers.

4. We recommend that where automobile dealer endorsement is required, despite our previous recommendation upon this point, that the dealer be allowed to charge a sum sufficient to set up an adequate reserve to cover himself for the risk he is guaranteeing.

5. We recommend that finance companies and bankers give greater attention to the matter of dealer accounting, requiring from dealers whose accounts they handle, monthly profit and loss statements, similar in form to the standard profit and loss form for dealers devised by the National Automobile Dealers' Association.

(The foregoing is the text of an address delivered by C. E. Gambill, president of the National Automobile Dealers' Association, at the second annual convention of the National Association of Finance Companies at Chicago, Nov. 16, 1925.)

The retail automotive dealer is more than a merchant. The intricate mechanical nature of the motor vehicle, for which he sells supplies, equipment and accessories, is such that the owner relies upon the dealer to give sound advice as to the adaptability of certain articles to fulfill the owner's individual requirements. The dealer who meets this situation intelligently and supplies his customers with products that will give unquestioned satisfaction will build a profitable business.

As the Editor Sees the Automobile Business

Dealer's Influence Over Car Owner's Purchases Is Great Business Asset

BY SAM SHELTON

PROBABLY in no other business does the dealer exercise so powerful an influence over the sale of merchandise to his customers as in the automobile business. In this business the dealer is a real authority looked upon by the car owner as an adviser capable of selecting and recommending the best accessories, supplies and equipment for the customer's individual needs.

The reason is found in the way the consumer uses automotive merchandise. This merchandise may be generally described by three classifications: accessories, supplies and equipment. Merchandise in all three classifications is used in connection with the operation of the motor vehicle. It is either placed within the vehicle or attached thereto and performs some definite function in connection with its operation.

Much of it has to be installed by some sort of mechanical operation which the car owner himself is not equipped to perform. Some of it is consumed with regularity in the process of using the vehicle, and the manner and rate of consumption vitally affect the satisfactory operation of the vehicle.

It is only natural then that the questions of size, fit, adjustment, adaptability to a particular car, and the like, should cause the car owner to rely upon the dealer's experience and judgment in the selection of this sort of merchandise. And the dealer has a responsibility to perform in seeing that the car owner is properly advised so that the car owner gets the satisfaction that should come with the use of the merchadise the dealer sells.

The dealer's influence in the sale of automotive merchandise is strikingly shown by a survey recently made by the Chilton Class Journal Co., publishers of MOTOR AGE and other automotive business papers.

Reports from nearly 2000 dealers showed conclusively that a great majority of car owners leave the selection of accessories and replacement parts to the dealer.

In connection with accessories the questions were asked:

What percentage accept your suggestions?

What percentage demand the products of a certain manufacturer and will accept no other?

Complete answers to these questions were received from 1763 dealers and the summary of their replies was as follows:

The dealer's suggestions were accepted by 75 to 100 per cent of the customers of 1024 of these dealers.

The dealer's suggestions were accepted by 50 to 74 per cent of the customers of 502 other dealers.

The dealer's suggestions were accepted by 25 to 49 per cent of the customers of 142 other dealers.

And in only 95 cases did the dealers report that less than 25 per cent of their customers accepted the dealer's suggestions.

Analysis of these reports shows that in 86 per cent of the cases more than half of the car owner customers relied upon the suggestions of the dealer in the selection of accessories.

Conditions very similar were revealed in the survey of replacement parts sales to car owners. Replies were received on this subject from 1,738 dealers.

1136 stated that from 75 to 100 per cent of the customers leave the selection of parts to the dealer's judgment.

293 stated that from 50 to 74 per cent of their customers leave the selection of parts to the dealer's judgment.

150 stated that from 25 to 49 per cent leave the selection of parts to the dealer's judgment.

159 stated that from one to 25 per cent of their customers leave the selection of parts to the dealer's judgment.

Analysis of these reports shows that in 82 per cent of the cases more than half of the car owner customers leave the selection of parts to the judgment of the retailer.

The majority of car owners recognize that the motor vehicle is an intricate mechanical product and that best results are obtained from it only when all parts, accessories and equipment are properly co-ordinated and adpated to the vehicle. Naturally this calls for the advice of an expert and the influence of this advice extends not only to the selection of size, type and quality but even to the choice of brands.

The dealer who accepts this responsibility and properly qualifies himself to give sound advice to his customers in the selection of their automotive accessories, supplies and equipment naturally will win the confidence of more and more car owners and will build up a profitable business in proportion.

As Nash Sees the Small Town Dealer

Manufacturer Attaches Great Importance to Solution of This Merchant's Problems; Many Can Improve Condition 50 Per Cent by Cleaning Up, He Says

By DAVID BEECROFT

(An interview with the President of Nash Motors Company)

ENVIRONMENT has always been a determining factor in shaping the habits of men, and it is an equally powerful influence in determining the principles and policies of companies. Thus, when the man virtually in control of a company is permeated with a familiarity not only of a department of his factory, but also has studied the distributor and dealer field so as to make himself part and parcel of it, any suggestions for improvement come with a double meaning.

This character of environment, plus a life-long business career in manufacturing and merchandising, enables Charles W. Nash to place his finger on perhaps one of the most important problems facing the motor industry today, which he expresses thus:

"I do not believe there is a single automobile manufacturer who is close enough to his dealers, not merely the big distributors in a few dozen of our largest cities, but to dealers in places of 10,000 population and under, as well.

"The dealer who sells twelve cars per year has his problems that are just as great in his territory as are the problems of the dealer who sells a hundred cars, or five hundred, in his larger territory."

This constructive criticism carries added importance today by virtue of the industry producing at a greater production rate than at any other time in its history, and with the possibility of 1926 setting a new record for production. The small dealer is constantly playing an increasing part in the retailing of this output, which makes his position one of increasing importance to the manufacturer.

Analyzing further the case of the little dealer, who has to dispose of a dozen cars a year, in a sparse territory, where there is constantly increasing competition, both in the sale of new and used cars, Mr. Nash fills in the picture further:

"Nearly every one of these little dealers has to borrow money to finance the cars on his floor, and he has his concern with interest, insurance, etc.

"Go to the place of these small dealers: Too often the new cars are in a dirty, dingy sales room, or in the corner of a garage.

"On the walls are posters of different makes of cars or other products sold during the previous year. The new cars are dusty, sometimes dirty. The repair tools are scattered over the floor. Disorder is too general."

Only a manufacturer who has himself traveled over the country from east to west and north to south, not once but every year, could possibly point with such accuracy to a situation that too often applies to the small town dealer. Mr. Nash is not describing the dealer selling any one make of car, but rather the small town dealer selling nearly every make.

While Mr. Nash, in word-painting his picture of the small town dealer, was giving an accurate cross-section of the situation, he was at the same time disclosing one of his own great characteristics as the head of the Nash Motor Company, because no person could speak with such accuracy and authority unless he had seen with his own eyes, felt with his own hands, and experienced by contact that of which he spoke.

Mr. Nash had.

Very few manufacturers have traveled so extensively each year among their dealer-organizations; visiting not merely the big distributors but the small dealers as well.. He lives not only in the midst of his factory activities, but also in the atmosphere of his distributors. Once a year he visits all of his distributors and on such occasions the associated dealers are called in for a sales talk. But Mr. Nash does not stop here—no, he makes his small town circuits, visiting the small town dealers and looking into the small town situation first-hand.

From CHARLES W. NASH

"The dealer who sells 12 cars per year has his problems that are just as great in his territory as are the problems of the dealer who sells a hundred cars, or 500, in his larger territory.

"Go to the place of these small dealers: Too often the new cars are in a dirty, dingy sales room, or in a corner of a garage. The new cars are dusty, sometimes dirty. The repair tools are scattered over the floor. Disorder is too general.

"The small dealer can improve his condition 50 per cent without spending a cent. He can clean up. Cleanliness is one of the first laws of success!"

"THE FIRST IMPRESSIONS OF THE CUSTOMER ARE LASTING and you must have a clean place of business."

Visits in Dealers' Homes

He not only takes a keen interest but an unusually keen pleasure in this. Recently, while in San Francisco with the Nash distributor, he took a day off to make a 150-mile circuit of the small town and cross-road dealer. Not content, merely with going to the dealers, he made a round of visits to their homes, meeting their families and having an opportunity of studying and interpreting human nature in its relation to business.

Another incident serves to emphasize further how well qualified Mr. Nash is to speak on this subject of the small town dealer. The occasion was a dinner of the Nevada dealers, where the attendance was such that two rooms were needed for the dinner. After eating the first course in the main dining room, Mr. Nash joined the dealers in the auxiliary room, and the comment of one cross-road dealer epitomized the value of such an act: "You're the same as the rest of us." Coming from one of these dealers, this was a classic description of the type of executive who is as close to the small town dealer as he should be.

Mr. Nash is not only a creature of the great out-doors

nd familiar with the face of the country, but he knows he hearts of the people and it is this fact that places a ouble significance on his criticism that the average manuacturer is not as close to his dealers as he should be.

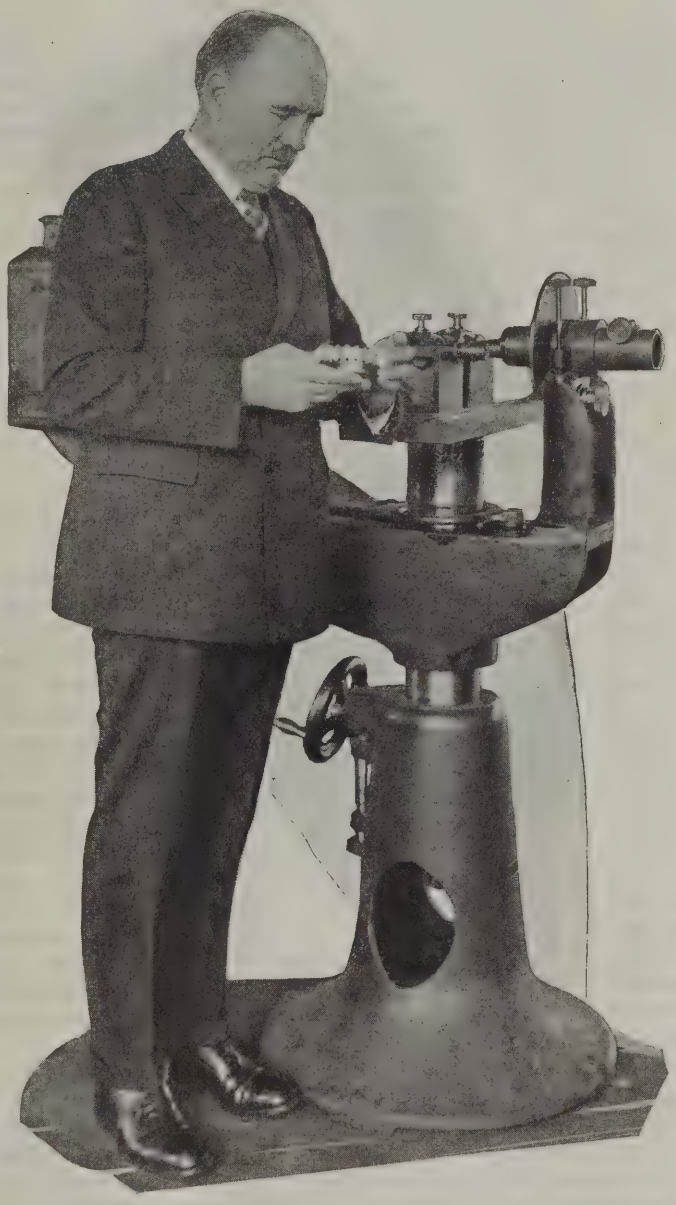
He goes further than merely offering a criticism by iving some constructive suggestions for the small town lealer:

"The small dealer," he goes on to say, "has more serious roblems right at hand today than have faced him heretofore, nd one of the first things he ıust do is to educate himself o as to do business on a igher plane." Further:

"The small dealer can imrove his condition 50 per cent ithout spending a cent. He an clean up. Cleanliness is ne of the first laws of sucess. He can set his sales pace, or salesroom, in order. Ie can keep his new cars lean. He can put his repair hop in order. With this done, ıe begins to set his own menality in business order."

The dealer who has never leaned up a dirty mess has nissed a great thrill. The 'rench have a saying that 'Every day has its morng," which applied to the ɔusiness day, means that ıature starts out fresh and lean and renewed each norning of the year—so ıhould the business man.

Mr. Nash goes further ınd hits at one of the greatst factors in influencing ıales, whether of automoɔiles, tires, boots and shoes, women's wear or groceries:



"First impressions are lasting."

These four words are in themselves a business sermon. They constitute a text that could be preached on every business day of the year.

"First impressions are lasting"

What does it mean? It is so simple that an explanation is not necessary, and yet it too often happens that truths so apparent are hardest to analyze. They contain volumes where only sentences are extracted. This is not a new impression born of automotive marketing, but is as old as the hills. Beside possessing age, it posses universal application. It is one of the fundamental laws of psychology—the science of the workings of the human mind. This is what makes it so important. Being an accepted law of psychology, you cannot deny it. It does not permit of dispute. It is as unalterable as the laws of the Medes and Persians. This is because it truthfully expresses the workings of the human mind and, as the mind is master of the man, it becomes a matter of first importance to make sure that the first impressions of the customer entering your place of business are favorable.

Mr. Nash analyzes this further:

Charles W. Nash

"The first impressions of the customer are lasting, and you must have a clean place of business. Too often this is not the case. The average small town dealer prefers to take a stogie and sit down on an old chair, rather than take a broom and clean up."

He has further suggestions as to how this dealer can improve himself 50 per cent without spending much money:

"This dealer must study psychology—not the text book—but get some of the first principles of interpreting human beings. He can make his greatest progress by such personal improvement, and in this I do not speak of the small town dealer, but the dealer in places of 15,000, and perhaps larger."

But while criticizing and suggesting methods of improvement, Mr. Nash has the latch-string of this human heart hanging out for these dealers. He knows their good impulses, as well as their business short-comings, and so this year, as last, this Nash principle of assisting dealers, comes to the front:

Says Don't Load Up Now

The Nash Company is now urging—get it—*urging*—these dealers not to load up with cars in November and December, realizing that they have their problems of interest, insurance, etc., and that their profits are small; but the reminding them that the dealer who does not stock up in January and February is not a good merchant and will generally find himself short of cars when the profitable selling season comes along.

Mr. Nash has a word to say with regard to the large distributor, some of whom have, because of their great success in the past few years, graduated into the coupon clipper classification. Here it is:

"If the distributor is not doing a good percentage of car-retailing, he is not close enough to selling problems. He may be doing an intensive merchandising work, but he can best appreciate the problems of his associated dealers when he has the responsibilities of such an association on his hands. The importance of the small dealer is such that the best assistance of the distributor is needed today as never before."

Mr. Nash is, as he always has been, an apostle of education; not merely the better education of the factory sales organization on the product, but there is a responsibility on the factory to educate its distributors and dealers. He regrets that there are so many dealers today not

Safety Zone of Automobile Financing

For Years Manufacturers Have Maintained Their Tenet of "Sight Draft Against Bill of Lading." Why Should Not the Finance Interests Hold to The Principle of "One-Third Down and Twelve Months to Pay?"

BY CHARLES C. HANCH

IN nearly all lines of business there is an established "yard stick" in some form to govern terms of payment for services or merchandise. Price agreements among competitors are unlawful, but neither the public nor law enforcing officials object to terms of payment arrived at by common consent or understanding. One of the most conservative and arbitrary "yard sticks" that has ever been used extensively in any industry, is the one used generally by automobile manufacturers. Their "yard stick" is Sight Draft Against Bill of Lading, in other words, cash in advance of delivery of goods. This "yard stick" has been adhered to tenaciously from the very beginning of the automobile industry.

In all other respects, except patent co-operation, they have engaged in the keenest kind of competition. They have omitted no conceivable or known competitive maneuver to confound the other fellow. They have permanently announced new models just as the other fellow was getting under way. New models have been based upon changes so slight that only an advertising manager could find them. Radical changes have been made with the pretense that no new or yearly models were ever brought out. Slow-moving lines have been repainted, truck racks attached, and sold for sport models. Prices have been drastically cut without provocation just when the market appeared to be stabilized. Revolutionary improvements have been announced out of a clear sky. Is it any wonder that hundreds of manufacturers have faded out of the picture?

Charles C. Hanch
General Manager National Association of Finance Companies.

Notwithstanding this battle among giants, no manufacturer has ever abandoned the good old "yard stick," Sight Draft Against Bill of Lading. It is a fortunate thing for automobile finance companies that their methods of competition are not so numerous as in the manufacturing branch of the business. For a number of years, automobile finance companies had a fairly well established "yard stick." This "yard stick" was one-third down, balance in twelve equal monthly payments on new cars, and 40 per cent to 50 per cent with 10 to 12 equal monthly payments on used cars.

Under application of this standard "yard stick" the volumes of financing of automobile retail sales grew from a comparatively small sum in 1915 to upwards of $2,000,000,000 during the last year. This, and this alone, made possible the present great volume of automobile production. Automobile time sales paper under standard terms established a reputation for soundness second to none.

For a number of years the average amount of note at time of purchase has been steadily declining. At the beginning of 1924, the average note on new cars was $587, and the average note on used cars was $303.

An extensive survey completed during 1924 showed a loss ratio of .18 to 1 percent, slightly less than one-fifth of 1 per cent on aggregated new and used car paper, amounting to $193,500,000, both with and without endorsement of the dealer. It should be borne in mind that this survey does not show the loss sustained by the dealer. This survey also showed the ratio of used car repossessions to new car repossessions as two to one.

Early in 1925 another survey was made to show the loss ratio on used car paper, both with and without endorsement by the dealer. This survey showed a loss ratio of a little less than one-sixth of one per cent (.157 of 1 per cent), on used car paper with guaranty and a loss ratio of a little less than three-fourths of one per cent (.735 of 1 per cent), on used car paper with guaranty. In this survey 95 per cent of the paper was with guaranty and 5 per cent of the paper was without guaranty.

During the past year, due to competition among themselves and influence by certain manufacturers, there has been a tendency, particularly in a few localities, to depart from the usual or standard terms. In view of the steadfast Sight Draft Against Bill of lading of the manufacturers, the recent position of some manufacturers in advocating smaller down payments and longer time, is anomalous to say the least.

Comprehensive Survey Made

In order to determine the actual effect of various departures from the standard terms, a very comprehensive survey has just been completed. This survey is based upon reports from four times as many finance companies as ever before participated in a survey of this character. The average note at time of purchase is now $528 on new cars and $280 on used cars. Inasmuch as the maturity period has a direct effect upon the unit loss of repossessed cars with any given down payment, the factor of maturity was used to show different unit losses.

The experience average of loss per repossessed car which had 12 equal monthly payments is $50. It should be remembered that this average is based on one year's record of all types of cars and the experience of small, medium and large finance companies in every section of the country, with a preponderance of smaller companies.

The experience average of loss per repossessed car of all types and in all localities which had 16 to 18 monthly payments is $78. The experience average loss per repossessed car which had a balloon note or more than 18

equal monthly payments, is $220. The average loss on repossessed cars with 16 to 18 monthly payments is nearly 57 per cent (56.67 per cent) higher than on repossessed cars with 12 monthly payments. In other words, from a unit loss standpoint paper with 16 to 18 monthly payments is 57 per cent more hazardous than paper with 12 monthly payments. The average loss on repossessed cars with balloon notes, or more than 18 monthly payments, is 341 per cent higher than on cars with 12 monthly payments.

The average losses shown above may not be in strict accord with recent experience, however, they are relative and may be taken as correctly showing the difference in hazard of paper with different maximum maturities.

The amount of the down payment is the most important item in connection with the sale of any article on time. While the down payment has a bearing on the unit loss, its most striking effect is on the repossession ratio. The percentage of repossessions of new cars with one-third down payment is 1.75. The percentage of repossession of new cars with one-fourth down payment is 3.8, and the percentage of repossessions of new cars with less than one-fourth down payment is 11. The repossession ratio with one-fourth down payment is 121.5 per cent higher than the ratio with one-third down payment, and the ratio with a down payment less than one-fourth is 537 per cent higher than the ratio with one-third down payment.

The percentage of repossessions of used cars with a 40 per cent down payment is 3 per cent. The percentage of repossessions of used cars with a down payment less than 37 per cent is 6 1/6 per cent.

A calculation of the loss ratios on total volume of business, based upon the above factors of the last survey is very illuminating. For example, the loss ratio on new car paper, one-third down, 12 months, is .163 per cent; one-third down, 16 to 18 months is .254 per cent; one-third down, more than 18 months is .716 per cent; one-fourth down, 12 months, is .36 per cent; one-fourth down, 16 to 18 months, is .563 per cent; one-fourth down, more than 18 months, is 1.587 per cent; less than one-fourth down, 12 months, is 1.014 per cent; less than one-fourth down, 16 to 18 months, is 1.625 per cent; less than one-fourth down, more than 18 months, is 4.583 per cent.

The loss ratio on used car paper with 40 per cent down, 12 months, is .536 per cent; 40 per cent down, with 16 to 18 months, is .839 per cent; 40 per cent with more than 18 months, is 2.35 per cent; less than 37 per cent down, 12 months, 1.1 per cent; less than 37 per cent down, 16 to 18 months, 1.716 per cent; less than 37 per cent down, more than 18 months, 4.84 per cent.

Loss Ratios

There are differences of opinion as to what constitutes reasonable loss ratios, but in view of usual reserves used by finance companies and the present tendency towards lower financing rates, it seems that no combination of down payment and maturity should be used which produces a loss ratio on new car paper in excess of one-half to 1 per cent, and no combination of down payment and maturity should be used which produces a loss ratio on used car paper in excess of three-fourths to 1 per cent.

In this connection it will be of interest to know that used car paper is now slightly more than 31 per cent in dollars and cents of the total retail paper handled by companies which handle both classes of paper. This percentage should be watched and reduced if possible. Fifty per cent of all companies reporting, require endorsement by the dealer on 100 per cent of the used car paper handled. Forty-four per cent of the companies require endorsement on part of the used car paper, that is to say, 94 per cent of the reporting companies require partial or full endorsement of used car paper. These percentages are only indicative of the general practice of finance companies and do not represent the true volume of endorsed used car paper. Some of the largest purchasers of used car paper do not require endorsement.

Regardless of whether the dealer does or does not, endorse the paper, so far as the retail customer is concerned, there are cetrtain hazards which must be assumed by some one.

Assuming that 12 equal monthly payment and one-third down on new cars and 40 per cent down on used cars, constitutes standard terms, it will be interesting to know the extent of special paper now in existence. Paper calling for more than 12 equal monthly payments is now 18 1/3 per cent of total paper handled and paper with a down payment of 25 per cent or less on new cars, and 35 per cent or less on used cars is 19 1/3 per cent of total paper handled handled. This does not imply that more than 37 per cent of all paper is special. In most cases where paper is special in one respect it is also special in the other particular. In any event, there is too much special and unusual paper being handled for the good of the automobile financing business. If the situation is firmly taken in hand by representative finance companies, no very serious results should ensue. Special paper should not exceed 15 per cent of the paper handled.

Must Pay Fair Rates

No retail customer can reasonably object to paying a rate which covers actual cost of getting the business; cost of credit investigation; cost of collection; insurance premium; proper reserve for actual losses and a reasonable net profit. If this theory is correct finance companies should not employ two sets of rates that the user should pay for the same service and hazards.

It is up to finance companies generally to make their own "yard stick." No one else will make a "yard stick" for them. No one will enforce the proper application of a "yard stick" save the inexorable operation of economic law which ultimately and inevitably punishes flagrant and persistent violators of its rules. If finance companies do not make a "yard stick" of their own and voluntarily adhere to it, there will be no Safety Zone in the automobile financing business; not even a silent policeman will guide the traffic.

Charles C. Hanch, the author of the accompanying article, speaks with the authority of one long connected with the manufacturing, selling and financing of automobiles. It was largely through his efforts that the cross-licensing agreement was reached, which saved the industry thousands of dollars.

Mr. Hanch is at present general manager of the National Association of Finance Companies, and "The Safety Zone of Automobile Financing" was incorporated in his report at the financial conference recently held in Chicago under the auspices of that association.

Mr. Hanch was one of the organizers and directors of the Automobile Board of Trade, which later became the N. A. C. C. During the war he was chief of the automotive products section of the War Industries Board.

Jewett Brings Out Smaller Six Cylinder Car Listing at $995

Interior view of the front of the two-door sedan showing location of coincidental lock on the steering post column. The one piece windshield should be noticed.

Standard Sedan Becomes Lowest Priced Vehicle of Its Type Embodying Hydraulic Four-Wheel Brakes as Regular Equipment. Wheelbase Is 109 In.

By LESLIE S. GILLETTE

A NEW light six automobile in the form of a smaller, lower priced edition of the present Jewett has been introduced by the Paige Detroit Motor Car Co. One body style, a steel-two-door sedan offered either with standard or de luxe equipment will be the first model available on the New-Day-Jewett as the latest addition to the line is known. It is planned to have a touring car and another closed model ready for presentation at the shows.

Listing at $995, the standard sedan becomes the lowest priced car of its type embodying hydraulic four wheel brakes as regular equipment. In the de luxe style, the price of the special sedan is $1,095. The engine is of four bearing L-head type having a 2¾ by 4¾ in. bore and stroke and developing in excess of 40 brake h. p. Remy electrical equipment and a Johnson carburetor are fitted. A single dry plate clutch and three speed gearset in unit with the engine are connected with the semi-floating rear axle by two metal universal joints and a tubular propellor shaft. A standard gear ratio of 4.90 together with 27 by 4.75 in. balloon tires allows a maximum speed of nearly 60 m.p. h. The wheelbase is given as 109 in.

While the general layout of the new car has not departed from standard practices and also follows closely the design and appearance of the larger Jewett, it was develoopel to be adaptable to present day driving conditions, specially in regards to high performance in congested city traffic. On the road the car demonstrated its easy handling and liberal reserve of power, the "get-away" or rate of acceleration and the effective breaking were found to be unusual for a car of this type.

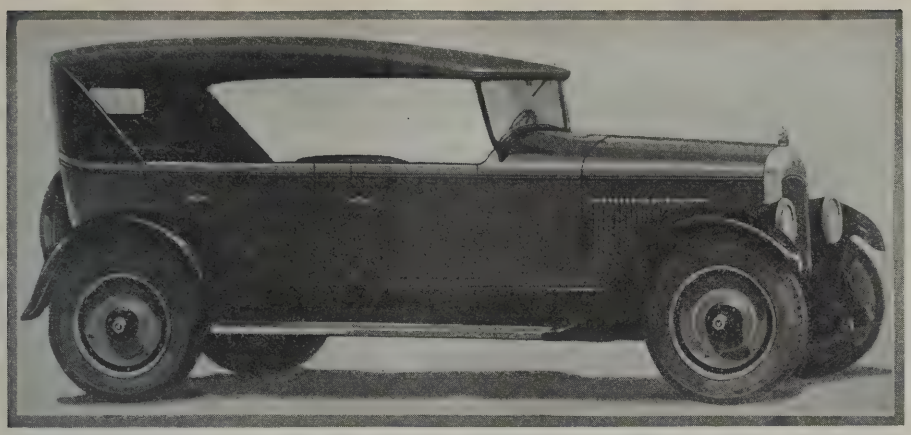
By the use of steel bodies, products of the Murray Body Corp., the cross dimensions of the corner pillars, door posts and window frames have been considerably reduced, permitting of a wider and alsomst unobstructed range of vision. This type of construction together with a shorter overall length of the engine, allows an unusually roomy body to be fitted on the new chassis. While there is a difference of 6 in. between the wheelbase of the New Day Jewett and its larger brothers, it is surprising to note that the interior dimensions of the two-door sedans on both chassis are identical in every respect.

An unusual amount of development work has been undertaken by the Paige engineers in perfecting the new model, a fleet of which have been undergoing severe road-testing for several months before being put into quantity production. Throughout the entire factory extensive changes have been made to expedite the assembly of the New Day Jewetts and production of the new member of the family will run the highest in Paige history, it is said. In addition, the larger Jewett and the Paige car will continue to be part of the dealer's line.

The engine is specially built for the new car by Continental Motors Corp. With an N. A. C. C. horsepower rating of 18.15, a piston displacement of 169 cu. in., the new six develops 40 b.h.p. at 2,400 r.p.m. while the maximum torque is 99 ft. lbs. at 800 r.p.m

Powerplant suspension is at four points with the method of carrying the rear of the engine departing from usual custom. By moving the flywheel housing to the rear approximately 1 in. it has been possible to run a channel cross member from one side of the frame to the other so that it passes under the engine between the housing and the oil pan. Two lugs are cast on the housing through which hold-down bolts pass securing the rear of the engine to the cross member. On the forward end two feet are formed on the rear of the timing chain housing, these feet resting on pressed steel brackets riveted to the frame.

Additional Stiffness



The cylinder block is grey iron with the bores finished by grinding and honing and the crankcase are cast integral. The head of course is detachable. The casting is well ribbed and by extending it 2½ in. below the center line great rigidity has been obtained. Besides providing more effective cooling, the effect of extending the water jackets down to the top of the case provides additional stiffness. A sheet metal header extending the entire length of the block allows complete inspection and cleaning of the water passages and is precaution against damage to the casting through freezing. Both the oil pan and the timing chain cover are steel stampings.

Weighing 43 to 45 lbs., the static and dynamic balanced crankshaft is of extra massive construction for an engine of this size being carried in four poured babbitt bearings of 2⅛ in. diameter and of the following lengths; front 1¼, both centers 1 5/16, rear 1 3/16 in. Connecting rods of "I" section with a center to center length of 9 in. have a bearing diameter at the lower end of 2 in. with a length of 1⅛ in. With cap, bushings and clamp bolt, the rod weighs 28¼ oz. In addition to locking, the 47/64 in. diameter pin in the cast iron piston with a tapered set-screw, snap rings are inserted in grooves at either end of the piston pin. The weight of the piston plain is 18 oz. while its length is 3⅜ in. Three rings located above the pin and of ⅛ in. width are employed, the lowest one being of special oil control type, requiring ten relief holes drilled in the groove.

Front end drive is by a 1¼ in. wide Link-Belt chain, having 89 links of ⅜ in. pitch and manually adjusted by swinging the generator mounting. The four bearing camshaft has its three rear bearings carried in grey iron bearings while the front bearing is babbitt, bronze backed to withstand the greater stress should the chain be set too tightly. Dimensions of the bearings in inches starting from the front are as follows:

Diameter	1⅞	1 13/16	1¾	1 11/16
Length	1⅜	1/2	1/2	1¾

Cams are ½ in. wide providing a .312 in. lift for the tappets.

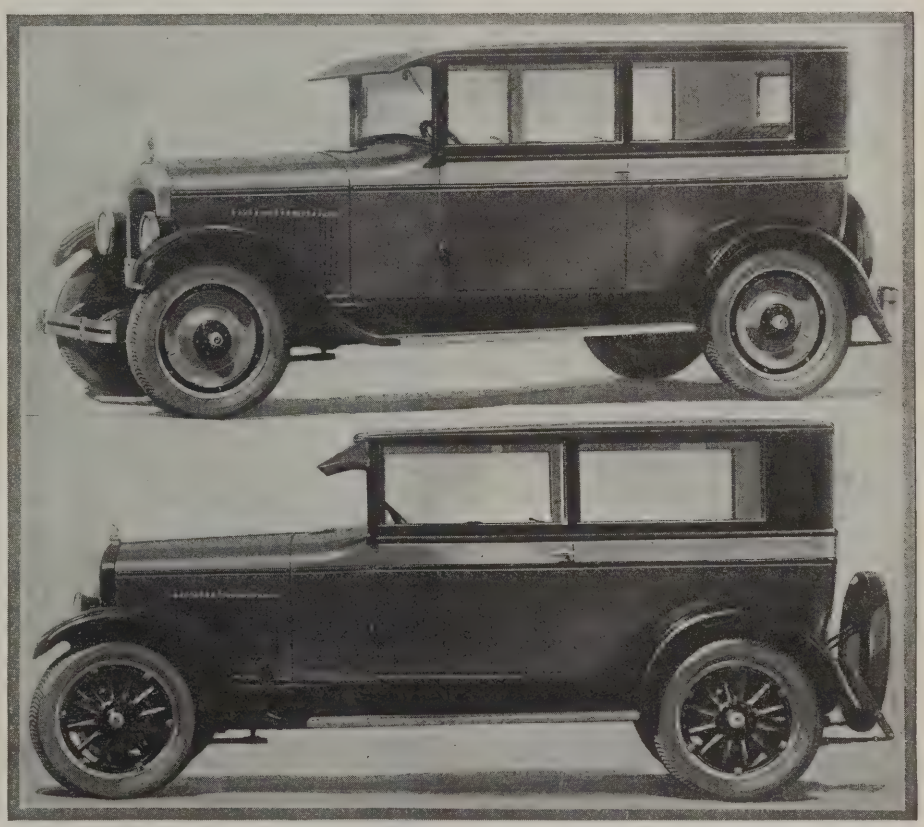
Open touring model on the new Jewett chassis. This model will not be exhibited until Show time and the price has not yet been decided. The permanent top and one-piece windshield should be noted

Both valves are inclined on an angle similar to those on the larger Jewett, and have nickel steel heads welded to carbon steel stems, the latter being ⅜ in. diameter. On the exhaust, the clear diameter of the valve throat is 1¼ in. while for the intake it is 1⅜ in. By removing two large cover plates the entire mechanism is accessible. The valve lifters are of the convex type and carried in three cast iron cages that are easily replaceable. Turning of the lifter is prevented by a plunger held through a spring pressing against its flat side.

In line with latest developments the fan and water pump are combined in a single detachable unit mounted on the front of the cylinder block and driven from a pulley on the front of the crankshaft by a "Vee" belt. Adjustment for the belt wear is compensated for in the movable flange on the fan pulley. The shaft carrying the 3 in. rotor and the four bladed 16 in. diameter fan is supported in a New Departure double row ball bearing at the forward end while a plain phosphor bronze bushing is employed at the rear. The radiator is of the honeycomb cellular type similar in design and appearance to the larger car. Standard equipment includes a baked enamel shell while on the de luxe model it is nickel plated.

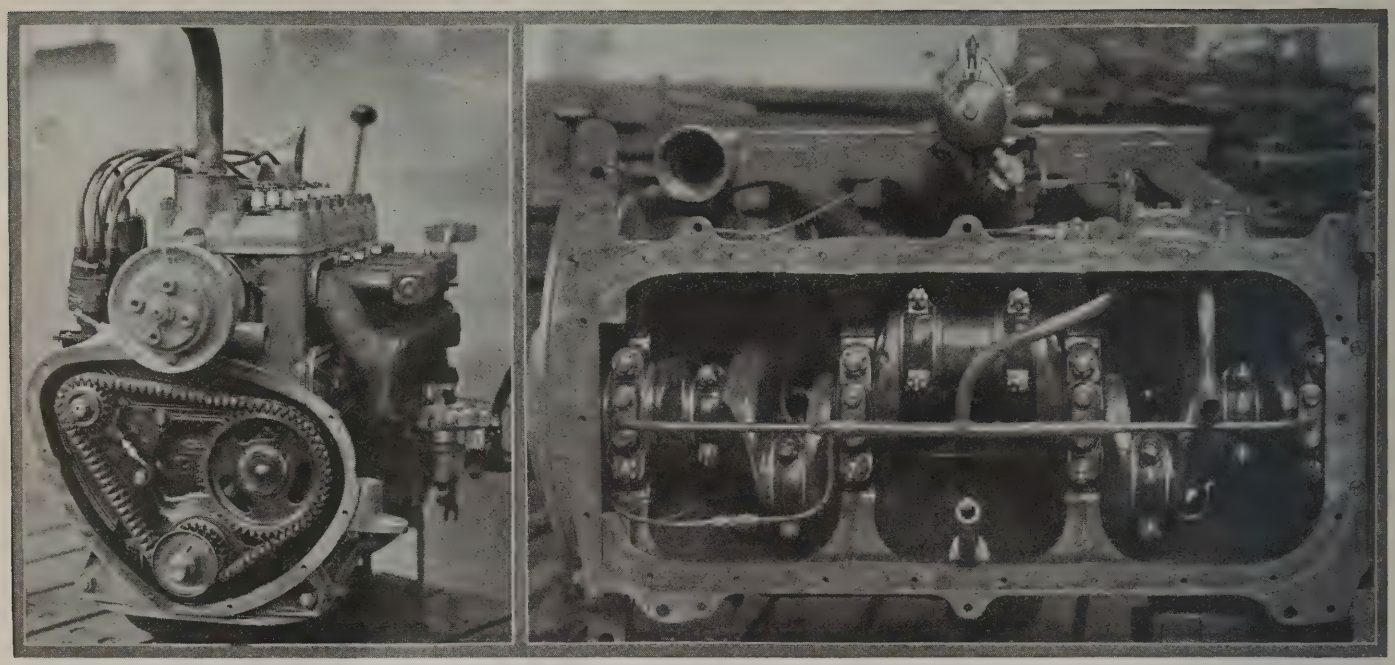
Pressure Lubrication

Lubrication is by pressure to all main bearings with the oil conducted through the drilled crankshaft to the connecting rods. Ducts in the crankcase webs carry the oil to the camshaft bearings while another lead to the front of the engine insures positive lubrication of the timing chain. In an accessible position just to the rear of the carburetor and below the valve cover plate, the combined oil pump and relief valve is located. It is necessary to remove four nuts to detach the unit, while withdrawing six small bolts and removing the cover exposes the pump gears which are operated by a spiral drive from the camshaft. Both the bayonet type level gage and the breather are on the right side of the engine while the capacity of the crankcase to show "full" on the gage is 6 qts.



The manifolding is of the same design as employed on the larger car except that it is proportionately smaller. A Johnson model "H" carbureter with a 1 in. top outlet is bolted directly to a connection which is cast with the exhaust manifold and passes through it to the rectangular section intake manifold. The exhaust is led down the forward part of the engine to make for greater accessibility and to keep the hot gases away from the floorboards.

Electrical Units



All three electrical units are of Remy manufacture while the battery is of the same type as employed in the larger Jewett, being an OB-13 Westinghouse of 115 amp. hrs. capacity. The starter is mounted on the right side of the flywheel housing and engages with 108 tooth gear on the flywheel by a Bendix engagement. On account of moving the flywheel housing to accommodate the rear engine support, a slight departure has been made from the standard S. A. E. method of mounting and a special armature shaft approximately 1 in. longer is to the third brush type generator, the latter being carried on the separate support casting upon which the distributer is located. The ignition unit is provided with automatic spark advance and operated by spiral gears connected with the generator drive. Both the coil and cut-out are mounted on the top of the generator.

High tension leads to the A-C make of ⅞ in. spark plugs are conducted through insulated brackets. Snap type terminals are used. A 5 amp. 25 volt fuse protects the generator field circuit while the lighting system is provided with a 20 amp. 25 volt fuse. Headlamps are of Corcoran manufacture and 6-8 single contact bulbs are used all around.

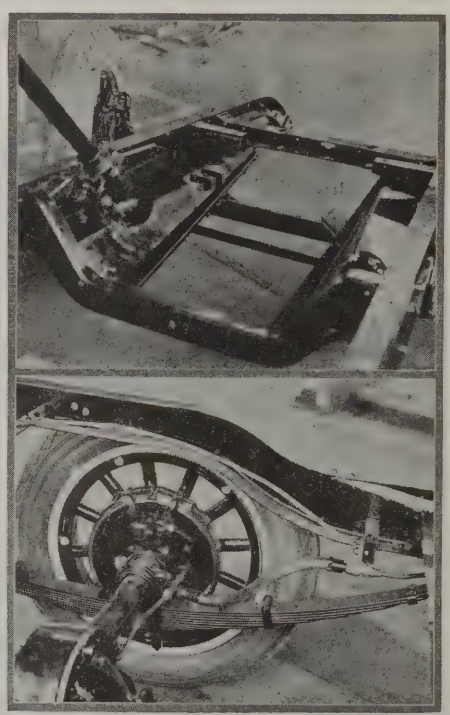
A single dry plate clutch of Rockford manufacture, model 9-HH, giving a greater leverage on the release arm than those employed on the bigger model is adopted. Besides being easier and smoother in operation, no adjustment is required. Four 90 deg. segments of friction material are applied to each face of the driven disk, the dimensions of the material being 8⅞ in. O. D., 5¾ in. I. D., by ⅛ in. thick. Throwout bear-

Top: The two-door De Luxe Sedan employing steel construction and listing at $1,095. Standard equipment includes disc wheels, front bumper, bumperettes, nickel radiator automatic windshield wiper. The top of the sedan has been carried forward producing permanent visor; bottom: The regular two-door steel sedan listing at $995. The narrow corner posts and door pillars as a result of steel construction should be noted.

Left: Front end chain of the new six showing pressure lubrication for timing chain; right: Oil pan removed from the Jewett engine showing oil leads running to each of the four main bearings.

ing is of Nice make and oiled by pressure gum through a nipple in the throw-out sleeves.

The transmission is a product of the Warner Gear Co. and known as model T-68A. Annular single row ball bearings carrying the main shaft while the lower shaft and spigot bearings are phosphor bronze bushings. Gear ratios are:



Low	3.07 to 1
Second	1.77 to 1
High	1.00 to 1
Reverse	4.00 to 1

Except for minor changes the leverages on the transmission brake are the same as those on the larger car, the dimensions of the drum being 6 in. diameter by 2 in. wide.

Two metal universal joints and a tubular propellor shaft all of Mechanics Machine Co. make transmit the power to the model No. 1593-E Salisbury semi-floating rear axle. Propulsion and torque is taken through the underslung springs while the axle housing is of pressed steel. The pinion is straddle mounted being carried at the front on a double row ball bearing and at the rear on an annular ball bearing. At the wheel ends of the $1\frac{1}{32}$ in. diameter axle shafts Bower roller bearings are used while the differential is supported on Timken roller bearings. Standard gear reduction is 4.9 to 1, the ring gear having 49 teeth and the pinion 10.

Front axle is also of Salisbury make, model No. 1592 and of the reverse Elliot type. Ball bearings similar to those on the larger car are employed on the knuckle joints while the king bolts are ¾ in. diameter. Bower inner and outer wheel bearings are employed. The worm and sector steering gear of Gemmer make, model No. 70 is fitted with a ratio of 10 to 1. A 17 in. diameter steering wheel is locked by a plunger located at the point where the post is secured to the dash. By depressing the plunger the ignition is automatically shut off.

The hydraulic four wheel braking system is virtually the same as that employed on the heavier Jewett except for the method of conducting the fluid to the rear wheels. Instead of the customary rubber hoses leading to the cylinders at each rear wheels, only one flexible connection is employed. On the left side a hose of the usual type connects with a "T" joint placed just above the spring pad and from this point the fluid passes through a short copper tube to the left operating cylinder. For the other wheel, fluid is led from the remaining outlet of the "T" by copper tubing passing along and secured to the axle housing, connection being made directly with the right operating cylinder. This arrangement besides making for a simpler hook-up prevents the possibility of damage to one less flexible connection between the frame and the axles. All four brake bands are interchangeable and contract over 12 in. diameter drums. The width of the lining is 1½ in. and the thickness $\frac{5}{16}$ in. Dimensions of the springs are the same as those on the larger car, the sizes on the front being 36 by 2 in. wide and on the rear 54 by 2 in. wide.

Top: The method of supporting the rear of the engine can be seen in this picture. This is an unusual feature, the entire rear of the engine being supported on the cross channel member; bottom. Photograph shows the method of transferring fluid from one rear rubber hose connection for the hydraulic braking system. Instead of a rubber hose to each rear wheel, fluid is transferred from left rear wheel to right wheel by means of copper tubing passing over housing.

On the standard model 4 in. Jaxon rims carrying 29 by 4.75 tires are fitted to 12 spoke artillery wheels. Tuarc disk wheels are supplied on the special sedan. Chassis lubrication is by the Zerk pressure oil gun.

In addition to the usual instruments on the dash the following items are included as regular equipment. Dash gasoline gage, cowl ventilator, sun visor, coincidental lock and windshield wiper. De luxe models also have nickeled radiator shell, front bumper, quarter rear bumpers, combination tail and stop light, automatic windshield wiper and snubbers all around.

Standard color for both closed cars is two-tone Killarney Grey lacquer.

As Nash Sees the Small Town Dealer

(*Continued from Page* 15)

sufficiently familiar with the product they are selling. The big dealer does not post himself sufficiently; his salesmen are not as well posted as they should be, and the factory is too busy producing cars to give the attention that the situation demands. The great lack of today is that desirable co-ordination between manufacturer and dealer; and the more this co-ordination can be carried out the better.

Mr. Nash is opposed to the extension of time-payments on motor-cars from twelve months to eighteen and twenty-four months. Here is his objection:

"Conditions in this country change very rapidly, and great numbers of cars are sold each year between April and the early fall. If these are sold on twenty-four months' paper, an unfavorable fall, due to frosts, poor crops, etc., means that many buyers cannot meet payments. The result is that these cars will come back on the financing organizations in large numbers, and in all probability will be placed on the used-car market at a 50 cent on the $1.00 basis. This will prove disastrous to used-cars in the hands of the dealers."

Mr. Nash is not one of those who believes that the saturation point of the motor car industry lies ahead, but rather that it was reached two or three years ago and that, because of this, there is a proportionately greater danger with time-payments that extend over eighteen months or two years.

He has one other message at this time for the distributors and dealers; namely, that both must recognize the importance of service and that, when the car is sold and paid for, the dealer's responsibility does not cease. He was one of the first executives in the industry to virtually preach the necessity for service, and is more thoroughly convinced now than ever before that it is the dealer who gives service that will continue and succeed in business.

Mr. Nash is not carried off his feet with the car production records that are being made at present, and does not believe possible the almost fantastic figure of 5,000,000 cars for 1925. In all these present evidences of prosperity he comes back with the old warning that the automobile industry has spoiled more men than any other, and that there is greater necessity today than ever before for distributors to stick close to their business and concentrate all of their efforts on merchandising and servicing motor cars.

Industrial Health Conservation a Sound Business

TUBERCULOSIS in industry is decreasing. The death rate during the past 20 years from this disease for the entire country has been reduced by one-half. A part of this gain at least, may fairly be attributed to the sunlight factories, exhaust fans, dust-protecting masks and other health measures, which have become common-places in industry. Yet physicians and health workers still urge employers to install further protecting measures for working men and women. And many employers are questioning whether the expense of such equipment is really justified as a sound business investment.

It requires careful consideration of the studies which industrial physicians and life insurance company statisticians have made of tuberculosis incidence, to understand the uses of what is known as "industrial medicine." The Metropolitan Life Insurance Company, for example, has found that more men than women die of tuberculosis after the age of 25. They infer from this that the higher death rate for men is due to industrial strain, as after the age of 25 women, for the most part, are employed in the more sheltered occupations of the home.

The labor turn-over and loss of time through illness still create a considerable loss to most employers of labor. To prevent this loss, and experts maintain that it is preventable, large industrial plants such as the New York Telephone Company, Metropolitan Life Insurance Company and the Dennison Manufacturing Company, have installed departments of preventive medicine for their workers.

Most to be reckoned with as hazards to the health of workmen are the dust hazard, impure air and over-fatigue. The problem of under nourishment, too, is a serious one.

It is one of the aims of the National Tuberculosis Association and its affiliated organizations to educate working men and women more in the rules of healthful living, thereby making them not only happier but more useful as producers. In order to further this campaign of education, the eighteenth annual sale of Chirstmas seals will be held throughout the country in December.

1926 BUS SHOW PLANNED

DETROIT, Nov. 28.—Detroit will be the place for the Second National Motor Bus Show, C. E. Stone, chairman of the general committee, has announced. The decision to hold the show again next year, in all probability at Convention Hall, was reached at a meeting of the general committee. "The show will be held here next year," Mr. Stone said, "and it will be bigger and better than the one just closed. Bus and accessory manufacturers have notified us that they are willing to exhibit their products again and that they will give the show their support."

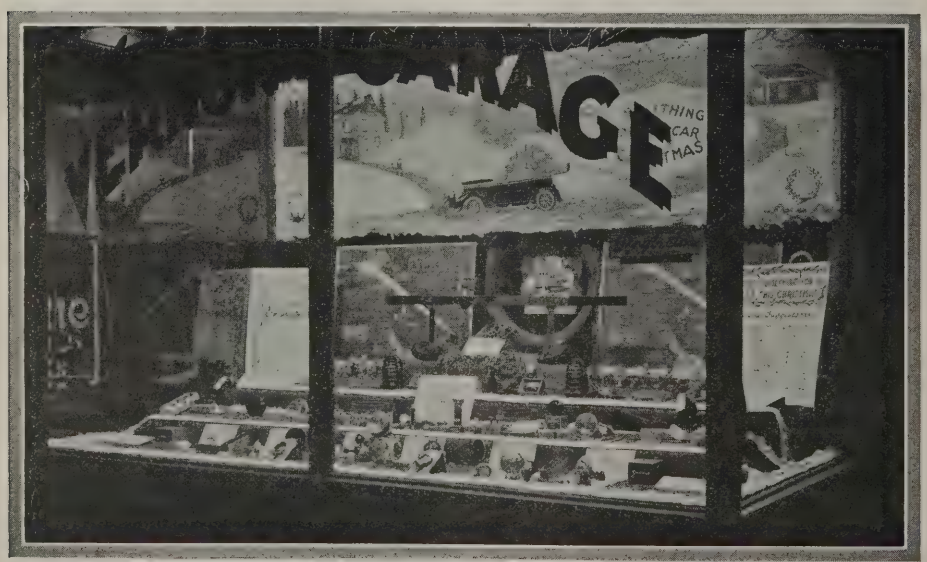
One Outfit Does the Work of Two

An interesting arrangement of battery charging equipment obviating the necessity of purchasing an additional motor generator, was recently made by a western company using a number of storage battery trucks. A 125-volt, multiple battery charging, motor generator was being used, the capacity of which was seven trucks charging at a 40-ampere rate. It was found necessary to double the number of trucks and, at first, it seemed necessary to install a duplicate charging equipment.

Upon conferring with the San Francisco office of the General Electric Company, however, an arrangement was devised whereby the starting time of each battery was staggered. Thus, batteries which had been charging for some time would gradually require less and less current until finally an additional battery could be added for charging. This was made a continuous process. The equipment used for the purpose was a CR-9390 solenoid operated dial switch actuated by means of a type TR, form W contact making ammeter. The ammeter rotated the dial switch to increase or decrease the number of batteries connected on the terminals when generator amperage varied between predetermined limits.

The automatic arrangement above described accomplished by mechanical means what the battery man in a service station accomplishes when he uses a constant potential charging outfit to the greatest advantage. In using the constant potential charging outfit new batteries can be added, one at a time as those on the line become charged, so that the load factor of the set is maintained constant or nearly so, which gives the greatest efficiency from any electrical machine.

MOTOR AGE'S PICTURE PAGES

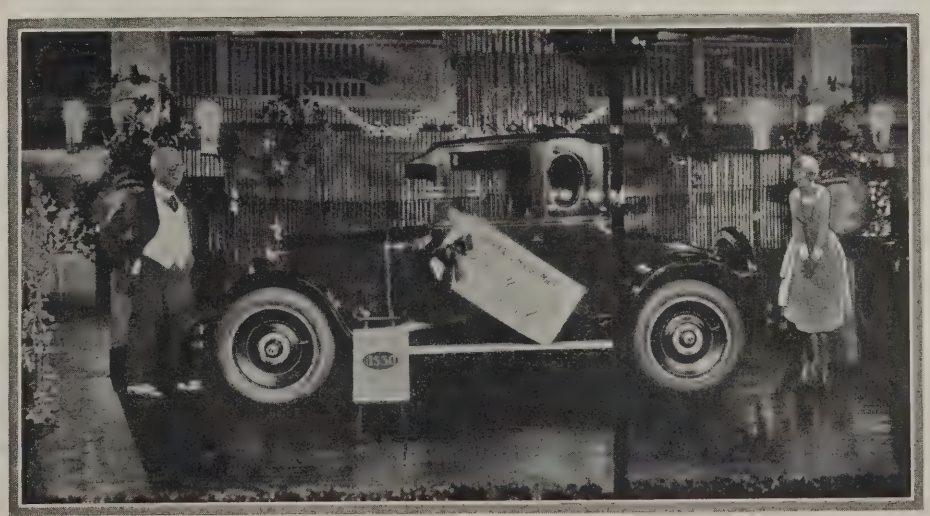


Top, left: Display of Nash Vriesma Auto Co., Omaha. The figure was so realistic that many at first thought it was alive; top, right: This is how A. W. Wade, Hudson-Essex dealer at Riverside, Cal., got the message across. The layout attracted much interest due to the fact that they do not have snow in southern California

Left: A suggestion of the primitive was contained in the Christmas effort of Jamison Sales Co., Chevrolet dealers at Canton, Ohio. It was the handiwork of four of the firm's salesmen who originated and worked out the window detail

Canada was heard from with this attractive window display entered in the A. E. A. contest last year by Vernon Garage, Vernon, B. C. It won fifth prize

YOUR CHRISTMAS WINDOW



Automotive dealers who expect to get their share of the Chrismas trade will have to present the holiday invitation in their display windows. On these pages MOTOR AGE presents photographs of some of last season's best decorated Christmas windows. These displays should furnish inspiration and ideas for other dealers who desire to make the best of the holiday selling season.

The Christmas spirit was effectively stressed in the entry of Harold L. Arnold of Los Angeles in the A. E. A. window display contest last year, shown above. There is no mistaking the psychological appeal in such an exhibit and it did much to keep the cash register ringing at Christmas time

Kreiner's Tire & Service Co., Ottumwa, Iowa, submitted the layout shown at the left in the A. E. A. contest last year and annexed a $10 prize as a result. One could scarcely escape the suggestion of an automotive Christmas contained in such a display

Father has made daughter glad with a gift dear to every feminine heart. The clever display at the right is that of the Mossler Motor Co., Oakland dealer, New Orleans. The portiers and chandeliers are made of red and green paper rope. The figures are beaver-board outlines

An Old Model Car Spits at High Speed

Q.—We are working on a Premier car, six cylinder type, which is about a 1912 or 13 model. It is No. 8522 model Z and is equipped with Eisemann magneto and Stromberg carbureter. The carbureter is of the old glass float chamber type. The car is all right up to speeds of 25 miles per hour, but over that it backfires at the carbureter and in the exhaust line very badly. It will not give better than 35 miles per hour and has very little power in high speed or on hill. Valve timing has been checked up with flywheel and seems to be o.k. Magneto has been overhauled and seems o.k. We have advanced the inlet valve camshaft gear two teeth without apparently helping much. The motor runs at normal temperature.—Milton J. Ludkins, Marblehead, Mass.

Our first suggestion is that you check the ignition. Run the engine at the speed which compares to 25 or 30 miles an hour or even higher and remove a wire from the spark plug to see if the spark will jump from the terminal to the engine, a distance of about $\frac{3}{16}$ inch. The spark may jump a distance of only $\frac{1}{8}$ inch and still be o. k. if the spark plug points are not set more than .025 inches apart. This will enable you to tell whether the ignition is cutting out at high speed or whether some other condition is responsible. As the magneto has been overhauled, we wonder if the work was properly done.

If the distributer gear is not correctly timed, with respect to the armature, it may be that as you advance the spark that the spark goes to the wrong cylinder. This, of course, would cause trouble such as you describe and make the engine back fire in the carbureter. The only other thing we can think of, that would do this, would be a sticking valve, which only sticks at high speed, so it might pay to check up the valves and see that the spring tension is good. The timing should be such that the exhaust valve closes and the inlet valve opens about the same time which is 6 degrees past top dead center. It also might pay to install a newer model carbureter and possibly a hot spot manifold, although we do not believe these changes would correct the trouble you are having.

REMOVING TAR SPOTS

I have noticed in an issue of MOTOR AGE, where a reader asks about a solution that will remove road tar. I have found that raw linseed oil, a soft cloth and a little patience are better than all the gasoline and coal oil. Where the tar has hardened it is best to apply a good coat of the oil and allow it to set for a while and then rub off with the cloth. —Majestic Garage, Hot Springs National Park, Ark.

The Pinion Nut Shears the Cotter Pin

Q.—We have a Chevrolet, 1922, which has developed a peculiar case of differential trouble. A few weeks ago on taking the axle apart we found that the drive shaft nut had cut the cotter pin and backed off allowing the drive shaft pinion to come off. Of course, this chipped the gears slightly. We replaced the drive shaft pinion and ring gear and put in a new drive shaft gear key and drive shaft nut. We saw that the nut was tight and that a cotter pin was used. After putting it together the axle was all right with no hum or noise of any kind. However after driving about 300 miles the same thing happened again, the nut shearing the cotter pin and backing off.—M. R. Wilson, Miltonvale, Kansas.

This sounds like a strange sort of trouble and the local Chevrolet service manager does not know of its ever occurring. We wonder if the drive pinion is a good fit on the taper on the drive shaft. If it does not fit the taper and if the key is not tight in the key way it is possible that the pinion is working back and forth and tends to work the nut back and forth. We would suggest your lapping the pinion to the drive shaft by means of valve grinding compound until you get a very good fit. In most cases not only does the nut fail to come loose but after it is removed a puller is necessary in order to get the pinion off. We accordingly feel that if the pinion is a good fit on the shaft that you will not have this trouble.

Q.—How should the brush holder be set on a Remy starting motor as used on a 34-B Oakland 1919.

Starting motor brushes should always be lcoated so that minimum sparking is obtained at the commutator. When testing the starting motor the brush location should be such as to give maximum torque when the lock torque test is made. The starting motor should speed up rapidly when connected to the battery.

TO GET PAINT OFF AND GEARS OUT

Q—What can I use on a car to take the old paint off to get it ready for repainting?—Tennessee Reader.

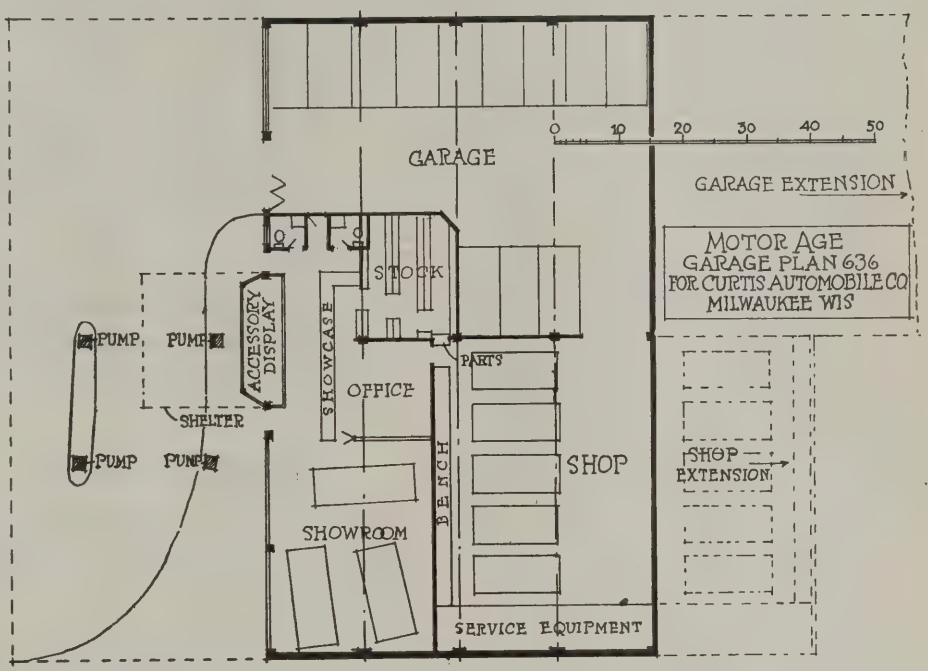
This information will be given by letter.

Q—How can I remove the distributer gears on a Dodge Brothers car? They are ground up and are locked where I can't turn the shaft at all. I have the outfit off the car.

There is a set screw underneath the distributer housing which should be removed. Then the whole distributer should come out of the lower casting. If it jams and does not come out, there is no official way of removing it. You will have to use your own discretion and mechanical ingenuity.

Planning Your New Building

By TOM WILDER



The READERS CLEARING HOUSE

A 100 Foot Front Is Better Than a 60 Foot

Q.—One of our dealers is asking us for ideas for practical garages for small town use and we hope if you have anything of this sort, you will forward it to us. The dealer's lot is 100 ft. wide and 200 ft. deep. His idea is to build in the center of the lot putting his oil filling station and canopy at the front of the building. He would like to have a showroom, office, stock room and the necessary rest room facilities. He does not plan on having his building over 60 ft. wide and about 100 ft. long. He plans on being about 40 ft. back from his lot line in order to allow plenty of space for his gasoline pumps.—Curtis Automobile Co., Milwaukee, Wis.

In our estimation there is quite a good deal of objection to building in the middle of a lot of this sort. If this is done there is a space of 20 ft. on either side that is not wide enough for any real use and is also not wide enough to build on to make a good useable addition to the 60 ft. building which is in the center. We are recommending that the 100 by 60 ft. building be placed crosswise of the lots occupying the whole front width. This can be divided perfectly into a 50 ft. garage on one side and a 50 foot shop on the other, the frontage being used for accessory store and showroom. This layout has the added advantage that it can be added to without in any way disturbing the existing departments as we have indicated in our plan. The back doorway may be installed in the garage so that the yard back of the building may be used for storage or outside service such as greasing, etc.

Placing the building as we have suggested also has the advantage that it looks like twice as much building as if it were narrow in the front giving the dealer the look of a good size prosperous dealer instead of a small one that had more lot room than he knew what to do with.

If this dealer is committed to his idea of a narrow building he should build to one side and 50 ft. in width.

Bad Vibration in Two New Cars

Q.—I have two Fords which vibrate very badly when the engine is pulling at about 15 miles per hour. These cars have only gone 1000 miles. What causes this? —W. M. Ryan, Long Beach, Calif.

It is unlikely that the mechanical parts could be so badly unbalanced that serious vibration would result at this low speed. We would suggest your checking the compression and if possible getting a compression gage and trying it in the four different cylinders to see how nearly alike they are. Another possibility is that the timing is inaccurate. You can remove the spark plugs and turn on the ignition switch in the battery position and turn the engine over slowly by hand to see if the coils start to vibrate at points half a revolution from each other, that is half a turn of the starting crank. Another possibility is in a defective manifold which would give an unequal mixture to the different cylinders.

Q.—What causes a roaring noise in a Ford when driving alone 20 or 30 miles per hour when the front wheels strike a bump? I have not been a subscriber to MOTOR AGE very long, but enjoy it very much, and the Clearing House most of all.

Ordinarily a roaring or grinding noise is due to rear axle trouble. It is possible that if the front wheels strike an obstruction or cause an extra load on the car that the additional strain on the rear axle produces a noise which would not otherwise be evident.

LEGAL QUESTIONS ANSWERED

By WELLINGTON GUSTIN

of the Chicago Bar

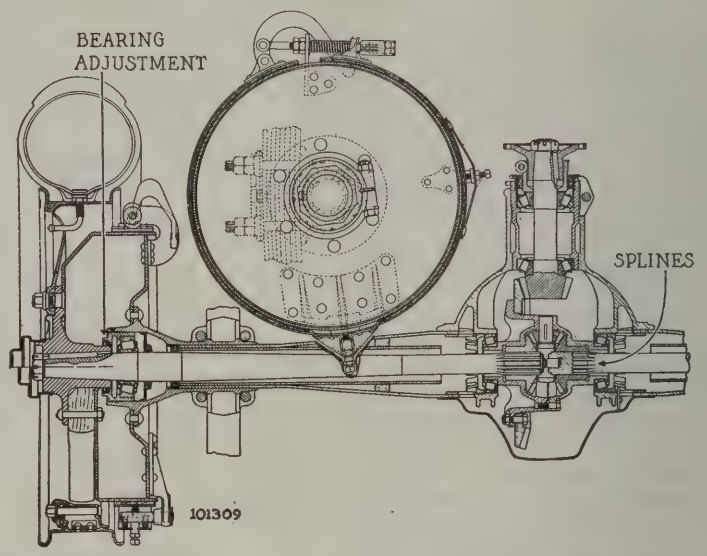
DEPOSIT HELD IN TRUST

Q. Can a deposit be collected? I made a deposit of $500 with a certain tractor company several years ago, I have discontinued their line of tractors and want to get my deposit back but they refuse to give it to me. If I brought suit would I be likely to win out?—Geo. E. Maurer, Freeport, Illinois.

A deposit is made under a contract and whether you may recover or not depends upon its terms and also possibly whether you have breached any of said terms which would in themselves prevent your recovery of the deposit. For instance, if you have agreed to do certain things which you have not done which has damaged the tractor company to the extent of the amount deposited, then on a suit to recover the company would likely set up a counter claim for this amount.

However, the company could retain only the amount of actual damages. The holder of a deposit holds the same in trust for the depositor and generally the depositor may recover with interest from date of demand for the return. The holder has no title except that of possession under the terms of the contract. So strong is the depositor's right that the writer recovered a deposit of $500 made by a dealer-agent of a truck company from the receiver in bankruptcy in Detroit—and as a preference over other creditors—although the firm claimed breach of the contract of deposit.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear



The Gear Teeth Chew Up The Differential Case

Q.—We have a special six Studebaker, 1924 model which has run 7000 miles and has developed a noisy rear axle. On examination we found that the spider gear and side gears had cut into the differential case. We put on a new case and now find that the axle is getting in the same condition after running about 700 miles. We cannot find any cause for this condition. Would be very thankful for any information which would help us in this case.—Frackville Sales & Service, Frackville, Pa.

We are showing a sectional view of the Studebaker axle. In the very center of the differential you will notice that the two axle shafts butt together and that a hardened steel button is set in the end of each shaft, these two buttons bearing against one another. At the wheel bearing there is an adjustment which when tightened pushes the shaft and wheel toward the center of the car. Tightening the two wheel bearings will push the two hardened steel buttons together in the center of the axle.

One possibility as far as your trouble is concerned, is that the adjustment has been taken up too much at one wheel bearing and not enough at another. This would cause the shafts to meet each other at some point other than the center of the axle. The shafts are splined and take their drive from the two side gears in the differential. If one shaft is too far to the left or right it is possible that one of these gears will bind on the end of the spline, so that a continual end thrust might be exerted on one of these gears.

As there is no special provision to take thrust of this character at this point, it might cause the gears to be forced to the right or left and make them cut into the differential case. Another possibility is that you have an axle shaft which is improperly machined or one which is too long or too short. When the adjustment is correctly made it is possible to have the axle jacked up and turn one shaft by hand and have the other turned readily in the opposite direction. There should also be no appreciable end play.

Construction of axle in Studebaker 1924 Special Six showing bearing adjustment which determines location of wheels and shafts

EXCESSIVE BACKLASH TROUBLE

Q.—I have a question to ask in regard to a 1922 model Buick. When it was driven 3,500 miles it developed a knock which gradually grew to be a very sharp knock. It can be plainly heard when the engine is idling and it is practically impossible to hear the knock when the car is running on the road except running two to five miles an hour. The knock is very plain. We have measured the cylinder walls and find only .0015 variation and the pistons have only .0025 clearance. The wrist pins, main bearings and connecting rod bearings are in good shape. We tightened main and connecting rod bearings and while the motor was still tight it had a dull bump instead of a sharp knock.

After the motor loosened up it had the same old sharp knock. The motor works perfectly at all speeds. It is impossible to short out the knock and it seems to come with the action of the valves and I think the push rods are in good shape. The knock also can be heard when cranking the motor with the crank. This car has the broad aluminum timing gears. At the present time the car has been driven 8,000 miles and the knock is no worse. What do you think of the trouble?—Vernon Hoblet, Willshire, Ohio.

We are of the opinion that the noise is due to backlash in the timing gear. We would suggest that you remove the timing gear cover and use a feeler gage to determine how much backlash is present. There should be not more than .0025 of an inch and if there is it means that the gears should be replaced with new ones. It is also possible that the noise comes from the valve action in which case very thorough directions covering methods of locating it can be secured by reading a story printed in the May 22, 1924, issue of MOTOR AGE, under the heading "Abnormal Engine Noises and How to Find Them." This story outlines a plan that can be followed and is based on the theory of removal and replacement of engine units in order to trace the knock.

ENGINE DEVELOPS VIBRATION AT 20 M. P. H.

Q.—We have a Gardner car with a 4 cylinder, 5 main bearing crankshaft Lycoming motor which has lately developed quite a vibration point at 20 m. p. h. This car when new was practically vibrationless and has been driven about 22,000 miles. The vibration is not noticeable at 15 m. p. h. or at 25 m. p. h. We have checked the compression and found it to be 50 lbs. in the No. 1 cylinder, 53 lbs. in the No. 2 cylinder, 55 lbs. in the No. 3 cylinder and 55 lbs. in the No. 4 cylinder. This motor has no bearing knocks or pounds. Neither the main nor the connecting rod bearings have ever been taken up with the exception of one of the main bearings.—Oskosh Cylinder Grinding Co., Oshkosh, Wis.

We would recommend your checking the shaft of the ignition unit to see that it does not have too much side play. It is possible that wear has occured at this point and that the opening of the interrupter points is not the same for all cylinders and does not occur at the same point in the piston travel. You can remove the distributor cap and shake the shaft sideways to see how much play there is and you can also turn the engine over by hand with the compression released and with the distributor cap off.

The interrupter gap can be checked with a thickness gage, as each corner of the cams functions. It is also possible that one corner of the cam has worn more than the other corners and produces a change in the timing.

You can also check the timing by relieving the compression and noting the piston position when the interrupter points open. The best way of determining the exact instant at which the points open, is to watch the ammeter and turn the engine slowly by hand. When the points come together with the ignition switch turned on, the ammeter will show 4 or 5 amperes discharging and when the points just separate the ammeter hand will drop back to zero. If the interrupter point openings are not uniform, it would be well to install a new interrupter cam.

Clearing Up Electrical Trouble

EDITED BY A. H. PACKER

The READERS CLEARING HOUSE

Wrong Ignition Coil Generates Static

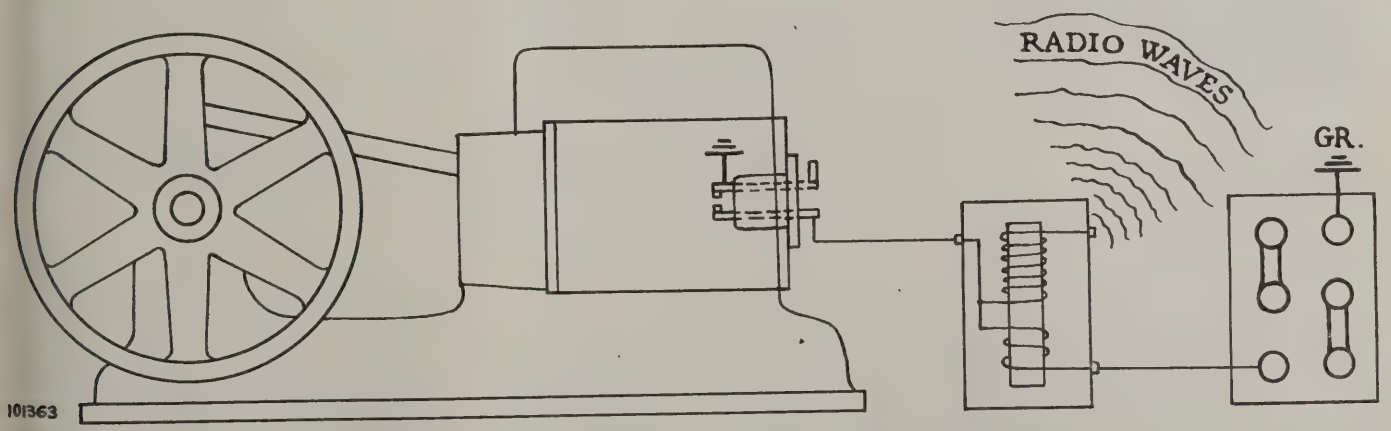
Q.—We have a condition at the creamery here that seems to us peculiar. A 2 h.p. make and break gasoline engine is equipped with a coil the same as the 6-volt Delco light uses and was connected directly to the battery. The make and break arm was made to break the primary circuit and the engine runs much better than with the old system. It also uses much less fuel and gives better power. When the engine is running a decided shock can be felt by placing the hand on any of the battery straps. The effect is similar to the shock from a spark plug on an automobile, but not quite so pronounced. It comes in on the nearby radios and spoils the reception to some extent. It can also be heard on the telephone. Would like to have your opinion about what causes this and how it can be overcome.—W. Virginia Subscriber.

The ignition coil which should be used with a make and break ignition system has only one winding. On the other hand all of the ignition coils used with 6 volt Delco light units have two windings. We have made a diagram to represent the general nature of the circuit you are using. The current from the battery goes through the primary of the ignition coil and through the contacts of the make and break device in the engine. When these contacts open you get a flash which fires the gas and the engine operates all right.

However, at the same time that you interrupt the current in the primary winding you generate a very high voltage in the secondary winding and there is no chance for the secondary voltage to be dissipated. In an ordinary jump spark ignition system as used on an automobile a connection runs from the secondary winding through the distributer to the spark plugs and the voltage rises only a certain amount and then causes the spark to jump the gap. The voltage then drops off to three or four hundred volts which is sufficient to keep the current flowing after it has once jumped. Where you have an open circuited secondary, however, as in the illustration we have shown, the voltage rises to a very high value, perhaps 10,000 volts or even higher. This, in a small way acts like a sending station and the high voltage sends out radio waves which are picked up as interference on nearby radio sets. The remedy would be to use the right kind of a coil or to take the coil you have and tear it apart and remove the secondary winding, then replace the primary winding and connections which would be still satisfactory for your purpose.

A TRICK START—SOMETIMES

Q.—I have found out a method of easily starting an automobile without using the electric starter. If the car has not been standing very long I turn on the ignition switch and then move the spark advance lever. If the engine has stopped in the right position the moving of the advance lever will make and break the ignition circuit and the breaking of the circuit will produce a spark just as if the engine were running. This works most of the time and saves a lot of battery current. Is this method used in the United States? —Frank Holland, River Terrace, Tinwald, Canterbury, South Island, N. Z.



No, the car owners are not sufficiently interested in the mechanism of the car or in the operation of the electrical system to use any such method even if it would work most of the time. With the grade of gasoline used here and considering the fact that engines are not always in the best of condition this method would not work very often. To the electrical trouble shooters, however, it is of interest that the spark can be produced by operating the spark advance lever and may in some cases cause the engine to start.

Get Education You Can Turn Into Cash

A reader of MOTOR AGE who has conducted his own automobile business for seven years became particularly interested in the electrical articles in MOTOR AGE and wrote in, requesting advice as to whether he should take up an electrical engineering course. Our advice to him, sent by personal letter was to the effect that he should not. The rosy side of electrical engineering is often advertised in a way which would make it appear that it is only necessary to take an electrical engineering course and immediately obtain a wonderful position.

As in every other line of work however, the engineering must be applied to some particular business. Readers of MOTOR AGE and others who have been engaged in the automobile business for some time and are more experienced in that work than in anything else should stick to it if possible. In the case of the man who had applied some of the electric testing principles explained in MOTOR AGE we recommended that he study this more thoroughly at a short term course in some electrical school, but still with the idea of applying it to his automobile work.

We also pointed out to him that after improving his mechanical and electrical departments as much as possible he should take on profitable lines such as carbureters and shock absorbers which are often handled by electrical service stations. Many shop proprietors are inclined to forget that their chief job should be merchandising. The mechanical or electrical ability may be necessary or may be purchased as expert labor, but this job will prove a failure if good items are not handled and merchandised actively.

Ignition circuit that would cause interference in nearby radio sets.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Something to Think About When You Plan Flat Rates

THE automotive industry has as yet placed no official name on that part which has to do with a motor vehicle performing as a transportation medium over prolonged periods.

Several names have been and are being used by makers, dealers, garages and repair shops.

There are those who choose to call it service. Others designate it by a little more dignified word—maintenance. And the country is full of places where the well known sign "Automobile Repairing" stands out in bold relief across the front of the premises.

Meaning About The Same

To the car owner all these names, service, maintenance and automobile repairing mean pretty much the same thing and he has even a few of his own, particularly the word "upkeep."

No matter how we look at it all of these expressions mean just about the same thing. All have been coined for one purpose and that is to furnish the trade and car owner with some ready means for referring to the things which come up during the operation of a motor vehicle after its purchase.

THINGS THAT HELP FLAT RATE

Knowing at all times just what was done to a customer's car on its previous visit, will often help in carrying out subsequent flat rate operations. One service station uses an index system containing the names of all its customers who frequent the shop and reference to the cards shows exactly the previous operations

But there is something to be said about the way these various terms are used. When you have just sold a man a brand new car you desire that he get uninterrupted use of that car and therefore, refrain immediately from telling him of your "repair department." You know sooner or later that car will need repair work, but it is not good form at this time to talk repairs to the new owner.

So we talk about service or maintenance and probably keep this up at least until the car starts to look a little weather beaten.

"Trading-In" Period

Then we start to talk about "running her in the shop." Maintenance and service give way to repairing. Repairing to the car owner kindles anew the word upkeep, a big bill for the work and sooner or later he begins to talk to friend wife about "Tradin'" the old boat in for a new one.

He gets a nice shiny new one and all he need do for the time being is to put "oil and gas in her." The dealer tightens the fan belt, adjusts the clutch and brakes and all this just plain service and maintenance. By and by comes the repair shop stage again and the cycle starts all over.

Observations indicate that the word maintenance is gaining favor steadily and it probably is the best all-around word that can be applied to that branch of the industry which seeks to give a motor vehicle owner the maximum period of usefulness at the smallest possible cost per mile.

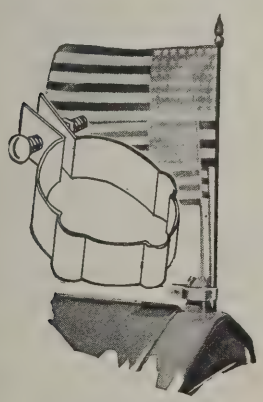
THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

"Dubl Servis" Spark Plugs



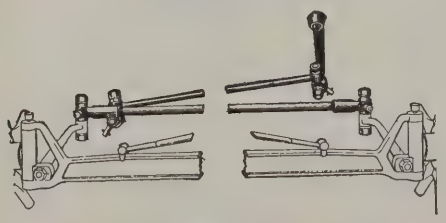
SPARK plugs which the makers declare will give exceptionally long service are being manufactured by the Thomason Manufacturing Company, of Minneapolis, under the name of "Dubl Servis" Spark Plugs. This is a spark plug with a reversible core, making it possible when the end in use in the engine becomes fouled or fouled to bring the other end into service. Such a change provides an entirely fresh spark plug. Another feature is in the terminal connector which makes a slip-on connection for Ford cars as well as all other makes. Materials used in the "Dubl Servis" plug are said to be of the highest character.

"Dubl Servis" Spark Plug

Ever-Brite Headlight Deflector

HEADLIGHT deflectors which the manufacturers say effectively does away with dimming are produced by the Akron Specialty Manufacturing Company, Akron, Ohio. The device is called the Ever-Brite Headlight Deflector and consists of four elliptical visors which deflect the headlight rays toward the road. Not only will the headlight equipped with this deflector relieve the oncoming driver from glare but it also enables the owner to provide full light at all times for his own driving. The deflector is easily attached by removing the lens and rim from the lamp and placing it inside the rim where a flange holds it in position. As the deflector fits in front of the lens the makers say it does not conflict with any state law. The device sells for $3, $3.50 and $4, for a set of two.

AKRON FLAG HOLDER

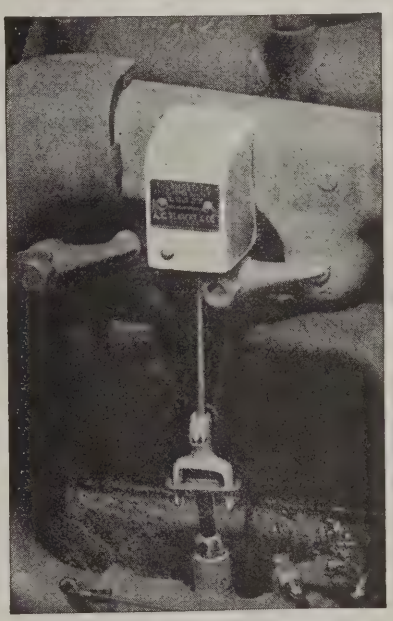


Cut shown above

A FLAG holder made of duraluminum is being made by the Akron Novelty Manufacturing Co., Goodrich Station, Akron, Ohio. The flag holder is fastened to the radiator cap and will hold three flags. List price, 25 cents each.

Bring Profits Through Your Windows

Speaking of window trimming—and the trade will be speaking of it more the rest of the year than at any other season—it is more difficult to make a display show up well in daytime than at night. Yet with many accessory dealers more traffic passes the store in the daytime.



Black or dark background and plenty of electric light make for better daytime effectiveness. Where a dark article is shown, however, it should be given an immediate base of white or some contrasting color. Winter offers an excellent opportunity for use of cotton in such a window and snow suggestion. Rustic color can be added with a miniature rail fence of split fire wood, a box well with bucket upside down on top and rope visible, and some use of small evergreen trees—all snowcapped.

"Steady Boy"

Blancke Thermostatic Control for Ford Carbureter

A NEW universal design of automatic thermostatic carbureter control for Ford cars has been developed by A. C. Blancke & Company, 602 W. Lake Street, Chicago, Illinois. As in the previous models the device is provided with a thermostatic coil which automatically positions the needle valve as the engine warms or cools, thus giving correct mixture so as to obtain the maximum power, without the necessity of turning the needle valve by hand. Tests are said to have been made which increase the gasoline mileage from 30 to 100 per cent depending on the care or lack of care formerly used by the driver of the car in adjusting the needle valve to suit operating conditions. The General Motors Corp., have obtained a license from A. C. Blancke who owns the basic patent covering thermostatic control of carburetion and this principle is now being embodied in a special construction for the carbureter used in Cadillac cars. Among the advantages of accurate carbureter adjustment controlled according to temperature are better lubrication, easier starting and more efficient operation.

Blancke Thermostatic Device

Steady-Boy

A REPLACEMENT steering system for Fords is offered by the Moon Brothers Manufacturing Company, of St. Louis, in its "Steady-Boy." The name of the appliance largely tells its purpose. Its object is to steady Ford driving and make for better riding comfort as well as economy for the Ford car owner. Use of the Steady-Boy is recommended by the makers to do away with jerking of the wheel that the Ford owner experiences when driving over rough roads. List, $7.50.

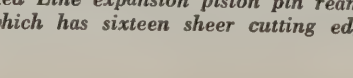
GETTING MORE OUT of the SHOP

Van Norman Valve Refacing Machine

A new valve refacing machine said to cut the time of regrinding valves on a six-cylinder car from 2½ hrs. down to 30 min., is now being marketed by the Van Norman Machine Tool Company of Springfield, Mass. The new machine replaces a former model and with added refinements brings greater efficiencies to valve repairing operations. The new model is known as the "Super Franklin Valve Refacing Machine," and is driven by a ¼ hp. Westinghouse motor.

The new machine is readily adjusted to accommodate valves having any angle

Van Norman Valve Refacing Machine readily adjusted for valves of any angle head



head, while the work-head may be swung around against the side of the 5-in. grinding wheel for such operations as refacing of tappet screws, points, breaker arms, etc., a self compensating drive mechanism furnishing maximum power to the work-head in any position. The fact that the machine also resharpens the reseating cutter and assures the same angle in the seat of the motor as on the face of the valve, guarantees accuracy. The new type machine sells to the trade for $175.

Red Line Expansion Piston Pin Reamer

The Red Line expansion piston pin reamers are made with sixteen helical flutes to give 50 per cent greater cutting efficiency and eliminate chatter. A 2-in, pilot and long shank makes the alignment easy and the rose reamer on the pilot prepares the hole for the expanded cutting edges. The countersunk expansion screw affords ready expansion and is said to prevent over expansion and broken reamers. It permits regrinding several times without undersizing. The expansion limits include.

Sizes	¼	to	⅝	inch	.012
"	11/16	"	⅞	inch	.014
"	15/16	"	1¼	inch	.016
"	1-5/16	"	1-9/16	inch	.018
"	2	"	2⅝	inch	.022

To take care of undersize bushings the reamers are ground .001 undersize. The

Red Line expansion piston pin reamer which has sixteen sheer cutting edges

No. 16 set, covering 98 per cent of all passenger cars, trucks and tractors and packed into a polished hardwood box, is priced at $163.15. The reamers are made by the Modern Reamer Specialty Co., 2401 Chestnut Street, Philadelphia, Pa.

New Greenfield Tap and Die Catalog

The Greenfield Tap & Die Corp., Greenfield, Mass., is distributing to the trade a new catalogue on small tools, known as No. 49. Its line of bolt and pipe threading machines, gages, ground thread taps and spiral fluted stay bolt taps are listed complete for the first time.

Carbon Cleaning Brushes

The No. 5148 display board of the Worcester Brush & Scraper Co., Worcester, Mass., contains a variety of steel brushes for cleaning carbon from gasoline motors. Hand and power surface cleaners are included as well as cleaners for valve guide. The assortment consists of 21 No. 7900 series valve guide cleaners; ten No. 80 small rotary carbon cleaners; No. 68 large rotary carbon cleaners; ten No. 66 hand rotary carbon cleaners. List price, 51 brushes, $47.75.

HB Buffer and Grinder

Cut Shown Above

The HB Ball Bearing Motor Buffer and Grinder is being placed on the market by its manufacturers, Hobart Brothers Company, Canal Lock Square, Troy, Ohio. The grinder and buffer is operated by a direct connected 1 h.p. non-stalling, ba bearing motor running at 1800 r.p.m. T outfit is furnished complete excepting t grinding wheel, ready to connect to t electric lines. The weight is 175 lbs. a it occupies a floor space of 15 in. by 15 When supplied for single phase A.C. direct current the price is $108.

Lock Washers and Cotter Pins

Western Wire Products Compan Third and Spruce Streets, St. Lou announces that it is prepared to furni the trade with lock washers in additi to cotter pins. The lock washers a cotter pins are packed in a novel co tainer known as the "Twin Assortme Container" which is a two compartme can with a screw lid at each end. O compartment holds the lock washers a

the other the cotter pins. The "Tw Assortment" of lock washers and cott pins consists of 50 of the latter and 1 of the former in ranges of sizes. Price On orders of less than 1000 assortment nine cents each; on orders of 1000 more, 8¾ cents each.

Auto Coat-A-Pants

Designed to save the motorist' clothes and time when he has t work around the car W. C. Kiernan Company, Whitewater, Wis., have brough out the Auto Coat-A-Pants. This is a army drab khaki garment made like coat above and with the lower portio made to clasp about the legs pants fashion. It gives full protection of work suit to the clothes and at the sam time is more conveniently put on tha stepping into a pair of regular overalls A dirt proof bag is furnished with eac coat making it possible to carry th garment in the tool box without undu soiling. Prices—over United States— $3.50. Canadian price is the same plu duty.

A CORRECTION

In the October 29, 1925, issue of Moto Age, page 30, was shown a picture o the Weaver Wrecking & Service Car and in the text mention was made that the equipment included the standard 1-ton Ford truck chassis. This is an error, as the truck chassis is a Graham Brothers 1½ ton model E B with a Graham Brothers closed cab.

EDITORIAL

Trade Days at National Shows

EVERY automobile dealer ought to attend one of the National Automobile Shows. There he will get a broader understanding of the great business he is engaged in and will gather up inspiration and enthusiasm that will help him in selling his own line. These shows, which are under the management of the National Automobile Chamber of Commerce, have made special arrangements to enable automotive merchants to see the shows without having to struggle through the throngs that are always present when the public is admitted. Two days, Monday and Tuesday, of the show weeks have been set aside for the exclusive attendance of the trade so that exhibits may be viewed and business transacted without the disturbing influence of throngs of public visitors. The trade days deserve the enthusiastic support of the dealers and the manufacturers.

Don't forget that the gun of abuse is never fired at a competitor without a "kick." And sometimes it kicks harder than it shoots.

Christmas Seals for Health

TUBERCULOSIS Christmas seals are again for sale on the candy counters, cigar stands and hotel desks of the country. Millions of them, too, are pouring into our homes by mail, with the request that we purchase the little stickers and so further strengthen the campaign against one of the world's greatest scourges.

This year the Christmas seal comes of age. It is just 21 years since an obscure postal clerk in Denmark conceived the idea of a decorative stamp to be placed on Christmas mail as a means of raising funds for a hospital for tuberculosis children. A few years later the first Christmas seals that were sold in the United States raised $3,000 for the purchase of a sanatorium site in Delaware. Last year 1,250,000,000 seals were printed for the National Tuberculosis Association and their sale brought approximately $4,500,000 into the coffers of the 1,500 organizations affiliated with the national body.

During these years the Christmas seal has helped to finance hundreds of local, state and national campaigns to secure hospitals, sanatoria, clinics and dispensaries. At least 20,000 public health nurses are at work in the schools and homes to educate children and parents in the rules of healthful living. In this way minor physical defects are detected and, because of early treatment a physical breakdown in later life with tuberculosis or some other serious disease is often prevented.

Our participation in the annual Christmas seal sale is an investment in individual and community health. More than that, we become a part of the message of hope which the seal carries to the many thousands who otherwise become victims of a preventable and curable disease. In all truth, the mission of the Christmas seal is joyous health.

Ardent bath tub merchandisers tell us bath tubs last much longer than automobiles. Of course. Anything that is used very little lasts a long while.

Let's Put This One Over

ROBERT E. LEE, manager of the St. Louis Automobile Dealers Association, issued a bulletin to the membership emphasizing the fact that it is unnecessary for the owner to put his car away for the winter and giving some practical points on the care of the car for winter operation. It was obviously intended for the dealers to make use of the bulletin's suggestions in efforts to stimulate winter business.

This is a good movement to spread over the country generally. Sell the public on the idea that the motor vehicle is a facility for all-year use. The public is pretty well sold on that thought already and with little promotion the trade can drive it home more thoroughly and profitably. We want to sell more cars and accessories and we want more maintenance business. Therefore we want to keep the cars out of storage and in service. All the public needs to fall in line is well directed suggestion and helpful information. Any trade association can take up such a movement locally.

The difference between a salesman and an order-taker is another bit of information you may obtain from income tax records.

More About Christmas Trade

INSPECTION of exhibits at the A. E. A. convention suggests that many automotive devices will appear on Christmas counters this year in appropriate wrappings. This is the work of manufacturers and in this work they are offering retailers a chance to cash in with them on the season's opportunity. Many retailers are planning special displays for the holiday trade. It is hoped that all retailers will give impetus to this big merchandising campaign through advertisements in their local newspapers. There will be much competition in this field of selling and if the trade realizes its share of the profits it will have to make its appeal conspicuous.

Carryover of 500,000 Cars Expected

Sales Reported as Good Or Better Than Normal

Dealers, However, Begin to Resist Heavy Stocking Because of Potential Tax Cut

NEW YORK, Dec. 2.—Except in a few of the central states, especially Iowa, where a poor corn crop and bad weather are affecting business, automobile sales are on a satisfactory level for the time of year—a little ahead, in fact, of normal for the season. But sales are not the burning question of the day in automotive circles. The growth of dealers' stocks in relation to production and next year's market is now the principal subject of conjecture.

It is generally agreed that the carryover into next year, on the basis of current production, will be about 500,000 cars and trucks. This will not be a large burden if the market is good next year, for there is no reason why automobile dealers should not accumulate inventories during the dull season; it is the practice in all retail trades. The main question, therefore, is whether the factories will continue to ship cars in excess of dealers' requirements after the New Year, as was done in 1924 with unfavorable consequences for the industry as a whole.

On this point the leading producers have reiterated their assurances that production will be curtailed to a point near the sales level as soon as it appears that their dealers have accumulated sufficient cars to place them in a satisfactory position for the late winter and early spring trade. That drastic curtailment, however, is not looked for in the immediate future is clearly indicated by the large volume of business still being done by original equipment makers, with whom orders are placed roughly a month ahead of the factories' production schedules.

Some resistance from the dealers to the stocking program is being encountered by the factories as a consequence of the prospect of tax reduction. The merchants do not want to have to meet a heavy loss on the cars in their hands on which the tax will have been paid at the 5 per cent rate, as against the proposed 3 per cent levy. It is hoped that Congress will see the desirability of having the reduction effective on the cars in transit or on dealers' floor.

KARDELL PROMOTES SHAW

ST LOUIS, Nov. 28.—Fred Shaw, formerly in charge of used car sales for the Kardell Motor Car Co., Reo distributors in St. Louis, has been appointed sales manager and assistant general manager of the company.

Motor Car Output in U. S. and Canada

WASHINGTON, Nov. 28.—Following tables show the production of automobiles, both passenger cars and trucks, for the first ten months of 1925, compared with the full year, 1924, as announced by the Department of Commerce for the United States and Canada:

Total Cars and Trucks

	1925	1924
Jan.	241,062	324,567
Feb.	287,213	367,370
Mar.	377,252	393,489
Apr.	439,125	384,353
May	426,016	331,638
June	447,860	254,146
July	400.361	260,935
Aug.	259,581	283,879
Sept.	332,781	295,480
Oct.	452,392	293,356
Total 10 Months	3,618,654	3,198,219
Nov.		232,248
Dec.		209,631

The following tables shows car and truck production in 1925 in United States and Canada:

	Cars	Trucks
Jan.	212,921	28,141
Feb.	252,803	34,410
Mar.	332,154	45,098
Apr.	391,302	47,823
May	382,714	43,303
June	364,806	38,054
July	358,554	41,817
Aug.	221,831	37,750
Sept.	272,413	60,368
Oct.	406,569	45,823

OVERLAND PROMOTES WHYTE

ST. LOUIS, Nov. 28.—J. F. Whyte has been apopinted retail sales manager of the St. Louis factory branch of Willys-Overland, succeeding Harold W. Booth who resigned to accept the position of assistant sales manager of the Ajax Motor Works at Racine, Wis. Whyte has been with the Overland organization 15 years.

Insurance Men Vote to Cut Agents' Commissions

NEW YORK, Nov. 28.—The National Automobile Underwriters' Conference at its annual meeting here, reduced the acquisition cost or commission paid to agents from 25 to 20 per cent, the reduction to apply generally among members of the conference throughout the country.

It was the opinion of some of those who attended that this reduction in commissions promised a reduction in rates in the not distant future. At any rate it was realized that a crisis in handling automobile insurance was pending.

Frederick C. White, vice-president of the Hartford Fire Insurance Co., was elected president, William R. Hedge of Boston, vice-president, and Herbert W. Ellis, assistant manager of the Phoenix of London, was re-elected treasurer.

Chicago Nash Dealers Plan Big Winter Sales Boost

Showrooms and Windows Display Advancements That Aid Comfort in Cold Weather

CHICAGO, Nov. 30.—The Nash Sales Company of Chicago, and 24 associate dealers in this city have set aside the week from November 29 to December 6 as "Winter Week" and are celebrating the event by special exhibits in all the showrooms and show windows throughout the city.

The purpose of the campaign is to educate the public as to the importance of recent advancements in motor car construction in relation to their effect on comfortable winter driving.

H. T. Hollingshead, president of the Chicago distributing firm, believes that few outside the automotive industry realize the tremendous strides that have been made toward increasing comfort and safety of winter motoring. He believes that the inconveniences of the old style cars have created an impression by many motorists that the time to buy their new cars is in the spring. Because of the danger of skidding on icy pavements, difficulty of starting in zero weather and the cracking and peeling of finishes, they have let their old cars bear the brunt of winter service.

Mr. Hollingshead is stressing in his Chicago campaign the changes brought about in recent months that prevent the ills and dangers of winter driving. Show windows and rooms are featuring attractive displays of four-wheel brakes, balloon tires, heat control devices, and special Duco finishes with which Nash cars are equipped.

Mr. Hollingshead believes that the public has been informed of these advancements but has not yet realized their full import. It is the purpose of the campaign to show graphically that the old idea of buying new cars only in the spring has passed out in effect just as the open car is rapidly doing in reality.

LOCOMOBILE PICKS SCHMIDT

BRIDGEPORT, Conn., Nov. 28.—George E. Daniels, vice president and General manager of the Locomobile Company of America, announces the appointment of L. A. Schmidt, as consulting engineer and assistant general manager. Mr. Schmidt was for several years chief engineer of the Fiat in this country, and his training in the Turin, Italy plant was of the most exacting nature. His shop experience has been equally extensive.

Cleveland Dealers Plan to Train Own Service Men

Association to Establish School Where Boys Will Become Skilled Mechanics

CLEVELAND, O., Nov. 28.—A three-year course designed to produce thoroughly competent automobile mechanics, will be started by the City of Cleveland shortly after the first of the year and thereafter will be a regular feature of the vocational training work of the Department of Education. This forward step is the direct result of the efforts of the Cleveland Automobile Manufacturers' 'and Dealers' Association to meet the shortage of skilled labor with which the service stations of its members are faced.

When the new course is under way, it is expected that it will provide a steady supply of trained men for the local service stations. The instruction will be given by the public school system and consequently there will be no tuition fee. As the students will spend more than half of the total time required for the course local service stations, the course will be of an intensely practical nature.

The classes will be recruited from boys of 15 to 16 years of age attending the junior high schools. They will be selected on the basis of general intelligence and mechanical aptitude. Before they start the course, their parents will be required to sign a statement that their sons are taking up the work with the serious intention of seeing it through and of entering the maintenance division of the automotive industry.

The entire first year of the course will be spent in school under the supervision of competent instructors, a portion of whose salaries will be absorbed by the Federal and State Vocational Training Boards. The morning sessions of three hours will be put in on practical work in the shop while the afternoon session will be devoted to classroom and laboratory work on related subjects. Among the related subjects to be covered are shop mathematics, business English, elementary physics and chemistry, blueprint reading and shop sketching. In addition, courses will be given in hygiene and safety, as well as in civics and elementary economics, the latter work being included to make the boys realize their responsibilities as citizens and their position in society. This instruction covers 38 weeks.

In the second year, the students will be divided into two groups which will alternate two weeks in school and two weeks in a dealer service station. The school work during this period will supplement the practical shop experience. At this stage, it is planned to give the boys instruction along lines which are not covered in their outside shop work as undoubtedly the dealers, at the start at least, will use the boys for greasing and other similar jobs.

(*Continued on Page* 43)

WHITE REALTY BRANCH

CLEVELAND, O., Nov. 28.—Plans have been announced for segregating the White Motor Company's real estate holding occupied by branch sales and service stations throughout the country. This will be done through the formation of the White Motor Realty Company, an Ohio corporation capitalized with 15,000 shares of no par common stock of which 5,000 shares are to be issued presently. To finance this company an offering of $3,000,000 6 per cent secured serial gold debentures are to be offered by Charles D. Barney & Co., Hayden, Miller & Co. and the Union Trust Company.

Woman Operates Electric Service Plant in St. Louis

ST. LOUIS, Nov. 28.—The Ford-Siefert Auto Electric Company has just occupied its new home at 2629 Locust Street here. The building was erected expressly for the company, is two stories high, with a sky-lighted, one story structure covering the rear section of the lot, 25x-35 ft.

Mrs. Martha Ford

A double drive-way leads from the alley to the granitoid service area in the rear. Shops are on the second floor and all new equipment has been installed there. The company is devoted exclusively to repair and replacement of all automotive electrical equipment.

Mrs. Martha Ford, widow of Peter F. Ford, a pioneer in the automotive electrical field in St. Louis, is the senior partner in the Ford-Siefert company. Clarence F. Siefert, the other partner, has had much experience in the automotive electrical field, having been connected with the Ford Motor Co. branch in St. Louis and the Tate Motor Co., Dodge Brothers dealers.

FRENCH TIRES RAISE

PARIS, Nov. 9—(by mail)—Michelin increased tire prices 22 per cent this week, to take effect immediately. In accordance with the custom here, Michelin's move was at once followed by all other tire manufacturers and importers on the French market.

A. E. A. Holds Meeting to Boost Christmas Campaign

All of Chicago Jobbers Are Present At Session When Merchandising Plan Is Presented

CHICAGO, Nov. 28.—For the first time in four years representatives of all of the eight automotive jobbers in Chicago who are members of the Automotive Equipment Association met to plan a co-operative merchandising movement for the good of the industry.

The meeting was held at the Congress Hotel under the auspices of the merchandising department of the A. E. A., and was attended by more than 100 jobbers, jobbers' salesmen and manufacturers' representatives. It was one of a series of meetings being held under the merchandising plan of the A. E. A. for the purpose of stimulating the sale of automotive accessories, parts, supplies and shop equipment.

Arthur R. Mogge, merchandising director of the A. E. A., explained in detail the campaign which includes a revival of the "Ask 'Em to Buy" movement and a new movement based on the slogan, "Show 'Em and Sell 'em." He urged jobbers to help their customers, the retail dealers, keep their places busy this winter, and showed how the A. E. A. is prepared to help them do this.

He explained the Christmas merchandising promotion being done by the A. E. A. and exhibited samples of the printed matter that has been prepared for the use of dealers in getting holiday trade. He also showed how the sale of winter necessities for the motor car can be greatly increased by proper cultivation of customers. The third phase of this business opportunity that he touched on was maintenance. He cited many examples of highly profitable maintenance business coming for careful attention to the selling and servicing of maintenance operations.

Other speakers were B. W. Ruark, assistant to Commissioner Webster of the A. E. A.; Sam Shelton, editor of MOTOR AGE; Dick Sheridan, president of the International Boosters Club and Ken Cloud of Jobber Topics.

The eight jobbers represented at the meeting were Automobile Supply Co., Chicago Auto Equipment Co., Chicago Automobile Supply House, Electric Appliance Co., E. D. Kimball & Co., Motor Car Supply Co., Sheridan Auto Supply, Inc., and Universal Automotive Supply Co.

Following the meeting several of the jobbers placed large orders for Christmas campaign printed matter prepared by the association.

HERTZ SEDAN RAISED

CHICAGO, Nov. 28.—The Yellow Truck & Coach Mfg. Co has increased the price on the Hertz sedan from $1,695 to $1,795.

Final Draft of Bill to Cut War Tax Is Finished

House Committee Rejects Plea to Make Provisions Retroactive —Reduction Is $70,537,000

WASHINGTON, Nov. 28.—Four decisions affecting the automobile industry were announced this week by the House Ways and Means Committee in its completed draft of the new revenue bill which carries a total of $336,236,000 tax reduction, of which $70,537,000 is cut from the taxes paid by the automobile users of the country.

The four decisions were: (1) rejection of the automobile industry's application for a retroactive tax, by which it would be possible to rebate the 40,000 dealers throughout the country on cars which they have in stock on the date the bill becomes effective; (2) announcement that the tax will become effective on the date of its adoption; (3) a ruling that parts and accessories, sold with passenger cars, be included as a part of the car and taxed 3 per cent, and (4) that automobiles, exported to American possessions be exempt from the 3 per cent excise tax.

Present indications are that the new tax measure will be introduced on December 7, get its first consideration on December 9, under a unanimous agreement by administration leaders and will probably be disposed of in the House within two weeks. The Senate leaders believe that its final passage can be effected by March 1.

G. M. OFFICIALS SAIL

NEW YORK, Nov. 28.—Alfred P. Sloan, Jr., president General Motors Corporation, announces that C. S. Mott, chairman, John T. Smith, H. L. Barton, M. L. Prentis and W. L. Davidson will sail December 5 to look after certain overseas interests of the corporation in England and on the Continent.

Willys-Overland Latest To Join in Finance Plan

NEW YORK, Nov. 28.—The Willys-Overland Co. of Toledo has been added to the group of automobile manufacturers whose dealers are assisted by the Commercial Investment Trust Corp. of New York in financing purchases and placing insurance on their automobiles.

The group so financed includes also Dodge, Hupmobile, Chandler, Nash, Paige-Jewett, Reo, Cleveland and Franklin.

The Commercial Investment Corp., according to a recent announcement has sold to a banking group, headed by Dillon, Read & Co., of this city, $7,500,000 6½ per cent preferred stock in the corporation, and, further, has arranged with the same group to underwrite 72,000 shares of its common stock, to provide additional funds for operating purposes. The common will be offered to stockholders, it is learned on good authority, on a basis of one of the old for five of the new at $60 per share. This transaction will bring to the Commercial Investment Trust Corp. approximately $5,000,000, in addition to the proceeds of the public sale of the preferred.

Wisconsin Chrysler Dealers Have Novel Insurance Plan

Milwaukee Company Finishes Payments and Delivers Car to Beneficiary If Buyer Dies

MILWAUKEE, Nov. 28.—A new insurance plan in combination with motor car sales has been successfully evolved by George W. Browne of the Clark Motor Co. of Milwaukee, Chrysler distributors in 32 Wisconsin counties, and has proved to be a big sales incentive.

The Clark Motor Co., as distributor, and all of its dealers in the territory, offer to purchasers of Chrysler cars, an insurance policy which in effect clears the title to the car in case it is unpaid for and sickness, accident or death overtakes the purchaser. The principal provisions of the policy are:

If the purchaser becomes sick and is prevented from performing the duties of his occupation, and is consequently unable to meet the monthly payments on his automobile, the payments will be made during the duration of his illness by the insuring company, and the receipt given the purchaser at the end of each month.

In event of loss of life through accidental causes the unpaid-for automobile will be delivered to the purchaser's beneficiary, with bill of sale paid in full, regardless of the amount due at the time of death.

There is no possibility of interference by the insurance commissioner of Wisconsin, a fate encountered by other automobile insurance schemes, since the insurance policy is written through the Rebhan Agency of Milwaukee and the Royal Indemnity Co. of New York is underwriting the risks.

Marmon Names Body to Study Dealers' Problems

Left to right. Spencer G. Pope, Pottsville, Pa., Horace A. Rayno, Albany, N. Y., and John G. Salisbury, St. Louis, Chairman.

INDIANAPOLIS, Nov. 28.—For the purpose of gathering together the criticisms, constructive suggestions and sales ideas of Marmon dealers and distributors in all sections of the United States for presentation to the Marmon dealer's convention of the Nordyke & Marmon Company's factory in Indianapolis January 4, 5, and 6, a committee of representative dealers and distributors composed of John T. Salisbury, St. Louis, chairman; Spencer G. Pope, Pottsville, Pa. and Horace A. Rayno, Albany, N. Y. has been formed and will act as a "clearing house" for suggestions which will be presented to the convention for consideration.

This move is a decided forward step in factory co-operation with its dealers and marks an effort on the part of the Marmon factory to garner from its dealers sound and conservative ideas which will accrue to the dealers' benefit and also lead to continued improvements in the Marmon car.

The first meeting of the dealers' committee was held in the office of Percy E. Chamberlain, Sales manager of Nordyke & Marmon Company November 19. At that time the purpose which led to the formation of the committee and the opportunities which it has to further the interests of the dealer body as a whole were explained.

The dealer committee will act independently of the factory Mr. Salisbury said. It will be purely a body for forwarding the interests of other dealers.

One of its first steps will be the mailing of a questionnaire to all Marmon distributors and dealers, asking them a series of questions dealing with the operation of their businesses and the problems which arise in their daily contact with the public. The questionnaires will be returned to Mr. Salisbury and, at a future meeting of the committee, the chronic problems will be separated from those which are purely local and the committee will have a definite picture of the situation as it exists.

Reo Reports Profit of $5,422,181 for Year

Capital and Surplus at End of Fiscal Period Is $3,000,000 More Than 1924

LANSING, Mich., Nov. 28.—With capital and surplus for the fiscal year ending August 31, 1925, $3,000,000 more than for the fiscal year ending August 31, 1924, the Reo Motor Car Company of Lansing has ended one of its best years, according to the annual report just made public. The profits after current federal taxes amounted to $5,422,181.85.

The annual report is for the Reo Motor Car Company and its subsidiary companies as follows: Reo Motor Car Company of New York, Reo Motor Car Company of Chicago, Reo Motor Car Company of California, Reo Motor Car Company of Texas, Reo Motor Car Company of Missouri and the Reo Michigan Sales.

Increase in capital stock is reflected in working capital which indicates a substantial gain in business. The export sales show an increase of 100 per cent, and according to R. H. Scott, president of the company, the prospects for 1926 are unusually good.

According to the report, after paying cash dividends for the year amounting to $2,475,000.00 there remained for transfer to surplus approximately $3,000,000. A stock dividend of 500,000 common shares was also distributed during the year. Good-will and patents are not shown on the balance sheet as having value.

The report follows:

Assets:

Cash on hand and in banks	$7,906,386.41
Sight drafts outstanding	772,822.21
Receivable less reserves	5,079,935.04
Inventories	9,571,503.76
Land, buildings and equipment less depreciation	7,189,376.91
Deferred charges	205,052.31
Stock and bond investments	77,401.00
Reo Motor Car Company of Canada, Ltd.	47,000.00

Among the liabilities listed are $2,360,610.30 in accounts payable, and accrued pay roll of $134,573.08, federal and local taxes of $1,210,500.66. Deferred credits are listed as $111,584,000, miscellaneous payables at $96,705, and the total capital and surplus at $26,935,503.80.

NEW CADILLAC DEALERS

DETROIT, Nov. 28.—New dealers added to the organization of the Cadillac Motor Car Co. include the following: E. E. Lindsey, Rome, Ga., The Jones Cadillac Co., Gulfport, Miss., Marlboro-Dillon Company, Clio, S. C., Claude Nolan, Savannah, Ga., The L. E. Huddle Co., Lancaster, Ohio, Frank Young, London, Ohio, Creighton & Ridley, Woodstock, N. B., Chapman Auto Company, Frankfort, Ind., W. W. Henderson, Lebanon, Ind., Chenoweth Auto Company, Richmond, Ind., H. C. McQuady, Arcadia, Fla., Roberts & Stebbins, Avon Park, Fla., Everett Cadillas Company, Cocoa, Fla., Miami Cadillac Company, Ft. Lauderdale, Fla., Moultrie Buick Company, Moultrie, Ga., Roulerson & Boone, Okeechobee, Fla., Seminole Hudson-Essex Co., Sanford, Fla., Ohio Garage, Sebring, Fla., Tifton Buick Company, Tifton, Ga., J. R. Williams, Valdosta, Ga., Vero Beach Cadillac Company, Vero Beach, Fla., Beeson-Bailey Cadillac Co., Wauchula, Fla., W. L. Hinson Auto Company, Waycross, Ga., Newton Bros., Emporia, Kas., Maloof Cadillac Company, San Bernardino, Cal., J. E. Downs & Co., Pana, Ill., Bob Davis & Company, Salem, N. J., M. A. Pyatt Motor Company, Wildwood, N. J., Foster Auto Company, Cottonwood, Ariz., Hi-Way Service Station, Superior, Ariz., The Charles Green Company, Eureka, Cal., T. A. Bartlett & Son, Lewiston, Ida., Coeur D'Alene Hardware & Foundry Co., Wallace, Ida., Dreyfus & Morgan, Delhi, N. Y.

Kettering Takes Huge Policy

DAYTON, O., Nov. 28.—Charles F. Kettering, vice-president of the General Motors Corporation, has taken out a life insurance policy for $1,600,000, Henry A. Stout, life insurance agent, announced here today.

Hudson Output Is Already Double That of Last Year

DETROIT, Nov. 28.—Hudson-Essex production for 1925 up to the present time totaling 256,000 passenger cars, doubled the entire production for 1924, factory officials said today. The 256,000 car came off the assembly line yesterday.

Of this number approximately 153,600 were Essex and 102,400 Hudsons. Coaches still lead in popularity, fully 90 per cent of the total number being coaches. Closed cars make up 98 per cent of the total.

Hudson-Essex output since 1922 has shown big increases. That year 60,000 were produced followed by 98,000 in 1923. Nineteen twenty-four saw 128,000 with this number being more than doubled by the present year.

NEW KELLY TIRE BRANCH

SPOKANE, Wash., Nov. 28.—A factory branch representing an investment of $250,000 will be opened December 1 by the Kelly-Springfield Tire company, George M. Martin, special representative of the company has announced here. The firm has leased a warehouse for a period of three years with an option to extend the lease for two years more. Mr. Martin announced the appointment of J. R. Bennyhoff, formerly in charge of the San Francisco branch, as manager of the local branch. The territory to be served by the new branch includes a part of Washington, all of Idaho and a part of Montana.

GOUX JOINS PARIS ESSEX

PARIS, Nov. 11.—(by mail)—Jules Goux, one-time Peugeot race driver and winner of the Indianapolis race, is now in charge of the Essex service station and spare parts depot in France. The Essex car is being handled in France by Hibbard & Darrin, who are also distributors for the Belgian Minerva.

New York Group Purchases Kelly-Springfield Truck Co.

Buyers Declare Preparations Will Start at Once for Greater Output Than Ever

SPRINGFIELD, O., Nov. 28.—Purchase of the assets of the Kelly-Springfield Motor Truck Co. by a New York group of men represented by H. W. Torney, Charles C. Jamieson, Edward L. White and Phillip H. Farley at a public sale conducted by Pearl A. Lewis, special master, for the sum of $340,000 has been approved by Judge Frank M. Krapp.

The purchasers are required to deposit $50,000 with the American Trust and Savings Bank as a guarantee covering payment of certain income and excess profit taxes to be adjusted with the government. Mr. Lewis, who is receiver, is authorized to adjust this matter within 30 days and return the balance of the money to the purchasers when they complete the deal.

The entry also shows that the consummation of the sale depends on an adjustment of claims totaling $12,000 at Seattle, Wash., a branch point of the Kelly-Springfield Motor Truck Co., where a receivership has been instituted. It is stated that the assets there total $50,000, and that an adjustment can be obtained within a week.

The purchasers under their bid acquire the real estate, buildings, machinery, good will and stock at the various branches in the United States: Atlanta, Baltimore, Boston, Chicago, Denver, Detroit, Erie, Pa., Greensboro, N. C., Kansas City, Los Angeles, New Orleans, Omaha, Pittsburgh, St. Louis, St. Paul, San Francisco and Seattle.

Edward L. White stated after the sale that the Kelly plant within the next ten days will begin preparations to go forward with the manufacture of trucks upon a larger scale than it has for years.

CHEVROLET SALES SCHOOL

ST. LOUIS, Nov. 28.—Chevrolet salesmen operating within a radius of forty miles of St. Louis attended a school at the Chevrolet branch here last week conducted by William A. Blees of Chevrolet Motor Co., Detroit, W. J. Burns, salesmanager and O. H. Hegre of the sales promotion department of the St. Louis branch.

NEW PAIGE DEALERS

DETROIT, Nov. 28.—The Paige-Detroit Motor Car Company has appointed new dealers as follows:

Lou Footes Garage, Turlock, Cal.; Don's Motor Shop, Kanas City, Mo.; Oppel-Spice Company, Duluth, Minn.; Jewett Sales Company, Logan, Utah; Elnora Garage, Elnora, Alberta, Canada; Orrville Star Sales Co., Orrville, Ohio; Brown Motor Company, Alliance, Ohio; C. G. Blackburn Motor Sales, Ravenna, Ohio; Paige-Jewette Sales Company, Orlando, Fla.; Brick Front Garage, Daytona Beach, Fla.; Lincoln Highway Garage, Medicine Bow, Wyo.; Paige-Jewett Motor Company, Fort Pierce, Fla., and W. A. Overall, Brunswick, Ga.

America Urged to Grow Its Own Rubber in Philippines

Head of U. S. Mission Tells Manufacturers Congress Should Change Land Laws of Islands

AKRON, Nov. 28.—All tropical products, including rubber, that America needs, can be produced at reasonable cost in the Philippines, according to Judge John Hausserman, vice-president of the United States mission of the American Chamber of Commerce in the Philippines, who was a visitor in Akron recently.

The only obstacle in the way of immediately establishing a rubber growing industry on a large scale in the islands is the law restricting land ownership to 2,500 acres, he pointed out, but this can be corrected by an act of Congress. It is believed the question will be brought up when Congress meets next month.

"When American rubber interests start operations in the Philippines," said Judge Hausserman, "they will find the much talked of labor problem has vanished. Labor there is plentiful and efficient. At present 30,000 natives are working on the sugar plantations in Hawaii, but they would rather be employed in their home land if jobs were available for them. The population has grown in the last 25 years from 5,000,000 to 12,000,000.

"Of the 73,000,000 acres in the islands, only 10,000,000 are under private ownership, leaving 63,000,000 in the public domain, available development.

"With Great Britian controlling directly or indirectly 95 per cent of the world's crude rubber supply," he continued, "this vast acreage of potential rubber plantation land is of the utmost importance to this country. The American people don't have to submit to the British monopoly, which has caused a huge increase in cost of rubber and automobile tires, if they will use common sense."

Many Full Time Schedules Being Resumed in Akron

AKRON, O., Nov. 28.—Many departments in Akron rubber factories are resuming full time schedules, this week, after operating for five days a week since about Oct. 1.

There was a seasonal decline in sales at the opening of the fall season, when "spring dating" was abolished, but in the last few weeks the demand for tires, both in this country and abroad, has been gerater than was anticipated. Sales to automobile manufacturers of original tire equipment have been particularly heavy, due to a record breaking car production.

Although none of the tire manufacturers are accepting deferred payment orders, as was the case last year, dealer business is reported to be good. Many distributors, whose stocks are low are ordering large shipments. From now on tire production is expected to steadily increase, reaching peak levels shortly after the first of the year. Most of the tire companies have been running about 80 per cent of capacity during the past two months.

NEW OLDS PARTS DEPOT

CLEVELAND, O., Nov. 28.—A factory parts depot has just been located at 7012 Euclid avenue by the Olds Motor Works, of Lansing, Mich. The new depot, stocked with $30,000 worth of Oldsmobile parts and accessories, will be in charge of T. F. Utley, zone manager. Other officials at the depot are H. J. Nestle, service manager; Arthur Thompson, manager of parts department; Lionel Brown, assistant parts department manager; L. C. Dunham, head of the wholesale department.

STRESSES FLAT RATE

HARTFORD, Conn., Nov. 28.—The L & H Motor Co., Hupmobile distributor throughout the state has just mailed to a selected list of Hupmobile owners and prospects a neatly printed four page folder describing various accessories carried together with a list of flat rate charges for service. The folder also carries pictures of the official sales and service personnel.

Wisconsin Insurance Suit Sets Important Precedent

MILWAUKEE, Nov. 28.—Of great interest to automobile dealers and owners is a recent decision handed down here, which considerably broadens the scope of automobile insurance coverage and establishes one very strong precedent. This precedent is the court's decision that an insurance company is liable for unlimited coverage of an automobile liability risk, except as expressly limited in the policy.

The case was that of the Journal Company, newspaper publishers, against the General Accident Fire and Life Assurance Corporation, and the question grew out of suits for damages following the crash of a Journal truck and a Northwestern railroad train on a highway south of Milwaukee.

The insurance company contended that since the accident occurred at a time when the truck was not engaged in delivering papers, it was not liable. The defense to this contention was that in the absence of a specific clause in the policy exempting the insurance company in such instances, the company was liable. The circuit court in Milwaukee sustained this contention and the supreme court affirmed the decision.

HAGGART VICE PRESIDENT

ALMA, Mich., Nov. 28.—J. C. Haggart, Jr., has been elected vice president of the Republic Motor Truck Co., Inc., according to an official announcement by O. W. Hayes, president. Mr. Haggart has been associated with the Republic truck company for the last nine years, truck company for the last nine years.

Parts and Accessories Set New October Output Peak

Shipments for Car and Truck Equipment Largely Responsible for Record

NEW YORK, Nov. 28.—October was the high month of the year in automotive parts and accessories business as well as in car and truck production, according to figures compiled by the Motor and Accessory Manufacturers Association. A representative group of members of the association reported October shipments to customers running ahead of all months of the year, including the spring peak in April.

Shipments of parts and accessory makers for car and truck equipment were largely responsible for the tremendous October record. October deliveries for original equipment were 214 per cent of the January figure as compared with 179 per cent in September and 183 per cent in April, the previous peak of the year. The tremendous gain in original equipment business which included heavy equipment by several large manufacturers of closed bodies, wheels and kindred products, brought the total shipments for companies reporting from all divisions of the industry up to 188 per cent of January as compared with 158 per cent for September and 168 per cent for April, the previous high month.

Shipments of replacement parts to wholesalers aggregated 131 per cent of January as compared with a total in September even with January and 130 per cent in August. Accessorry shipments to the trade exclusive of vehicle manufacturers aggregated 163 per cent of January as compared with 155 per cent for September and 193 per cent for April, the previous high month. Shipments of service equipment, that is, repair shop machinery and tools, in October ran even with January as compared with 123 per cent of January in September and 113 per cent in August.

The tremendous October business in original equipment was in keeping with the car and truck production of more than 452,000, setting a new monthly record.

WAGON WORKS BOUGHT

EVANSVILLE, Ind., Nov. 28.—The William T. Karges Wagon Works here have been purchased by the Evansville Planing Mills and will be utilized for the manufacture of motor car bodies. The buyer paid $75,000 for the plant. Operated for many years in the manufacture of farm wagons, the business gradually declined with the increase in motor vehicles, and six months ago was closed permanently. Since then, the stock and machinery has been in process of liquidation. William Johann, general manager of the purchasing company, plans to install new machinery and enlarge the plant and hopes to employ several hundred men.

Cincinnati Dealers Keep New Cars Moving Quickly

Used Automobile Sales Receive Big Impetus Throughout October and Early November

CINCINNATI, O., Nov. 28.—Used car sales in the Cincinnati district are exceptionally active according to reports from dealers and distributors. The latter are of the opinion that this is a good sign because it shows that a goodly number of sales of new cars are being made to provide the used cars which are being transferred.

This is demonstrated when it is seen that the used cars being sold are of a fine quality many of them being 1925, 1924 and 1923 models which were traded in at good figures to dealers and distributors when 1926 cars were purchased. All through the fall there has been a steady increase in the sale of used cars and October was a banner month, as 3,868 used cars were sold, delievered and registered at the clerk's office of Hamilton county during that month.

The first half of November also is making a good showing as the registrations up to Nov. 15 were 1,473 used cars. Dealers say that even more more than that number have been sold as the dealers were not always able to make deliveries on the day of sale. New car sales in Hamilton county up to Nov. 15 were 782 cars, the largest percentage of which were closed jobs. This is compared with 2,064 new cars sold in October 1925 and 948 new machines sold in all of November 1924.

Distributors in this territory are using every means of spreading the gospel of better co-operation between dealers and sub-dealers of various makes of cars, so that information may be exchanged and a more uniform basis of sale of used cars in trading-in deals may be established. Distributors assert that often dealers and sub-dealers are imposed upon by buyers in car trades when buyers shop around telling one dealer that another dealer had offered him so much for his car, when in fact there had been no such offer.

Sales of tires and accessories in this district are keeping up well, it is reported, and everything points to a substantial increase of business in November over November 1924.

RECHARGEABLE DRY CELLS

MADISON, Wis., Nov. 28.—A rechargeable dry cell is announced by the French Battery Company of Madison. The container is a cylindrical zinc plate which serves as the negative electrode. The positive plate is especially designed grid so constructed as to prevent the active materials from falling out. Moisture needed by the battery from time to time is supplied by means of distilled water, two or three eye droppers full of water being required every two or three months. The cells may be used separately, but for general use will be put up in six cell units in cabinets, with built in rechargers, the whole outfit to be connected both with the radio set and the electric light plug.

NEW CLEVELAND DEALERS

CLEVELAND, O., Nov. 28.—New dealers added to the organization of the Cleveland Automobile Co. include:

Maudlin Bros., Detroit, Lima Chand-Cleve Co., Lima, O., Dawson Sales Co., Muncie, Ind., Electric City Auto Exchange, Schenectady, N. Y., H. O. Cummins, Vallejo, Cal., Barney Motor Sales Co., Wyandotte, Mich., Chandler Newark Motors, Newark, N. J., Chandler Jamaica Motor Inc., Newark, N. J., Chandler Jamaica Motor Car Corp., Jamaica, L. I., N. Y., General Auto Shop, Appleton, Wis., Cleveland Sales & Service, Moline, Ill., Coast Motors, Long Beach, Cal.

Henry Sterling Houpt

PELHAM, N. Y., Nov. 28.—Funeral services for Harry Sterling Houpt, for 20 years one of the best known automobile dealers in New York City were held at his home here, where he died following two nervous breakdowns. In 1907 he headed his own sales company, handling the Thomas car, which under his guidance was entered in the Vanderbuilt Cup and other races in 1905-07. Later he distributed the Lozier and was aslo interested in the Owen magnetic car. For a time he was vice-president and general sales manager for the American Locomobile Co., builders of the Alco car, and from its organization in 1915 until he retired last year to engage in real estate operation he was president of the Hudson Motor Car Co. of New York. He is survived by his wife, Eleanor G. Houpt, and a brother, Edgar M. Houpt.

Oldsmobile Deluxe Models Far Outsell the Standard

Analysis Shows Public Wants Its Cars Equipped with Accessories —Coach Most Popular

LANSING. Mich., Nov. 28.—Proof of the truth of the statement that the luxuries of yesterday are the necessities of today is shown by an analysis of Oldsmobile's sales figures for the first 10 months of 1925. During that period the deluxe models, fully equipped with all accessories, far outsold the standard models.

The most popular model was the deluxe coach, with the deluxe sedan, the highest priced car in the Oldsmobile line running second, slightly outselling the standard coach, the lowest priced closed car. The sale of standard and sport touring cars are about equal, due to the large export demand for the standard open cars.

Oldsmobile was one of the early companies to recognize the trend toward fully equipped cars, and more than a year ago it standardized on all accessories. They were selected and designed to conform to Oldsmobile's requirements, and are attached to the cars on the assembly line. Thus the accessories are integral parts of the finished car.

From the present trend it is likely that in the not far distant future practically every car sold will be equipped with front and rear bumpers, snubbers, motometer, spot light, automatic windshield cleaner, rear view mirror, kick plates, gasoline gauge, luggage trunks and rack.

Renault Mystifies Paris Drivers

PARIS, Nov. 9.—(by mail)—A 6-h. p. Renault runabout, apparently having nobody abroad, yesterday ran along the Paris boulevards and main avenues during the peak hours of traffic. It was at first believed that this was a radio demonstration and that the G. M. C. truck which traveled in the immediate neighborhood of the Renault constituted the transmitting and controlling station. There is now a suspicion, however, that the car was faked and that it was operated by an electric motor with a driver concealed in the tail. The dealer responsible for putting the car on the street reaped a plentiful advertising harvest.

Safety Director Reports On Progress for 1925

Barber Tells Hoover That Conference Has Succeeded in Stimulating State and Local Action

WASHINGTON, Nov. 28.—Deploring the mounting curve of human, material and financial losses due to street and highway accidents, more particularly those involving motor vehicles, as "one of the most conspicuous examples of waste in modern American life," A. B. Barber, director of the National Conference on Street and Highway Safety, in a report to Secretary of Commerce Hoover which is included in the latter's annual report to Congress, recites what the national conference has accomplished since it was first called in the spring of 1924.

"The National Conference on Street and Highway Safety is nationwide in its scope," says the report. "Its purpose, however, is to obtain results through stimulation of state and local action. Its activities have assisted in focusing wide spread public attention on the automobile accident problem, and in crystallizing opinion on remedial measures which should bear definite results. A beginning has been made on the application of these measures by state legislatures, and an important influence has been manifested in regard to municipal regulation and organized community effort."

Admission is made by Director Barber in his report that: "As this report is being written the Committee on Statistics has reported that the wastage in human life and physical losses is continuing to increase."

Director Barber lauds the co-operation which is being given the conference by the National Automobile Chamber of Commerce, the American Automobile Association, the National Association of Taxicab Owners and other interested organizations.

FIAT PUSHES NEW MODEL

PARIS, Nov. 11.—(by mail)—During the past fortnight Fiat has conducted an important sales campaign in France in favor of the new 7 h.p. model, which next year will constitute the big production job of this Italian concern. Prices on the French market are chassis with tires 16,100 francs; phaeton 21,900 francs; roadster 19,750 francs; cabriolet or four passenger sedan 26,850 francs. These prices are rather higher than the most direct French competitor, the 6 h.p. Renault, but sales are reported to have been very satisfactory.

1500 DEALERS HEAR N. A. D. A.

DALLAS, Tex., Nov. 28.—Automobile dealers, distributors, salesmen and accountants in Texas and parts of Louisiana and Oklahoma have been given a close insight into the motor industry and a clear explanation of modern methods of automotive merchandising through a series of sales congresses held in Houston, Dallas, Fort Worth, San Antonio and El Paso during the past week under the auspices of the National Automobile Dealers' Association, with the manufacturers and local distributors co-operating. Some 1,500 automobile men attended these sales congresses and heard experts discuss the motor industry and the best methods of selling automobiles. The chief speakers at the cities where the congresses were held were Lynn M. Shaw, H. D. Bullock, Edward Payton and A. R. Kroh.

SCHACHT TO REORGANIZE

CINCINNATI, O., Nov. 28.—Stockholders of the G. A. Schacht Motor Truck Co. of Cincinnati will receive two shares of no par common stock for each share of common par value $100 now held, in the re-organization of the company which is proposed to take place Nov. 24 at a special meeting of stockholders to be held here. In the reorganization meeting 6,000 shares of common stock without par value are to be authorized and 11,500 shares of preferred stock of par value of $100 each. Each holder of preferred stock will be given one share of the new preferred and $5 in cash representing the redemption premium on preferred stock now held. The new preferred will carry cumulative dividends at the rate of 7 per cent and will have no compulsory redemption provision.

KLEIBER TO EXPAND

SAN FRANCISCO, Nov. 28.—Capacity and production of the Kleiber Motor Car Company's plant will be doubled in 1926, according to a statement issued by George F. Schwarz, sales-manager. Another floor is being added to the Kleiber plant, which now covers an entire city block. The car is custom-built and Schwarz says the chief difficulty about the expansion is that of obtaining skilled craftsmen in blacksmithing, coach-body work and upholstery. Louis Lagomarsino has been appointed branch manager in charge of the factory at Los Angeles. He has been for several years attached to the San Francisco factory. The Kleiber company has been building trucks for 17 years, but embarked in the passenger car building industry a little more than a year ago.

TRANSPORT CAMPS GO

WASHINGTON, Nov. 28.—The army's motor transport centers, Camp Holabird, Md., and Camp Normoyle, Tex., and the transport section of the San Francisco depot, will go out of business at the end of the present fiscal year, it is announced here by the quartermaster general at the War Department. Camp Holabird will be turned over to the Third Corps Area jurisdiction at Baltimore, and Camp Normoyle to the Eighth Corps commander at San Antonio. Work of the motor transport school at Camp Holabird will be taken over by the instruction school at Philadelphia.

Hudson Dealer Announces Weekly Purchase System

Detroit Distributor Extends Payment Experiment Further Into Lower Priced Six Field

DETROIT, Nov. 28.—Aaron DeRoy, head of the Aaron DeRoy Motor Car Company., Hudson-Essex distributors for this territory, has announced another plan which will make the purchase of either Hudson or Essex passenger cars much easier.

Under the new plan, purchasers of Hudson-Essex cars, can deposit any amount from $1 up with the company and receive 8 per cent interest. Additional payments are made according to the plan under which the car will be bought. When the amount which the future purchaser has paid in together with the interest has reached the amount required for the down payment, he can take delivery.

The plan, according to Mr. DeRoy, has been devised to take care of those wishing to buy cars at present but willing to accept delivery at some later date. The interest shown in the plan indicates that it has helped to stimulate sales.

With the recent price reductions and lower down payment plans which have been in use coupled with the above plan, Hudson-Essex reaches still further into the lower price six cylinder field. It also touches the Ford and Chevrolet buyers making it possible for them to buy Essex cars on payment plans which will not affect their immediate pocketbooks to any extent.

MEXICAN IMPORTS GAIN

LAREDO, Texas, Nov. 28.—During the first ten months of 1925 a total of 1,072 cars of automobiles were exported to Mexico from the United States through Laredo, as compared with a total of 737 cars for the entire year of 1924. The shipments for the first ten months represent only about one-half of the total exports, as many more were made by water through the port of Tampico, and others entered Mexico by way of Eagle Pass, Brownsville, El Paso and other border gateways. The exports through Laredo for October were 177 cars, and the total for November is expected to reach more than 200 cars. The increased demand for automobiles in Mexico is due largely to the general revival of business and a restoration of peaceful conditions. The construction of modern highways which is now in progress also is having the effect of increasing automobile sales, it is stated.

WHIZ PROMOTES SMITH

SEATTLE, Nov. 28.—George F. Smith, former Seattle branch manager of the R. M. Hollingshead Company, manufacturers of Whiz products, has been promoted to divisional manager for the Pacific Northwest.

New Carburetion Features To Be Seen at Big Shows

Lubrication Also Will Be Stressed —More Complete Lines of Shop Equipment Planned

NEW YORK, Nov. 28.—Among the new devices to be displayed in the parts and accessory sections of the National Automobile Shows in New York and Chicago will be several for improving carburetion and lubrication. As a result of research in the past year it is said that the new carburetion systems will come nearer to introducing fuel into the engine in the most productive form than ever before.

Important steps have also been taken in the methods of distributing lubricating oil to best advantage and keeping it pure as long as possible after it is fed to the engine and other parts of the car.

This year the shows will cater to a greater extent than ever to the service stations, presenting complete lines of equipment, both power machinery and hand tools. These will include many new devices to speed up work and reduce costs in the service and maintenance field.

Every succeeding show displays more pronounced trend toward artistic fittings, especially in body hardware. The newer designs this year include gold and silver plated interior hardware, both chased and engraved, and of the various art periods in which dainty and unusual design predominated.

In parts and accessories, as well as in complete cars, the most important firms in the industry will be represented. Engine makers will include Continental, Hercules and Waukesha; body makers, Budd, Rex and others. In the accessory section will be the newly developed device of Thompson Research, Inc., for elimination of carbon monoxide gas.

SCHOOL ENROLLMENT GAINS

SAN FRANCISCO, Nov. 28.—Enrollment records at the Star Automobile Merchandising School, held by Raymond Boyd, in the salesroom of the Star factory branch on Van Ness Avenue, were broken in November, when 250 young men signed up for the course. The school is free and the students who graduate are given positions in the Durant organization.

WILMINGTON PLANS SHOW

WILMINGTON, Del., Nov. 28.—The Wilmington Automobile Trade Association has selected the week of March 1 as the date for the 1925 show. The Hotel du Pont has been chosen as the place for holding the show, the same as last year. Several large rooms, the ballroom, foyer and du Barry room, are available. They will accommodate a large number of cars and accessories. It will not, however, be possible to exhibit commercial cars.

STAR DEALERS MEET CURTIS

PORTLAND, Ore., Nov. 28.—Oregon Star dealers gathered here during the past week to meet the new sales chief of the Durant Motor company of California, H. W. Curtis. With Curtis came other new officials of the Durant family for the Pacific Northwest. Col. Ralph Faneuf, northwest zone supervisor and Bert Goodfield as representative for western Oregon and the Willamette valley. He succeeds Ernest Jones, who has been made assistant sales manager at the factory.

Olds Adds Shassberger to Analyze Its Territories

LANSING, Mich., Nov. 28.—In line with the new Oldsmobile sales development program, two new positions have been created in the sales department of Olds Motor Works, D. S. Eddins, general sales manager of the company announces. They are manager of the territorial analyzation department, and supervisor of territorial representation.

E. J. Shassberger, for the last four and a half years advertising manager

E. J. Shassberger

for Oldsmobile, has been appointed in charge of territorial analyzation, and E. F. Glenny, manager of the Minneapolis branch of Oldsmobile, will be supervisor of territorial representation.

Mr. Shassberger's duties will comprise a thorough analyzation of the United States from the viewpoint of Oldsmobile sales, to determine, scientifically, on the size, number and locations of sales outlets. His finding will be used as a basis by Mr. Glenny in his work of supervising the appointment of dealers. This correlation of territorial sales development is part of an extended sales promotion plan now being prepared under the direction of Mr. Eddins.

Louisiana Dealers Report Good November Business

Conditions in General Throughout State Are Better Than for Last Four Years

NEW ORLEANS, La., Nov. 28.—Although the rainy weather may have temporarily retarded new car business in Louisiana and Mississippi during November, the sloppy condition of the roads had a beneficial effect on tires and replacement parts. Most car distributors reported a better business than that of October, and dealers' reports were optimistic.

Business condtions in general are in better shape in both Louisiana and Mississippi than they have been for the last four years. All crops made fair yields this year, and prices were good. Cotton has about all been picked and marketed, bringing much ready money into the cotton sections, some of which was invested by pickers in used cars that thus made it possible for dealers to go after new business. Distributors report that dealers are not overstocked with used cars and that repossessions are few.

Specifically, it appears that: New cars are selling better since the new models have been stocked and since the winter weather has put some pep in the buyers; used cars being disposed of practically as fast as dealers buy them when good judgment in taking them is used; accessories, fair and improving; shop equipment much better because garagemen have realized the value of well equipped shops; tires, excellent and on the increase, on account of the wear of muddy roads and anticipated increases in prices; electrical units very good for both cars and radio; radio sets selling rapidly; collections satisfactory, and most of buying is done on terms.

FORD DEALERS BANQUET

ST. LOUIS, Nov. 28.—Beck & Corbitt Iron Co., automotive distributors of which William Niekamp is president and George Niekamp is secretary, gave a banquet to Ford dealers and their salesmen at the Coronado Hotel to introduce to them the Universal six-speed transmission for Fords for which the Beck & Corbett Co. has just been appointed distributor. About 400 men including officials of some of the leading Ford establishments in the city attended.

OVERLAND DEALERS MEET

ST. LOUIS, Nov. 28.—More than 250 Willys-Overland dealers in the St. Louis district attended a "get together" dinner and entertainment last week at Claridge Hotel. The district includes parts of Missouri, Illinois and Kentucky. Speakers were W. O. Kirakofe, branch manager, J. F. White, sales promotion manager of the St. Louis Willys-Overland factory branch.

Along Automobile Row

SPRINGFIELD, O.—The Conover-Maples Co., has been appointed representative for the Franklin car in this section, it is announced. The company also handles Studebaker and Marmon.

DES MOINES, Ia.—W. H. McManus, for three years representative for the Ford Motor Company in Des Moines and lately in Memphis, has resigned his southern post to return to Des Moines as special representative for Willys-Overland, Inc., Des Moines branch.

LOS ANGELES.—Stephens S. Nerney, Hollywood Ford dealer, has been appointed an authorized Lincoln dealer in Hollywood. Mr. Nerney plans the early erection of a new building for the exclusive occupancy of Lincoln sales and service facilities.

DALLAS, Tex. — Nash-McLarty Motor Company has established a retail store at Olive and Pacific Avenue with D. C. Welling formerly of Houston, in charge. The Nash-McLarty Company recently established a retail store in Oak Cliff, the biggest suburb of the city.

CLEVELAND, O.—The Cooksey Oldsmobile Company has moved into the Bryant Building, Superior Avenue and East Twelfth Street. The new quarters, more centrally located than the former up-town offices, offer additional space for display and servicing of cars.

DECATUR, Ill.—Merle Torney, formerly of the wholesale department of the Decatur Drug Co., has joined the sales staff of Frede & Sons, Chevrolet dealer.

DAVENPORT, Ia. — The Davenport branch of the Firestone Tire & Rubber Company was host to 50 truck tire dealers of eastern Iowa and western Illinois at a one-day sales conference last week.

HARTFORD, Conn.—Ben F. Butler, formerly general manager of the Connecticut Auto Sales Co. which has passed out of the local sales field, has opened up a salesroom at 170 High Street and will feature Hudson and Essex under an associate dealership.

CHAMPAIGN, Ill.—Auto Service Garage, Hudson and Essex dealer, H. A. Sims, proprietor, moved into its new building recently and had a grand opening which was attended by about 5,000 persons.

MEMPHIS.—The new building for the Stewart-Warner Products Service Station, has just been finished and occupied.

SPRINGFIELD, Mass.—R. A. Phaneuf has been named manager of the Springfield Durant Co., retail sales branch of Durant Motors, Inc.

DETROIT.—Studebaker Corporation has opened a new sales and service branch in Detroit at 3440 East Jefferson Avenue under the direction of F. A. Kolbe. Formal announcement of the opening of the branch was withheld until the entire station could function as a whole.

PEORIA, Ill.—Edwin Mueller, long identified with the automotive sales forces in this city and Springfield, has joined the S. M. Morse Company, Chrysler dealer, as a salesman.

HARTFORD, Conn.—The Brack Motor Sales Co., East Hartford has taken on the Moon and Diana lines.

MEMPHIS.—The Service Motor Co., Chrysler and Marmon specialists, announces that B. B. Boyce now has charge of the service and repair department.

CLEVELAND, O.—A new sales and service office was opened here by L. L. Smith, Cleveland, Nash and Ajax dealer. The new structure, located at 13700 St. Clair Avenue, is one of the most modern buildings of its kind in this section.

ST. LOUIS.—The Lincoln Department of Lambert-Graves Motor Co., Ford and Lincoln dealer, recently celebrated the first anniversary of the opening of its own building at 4001 Lindell Boulevard.

HARTFORD, Conn.—Charles C. Frost, Hartford, Conn., for the past six years with the Harrington Hudson Co., has joined the sales force of the Mohen & Amidon Sales Corporation at 368 Main Street, Hudson and Essex metropolitan dealers.

PORTLAND, Ore.—Rapidly increasing sales have caused another expansion move on the part of Condit & Conser, distributors of Diana and Moon cars and subdealers for Hudson-Essex. They have opened a west side branch.

MILWAUKEE.—The new radio store devoted exclusively to radio receiving sets, parts and accessories and to giving of day and night radio service will be opened soon at Beaver Dam, Wis., by H. L. Kirsh and L. C. Cunningham.

DES MOINES, Ia.—The Chevrolet Motor Company entertained dealers and their families from Iowa, South Dakota and Nebraska, at the opening last week of its new building at Thirteenth and Walnut Streets.

HARTFORD, Conn. — The Brightman Auto Parts Co. has opened a new four story sales building on Morgan Street and will feature new parts for all makes of cars. The firm recently took over the territory of the P. D. Auto Parts Co. which has retired from the field.

SPRINGFIELD, Mass.—O. L. Huntting has been appointed wholesale and retail dealer for the Locomobile complete line in this territory.

CLEVELAND, O.—As part of an expansion program, the Nash-Holzhauser Company, Nash dealer opened new salesrooms at 6225 St. Clair Avenue. The former location will be used in the future as a service station, while the new quarters will be used exclusively as a salesroom.

SPRINGFIELD, Ill.—The Foutch Battery Service, operated by S. E. Foutch has moved to 214 Broadway in larger and newer quarters where he will be better able to handle his growing trade.

ST. LOUIS.—Riesmeyer-Yates Motor Co., Ford dealer in Webster Groves, St. Louis County, has opened a new building at Lockwood and Maple Avenues.

HARTFORD, Conn.—F. W. Williams, Inc., Paige and Jewett distributor, is building a new sales and service station on the Connecticut Boulevard which will be operated as a branch of the Hartford headquarters.

LOS ANGELES.—The Star Motor Company of California recently opened its new Hollywood branch with impressive ceremonies. The new branch is in charge of Ralph Wheeler, manager, and Ray Gunderson, assistant manager.

DETROIT.—Harry Farenback has been named manager of the Bielman-Taube Motor Sales Company of Detroit used car department which was recently opened.

MILWAUKEE.—N. M. Sinske has been appointed office manager of the West Point Garage Sales Co., Willys-Knight and Overland dealer, of Milwaukee. Mr. Sinske was connected with the Hokanson-Thompson Co., Inc. Peerless and Oakland distributor, for several years.

THOMPSONVILLE, Conn.—Carpet City Motor Co. has taken the franchise for the Studebaker for the northern section of Hartford County.

ALBANY, Ore.—W. E. Chrisman and W. R. Scott who have been operating the Chevrolet car agency in Lebanon for the past two years have taken over the Albany Chevrolet agency from the Markle company.

CHICAGO.—Charles F. Benell, for the last ten years a salesman for H. Paulman & Co., former Pierce-Arrow distributor in Chicago, has been appointed a Pierce-Arrow sales and service representative with a store at 5714 Broadway, under the name of the Benell Motor Co.

SAN FRANCISCO.—Victor J. Canepa, state senator from this city, and his cousin, E. J. Canepa, have been appointed Chrysler agents for the North Beach district of San Francisco.

TIFFIN, O.—The Gurney Co. has been incorporated by Albert H. Gurney, Frederick G. Pringle, Wolfgang J. Paulus, Lynn Troxel and James D. Watson to act as a Ford agency.

NORTHAMPTON, Mass. — Frank C. Magranis has taken the Packard and Chrysler agencies and has organized the Magranis Motor Sales Co., for which he is building a new establishment in King Street.

MILWAUKEE.—E. Hirsch, who has been associated with the Jesse A. Smith Auto Co., Hudson-Essex distributor in Milwaukee, for the last 10 years, has joined the Packard Motor Co. of Milwaukee as salesman.

ELGIN, Ill.—Joseph W. Taft has taken over the Cadillac agency in Elgin and announced the erection of a $15,000 sales and service station at North State and Mill Streets.

PORTLAND, Ore.—L. K. Nickols, formerly Buick representative for Eastern Oregon, has joined the sales staff of the Portland Motor Car Company and will hereafter handle Hudson and Essex sales in the entire eastern part of the state.

CHICAGO. — Edwards & Crist, 1255 South Michigan Avenue, formerly representative of the Auburn and the Gardner, has retired from the automotive retail field and will confine its activities in the future to the sale of bicycles and supplies and the manufacture and sale of radio sets.

NEW ORLEANS.—Behr Motor Sales Company, Inc., Kissel dealer, opened at 1400 St. Charles Avenue this week. J. H. Behr has personal charge of the salesrooms.

CHICAGO.—Leon J. DeBroux has been appointed manager of the used car department of the Stutz Chicago Factory Branch, Inc., Floyd D. Cerf, president of the branch company, has announced.

AUGUSTA, Ga.—The Augusta Packard Automobile Co., Packard and Oakland dealers in Augusta, plans rebuilding and repairing of the sales building and service station recently damaged by fire at an estimated loss of about $25,000.

SHELBYVILLE, Ill.—Alva A. Jones has purchased a site on West Main street for the one-story fireproof garage and salesroom. It will adjoin the Domas building now occupied by his Ford agency and on which he has just taken a new five-year lease.

HARTFORD, Conn.—Ben F. Butler, formerly general manager of the Connecticut Auto Sales Co., has opened a selsroom at 170 High Street as a metropolitan dealer in Hudson and Essex under the Harrington Hudson Co.

ST. LOUIS.—William J. Christman, who has been connected with Gill-Foote & Co., battery firm at 4620 Delmar boulevard since its organization five years ago, has become sole owner of the firm. He purchased the interest of Samuel E. Foote who previously had acquired the interest of his partner.

SPRINGFIELD, Mass.—Huhm Battery Co,. has been appointed as an official dealer and service station for the Willard Battery in this territory.

DETROIT.—David R. Irwin, formerly automobile editor of the Seattle Times and more recently with the Burroughs Adding Machine Company, has joined the advertising department of the Cadillac Motor Car Company.

MOLINE, Ill.—The Service Motor Sales Company, distributer of Star, Durant, and Flint cars, formally opened a new garage and sales and service agency.

With the Associations

Discuss Sales and Service

NEW YORK, Nov. 28.—Co-ordination of sales and service was discussed by Henry Holt, formerly in charge of the Overland service station in New York City and now Brooklyn branch manager for the Overland, at the November meeting of the Automotive Service Association of New York, Inc., with H. Ivan Stengel of the Uppercu-Cadillac Corp., president of the association, as chairman.

Mr. Holt's address and the discussion following brought out many of the familiar points of difference between the salesman and the service man.

Mr. Holt expressed the hope that the association would appoint an efficient committee to work out ways and means to bring sales and service closer together.

E. J. Rabidoux, a Reo sales manager for several years and now a Buick salesman, believed that the biggest problem of the service manager was to deliver the car to the buyer fully serviced.

William E. Kemp, wholesale distributor, believed that the whole problem between sales and service men consisted of weak salesmanship.

William G. Gow of the StudebakerS Sales Co., Newark, N. J., insisted that free service should not be handled by the service department but by the sales department. This company gives to the buyer of every new car a coupon book entitling him to $25 worth of service. If the buyer, after these coupons are exhausted, complains that he expected more free service, the serviceman refers him back to the sales department.

Mr. Stengel believed that by complete segregation of sales from the service department, arguments from complaining customers on the sales floor, which too often have a bad effect on new prospects, could be avoided. Mr. Gow held to his point and said that an investigation by his company had proved that 28 per cent of 4,000 complaints referred to free service matters, the responsibility for which lay with the sales and not the service department.

Denver Dealers Meet

DENVER, Nov. 28.—At the November meeting and dinner of the Denver Automobile Dealers' Association, a silver service was presented to the retiring president of the association, Mr. Norton of the Norton Buick Automobile Company. Mr. Norton has been very active in the work of the association as the progress made during the last year has shown. The principal topic of conversation at this meeting was the sales meeting to be held in this city December 9, at which some 600 out of town dealers will be the guests of the distributors.

Memphis Dealers Pleased

MEMPHIS, Nov. 28.—President R. R. Price of the Memphis Automobile Dealers' Association states that this body is gratified at the new honors coming to Memphis automobile tradesmen in a national way and in the prospect of this city entertaining the 1926 annual of the National Tire Dealers' Association, recently held in St. Louis.

The Memphis Automobile Dealers' Association has done some effective work

R. R. Price

this year in conjunction with the Memphis Safety Council and the city in regulating traffic and reducing congestion.

Mr. Price is with the Southern Motor Co., Cadillac dealer, and is serving his first term as president. H. B. Hull, vice president, is from the Harter B. Hull Co.; H. J. Jetton, treasurer is from the Bluff City Buick Co. The directors of the association are E. C. Barwick, J. E. Dodge, Harter B. Hull, R. R. Price, H. J. Jetton, and Thomas H. Smart.

Will Mark Rental Batteries

ST. LOUIS, Nov. 28.—All rental batteries obtained from members of the Associated Automobile Service Companies of St. Louis Battery Division, will be marked in the future to make identification easier. On one connector the initial "A. A. S. Co's" will be stamped and on the other will be stamped the membership number of the owner of the battery.

A list of these membership numbers will be kept by each member and if a rental battery is brought into a battery place for charging or repair the owner will be notified and restoration forced. All such batteries are to be painted red.

Dallas Dealers Elect

DALLAS, Tex., Nov. 28.—At the annual meeting of the Dallas Automotive Trades Association John E. Morriss, Ford and Lincoln dealer, was elected president to succeed Frank H. Stephenson. J. M. Worshaw of the Dallas Buick Company, was named vice-president to succeed C. R. Nachtrieb and L. R. Filgo of the Filgo Motor company, was elected treasurer to succeed W. E. Brown.

Directors named for the ensuing year are: David Burke of the retail group, R. C. Langley of the wholesalers, Fred Orior of the parts and equipment dealers and F. A. Ferris of the accessory men. The holdover directors are J. W. Atwood and W. C. Lemmon.

Reports made at the meeting by the outgoing officers showed the motor business in Dallas and territory leading all other lines in value of goods sold. The automobile business during the last 12 months in Dallas and through Dallas dealers and distributors amounted to $250,000,000 the report said. The officers said men connected with the Dallas automobile trade are responsible for 90 per cent of the 915,000 cars now in Texas to say nothing of the thousands sold in Oklahoma, Louisiana, New Mexico, Arizona and the Mexican Republic.

The automobile men heard reports of the recent show, showing a surplus of funds in the show treasury. The dealers requested that arrangements be made before the next annual show is held to obtain more space for display. This will probably mean enlarging of the present show building.

Peoria Plans Show

PEORIA, Ill., Nov. 28.—The annual automobile and accessory show sponsored by the Peoria Automotive Association, tentatively scheduled for the last week in February, is being outlined already by the association and committees are appointed to confer with dealers and exhibitors in preliminary plans. P. K. Norman, is chairman of the general committee and acting with him are C. A. Roadstrum, L. E. Graham, B. B. Rutherford and A. G. Thede.

Membership Rules Changed

PHILADELPHIA, Nov. 28.—The Philadelphia Automobile Trade Association has adopted a radical change in its by-laws, amending them so as to admit as a dealer-member any concern engaged in the retail sale of automobiles in Philadelphia or vicinity, within 15 miles of the county line. This opens the way for the admission of some 140 dealers. The committees drafting the amendment consisted of M. D. Bushong, Robert B. Parker, Ralph W. Cook, Walter G. Herbert and George W. Reinhold.

Machine Tools in Demand By Dealers of Southwest

Atlanta Jobbers Report Business for Last Ten Months Better Than Former Entire Year

ATLANTA, Nov. 28.—A tangible idea of the healthy tone of business in the South this year may be noted from a survey of machine tool sales Atlanta distributors have made the past six or eight weeks to service stations and independent garage companies in the South, most of the distributors here expressing the opinion that this business will very likely establish a new record this year if it continues to hold up as well the next six weeks as it has the last.

Inquiries from automobile companies and service station managers that are reaching the tool distributors in Atlanta are in sufficient volume to indicate that there will be little abatement in the volume of this business the next few months.

Practically all heavier tools have recently been in exceptionally good demand in this field, primarily including drill presses, lathes, cylinder grinding machines, and similar heavier equipment. There appear to be two reasons why the demand from service stations and garage companies has been so unusually active in this district.

For one thing, the automotive industry this year has done more construction than usual, and particularly has this been active in new service stations and garages; for another thing, service station and garage business has been so good in all parts of the South that finances are in better shape for the adding of this additional equipment that has long been needed. A good part of the buying by the new garages and service stations is in new machinery and equipment, while the latter is largely in used tools and equipment.

Two of the largest distributors of such equipment in the Southeast, both of them located in Atlanta, state their sales the first ten months of this year were the largest they had ever been for a whole year before.

Nash Production and Sales Set Records in 10 Months

KENOSHA, Wis., Nov. 28.—The Nash Motors Company continues to set production and sales records. "For the fourteenth consecutive month," says E. H. McCarty, general sales manager of the company, "the volume of Nash business has shown an increase over the corresponding months of a year ago. Previous to this year, 1923 was our greatest year since the founding of the company. During the twelve months of the calendar year of 1923 Nash shipped a total of 56,685 cars. From January 1 to October 31 of 1925, or a total of ten months of this present year, we have shipped 76,959 cars. In other words, in the first ten months of this calendar year our business is 35 per cent greater than for the full twelve months of 1923.

"In the three-month period since July 23, when the new Nash models first went on display, sales have shown a large gain over the highest mark set by the greatest previous three-month period in the history of Nash Motors. Reports received from ten major cities show that during the first week of November their bona fide retail sales following the price reduction swept 53 per cent above sales made in the same cities during the same week of November, 1924—and November, 1924, was the greatest November in all Nash history.

"Another side light on the success of Nash Motors this year is the increasing number of applications we are receiving for the Nash franchise. During the month of October alone 104 new dealers were awarded the Nash contract."

NEW AUBURN DEALERS

AUBURN, Ind., Nov. 28.—New dealers who have recently been added to the Auburn organization include:

Frank B. Schleinhage, Portsmouth, Ohio, Auburn-Dayton Co., Dayton, Ohio, Wm. D. Pitt Auto Co., Iron Mountain, Mich., Cliff McCready Motor Co., Arcata, Cal., C. T. Kemp, San Jose, Cal., Auburn Sales Co., Lodi, Cal., Russell-Towmey Corp., Lakeland, Fla., Frasca Brothers, Sandy Ridge, Pa., T. C. Wood Hardware Co., Rhinelander, Wis., The Auburn East Cleveland Co., Cleveland, Ohio, F. H. Searles, Minneapolis, Minn., Wroge Motor Sales Co., St. Paul, Minn., Hoch's Garage, Duluth, Minn., Bjorling & Erickson, Willmar, Minn., Edwin Laman, Colfax, Wis., Fred Luchsinger, Lisbon, N. D., Gackle Brothers, Kulm, N. D.

Coming Motor Events

Automobile Shows

New York—Jan. 9-15
National Automobile Show in Grand Central Palace.

New Oakland Used Car Division Is Inaugurated

Purpose of New Department Is to Watch Stocks on Dealers' Floors —Buck in Charge

PONTIAC, Nov. 28.—Formation of a used car division of the sales department of the Oakland Motor Car Company was announced today by A. R. Glancy, president and general manager. The division will be a permanent part of sales development work.

W. L. Buck, formerly field instructor in zone two for the sales development department has been appointed head of the new division. Mr. Buck, a veteran in the automobile industry has been in succession salesman, sales manager, dealer, factory district manager and instructor in modern merchandising.

The primary purpose of the new department will be to watch used car stocks and to provide individual assistance in unloading excess inventories. From time to time, the department will broadcast suggestions in keeping with the situation on hand, and which are expected to be of material benefit to Oakland dealers and distributors.

So far the department has been of unquestionable value to Oakland dealers in helping them dispose of their used car stocks, and in many cases has disposed of the "used car problem" in its entirety.

R. E. Olds Deplores Too Lenient Time Payment

ST. LOUIS, Nov. 28.—R. E. Olds, president of the Reo Motor Car Co., at Lansing, Mich., was a recent visitor in St. Louis.

While in the office of the Kardell Motor Car Co., Reo distributors here, Mr. Olds, according to J. C. Kardell, vice-president, deplored the tendency appearing in the industry of extending beyond one year the time limit during which time-payment purchasers of automobiles may complete their payments.

In numerous instances dealers, with the sanction of finance companies have extended the time, to 18, 20 and even 24 months. Olds declared such extension of credit was dangerous.

He said this year would stand out as one of the best years in the automobile industry in points of production and sales and he said he thought that next year would also be a good year.

KUHN HEADS FLINT BRANCH

CINCINNATI, Nov. 28.—W. E. Kuhn, sales manager of the Cincinnati Flint Company, has been appointed as manager of the Flint branch here to succeed J. M. Finlayson. Mr. Finlayson has been appointed regional manager of the Flint Motor Company of Flint, Mich., with headquarters at Detroit.

Grand Central Palace Will House 1926 New York Show

Thousands of automobile dealers will see the 1926 National Automobile Show at New York in the Grand Central Palace from Jan. 9 to 16. The show returns to the Grand Central Palace this winter after two seasons at the big Bronx Armory. The last show held at Grand Central Palace was in 1923. The accessibility of the Palace to the railway terminals and the hotel and theatre district of New York is the great reason for bringing the show back to it.

At the coming show two days, Monday and Tuesday, will be exclusively for the trade so that dealers and others connected with the industry may attend and be free from the confusion and crowding that always occurs when the public is admitted.

Dealers throughout the country who expects to attend the show on these two trade days will be provided with credentials by the National Automobile Chamber of Commerce, entitling them to free admittance.

Schools to Train Service Men

(*Continued from page 33*)

Execept for four hours each week or one day every two weeks, which will be devoted to classroom work, the entire third year will be spent in service stations getting practical experience. The classroom work will cover advanced theory of automobile construction and machine shop practice.

The boys will be paid for all time spent in dealer service stations at an hourly rate on a graduated scale from 25 to 50 cents an hour.

The course is under the direction of Howard L. Briggs, director of vocational training in the City of Cleveland. Mr. Briggs is one of the most experienced men in this field as is evidenced by the fact that all the plumber's, carpenter's and bricklayer's apprentices in the city are being trained under his supervision in the same manner as the automotive mechanics will be schooled.

The details of the plan were worked up for the presentation to the city by a committee appointed by the dealers association. The personnel of this group is as follows: W. Pitt Barnes, Dodge Brothers; R. J. Schmunk, Hudson-Essex; O. C. Tyner, Jordan; B. L. Williams, Ford; J. F. McDonald, Buick; George Roesler, Nash; F. E. Paine, Paige; and W. J. Buckwalter, Chandler-Cleveland.

Increase Your Sales—**NOW!**

By Selling What Sells—**NOW!**

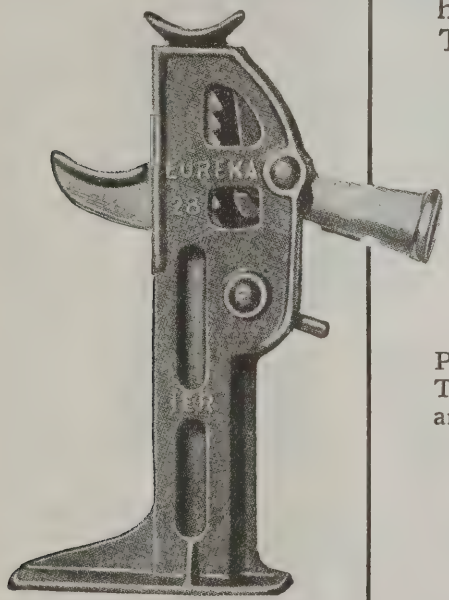
Sells Quick at $1.25 Retail

TASCO gauges sell fast in the winter months. Nobody likes to go thru all the trouble of "measuring" the gasoline in their tank when the weather is cold. Ford, Chevrolet and Overland owners can read their gas at a glance with a TASCO gasoline gauge screwed in place of the filler cap.

Counter display rack packed with every dozen enables you to show them. And — that's all that's necessary.

Order Type "H" for the new Ford Roadster, Touring and Tudor. Type "C" for the Fordor.

THE AKRON-SELLE COMPANY
"40 Years in Business" AKRON, OHIO



MAYDWELL & HARTZELL, Inc.

Pacific Coast Distributors

FORDS, CHEVROLETS and OVERLANDS

FOSTORIA No. 32
Special Balloon Tire Jack

Low placement—high lift. Every part designed especially for balloon tire service. Double machine cut screw of high carbon steel. Fast and easy to operate. Equipped with 36 inch collapsible steel handle positively locked in action. Adjustment, 7 to 17 inches. Capacity, 3,000 pounds. Weight, 8½ pounds. Packed in individual cartons.
Price - - - - - - $5.75

FOSTORIA No. 28

A husky ratchet type jack. Lifting pawls are heavy and spring mechanism simple. Adjustment, 8 to 16½ inches. Capacity, 2,000 pounds. Weight, 4½ pounds.
Price - - - - - - $2.25

Play Safe with Fostoria Jacks and Pumps

You're obliged to carry *some* kind of pumps and Jacks. Your money is invested in them. How quickly they turn over, how many come back, how efficiently and profitably they are restocked—these things mean *profit* or *loss* to you.

Fostoria Fenders for replacement are sold in larger volume than those of all competitive makes combined.

No particular *design* has put them so far in the lead. They are exactly to car manufacturers' specifications.

It is Fostoria's adherence to quality standards and their cooperation with jobbers, dealers and service stations—that has gained this leadership.

And now that same cooperation is behind Fostoria Jacks and Pumps.

This means:

—quality continuously maintained
—ability and willingness to help the trade
—a generous policy as to profits and service
—prompt delivery of quantities desired
—advertising and selling helps to keep the goods moving—profitably

Play safe—with Fostoria Jacks and Pumps. They are excellently designed, quality built, and are priced and distributed *right!*

THE FOSTORIA PRESSED STEEL COMPANY

(Successors to the Ashland Mfg. Co., Ashland, Ohio)

Dept. BE

FOSTORIA, OHIO U. S. A.

Also manufacturers of the famous Fostoria Fenders

FOSTORIA No. 75 PUMP

A powerful pump. 1½ inch diameter with 18 inch barrel. Five ply rubber hose 24 inch long with "Han-D Slip-On" connection. Baked maroon enamel finish.
Price - - - - $3.00

FOSTORIA No. 1 IMP.

Sturdy little screw type jack for Ford, Chevrolet, Overland particularly. Capacity, 2,000 pounds. Weight, 4 pounds.
Price - - - - $1.40

The Roadster Plays a Comeback

Demand for a "Second Family Car", Snappy Body Lines and Sport Appeal Apparently Figure Prominently in Reasons for Increased Buying Interest

By CLARENCE PHILLIPS

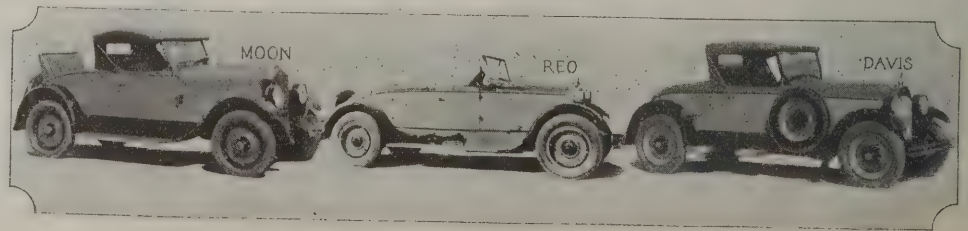
THERE has been an increasing demand for roadsters—an increase which has amounted to more than a seasonal spurt. It has come as a steady development which began some time last year, gathering momentum at the opening of the present year's active selling and increasing its force as the 1925 season progressed.

With 1925 nearing its close the roadster continues going strong. Some companies will check out with new roadster records this year. The trade as a whole will close books Dec. 31 with a unit roadster volume surpassing either that of 1924 or 1923 and possibly widely surpassing either of the other two years immediately preceding.

According to trade reports there are some sections where the roadster is the only open model that has been enjoying increased demand, touring car demand having been steadily diminishing or remaining at very low ebb as closed models have gained in favor. Apparently the roadster is having its inning again.

"The roadster is playing a strong comeback" remarked a factory man the other day, and a check up reveals that it is doing all of that.

In order to obtain some definite roadster facts MOTOR AGE submitted a questionnaire to the factories replies to which revealed some interesting observations and sidelights respecting the reception and progress of this particular body style.



Importantly, the answers show that there is a growing roadster interest in the industry just now, reflecting, of course, growing interest on the part of the buying public. A number of factories which had never made roadsters before or which had dropped them temporarily have included roadsters in their schedules of the past 18 months. Others not listing roadsters at present are considering this addition to their lines.

It is practically certain that several companies not having roadsters on their lists today will have them on display at the national shows or soon thereafter. One company which has not listed a roadster for the past two years but which expects to display roadsters at the shows makes this frank comment:

"Information that you will receive will undoubtedly convince you that 1925 was a surprisingly fine year for roadsters. The best Information that we have been able to gather assures us that we missed out by not having a roadster this year."

A study of records shows that there has always been more or less uncertainty in factory minds as to the roadster's sell-

One big reason for increased interest in roadsters recently is found in the pictorial illustrations accompanying this article. American makers have put smartness and utility in these models in a manner naturally calculated to tempt many automobile buyers

As the Roadster Outlook Has Been Sized Up Each Year Lately by Manufacturers

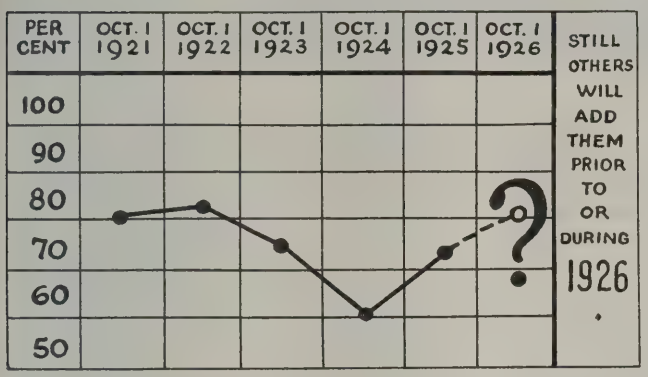


Chart shows roadster curve over five-year period. One hundred per cent would mean all makes represented had roadsters on lists. Eighty per cent, therefore, means 80 per cent of all makes represented that year had roadsters on list

ing qualities, few of the makers having carried roadsters year-after-year without dropping this body one or more times to possibly take it up again later.

The chart published in connection with this article gives an idea of the roadster's prominence in factory production lists over a period of five years ending October 1, 1925. It will be noted that this body's popularity with the makers has greatly fluctuated.

On Oct. 1, 1921, as the chart indicates, eighty per cent of the makes represented (in a list of 112 makes) included one or more roadster bodies. The change from that time to a year later was not material.

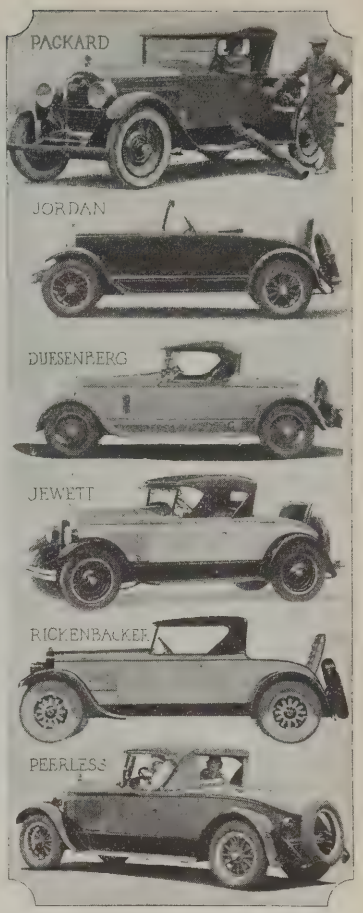
But notice the downward pitch of the curve from October, 1922, to October, 1924. From 82 per cent on Oct. 1, 1922, there was a drop to 75 per cent by October, 1923, and a substantial continuance of this grade to 60 per cent by October, 1924.

And now notice the sharp rise from October, 1924, to October, 1925.

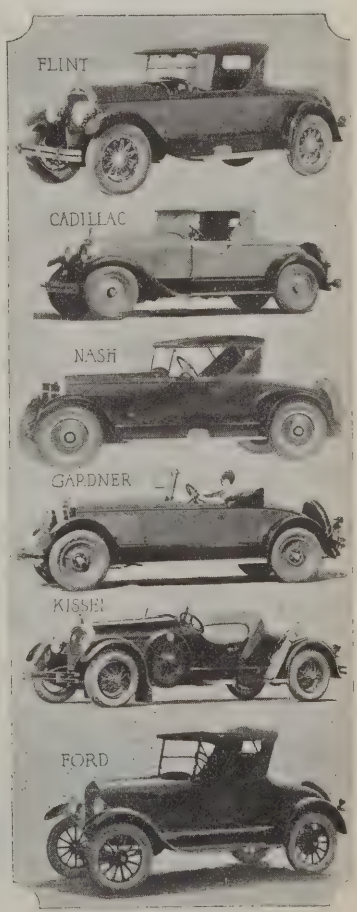
In the past year the line has gone from 60 per cent to 73 per cent, going upward on a grade approximately that of the descent.

How much farther upward it will go it is difficult to say, but there are reasons to believe the ascent will continue to a greater or lesser extent for some time yet. It is not at all unreasonable to speculate that at this time a year hence more than four-fifths of the companies making passenger cars will be supplying roadster models. It is possible the proportion will be still greater.

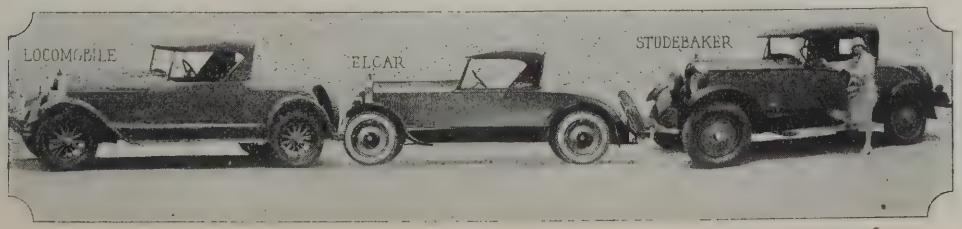
As it is, at the present time 73 per cent of the makes listed include this type of body where but 60 per cent of the makes represented included it a year ago.



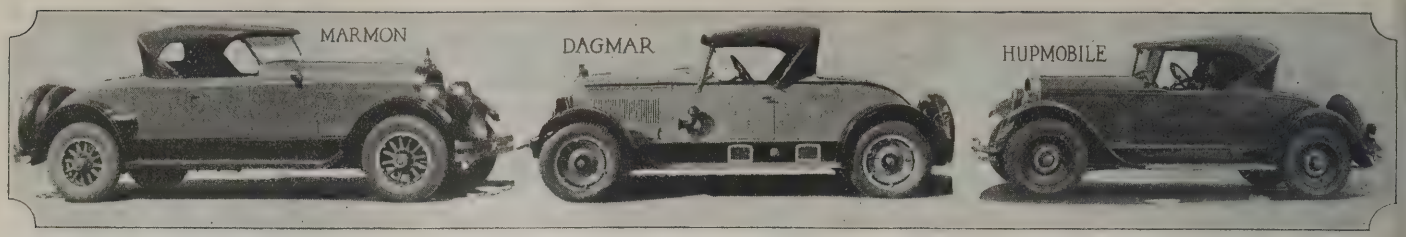
The significance of this sudden turn to roadsters by manufacturers is in the fact that production lists strive to follow the trend of public preference. Merchandisers in the field have found a line of lowered sales resistance in a certain buying class desiring roadster models and makers have capitalized the opportunity by putting out roadster products with especially strong selling qualities. Many retailers over the country who had quit carrying roadsters or who have recently begun showing them for the first time are studying the model's selling points so they will know how best to deal with those buyers who are out shopping for this particular style of body. It is good selling theory to sell the prospect hardest on what he seems most sold on himself, following the line of lowest resistance. Factory suggestions of roadster selling points are touched on later on in this discussion.



It might come as a revelation in some quarters of the trade to know that a large representative group of our factories, 21 to be specific, has been making four or more roadsters on an average to each six touring cars. Other companies were unable to supply estimates on this particular point.



Incidentally, these 21 companies have been giving an average of 74 per cent of production to closed cars.



That puts open car production at 26 per cent of the total volume, with roadsters representing 41 per cent of the entire open car output.

There is more than a bare chance that next year will find the factories giving the big end of open car production to roadster

designs. It might be interesting in this connection to remark that Ford's production schedule for October called for a roadster output equal to 20 per cent of the total production volume. All big producers of more popular low priced cars are experiencing brisk roadster interest.

One company handling a medium priced line reports that it is giving 90 per cent of its open car production to roadster bodies. Another reports that its roadster production has been running 85 per cent of the total open car output while with others the proportion ranges from 75 per cent downward.

Demand Much Above Last Year's

With respect to the comparative tone of roadster business to the end of the third quarter this year the factories were asked two questions: (1) Has the roadster demand so far this year been better than it was to this point last year? (2) How much better (in percentage)?

An average of replies by companies in position to give actual figures or estimates indicates an improvement over the first three-quarters of last year of 52 per cent in roadster demand.

One of the largest volume manufacturers of medium priced cars reports that the roadster business this year has been three times greater than that of last year. That is an outstanding case. Elimination of the three highest instances wherein increases of 300, 100 and 100 per cent were reported, would reduce the general average to something above 30 per cent, which still looks large.

Replies also indicate that the roadster business for the industry generally for the first three quarters of the present year scored a material increase over the average roadster business of the previous four years.

And now for whys and wherefores. Question No. 8 submitted to the makers was as follows:

"Assuming that general public interest in roadsters has been increasing—to what do you attribute the improved interest?"

In other words, what is responsible for the roadster's comeback? What are its big selling points? From the mass of replies we have picked out the following high spots in this connection:

Its appeal as a second family car.
Ease of management in traffic.
Demand for small carrying capacity.
Its compactness.
Smartness.
Beautiful lines of more recent models.
It is the logical sport car.
A car for general utility.
Handiness.
A "business and professional" car.
Improved design.
Appeal to persons wanting outdoor life.
Growing popularity of golf.
The worker's daily transportation.
Recently more snappy yet relatively low-priced.

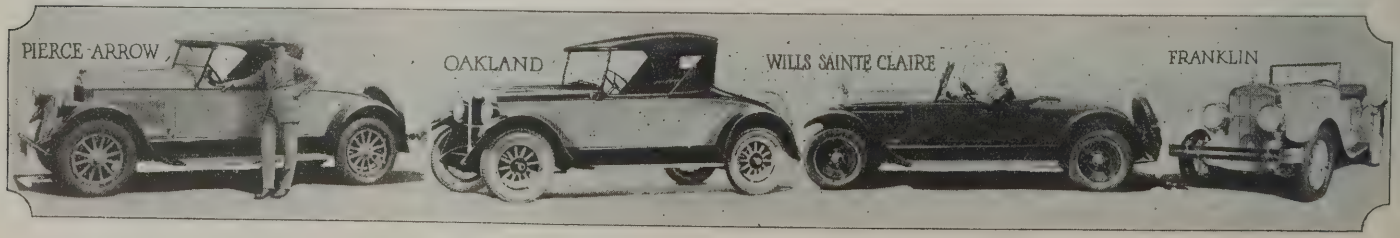
There seems to be general agreement that smartness of current designs, coupled with the roadster's practical utility for many purposes, make for easier selling of this body. Companies featuring rumble seat jobs find that the rumble seat has a powerful sales appeal. That the demand for a second family car is increasing roadster sales is a point on which the majority of factories agree.

"More families are buying two cars," says one factory, "buying the roadster for a sport car in addition to the family sedan."

"Many families that had one car formerly," says another typical answer, "now buy a sedan and a roadster." One company finds that "the two-car tendency is increasing very rapidly" while another remarks that "the public is buying the two-car idea," indicating that this company is merchandising the "two car" idea.

A Different Angle

Differing with the majority to an extent is one reply to the effect that the roadster's rise in popularity is "not so much as a second family car but it is favored by certain elements with whom appearance is a factor—mainly appearance."



Following is an interesting extract from a letter which one manufacturer sent in:

"We feel sure that the tendency toward roadsters is due to the fact that they are sport models and appeal to the public for that reason. We believe that there is a growing tendency on the part of owners to buy roadsters for use as second family cars, particularly for use of the children and for running out to the golf club. We b l that the added interest in roadsters has been established because of the greatly improved appearance of roadsters in general. We believe that the roadster is the accepted sport model, or sport type, of today, and that other open models will gradually pass out of the picture."

Having digested that, read this: "Answering No. 8 of your questionnaire, the interest in roadsters has been increasing, but it is our belief that they may go out of style more quickly than they came in." That is from a company which now lists no roadster but which expects soon to add one.

To quote another letter: "We have noticed a decided increase in the roadster business this year over last and this increase will undoubtedly be even greater during the coming year. We find that families are beginning to afford two cars which undoubtedly has been a factor in increasing roadster demand. The price element is also to be considered when estimating the demand for open and

This Trade Association Is a Business

W. L. Hughson, president San Francisco Automobile Trade Association

No Banquets, Picnics or Other Fun, But $200,000 Saved for Its Members in Seven Years Is Record of San Francisco Automotive Group

Arthur D'Ettel, manager and secretary of San Francisco Automobile Trade Association

OUT at San Francisco, where the flying fishes build their nests in the hinges of the Golden Gate and the domesticated whales hold monthly field-days during the tourist season, they have an automotive trade organization which is probably the most successful, as well as one of the oldest, of its kind in the United States. It has been in continuous and successful operation for 14 years; it has saved its members hundreds of thousands of dollars along several lines; it has corrected a number of evils in the industry, and inaugurated a number of good practices which now have become habits; and it was originally devised, and ever since directed, by one man.

It is the San Francisco Automobile Trade Association, of which William L. Hughson is president and Arthur D'Ettel, secretary-manager. Now, if anybody thinks that this business of being a secretary, or a manager, or both of them at once, to a trade association is a cinch, let him try it. But D'Ettel started off, away back in 1909, sixteen years ago, by getting the idea of an automotive trade association which should bring all the crafts together in one beneficial organization. It wasn't until 1911 that he brought the garage men to see it his way, and then only five of them saw it, but by 1912 he had met Old Man Trouble in all disguises, had the old gent whipped, and ever since that time has been running the association just like a Swiss watch is supposed to run, only better.

Today, the San Francisco Automobile Trade Association has a membership of about half of the 450 repair, garage, paint, and other automotive crafts in San Francisco, and the original five garage men have grown to 110.

This year's officials of the San Francisco Automobile Trade Association are W. L. Hughson, Ford dealer, president; C. N. Weaver, Studebaker distributor, first vice-president; Roy Alexander, Chandler and Cleveland, distributor, second vice-president; and Arthur D'Ettel, secretary-manager. The present board of trustees, consists of Manley Harris, from the Auto Body Building Painters and Trimmers Association; H. M. Nicholson, Automobile Repairers' Association; Herman Hinze, Automobile Electrical Association; and A. G. Steelman, Garage Owners' Association. The secretary-manager is also a member of the board of trustees.

Along practical lines, the association has done a great deal for its members, and, this year, is still further expanding its activities. The garage owners, for example, have a purchasing department, which has been in very successful operation for seven years, during which time it has saved, as the books show, more than $200,000 to the members. Mr. D'Ettel does the purchasing, with the aid of men who know particularly well each commodity to be purchased. Each man puts up the money to buy what he wants. This fund is put in the bank and the secretary-manager buys in a lump and distributes the commodity purchased to the individuals. Only large lines, such as gasoline, lubricating oils, soap, sponges, are bought by this method. Tools, metal supplies and accessories are never touched. All these supplies are bought locally from jobbers. An employment bureau is maintained, and this has been particularly successful with the garage men, both in cutting down their labor turnover and in helping them to get more competent men. There is no charge to either party for the use of this department.

The association is operated on a strictly business basis. Picnics, banquets, "field days" and similar social events have been abolished as not only not useful to the organization, but often harmful to its development as a business undertaking. Radio is called on frequently to disseminate information to the membership, and has been found very successful.

Practical Steps in Magneto Overhauling

Barney Hangs Out His Shingle and the Red Head Gives Him Some Pointers on Automotive Electrical Work

By A. H. PACKER

THE Red Head spelled it out slowly, for it made no sense to him. Valvy, looking over his shoulder was equally puzzled.

T-R-A-C-T-O-R
E-L-E-C-T-R-I-C-A-L
B.-O.

Barney was making a sign on a big white strip of cloth, but Bill Fixit's roaming trouble shooting men were having a hard time to figure what it was all about.

"Are you lookin' for a farm hand that can run your cast iron horse?", Valvy wanted to know. "Most of the tramps I've seen can hardly handle a pitch fork, let alone shoot electrical trouble on a tractor."

"You haven't seen the half of it yet," said Barney. "Look at the rest of the sign and you will ken the ambitious idea that's been buzzing under my engine hood since you boys have been here. Dad wants me to settle down to work of some kind, and as digging in the mud and sterilizing barns doesn't appeal to yours truly, I've decided to do some electrical work for this farming community instead of chasin' around in the race car all the time.

Then Barney pulled the rest of the sign out from under the bench, and Red and Valvy began to get the idea. It read,

TRACTOR AND AUTOMOBILE
ELECTRICAL OVERHAULING
B. O. SMITH

"You sure have a lot of crust," said Red. "But I've seen it done before and know of at least two places that are out in the woods, and where the work comes in for miles in preference to being taken to the town garages. But you haven't done much electrical work, and may get stuck on a job now and then."

BILL FIXIT STORY No. 13

PREVIOUS installments in this series by A. H. Packer were published March 19, April 2, April 16, May 7, May 21, June 18, July 30, August 13, September 3, September 24, and October 22, 1925.

SYNOPSIS: Bill Fixit's electrical trouble shooting men start on a trip in a Speedway car. They stop at various places along the way and in a mining community are robbed of all their money. This necessitates getting a job with the local electrician, to whom they give some helpful information gained in working in Bill Fixit's garage. Directional radio is used by government agents in locating a gang of crooks and the boys' money is recovered. The trip is continued and the night after leaving the mining town they stop with Barney Oldfield Smith, an amateur race driver and help him with a magneto job, where a new condenser is needed. The condenser is obtained from Bill Fixit's electrical station, but in the meantime Valvy discovers an old radio set, and the Red Head engineers a trouble shooting job on the set and restores it to its original usefulness.

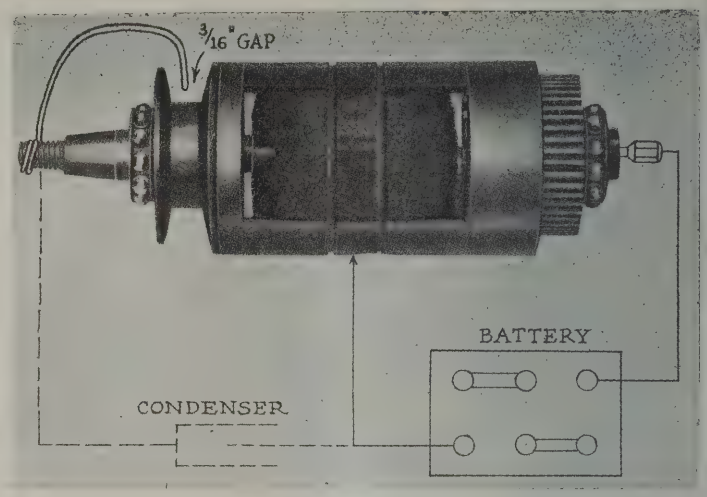

Fig. 4. Simple method of testing a magneto armature with a battery and a couple of wires.

"Right as usual," said young Smith. "But Bill Fixit's prompt service gave me an idea. I'll tackle every job, promise each one in two or three days and when I get stuck send them to Westville. When I get by with a job I'll make some money, and when I fall down I'll get some experience. Then pretty soon I will not fall down on any of them.

"You see I am figuring on pumping you fellows some more, too, before you get away; that is if the old house and mother's cooking is sufficient attraction to pay for your trouble."

Everybody Satisfied

"No kick on that proposition," said Valvy, still thinking of the Thanksgiving feed that had vanquished him in the fifth round. I do most of the eating and Red does the work, it suits me fine."

"I like to do my stuff," said Red, "as well as Valvy likes to eat, so we'll call it a go, and as you are representing yourself as a tractor expert we better take up some of the practical tricks in magneto overhaul, because that's the only electrical unit you find on many of the tractors."

Red went up to his room to get a bunch of diagrams that Bill Fixit had made at one time, and when he came back the lesson started, with Red, the teacher, Barney Oldfield Smith the pupil and Valvy listening in just for luck.

"From a practical standpoint," Red began, "its always best to take a magneto off rather than try to fix it on the car or tractor. In the first place, by the time a magneto gives trouble it probably needs a general overhauling. If the points are causing the immediate trouble, it might be possible to get the engine running by filing the points. This however would give but temporary operation and would not be worth while for the repairman, for only a nominal charge could be made.

"Then when the machine went dead again in a short time, the only thing the customer would remember would be the trouble, and he would forget the fact that he had not paid for a real overhaul.

"Removing the magneto is simple enough, but if the electrician is wise, he will check the position of the engine and then note the position of the distributer brush as well as marking the magneto coupling. Because the magneto

haft turns around twice while the distributer turns once, t is not enough to merely mark the coupling, for you can oosen the coupling and turn it around once so the marks re again together, but this gives the spark at the wrong ylinder.

"It is not absolutely necessary to set the engine on dead enter, but some electricians prefer to do this, turning he engine until the rear exhaust valve has just closed, s this gives the approximate firing point of the front r No. 1 cylinder.

"If the tractor or car is in your yard it may not be ecessary to disconnect the distributer cap from the spark lug wires, but it may be left hanging, while the magneto, vithout the cap is taken off. In either case, however, he cap should be carefully removed, so that the dis-ributer brush and spring are not lost. Having the dis-ributer cap to work with is of some help, however, when he magneto has been put together and the time comes o check the meshing of the distributer gear to see if the listributer is timed properly.

"The next step is to take the interrupter off and this nay necessitate disconnecting a wire. This is true in the Dixie magneto, while in armature types such as Eisemann and Bosch it is not necessary as the screw in the center of the interrupter acts to both hold the interrupter on and also to connect the insulated contact point to the primary of the armature.

"In this illustration of Bill's (Fig. 1)," said Red, "we have the interrupter of a magneto shown and below it we have an enlarged view of the points, the sketch at the right showing how they should be, and the one at the left showing how they often are after missing begins. The contacts require a layer of metal which does not oxidize under the action of the spark. Platinum is often used for this purpose although on battery ignition systems various other metals, notably tungsten, are used. On magnetos platinum iridium is usually considered the most satisfactory.

"Whatever the substance may be, however, it is essential that there be a complete layer of it making contact. When the points have burnt away as shown at the left

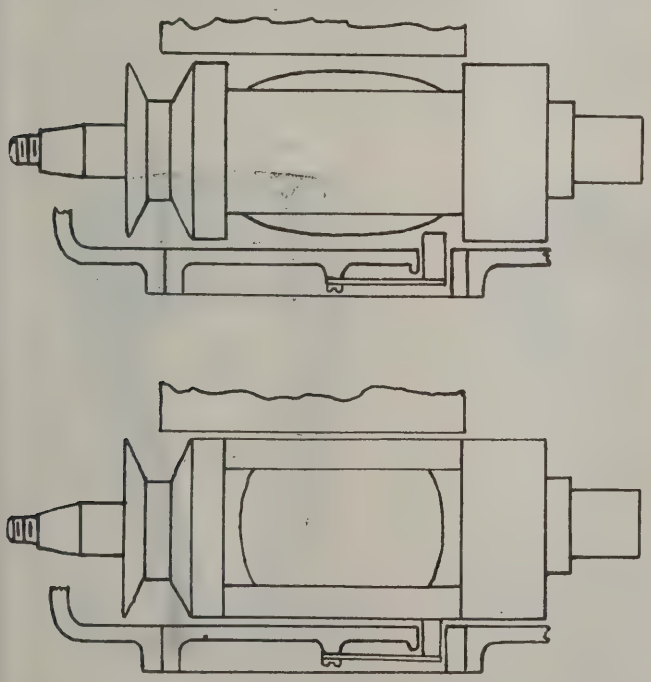

Fig. 3. Removing armature without breaking ground brush. Lower view shows the safe method. Upper view shows method that results in breaking the brush.

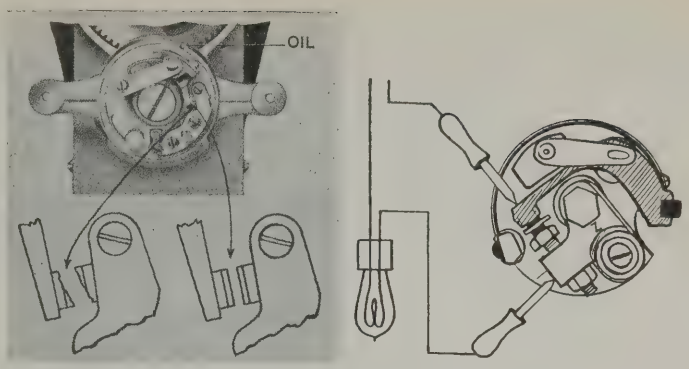

Fig. 1. Left: Checking the interrupter points. Lower right (Fig. 1), points in good condition. Lower left (Fig. 1), points worn down to the iron; right: Fig. 2. The 110 volt test applied to a magneto interrupter to make sure it is not shorted.

sketch (Fig. 1) it means that the iron part of the contact is helping to make the contact, and when the break occurs a bad arc forms, due to the tendency of the iron to burn. The burning iron tends to sustain the arc which permits the primary current to die out slowly, thus seriously weakening the secondary or sparking voltage.

"At times it is difficult to see whether the layer of platinum is good or not, but if in doubt the points should be cleaned with a file all around the sides so that the line of the weld can be seen. When the platinum is nearly gone, new points should be put in, or the magneto will go bad again in a short time.

The 110-Volt Test

"Interrupter insulation rarely gives trouble, but if we are to make a thorough job of it the 110-volt test should be used after the interrupter has been removed. To do this a piece of paper or wood may be used between the points to hold them apart and the test points used to see if the lamp will light up (Fig. 2). If the lamp lights the interrupter is shorted, the insulation being defective. At the same time it would be well to feel the spring action and see if it seems to be normal.

"When the interrupter and distributer have been removed, the high tension pencil, if one is used, should be removed carefully, also the high tension brush holder, these parts being laid aside where they will not be injured. The next step is to remove the armature.

"In some magnetos grounding brushes are used to carry the current from the frame of the machine back to the armature, without making it necessary for the greasy ball bearings to carry this current. Where such magnetos are worked on it is essential to remove the ground brush, if possible, before the armature is withdrawn. In Bosch magnetos, for example, there are two ground brushes, one of which is seen at the back of the interrupter when the interrupter is taken off. The other can be removed by turning the magento upside down.

"In withdrawing the armature on an unknown magneto it is always well to have the armature vertical, that is with the iron end pieces of the armature in the up and down position instead of at the sides. Then if there is an inside ground brush it will ride over the surface of the armature and will not spring up into the winding space when you start to pull the armature out.

"This sketch," said Red, "shows what I mean (Fig. 3) where the lower view shows the brush riding the iron part of the armature, while the upper view shows the armature turned the other way and the brush springing up into the winding space. When the armature is pulled all the way out, it will have to shear off a part of the brush in order to come out.

"Before the armature is taken out, some trouble shooters prefer to take the magnets off, using keepers on them as they are removed so that they will not be weakened. As every magneto overhaul job includes remagnetizing, however, it is somewhat doubtful whether this is really essential or not.

"Another precaution that may or may not be observed is to look for the distributer gear marks that tell where to mesh the distributer gear with the gear on the armature. In some cases the mark is difficult to see and in other cases there may be several marks, made by the various men who have worked on the magneto. For this reason it is just as well to forget the distributer gear marks, but to carefully check the setting as the magneto is being ressembled again.

"After the armature has been removed it should be tested. There are various ways of doing this and some devices for the purpose are furnished by the magneto companies to the service stations representing them. Bill showed us all a simple method once which requires no equipment but a battery and a couple of wires (Fig. 4), although a spare condenser can be used to get a better test.

Regular Interrupter Omitted

"The regular interrupter can not be used applied to the end of the armature shaft, for there it is a short on the primary winding as far as outside current from a battery is concerned. For that reason the regular interrupter is left off and the screw which held it is replaced to make a connection to the primary. Then one battery terminal is connected to this screw.

"Before we go any farther with our test it is necessary to provide a gap at which the spark may jump, or we will be in danger of straining the insulation of the armature, for when out of the magneto it is no longer connected to its safety gap. The improvised test gap is made up by twisting a piece of wire around the shaft and bending it over to within $\frac{3}{16}$ in. of the slip ring. The next step is to take a wire from the other battery terminal and rub it along the surface of the armature.

"Theoretically we should have tungsten or platinum points to break this circuit, but actually it is surprising how the ridges in the center of the armature will help get a sudden break as the wire is rubbed over the armature. As this is done sparks should jump at the gap. These sparks should jump successfully but should not be very fat or red, for the condenser in the armature is not properly connected for this battery ignition test, it being across the primary and not across the improvised interrupter.

"To get a fatter spark and one that will jump a little farther, we can connect a spare condenser as indicated by the dotted lines, for in this position it will be across the crude interrupter we are using. It is, of course, possible to connect a regular interrupter in the circuit and if this is motor driven, as by a horn motor, it would be possible to run a test on the armature for half an hour or so. This would be advisable if there is any question about the magneto working properly after the engine gets hot.

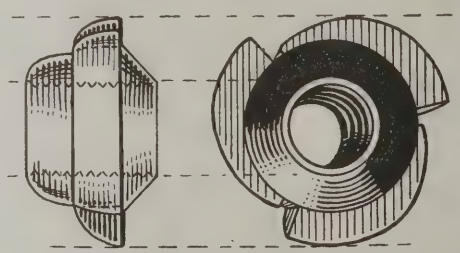
Results of Tests

"It is now interesting to record the possible results of these two tests and the conditions they indicate. We will call the No. 1 test the test in which only the battery and wires are used and the No. 2 test the one where we add the other condenser, the various possible conditions being as follows:

No. 1 test O. K. No. 2 test O. K. Armature O. K.

No. 1 test, spark weak; No. 2 test O. K., condenser poorly connected or low in capacity, or wire to battery test leads too long for good results on the No. 1 test.

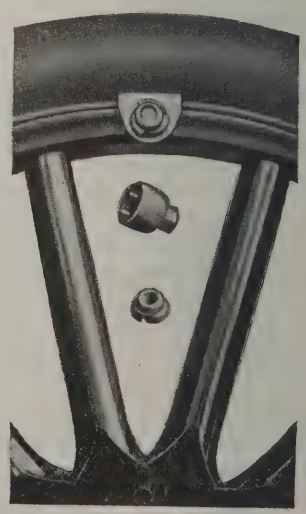
No. 1 test, spark very weak; No. 2 test also weak, secondary or condenser shorted. Added condenser does not improve test under either circumstance.



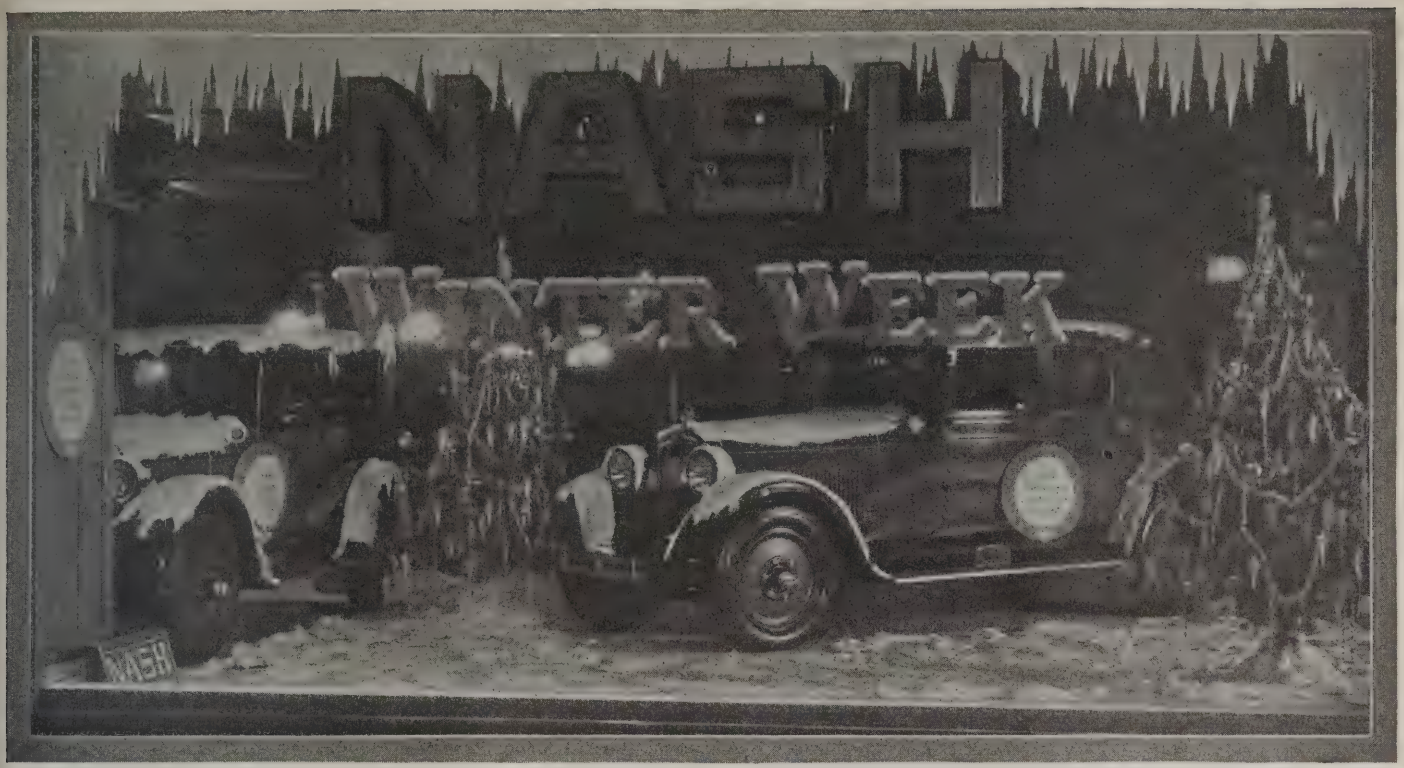
"In the test results just given it will be seen that if poor results are obtained on both tests we do not know what is wrong. However, in either case it would be necessary to take the armature apart, to change either condenser or coil, and when we have gone far enough to disconnect the condenser we can test it with 110 volt points as we tested the interrupter (Fig. 2). If the condenser is shorted we need a new one. We can at this point test the coil over again just to make sure that we are not putting in a new coil unnecessarily."

NOTE: The subject of magneto overhauling will be continued in the next Bill Fixit story.

Lyon Key Nut Designed to Prevent Unauthorized Removal



A Chicago inventor recently brought brought out a novel form of nut designed particularly for use in connection with securing rims on motor car wheels and so constructed that it cannot be removed unless the key wrench is at hand. An ordinary wrench, socket wrench, pipe wrench or pliers will not affect the nut in the slightest.



The nut includes a rounded body, as shown in the illustration, and is made with three projecting lugs against which similar lugs in the key wrench bear when the nut is tightened. Small grooves are cut along each face of the lugs on the nut and slightly below the surface and these grooves are the ones into which the particular part of the key wrench fits upon removal of the nut.

Left: Lyon Key Nut, showing the details of construction; right: Its application to a wheel rim

The exterior surfaces along the small grooves are tapered or feathered and consequently it is impossible for anyone to use the shoulder of the grooves as a means for driving off the nut with a chisel or screwdriver. Furthermore, the nut is case-hardened and a pipe wrench or pair of pliers simply slip off if an attempt is made to remove the nut with them. Reference to the illustration makes the construction of the nut quite clear.

Uniform display of Chicago Nash dealers designed to promote winter sale of cars

"Winter Week" Stimulates Sales

REALIZING that the Holiday season holds unappreciated advertising possibilities for merchandisers of automobiles, Nash dealers in Chicago promoted "Winter Week".

Throughout the seven days ending last Sunday, the Nash Sales Co. of Chicago and its 24 dealers presented holiday showrooms and window displays to the public, featuring the comfort, safety and convenience of driving a modern automobile in the winter months.

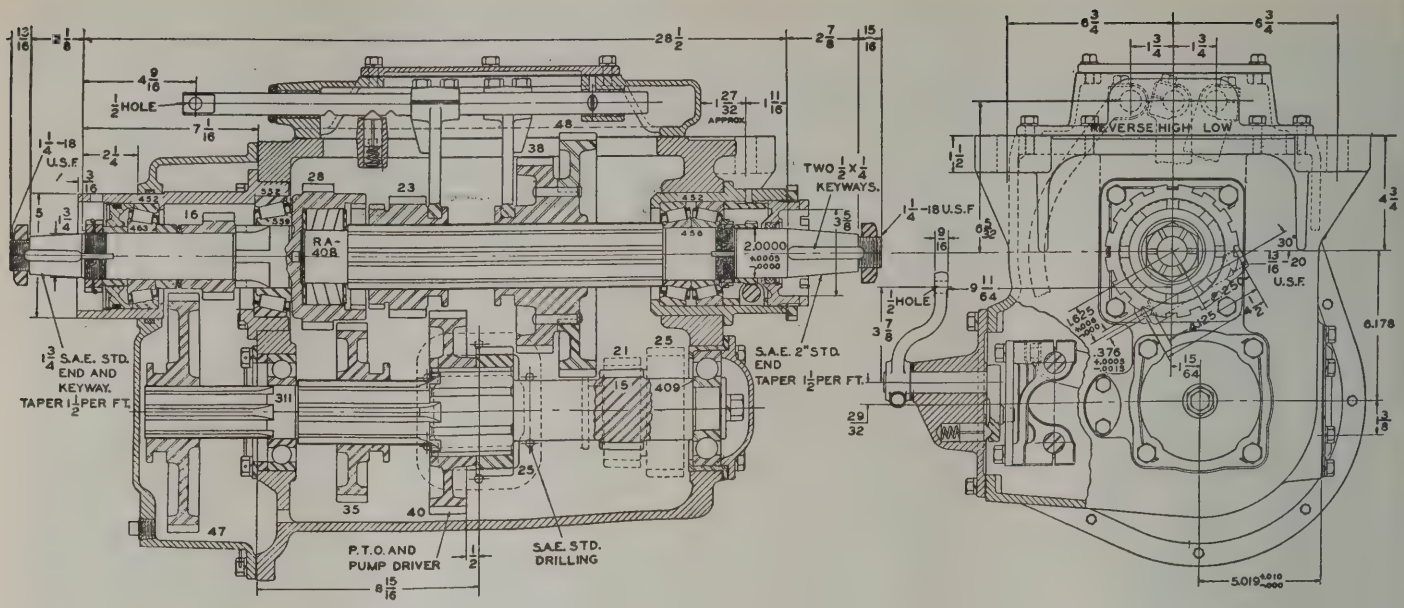
The week before the campaign opened, attractive full page advertisements were carried in Chicago newspapers, setting forth reasons why the potential buyer should not delay his purchase until spring, as has been so often the custom in former years.

Among the advantages cited in the advertisements were that the Duco finish is impervious to snow, sleet or ice; that full balloon tires cushion the chassis against road racking from the pitted and bumpy streets; that the improved carburetor assures instant starting; the overlapping door construction insulates the body against draft; that the Nash type four-wheel brakes prevent skidding on icy pavements; improved heaters keep cars warm in zero weather; and weather stripping makes enclosed bodies impenetrable.

The dealers further assured the public that their investments would be protected because there are no impending body changes. Extra inducements were offered for the old car in the advertisements. The dealers told the public that their used car stocks were low and that more good cars were needed. A special Christmas offer for the old car, with holiday terms on the balance, was made by the 25 firms that took part in the campaign.

H. T. Hollingshead, president of the Nash Sales Co. is of the opinion that few outside the automotive industry realize the tremendous strides that have been made in increased comfort and safety of winter driving. "Nearly every major advancement of the last three years has helped to establish the motor car as a practical all-year means of transportation," he declares.

"The inconveniences of the old style car have been so numerous that many motorists have formed the habit of waiting until spring before buying their new car. Now these conditions are completely transformed. Besides four-wheel brakes, eliminating skidding, improved heat devices which insure instant starting and special finishes that are impervious to sleet or sudden temperature changes, there has been remarkable progress in body designing.



"Doors on Nash bodies are fitted with overlapping edges, heaters have been made more efficient and dependable. Balloon tires have proved their superiority over the high-pressure types not only in riding qualities but in protection to the chassis against road shocks.

"It is our belief that the public knows about these improvements but has not yet fully appreciated how completely they revolutionize winter driving."

On the first day of the special exhibit and during the entire week the Chicago showrooms were crowded. A uniform display pictured at the top of this page was used in every dealer's show window.

Before the week opened, a "teaser" window display was shown by each dealer. Painted on the window were the words: "Winter Week Is Coming" and the window was blotted in with opaque blue. Upon the opening day, the blue paint was washed off and an attractive winter setting as shown above, was visible to the passerby.

"Our normal December business is already being greatly increased as a result of 'Winter Week'," Mr. Hollingshead said. "It was purposely staged at a time when sales effort and buying activity are supposed considerably to lessen. The reason for this slackening of business in December in former years has been the general belief in the discomforts and inconveniences of winter motoring. That is exactly what we aimed to overcome."

Sectional view of the model 70 7-speed 5-ton truck transmission made by Brown-Lipe Gear Company

Brown-Lipe Adds 5 Ton Truck Transmission

ONE of the recent additions to the products of the Brown-Lipe Gear Company, Syracuse, N. Y., is the model 70 7-speed main frame type of transmission. This gearset, made especially for 5 ton trucks will be shown for the first time at the American Road Builders Show to be held in Chicago January 11-15.

The model 70 is made with a two speed countershaft giving the high and low range of four forward and one reverse speed with an over drive on the high range. It is made with an overhead shifting device and a power aperture is fitted. The main shaft and countershaft gears are made of 3.5 per cent nickel steel, and whereas other Brown-Lipe transmissions use a square main shaft the model 70 is made with a splined main and countershaft. Ball bearings are used on the countershaft instead of roller bearings.

The layout of the bearing on the rear end of the main shaft departs from usual practice in that a double Timken bearing is placed in a separate housing to withstand the thrusts and heavy loads.

The model 70 transmission is fitted with the following gear ratios from which it will be seen that a low low is afforded which makes possible a quick return by the truck.

Ratio of Change Gears

High Range			Low Range		
Rev.	4.76 to 1		Rev.	11.19 to 1	
1st	4.00	" 1	1st	9.40	" 1
2nd	1.90	" 1	2nd	4.46	" 1

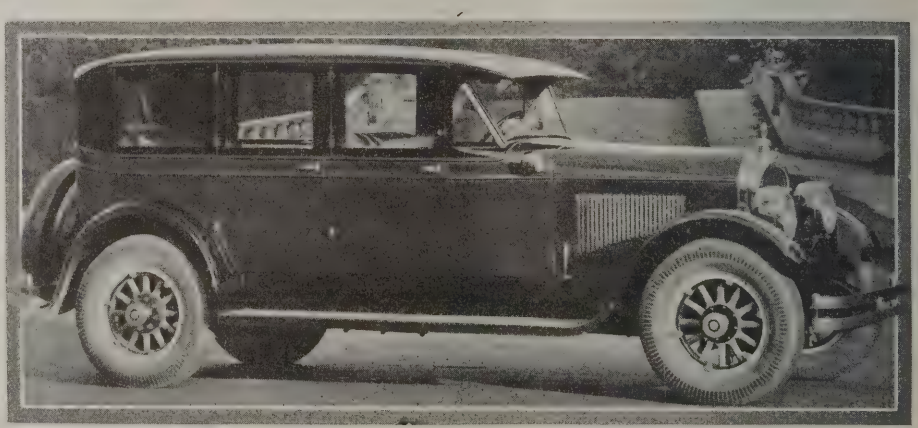
4th	.71	" 1	4th	1.00	" 1



Randall Valve Guide

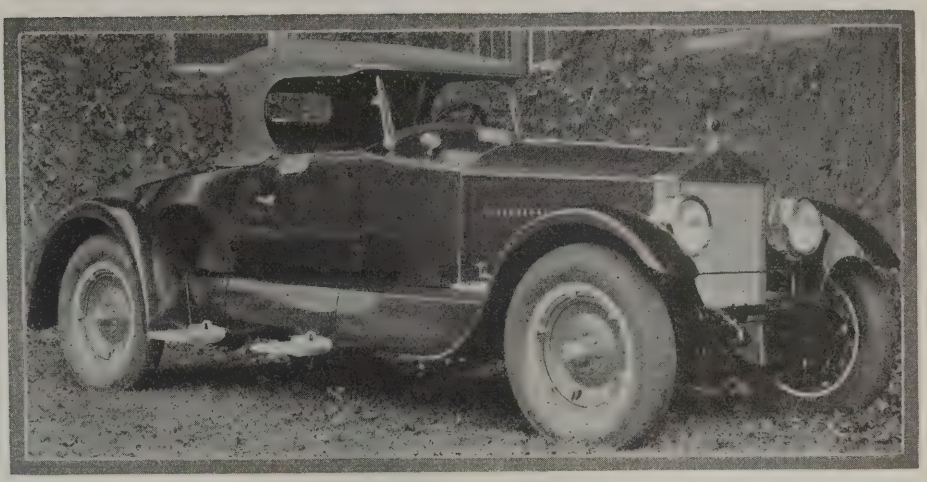
Announcement is made to the trade that John C. Hoof & Company, 157 W. Illinois Street, Chicago, have been appointed exclusive national sales agent for the Randall valve guides. These guides have been sold for equipment purposes, but are now to be sold to the replacement trade. They are made of close grained cast iron, machined all over and come in the plain or self lubricating type. In the latter helical grooves with compressed graphite flush with the bearing surface, lubricate the valve stem.

ABOUT BALL BEARINGS

The Fafnir Bearing Company of New Britain, Conn., manufacturers of Fafnir Ball Bearings is issuing a booklet called "Correct Mounting and Care of Ball Bearings for Automotive Service." The booklet has many illustrations and shows the correct and incorrect methods of mounting and removing ball bearings. The Fafnir Bearing Co. will be pleased to send a copy of the booklet to anyone interested.

Marmon Has New Body Model

The latest in the Marmon line is the seven-passenger sedan DeLuxe which is shown above



Roamer Eight Offered in Nine Body Styles

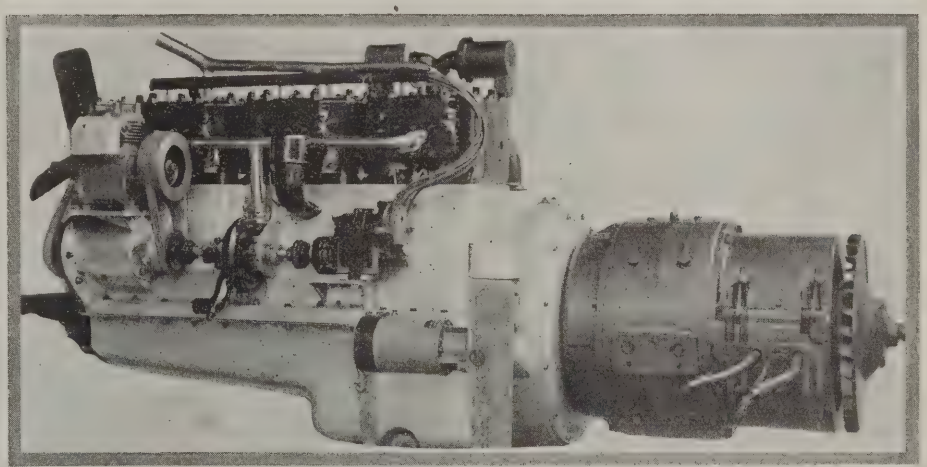
A RECENT addition to the field of eight-in-line models is the Roamer 8-88, built by the Roamer Motor Car Co., Kalamazoo, Mich. The car is custom-built and as is usual in such cases, upholstery and paint are largely optional with the purchaser.

The 8-88 is made with a standard wheelbase of 132 in. although 136 and 138 in. are available for special models. Tires are 32 by 6.20 balloons and Lockheed hydraulic four wheel brakes are fitted.

The engine bore and stroke are $3\frac{7}{16}$ by 4½ in. respectively giving a displacement of 287.3 in. Other engine specifications include; force-feed oiling; water pump cooling; chain drive on front end; Swan design intake manifold and lightweight pistons with four rings per piston. The clutch is a Borg & Beck and in unit with it is a transmission in which the gears are constantly meshed.

Many colors are standard and special colors are available at additional cost. The body styles include a five-passenger standard tourer; five-passenger sport; two-passenger speedster; 2-4 passenger roadster; five- passenger sedan; five-passenger special sedan; seven-passenger sedan; three-passenger cabriolet and four-passenger brougham.

One of the models of the 8-88 Roamer. This is the two-passenger speedster. Color is optional with purchaser



Tillings-Stevens Gas-Electric Drive Buses Introduced in This Country

TILLINGS-STEVENS design of gas-electric drive buses is being introduced into this country for the first time by the American National Omnibus Corp. who are the sole licensees for Tillings-Stevens Motors, Ltd. of England. The assembly of four chassis of this type has just been completed by the Gray Mfg. Co., holding the exclusive manufacturing rights.

Except for the English built electrical units, the chassis are an American product differing in principle from the General Electric Co.'s gas-electric drive buses in that it applies power from main electric motor through a propeller shaft to a conventional type of rear axle whereas a separate drive in the form two motors each connected to a rear wheel are employed on the General Electric chassis.

Because there is no positive mechanical connection between the engine-generator unit and the electric motor which actually operates the bus, it is a simple matter to vary the wheelbase length to take different types of bodies. The chassis is so constructed that it can be operated without the body, the latter being supplied as a separate and independent unit.

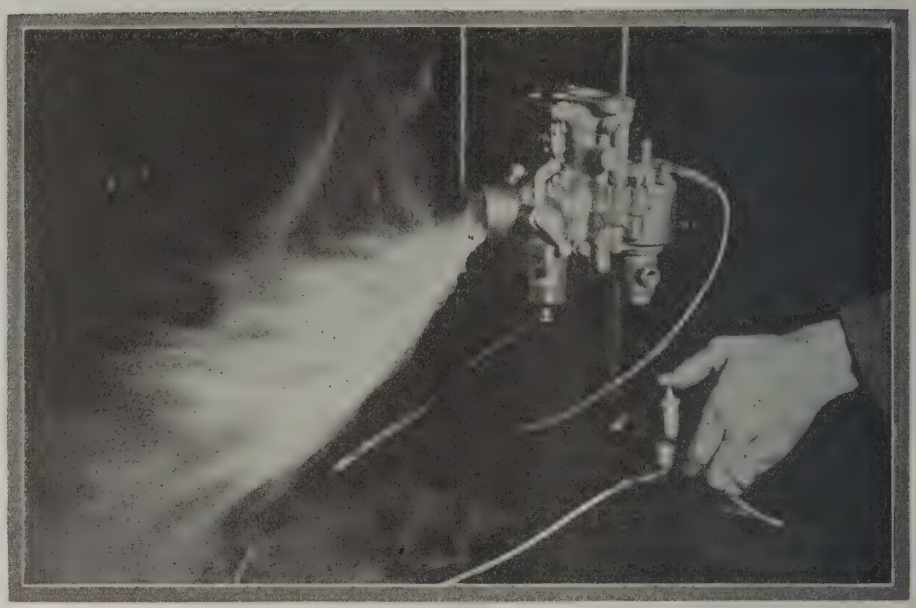
A four or six cylinder Waukesha high compression bus engine of the detachable "L" head type with the Ricardo combustion chamber furnishes the primary motive power. Forming a unit with the gasoline engine by being bolted to the bell housing, the electrical generator is connected direct through a patented spring drive employing two leaf springs located in the engine flywheel thus providing a flexible and resilient drive. This type of coupling permits of the generator being removed or replaced without disturbing the drive.

Power plant of the Tillings-Stevens bus. This is a Waukesha 6 cylinder engine to which the electric generator is connected

MOVEABLE BENCHES AID SHOP OPERATIONS

In the service station of the Howard Automobile Company in San Francisco there are special movable benches which have been equipped with a drill press, emery wheel, and a combination valve facer and seater, each having an individual electric drive, current being provided by extension cords. The drill press is provided with a special clutch to fit the valve cage for the purpose of cleaning carbon. The emery wheel is a combination emery and buffer, the buffer being used for cleaning valves, spark plugs, and the emery wheel for grinding tools.

Chrysler Has Device to Facilitate Cold Weather Starting



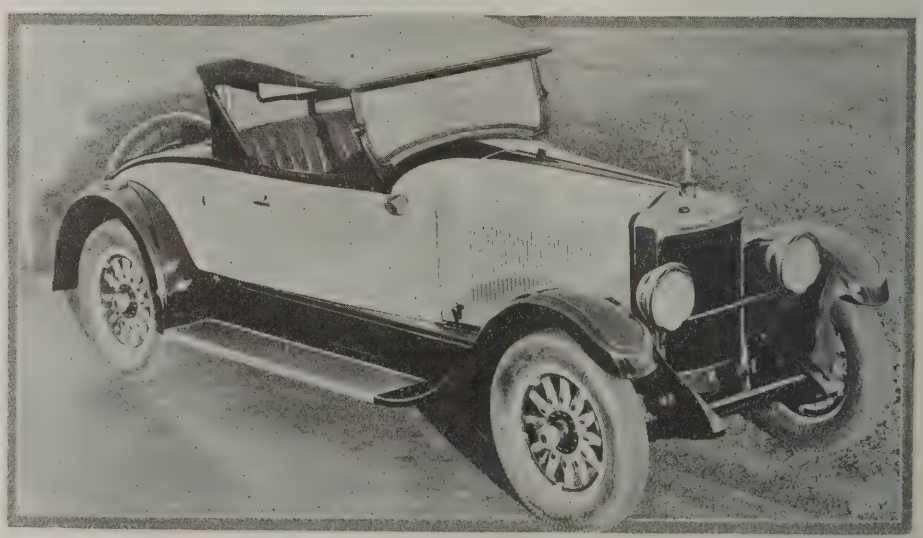
TWO new devices, a fumer and a manifold heater, to facilitate starting in very cold weather are now fitted on all six cylinder cars shipped from the factory of the Chrysler Corp.

These developments in combination bring the engine performance in winter up to practically the same standards of operation as during the summer months. In addition, crankcase oil dilution is reduced and improved fuel economy are claimed. Before the improvements were fitted to the cars, exhaustive tests were conducted by Chrysler engineers to prove their efficiency under the most severe conditions. In one case of the tests a stock engine and battery were placed in a cooling chamber for 20 hours with the temperature below zero. After this period, using standard gasoline, a successful start of the engine was made.

The primer or fumer is of simple construction, consisting of a double heating element and asbestos blocks enclosed in a brass sleeve. At the bottom of the sleeve there at two openings into which the gasoline is admitted. On the top is a perforated grid through which the gasoline fumes escape after contact with the heating element and from here escape to the body of the carbureter. The unit is placed in a well at the bottom of the carbureter.

Briefly, the action is as follows: When cranking the engine with the choke closed, there is a considerable amount of gasoline drawn from the carbureter jet. The suction at low temperatures, however, is insufficient to lift it up into the combustion chamber. Therefore, the gasoline drains back into the well in which the fumer is placed and fills it up to about half the height of the heating element. At this level, the heating of the gasoline is most rapid, and a drain hole is provided to prevent its filling any higher. To give the heating element time to heat and vaporize the mixture gradually, the unit is so constructed that the gasoline attains its maximum level slowly. The fumer is operated by means of a switch on the instrument board.

The other device for heating the incoming gases consists of a valve controlling the flow of heat from the exhaust manifold to a jacket surrounding the intake manifold providing a rapid, uniform heating of the mixture. A control on the instrument board operates the valve.



This shows the fumer attached to the Chrysler carbureter, the wires leading to the switch mounted on the instrument board

Offset Body Panels on Diana Give Distinctive Effect

THE Moon Motor Car Company announces something new in the way of a Diana roadster finished in black and white. As in other Diana models for 1926, moldings have been eliminated by offsetting the body panels at approximately the same location formerly occupied by the moldings, the offset eventually working itself over the cowl and the hood, forming an arrow head with its apex at the rear end of the radiator shell.

The upper portion of the offset panel is done in jet black, satin finish Duco. In contrast the lower panels of the body are finished in snowy white Duco. The beveled edge of the dividing line between the offset panels and the lower panels is striped with a contrasting color, green or orange, being optional. The arrow head on both the cowl and the hood is done in jet black. The hood louvres are striped in black while the entire rear deck of the car including the back of the rumble seat is black.

Equipment includes nickel plated headlights and cowl lamps of special design to conform to the line of the Diana radiator shell and hood, silver finished door handles of special design, seven-inch body rails on the rear deck just behind the gypsy curtain, two aluminum steps which afford easy access to the rumble seat, a removable tailored cape top.

Diana Eight roadster with satin finish black and white Duco. Molding has been eliminated by off-setting the body panels

Anyone who doubts the popularity of radio need only visit one of the shows which are held in different parts of the country. An example of how they "pack 'em in" is found in the crowd that attended the St. Louis exhibition, pictured above

Cleveland Police Use Radio in Work

CLEVELAND, OHIO, Nov. 27.—Jacob Graul, chief of police here, has announced that the department has adopted radio equipped police cars as an aid in the apprehension of criminals. This action followed installation and tests of radio receiving equipment in the police chief's private car. The radio equipment is to be installed in the seven other flying squadron department cars. Each of these cars will carry two receiving head sets and a loud speaker in addition to batteries and other radio mechanism. A sending station of special wave length will broadcast orders from police headquarters to the flying squads at the precincts or on the road.

"One of the chief advantages of the use of radio in the police cars," declared the Cleveland police chief, "is that it will enable us to pick up our squadrons anywhere, at a moment's notice and concentrate them to handle emergency work at a given point. It will enable us to cut down the elapsed time between the commission of a robbery or other crime and the pursuit of the criminals."

The Cleveland police plan calls for a radio head-set for use in the front seat. Another receiving head-set is installed in the tonneau of the car. A loud speaker installed under the cowl of the car and pointed toward the rear can be used for broadcasting to all passengers of the car. Tests of the police equipment showed it possible to hear clearly while the car traveled at a speed of 54 miles an hour.

The Headquarters Broadcasting Station, being equipped for sending by special wave length, will permit police to communicate from headquarters to flying squads without outside interference or tuning in by outside parties.

Collapsible Aerial

THE AERIAL made by E. D. LaSalle, 61 Washington St., Batavia, Ill., is in the form of an umbrella and contains 85 ft. of insulated wire. The feature of this antenna is that it is collapsible and can easily be erected or taken down.

Dallas Business Booms

DALLAS, TEXAS, Nov. 27.—Radio dealers in Dallas and trade territory, as well as jobbing houses, find it is not so much the interesting of a customer in radio but more of assuring him a suitable set for his money according to Hal Corey, secretary of the Dallas Retail Radio Dealers' Association. Mr. Corey says practically everybody is buying radio sets and they want something that will deliver the goods. The business in Dallas, which has been off for some time, is hitting on all tubes now. There are a score of retail establishments handling nothing but radio in Dallas, as well as ten wholesale concerns which distribute sets and parts to the entire Southwest from Dallas.

Mr. Corey said radio apparatus comes to Dallas in car lots daily. He declares that music dealers in all sections of Texas have taken on radio lines and that half of the automobile accessory dealers of the state handle radios.

According to Mr. Corey the volume of radio business done in Dallas this year will pass the $5,000,000 mark.

Cincinnati Show Success

CINCINNATI, O., Nov. 28.—After several postponements on account of conflicting events at Music Hall, the Radio Show of the Cincinnati Electric Club's radio division was finally held from Nov. 17-21. It was a great success and in the opinion of radio producers, jobbers and distributors the best radio show ever held in this region.

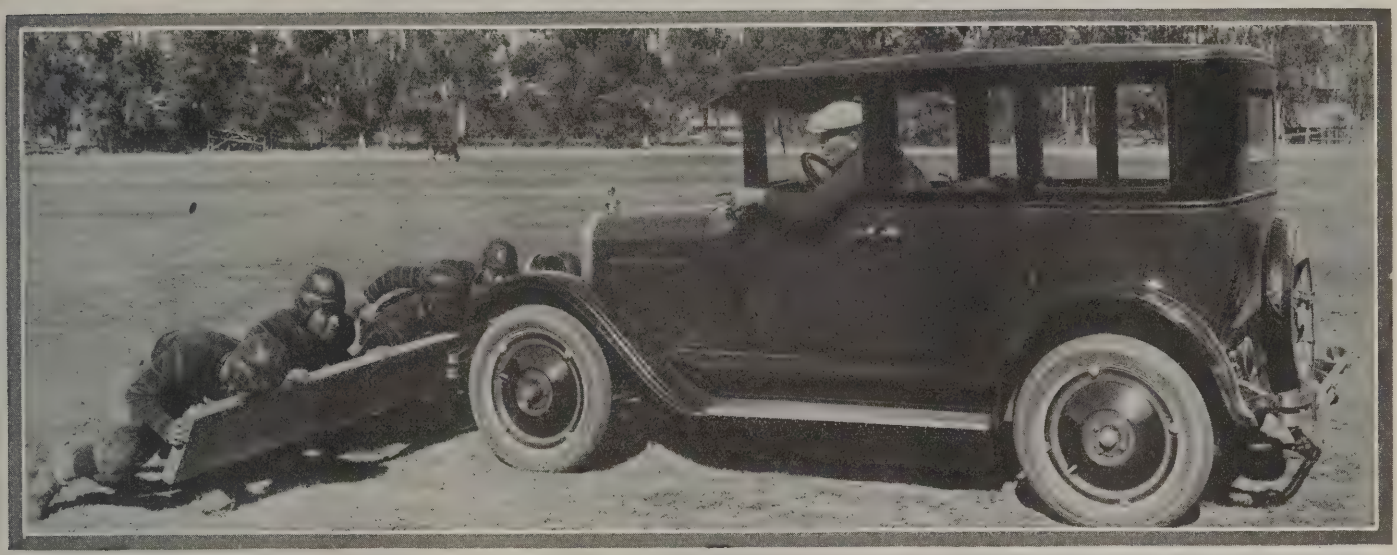
The success of the show was not so much in the attendance, which fell off towards the last day, but from the large percentage of buyers who were in the crowds and the numbers of orders for radio sets, tubes and general radio accessories which were taken by exhibitors. The crowd itself was not to exceed 26,000 for the five days. Radio distributors from all parts of the middle west were in attendance and numbers of jobbers large and small who represent the radio producers and manufacturers in Cincinnati and vicinity, together with an exceptionally large number of dealers who represent jobbers of the Cincinnati metropolitan district were on hand. Radio jobbers came from as far away as Boston and Canadian points and there was hardly a jobber in the five states around Cincinnati who was not in for at least a day or so.

The big attraction for the public was the mammoth radio set cabinet, said to be the largest ever constructed, part of which was used for the stage where the broadcasting was given. This cabinet was 36 feet long, 21 feet wide and 18 feet high and a part of the front panel was arranged with a dim light in the rear which gradually grew more and more brilliant until a curtain lifted and disclosed the broadcasting stage. The inner part of the cabinet was fitted with sound proof padding in the same manner as a broadcasting studio and gave the public an excellent impression of the manner in which stations broadcast their programs. Artists from the WLW, Crosley Radio Corporation, WKRC, Kodel Radio Corporation and the WSAI station of the U. S. Playing Card Company gave programs nightly and there was also an amateurs' contest which attracted considerable notice.

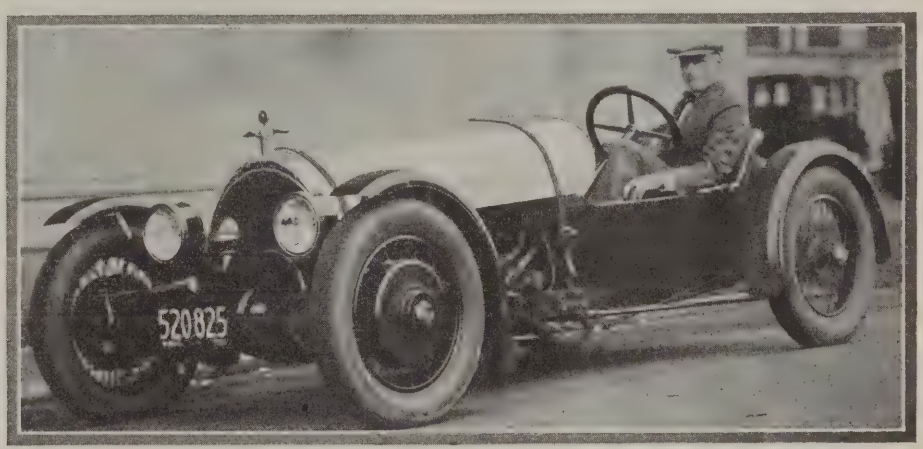
New Station at Hartford

RADIO is now well under way with Hartford, Conn., dealers. All indications point to a big volume of business this autumn and winter. New equipment is coming into the field and all dealers are making every effort to turn in a big volume during the winter season. The situation insofar as sales are concerned is being helped materially by the Travelers Insurance Co. which opened a broadcasting station a few months ago. WTIC hooks up with WEAF and some first calibre entertainment is promised for the winter. Dealers say this determination to hook in with New York on high class material is doing much to better the sale of equipment.

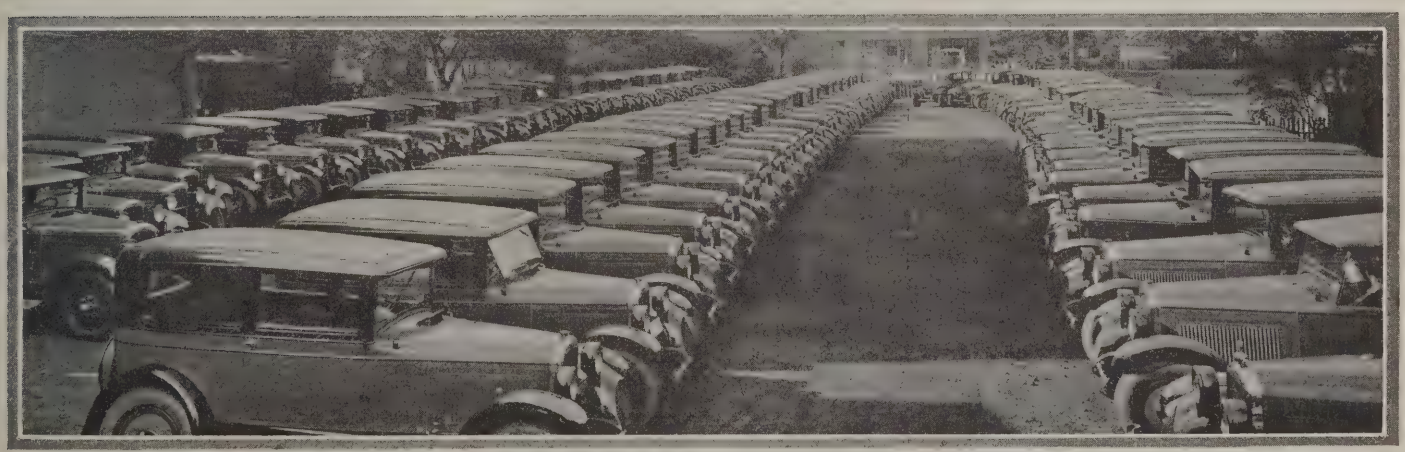
MOTOR AGE'S PICTURE PAGES



THE LAST WORD. Interiors of the new $300,000 Paris home of the Chrysler distributor for France, which also sells French makes. Upper left: American bar handsomely decorated in old English oak; upper right: View showing exhibition hall where cars are displayed in a tempting manner, with accessory gallery in background; lower left: One of the four tennis courts which are provided as an added attraction for the amusement of clients; lower right: The luxurious office of the president of the St. Didier Garage which has provided this most attractive setting for the automotive products it handles.



OMNIPRESENT. Helen Foster, leading lady of Educational-Lupino Lane Comedies, trying out the Ford polo car used in the Educational-Mermaid Comedy "Lickety Split."



OF AUTOMOTIVE INTEREST

RESISTANCE PLUS. Coach D. Pierce, who directs the team of the Sherman Indian School, Riverside, Cal., attaches a long plank to the front bumper of a Chevrolet sedan, places the car in low gear and slowly pushes his husky linesmen down the field. This method, he says, teaches the players to dig in and to hit the line low. Now somebody page the "Four Horsemen."

A DISTINCTIVE CAR. A. A. Nichols of Waltham, Mass., freshman at the Massachusetts Institute of Technology, has designed a front-drive car in which many Ford parts are used and is being kept busy explaining its construction.

THE FRUIT OF SALES EFFORT. The Reeke Nash Motors Co., distributors in Cleveland, Ohio, recently delivered 80 cars in that city in one week. This company has found it necessary to increase its operating area to 100,000 sq. ft. of space, 60,000 of which is under roof. The photograph was taken in the immense yard back of their Euclid avenue headquarters.

The READERS' CLEARING HOUSE

Questions and Answers on Dealers' Problems

BUILDING - ELECTRICAL - FLAT RATES
SHOP - LEGAL - PAINT & TRIM - ACCOUNTING

Using Extra Set of Spark Plugs on Essex

Q.—We notice in an issue of MOTOR AGE where a man in Canada had bored the head of an Essex to put in an extra set of spark plugs. We would like to know how this was done without drilling through the water jacket or disturbing the water circulation.—K. A. Miller, Box No. 1115, Brawley, Calif.

It is necessary to drill through the water jacket and put in bushings. We are giving you by separate letter the name of a man who has done considerable work along these lines and from whom you can get more detailed information.

Q.—We would like to know if it is possible to mix one pint of castor oil with eight gallons of gasoline so as to lubricate the piston and cylinder walls and yet not have enough oil to foul up the plugs. This question has reference to an Essex which has been changed for racing and on which we are having trouble due to missing and cutting out at high speed. We would like to know if there really is any value in mixing castor oil in the gas for speed.

We would not recommend this. Cylinder oil is sometimes mixed with the gasoline in accordance with your idea but for a different purpose. It is effectual in breaking in a new engine for the cylinder walls are thus thoroughly lubricated. It has the effect, however, of carbonizing the engine and plugs so that cleaning is soon necessary.

A Special Coil for High Speed Ignition

Q.—We have trouble with the missing as previously stated in spite of the fact that we have double springs on the valves and extra springs on the Delco ignition to help the points open faster. We also have a Winfield carbureter with air pressure, also a gear oil pump taken from a Chalmers.

The trouble with missing at high speed is due to the fact that the points are not in contact long enough to allow the current to build up in the coil. One way of remedying this condition would be to use an open circuit coil instead of a closed circuit. You might try an Atwater Kent open circuit coil such as formerly used on either Franklin or Hupmobile. The Franklin coil being designed for 12 volts, however, would apparently make the Hupmobile coil preferable. This coil will draw from 10 to 20 amperes with the ignition switch turned on and the interrupter contacts held together, whereas the normal closed circuit coil draws five or six amperes. This means that at low speed the points will spark very badly and will burn if the engine is operated for any length of time at low speed. Accordingly if it is necessary to operate under both low and high speed conditions it would be well to use a resistance or ballast which can be obtained from any good ignition shop and this could be connected in series with the coil. Then for high speed operation a switch could be used with wires connected to both sides of the ballast coil so that it could be shorted out for high speed operation. If there is any question about the way to connect this up we would be glad to submit a sketch giving the circuits.

Q.—We do not know whether the camshaft is a stock or special one, but we are having trouble due to the heads of the valves jerking off when the engine is run at high speed. This applies particularly when idling.

A tulip or semi-tulip type of valve should be used, preferably one made of a high grade alloy steel.

Sometimes Left Is Right

Why is it on Stromberg carbureters that you have to turn the idling adjustment to the right to make the mixture richer, but turning the high speed adjustment to the right makes the mixture leaner.—Chicago Mechanic.

The idling adjustment controls the air while the high speed adjustment controls gasoline which accounts for the opposite effect obtained.

The Readers' Clearing House

THIS department is conducted to assist dealers and maintenance station executives in the solution of their problems.

All questions are answered direct by letter, so the name and address should be given in full. This saves waiting for the answer to be published, which sometimes occurs several weeks late, depending upon the space available.

Readers' names will not be published with articles, if a request to this effect is received with the letter.

Inquiries not of general interest will be answered by personal letter only. Emergency questions will be replied to by letter or telegram.

Also state whether a permanent file of MOTOR AGE is kept, for many times inquiries of an identical nature have been made and these are answered by reference to previous issues.

Addresses of business firms will not be published in this department but will be supplied by letter.

Technical questions answered by B. M. Ikert and A. H. Packer; Legal, by Wellington Gustin; Paint, by G. King Franklin; Architectural, by Tom Wilder; Tires, by a Practical Tire Man; General Business questions, by MOTOR AGE organization in conference.

New Cars That Knock With Low Grade Gas

Q.—We have had several new Fords come back into our shop for what seems to be a carbon knock. We removed the head and found very little carbon, not enough to cause a knock, in our opinion. After this slight amount of carbon was scraped off the car ran all right for about two days and then the same knock came back. We have had the same trouble on several of the late cars and do not seem to be able to remedy it. We would like to have your opinion as to the cause and remedy.—Hugh Gordon, Healdton Motor Co., Healdton, Okla.

We believe this is a piston slap caused to some extent by present day gasoline which has a tendency to detonate. We would suggest your trying special fuel of some sort, either benzol or high test gasoline or some of the doped fuels which are on the market. If these overcome the condition it shows that detonation is partially responsible. Another thing to do would be to check up the clearance between the pistons and cylinders with a thickness gauge. If this is not appreciably over .004 inches there is nothing you can do unless you wish to try an inner ring in the second and lower ring groove. For example on Willys-Knight engines using aluminum pistons where there would otherwise be a tendency for the piston to slap when cold an inner ring is used to prevent this occurring.

Loose Bearings Cause Oil Pumping

Q.—Could loose main and connecting rod bearings on a model 59 Cadillac cause excessive consumption of oil. The cylinder blocks have been rebored and new pistons and rings fitted. Piston and rings were given the proper clearance and good material was used. Reboring was done by an expert machinist with expensive grinding equipment. The oil gauge shows a low pressure reading.

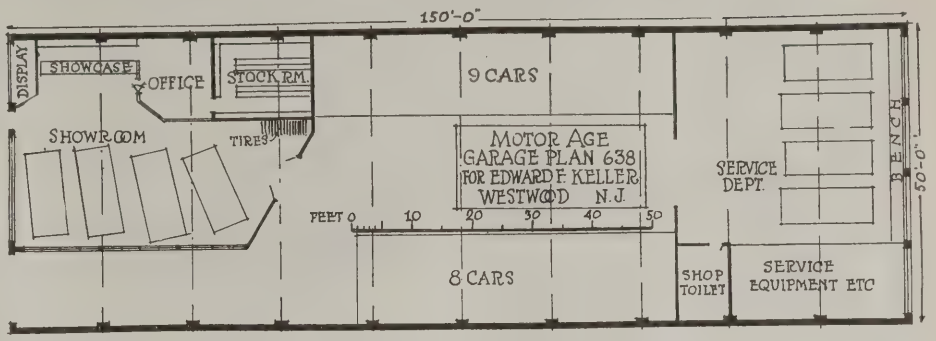
Loose bearings will cause excessive oil consumption because too much oil is splashed to the cylinder walls and will get by in spite of pistons and rings. On Cadillac cars the connecting rod bearings cannot be taken up in the usual manner. This statement applies to the blade rod. To check the operation of the oiling system, it is often considered desirable to use oil under pressure and connect from a tank to the oil pipe of the engine so that oil flows from an outside source instead of from the regular oil pump. The lower pan can then be removed and a mechanic under the car with a light can see how fast the oil is dripping from the various bearings. The oil should drip slowly from each bearing and should not come in a regular stream from any one.

Planning Your New Building

By TOM WILDER

The READERS CLEARING HOUSE

"Get Competitive Bids When You Build"



Q.—we are planning to erect a garage containing showroom, garage and storage space on a lot 50 by 150 with gas tanks in front. We would appreciate any suggestions you might make for a proper proportioning of building as well as arrangement in order to utilize the space to the best advantage. The owner of the land has a plot 100 by 150 and suggested that if he could put up one large garage on the plot, selling one half to us and the other half to someone else he could build and sell them much cheaper. The plot is on a main road and faces west. We planned to show accessories in the front of the showroom and have the building set back so that gas customers could drive in off the street. Any suggestions would be greatly appreciated.—Edward F. Keller, Westwood, N. J.

We are enclosing a pencil sketch showing a layout for your proposed garage. We would not favor a filling station in front of this building for the reason that a good filling station cannot be built on so narrow a space. Only the small cars could make the turn and get out without backing, and it would be especially undesirable with a front entrance as you must have. You should either get a corner lot or one that is 60 to 70 feet wide.

Savings Effected Through Bids

Regarding the lower price, by having two buildings put up together we do not believe there is much in this as there would be practically no saving except possibly a party wall and the cost of building runs about so much per square foot. The best way to make a saving is to get several competitive bids and then take the lowest. You will be surprised to find that there is sometimes a difference of nearly 50 per cent in the estimates of different contractors, even when bidding on the same specifications.

There is not much choice in the layout of a building on a lot of this sort, the display space here being very limited and if it is at all possible we would advise you as above, to get a corner lot, and then you can have an entrance on the side and use the whole frontage and part of the side to display new cars and accessories. A side street always offers better parking facilities and less congestion around the entrance. If there is a good wide alley behind this lot it would help out as then you could get along without the front entrance using the whole frontage for showroom. You could place the shop just back of the showroom where it would be handy to the stockroom and use the rear part for garage purposes.

A building of this size requires material in large enough quantity to insure prices as low as would one double the size

Not Enough Oil

Q.—We have a few questions regarding a 6-46 1917 Paige using a Continental 9N engine. This engine gives perfect satisfaction only for the fact that it will destroy a rod bearing about every 5,000 miles or so. It has done this five times in 25,000 miles, two years driving. The bearings do not seem to get hot and run as if dry of oil and the motor has plenty of oil and the pressure on oil gage is from 2 to 5 pounds each time. The bearings seem to crack up and fall out in pieces and does this in about one mile. The trouble has never happened to the same rod the second time.—Wilson W. Culver, 8 Alvena Avenue, Cortland, N. Y.

We have taken this question up with the local Paige-Jewett maintenance organization and they are of the opinion that the connecting rod bearings do not have sufficient dip in the oil. With each connecting rod at the bottom dead center position the scoop on it should extend into the oil ⅛ of an inch. If the car is to be used for driving at high speed for any length of time it is advisable to increase its dip to ¼ of an inch. The increase in dip may be secured by blocking up under the sub-base inside of the regular oil pan or crankcase lower half. Place a gasket of the necessary thickness between the sub-base carrying the trough and the regular oil pan and then gage the amount of dip.

Increase the Dip

Q.—Would it be practical to install a Dodge Brothers oil pump on front of the timing gear case and drill the crankshaft for pressure lubrication? This engine does not smoke or use too much oil nor does it ever run hot. I drive the car from 35 to 40 miles per hour most of the time.

It will be possible to install a different pump and to drill the crankshaft but you will find that the cost of drilling the shaft alone would run in the neighborhood of $40. Our suggestion is that you increase the dip and that you make sure that the connecting rod lower bearing shells are properly fitted to the rod and cap before they are fitted to their respective crankpins. The fact that the engine does not smoke strengthens the impression that the rods do not have sufficient dip. When checking the oil dip we would advise that rods be checked individually so as to get it the same all over.

AUTOMOTIVE FACTS OR FABLES

Q.—I have heard it claimed that leaky valves will have a tendency to cause a motor to pump oil. What is the theory behind this conclusion? — West Coast Reader.

Leaky valves will cause poor combustion. Poor combustion may fail to burn the oil which works past the pistons and consequently may make it appear as if an abnormal amount of oil is getting into the combustion chamber.

Q.—Why should a cool running engine be hard on an exhaust valve?

With a certain carbureter setting the mixture will be leaner when the engine is cold. A lean mixture burns slowly and is still burning when the exhaust valve opens. For this reason and because the flame is an oxidizing flame there is more tendency for the valves to burn when the engine is cold.

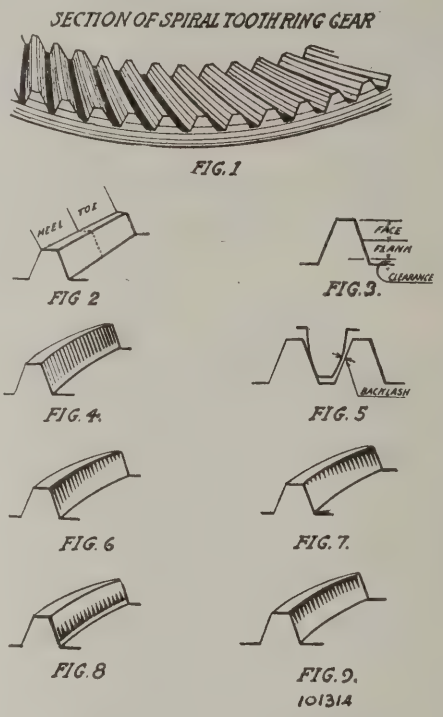
May Be Poor Ignition

Q.—It is claimed by the makers of a certain motor car that an air leak in the exhaust manifold system, as for instance at the joint between the exhaust manifold and the exhaust pipe will case popping back in the muffler. Why should this be so?

This does not seem to be a possibility unless poor ignition or some other similar condition is permitting raw fuel to get into the muffler. If this is the case the addition of air might make it combustible and then additional flame coming from one of the cylinders might cause an explosion in the muffler. If this theory were universally correct there would be explosions in the muffler when the muffler cutout is operated.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Here's the System on Spiral Bevel Adjustment



Q.—I am having trouble with a Jewett 1924 model differential. I have put in a new gear but cannot get the noise out of it. When I step on the gas when the car is moving it gives a singing noise to it and when a let up on the throttle the noise is gone. Have tried to get this noise out but did not have very good luck. I know the adjustments on it but I do not know if it is too close or too far apart to make the singing noise and when I get the singing noise out it makes a noise when the car slows up.—North Dakota Reader.

If at any time the rear axle has run without oil it may be that wear in the bearings has occurred so that a perfect adjustment is very difficult to get. If the axle is taken apart the bearings should be laid on a surface plate to see if there is any movement of the inner race possible. That is, there should not be any play sidways as an attempt is made to move the inner race back and forth. If the bearings are o. k. then the metal pinion and the metal ring gear should be rolled, one on the other to note the position which the pinion takes and to see whether it sticks or runs freely. The pinion and gear should then be assembled in the axle as nearly as possible in the same position, allowing from .005 in. to .008 in. backlash between them.

Place the axle under the car and at the same time paint the gear teeth with a fine coat of white lead. After this is done jack up the rear wheels and start the motor, throwing transmission into high gear, also throw in your brakes, which must be equalized so you get about the same load on each wheel. This will wipe the paint off the teeth. You may find a condition as illustrated in Fig. 9 in the sketch on this page. The shaded portion represents the contact of your gear. That means that the load is pulling on this portion of the teeth. In that case, move your pinion toward the gear, until the pinion wipes off the paint as shown in shading on Fig. 4.

Fig. 4 illustrates the most desirable condition where the contact is slightly heavier at the toe or small end of the tooth than it is at the heel. This is desired, due to the fact that, when the load is applied, the pinion has a tendency to lift and apply a greater load at the heel or large end of the tooth. If you have a contact as illustrated in Fig 8 or where the load comes on the base or flank of the gear tooth, it means that the pinion is too far in and should be backed out. Gears set up in this way, are sure to be noisy. If the contact is as shown in Fig. 8 the pinion is too far in and if the contact is as shown in Fig. 9, it is too far out.

If the contact on tooth appears as shown in Fig. 6, it means there is too much backlash between ring gear and pinion. This requires moving the ring gear toward the pinion and if this is not done, the extra heavy pressure at the large end of the tooth will cause it to break off. If contact is too heavy at the small end as shown in Fig. 7, the small end of the tooth will eventually break off.

The way the paint rubs off shows whether axle gears are correctly adjusted

AN S. O. S. FOR GAS MASKS

Q.—We have a number of Dodge cars, screen body models. The fumes from the exhaust come up from the rear and cause the drivers to have headaches. We are sure these fumes come from the rear of the car for this reason; if the rear curtain is down the driver is not affected. It is not caused by back pressure through the breather pipe as we have used new rings and the engine has been rebored. It seems to be the fumes from unburnt gasoline, yet the car goes about nineteen or twenty miles on a gallon of gas. We have tried all makes of carbureters, but the trouble has not been entirely eliminated, although one make of carbureter eliminated about forty per cent of the fumes and increased the mileage.—Louis Wanner, 251 Main St., Garfield, N. J.

The fact that one carbureter improved the condition would seem to indicate that burnt gas and not raw gas is producing the fumes. One suggestion is to squirt kerosene into the air intake of the carbureter so as to produce smoke. Then observe the exhaust outlet tracing from the manifold through the exhaust pipe to the muffler and at both front and rear of the muffler to see if smoke is coming out at any point. Observe especially the connection between the manifold and exhaust pipe and between the exhaust pipe and muffler. If there is no evidence of leakeage then it might be advisable to put a flexible extension on the tail pipe of the muffler so as to carry the fumes farther away from the car.

Speed Data for Speedometer Testing

Q.—What are the revolutions of a speedometer at 10—25 and 50 miles per hour or about three speeds on popular makes of instruments such as Stewart, North East, Johns Manville, A-C, Warner, Jones, Waltham and Van Sicklen? I wish this information for checking speedometers on the car as I will build a rig with variable speed and master tachometer and connections for the different heads without removing from instrument board. We are often asked to do this so that they may be sent in for correction if necessary.—Auto Electric Shop, Cedar Rapids, Iowa.

On receipt of your letter, various circular letters were sent out and the following information was thus made available.

Speedometer	R.P.M. at 60 M.P.H.
Corbin	2560
Standard (Cent. type)	2000
Standard (Magnetic type)	1000
Stewart-Warner	1009
Waltham	1008
A-C	1008
North East	1026

As these figures are given for a speed of 60 miles per hour you can get the other speed by proportion. For example at 30 miles an hour it would take just one half of this speed or at 10 miles per hour, 1/6 of this speed.

ENGINE CONTINUES TO FIRE

Q.—What would case a Monroe motor, engine No. 15333, car No. 15361 that has been completely overhauled to fire several times after the ignition switch is turned off. The water circulation is o. k. because the water never boils. This motor is fitted with a Zenith carbureter, both the low and high speed jets being size 90. The timing is o. k. as the motor seems to have plenty of power.—North Side Auto Repair, 2110 N. Michigan St., Kokomo, Ind.

If the ignition switch operates properly it will cut off the battery current and will prevent the ignition coil from firing. Then continuation of firing in the various cylinders will indicate overheating. A projecting piece of metal in a cylinder will cause this condition for it gets red hot. Carbon will also cause this condition. Overheating is further aggravated by a lean mixture and as this carbureter requires a No. 90 main jet and a No. 110 compensating jet, we think that this may be all or part of the trouble. The other specifications are No. 20 choke, No. 50 idling and No. 38 seat. We would also recommend your checking the valves when the engine is hot to make sure you have clearance between the valve stems and tappets.

Clearing Up Electrical Troubles

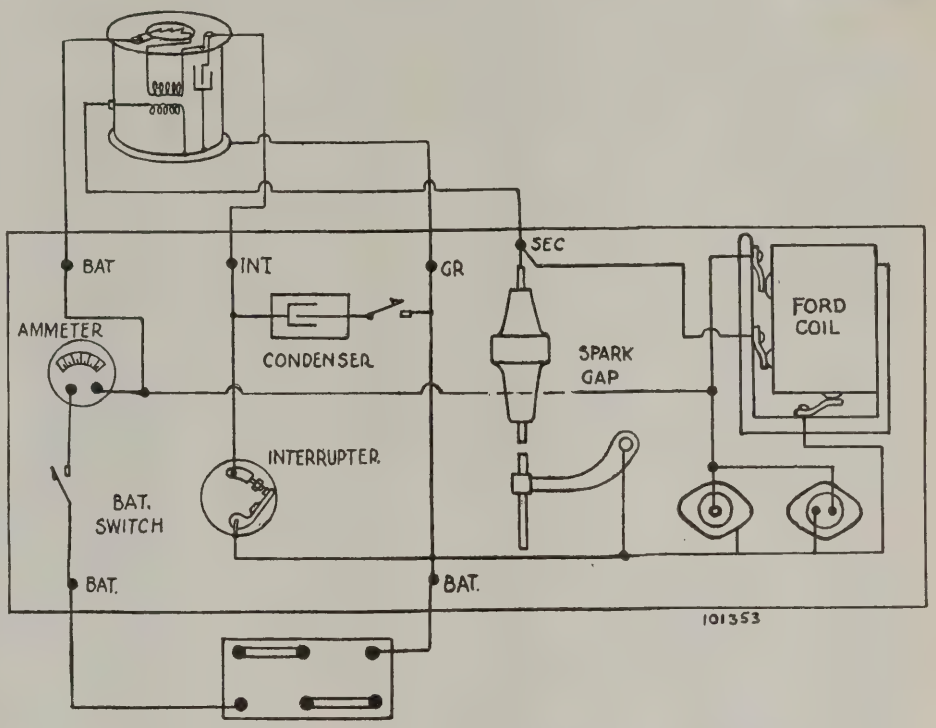
The READERS CLEARING HOUSE

Making a Coil Testing Outfit



Q.—Will you kindly give me some information as to how to make a home-made tester for a high tension non-vibrating coil. I want to be able to test the coil and also the condenser and also wish for a tester to test Ford coils and spark plugs, also single and double contact lamp bulbs.—Frank Vote, 1359 Palace Street, St. Paul, Minn.

We are showing an illustration of an ignition test board which you can easily construct. It requires the center portion of a spark plug, an ammeter and an interrupter. If you can drive the interrupter by means of belt from a small motor, or by means of a horn motor or by some such method, it will be better than turning it by hand, for you can make an endurance run on any coil which seems to be giving trouble. In the illustration we have shown an ignition coil connected and you will notice that it is necessary to know what is inside of the coil before you can properly connect it.

The coil shown has a condenser in it and the common connection of the primary and condenser should go to the Int. terminal. The other end of the condenser should go to the GR terminal and the other end of the primary which in this case comes from the ballast resistance on top of the coil should go to the Bat. terminal. Where there is a condenser inside the coil the condenser switch shown on the test board is left open, otherwise it will be closed. The spark gap is shown as being adjustable, so that you can determine the greatest distance the spark will jump and also set the gap at ⅛ or $\frac{3}{16}$ inches for an endurance run. At the right on the test board there are shown two sockets, one for single contact and the other for double contact bulbs.

One Test At a Time

There is also shown at the right a Ford coil setting in a wood frame which has three spring brass clips so that contact is made to the three terminals of the Ford coil. When testing such a coil no other ignition unit should be tested at the same time. You can test a spark plug by opening the gaps wide and putting the spark plug in parallel with the gap. For a good test however, a piece of mica should be put in between the points to see if the spark will jump a greater distance than the normal point setting. Another way is to bend the points apart to ⅛ inch or more. Such a test board may also be used for testing a high tension magneto armature. Under these circumstances the interrupter is removed and the high tension slip ring connected to the Sec. terminal. The terminal marked Bat. is then connected to the magneto interrupter screw which is replaced in the end of the armature shaft while the GR terminal is connected to the frame of the magneto armature or to the end of the shaft.

An ignition testing outfit may be made up in this fashion. The interrupter is preferably motor driven. Provision is also made for testing bulbs and Ford coils

The Cutout Worked With a New Armature

Q.—I would like to have you explain something I encountered with a common Ford generator. With the engine running at a fair rate of speed and with normal wiring the ammeter did not show any charge. Taking the wire that is connected from the ammeter to the cutout and connecting it from the ammeter to the generator terminal the indication was from 10 to 15 amperes charge with the engine running at fair speed. However, with the normal wiring, that is the wire put back on the cutout and the cutout points closed by hand the ammeter would show a reading but under no conditions could I make the generator current flow from the ammeter without closing the points by hand. The various cutouts that I used were all in first class condition and they worked all right after a new armature had been put in the generator. I would like to have this condition explained thoroughly. W. R. Moore Garage, Benjamin, Texas.

When the cutout points are not closed by hand it is necessary for the generator to build up without having its field excited from the battery. When a generator has been stopped there is but little magnetism left in the field poles, so that when the armature first starts to turn it generates a very small voltage. This may be only half a volt or less and it is necessary for this small voltage to send current from the armature to the brushes and through the field winding in order to strengthen the magnetism and generate more voltage.

Accordingly if the brushes are oily or if there is a poor connection in the field circuit or if the wires in the armature or commutator are poorly soldered so that there is a high resistance there will be very little preliminary current flow and the magnetism may not be increased enough to enable the generator to build up. As you overcame the condition by using a new armature, we will assume that the generator had been overheated at some time and the solder had been thrown out from the commutator bars, to such an extent that a high resistance existed. When you closed the cutout points by hand you allowed enough current from the battery to flow to the field winding of the generator to enable the machine to generate 6 volts instead of ½ volt or less, and this higher voltage was enough to start current through the shunt field winding and keep the generator operating after you had once primed it. A thorough test of the old armature on a growler combined with the use of phones to see if there are open circuits in the armature might check up the theory we have advanced.

Motor Age's Flat Rate Forum

Selling Cylinder Refinishing Jobs

EVEN though the shop has flat rates for refinishing cylinders, fitting new pistons and rings, etc., it sometimes is quite a job to sell the customer on the necessity of doing such work.

One shop gets around this by having on hand an old cylinder block cut away to show the interior of the bores, valve mechanism, etc. In one of these bores is left an old piston, rings, valves, connecting rod and so on, showing the sloppy fit of the parts.

In one of the other bores, the latter is reground, a new piston and rings, valves and connecting rod are fitted to show the customer exactly the difference between a cylinder in good condition and one in bad condition. The foreman of this shop says no amount of talking will convince a customer half as much as such a cutaway cylinder block.

The Little Things That Count

Requisitions for parts are a necessity, of course, but it can be overdone. Many shops have found it unwise to have the men make out requisitions for small parts like cotter pins, washers and certain bolts, because the work involved in handling the requisitions is not warranted by the cost of the part.

But, it pays to watch certain things. For example, it is wasteful to hand a mechanic a full sheet of emery cloth when he asks for it. Generally a piece 4 in. square is all he needs. Have it cut into squares that size.

Books on Flat Rate

Meriden, Conn.

To the Editor of MOTOR AGE:

Enclosed please find check for 50 cents for MOTOR AGE's Flat Rate Manual. Can you inform me who publishes flat rate books for Dodge Brothers motor cars and how I can buy one; also who manufactures special tools for Dodge Brothers cars. I am going to specialize in Dodge Brothers and Ford repair work. Can you suggest where I can get some advertising material someone has used successfully in a direct-by-mail campaign advertising flat rates. Where can I purchase a book with instructions covering brake adjustments on new types of cars? Any material you will send me will sure be appreciated. Please do not be offended at my battery of questions as I have been saving these up for quite a while.

JOHN DE FRANCIS,
Joe's Brake Service Station.

Enclosed cars, especially those which operate in regions where roads are dusty, accumulate quite a bit of dirt and foreign matter on the upholstery. This is difficult to clean properly unless facilities are at hand. Many service stations have a fixed price for cleaning the interior of closed cars and make use of a vacuum cleaning process

We do not believe any concern outside of Dodge Brothers publishes a book listing flat rate operations on that particular make of car. Usually the manufacturer of the car compiles the flat rate manual pertaining to his product. However, the MOTOR AGE's Flat Rate Manual sent to you lists practically all the operations you will be likely to encounter in the servicing of the Dodge Brothers car.

MOTOR AGE has published from time to time reproductions of cards, booklets and letters sent out by various concerns to advertise their flat rate service. We cannot direct you to any particular concern and practically all such advertising is prepared locally. There really is nothing very difficult about preparing it. What people are interested in is "what will it cost." To that end you could prepare a list of typical operations, such as valve work, brake adjustment and relining, lubricating chassis, rebushing front axle knuckles and tie rod yokes, etc., and set the price after them. The definite charge is what the motoring public likes. Give them that and they will do the rest.

MOTOR AGE has within the last few weeks run a series of articles pertaining to the adjustment of the brakes on the late models. The brake manufacturers have manuals covering the adjustment of their brakes. We are sending you their names by letter and also the names of concerns making special tools for servicing Dodge Brothers cars.

No. 43

FLAT RATES FOR DODGE BROTHERS CLUTCH OPERATIONS CONT.

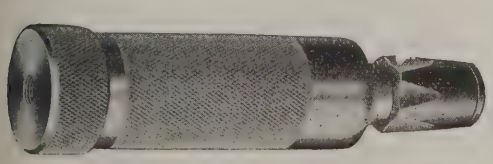
(Continued from Dec. 3 issue)

Manufacturer's Official Designation		Time
3119	Clutch driving disc pin (on flywheel), remove and install one	14 hrs.
3119-A	In addition to Job No. 3119, to remove and install each additional flywheel pin, add	½ hr.
3120	Driven disc pin (on spider), remove and install one	7 hrs.
3120-A	In addition to Job No. 3120, to remove and install each additional clutch spider pin, add	½ hr.
3117	Clutch pressure plate and hub, remove and install	7 hrs.
3106	Clutch driven spider and shaft, remove and install	7½ hrs.
3108	Clutch pedal shaft, remove and install	2½ hrs.
3107	Clutch release fork shaft, remove and install	4 hrs.
3109	Clutch shaft end play, remove	7½ hrs.
3115	Clutch spring, remove and install	7 hrs.
3105	Clutch, wash with gasoline and treat with rosin and turpentine	1½ hrs.
3110	Clutch release bearing grease tube assembly, remove and install	1 hr.

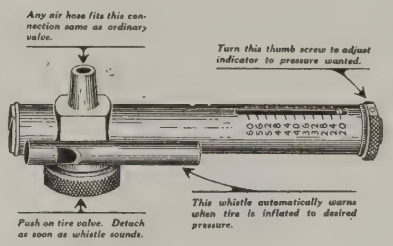
THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Oakes Water Pump for Fords



A CIRCULATING water pump for Ford cars and trucks which the makers recommend as being thoroughly efficient and dependable is being manufactured by the Oakes Company, Indianapolis, Ind. Installation is said to be easy as well as adjustment, no special tools being required for either operation. The regular Ford fan belt and hose connections are used. It is said that the pump operates at the proper speed at all times with consistently correct pressure while the heavy construction and ample internal clearance make it impossible for foreign matter or ice particles to clog or injure the pipe. List price, $5.



Oakes Circulating Water Pump for Ford Cars and Trucks

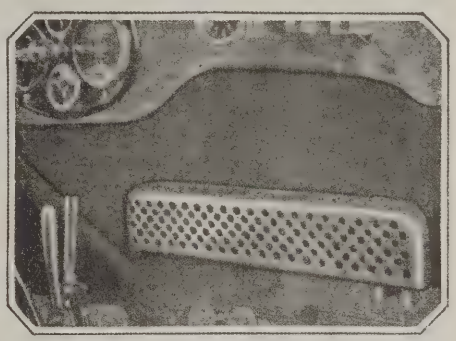
Dot Compressor Adapter

EVOLVEMENT of an adapter which converts any make of service compressor into a Dot compressor is announced by the Carr Fastener Company, 31 Ames Street, Cambridge, Mass., manufacturers of the Dot High Pressure Lubricator. An eight-inch pipe thread is tapped in the end of a standard Dot lubricator for inserting nipples of other makes of lubricating systems. The price complete to service stations is $3.

Dot Compressor Adapter

Clymer Automatic Tire Gage

CLYMER Motor Products Company, Denver, Colo., is making a new type of tire gage the chief feature of which is that it registers the air pressure as the tire is undergoing inflation instead of after inflation has been accomplished. This instrument, known as the Clymer Automatic Air Gage, is carried either in the pocket or tool kit and when inflating a tire is attached between the tire valve and the air hose so that the air passes through the gage as it enters the tire. Another interesting feature is a signal whistle which warns the user when the desired pressure has been attained. Before inflating the pressure desired is set with a thumb screw indicator and when the proper pressure has been reached the air supply is shut off automatically—and the whistle is heard. This gage is packed in a small leather pouch, the outfit weighing 15 ounces. The instrument is five inches long and nickeled and said by the manufacturers to be unfailingly accurate. Retail price, $2.50.



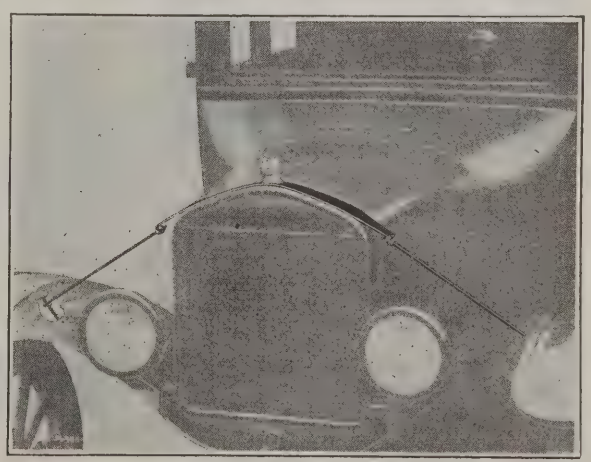
Piston Pin Retaining Springs

PISTON pin retaining springs for car and truck engines requiring such springs are now available in labeled, packaged lots from the G-H Tension Ring Co., Inc., Baltimore, Md. The retaining springs are packed in labeled boxes containing 100 springs and can be obtained either in packages or in a counter display carton containing an assortment of packages of each of the 27 different numbers.

Additional Descriptions Will Be Found On Following Page

Kingston Universal Car Heater

THE Kingston Universal Car Heater will fit and heat any car according to the Kokomo Electric Company, Kokomo, Indiana. It also is pointed out by the makers that the heater may be installed almost anywhere in the car. One of the popular installations is on the vertical dashboard where the heat first warms the feet of the passengers in the front compartment, then circulates throughout the vehicle. Just as handily however, it is said, the heater may be installed in front of either the front or rear seat or behind the front seat. The Kingston heater has an exceptionally large radiation surface, it is said to be gas-proof and also that the valve is positive in action and will not leak. The list price for this heater is $8.50, including eight feet of flexible tubing.



Kingston Universal Car Heater

Oakes Fender Brace for Fords

Cut Shown Below

ELIMINATION of fender rattle and vibration and effective fender protection can be realized through use of the Oakes Fender Brace for Ford cars and trucks, according to the Oakes Company, of Indianapolis, Ind., the manufacturers. Built of spring steel and finished in glossy baked enamel this brace is declared by the producers to be strong enough to withstand road shocks, very durable and neat. It is easily and quickly installed. List price, $1.50.

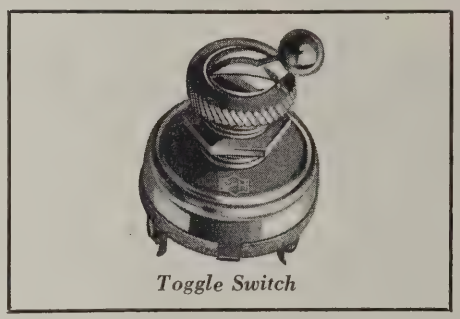
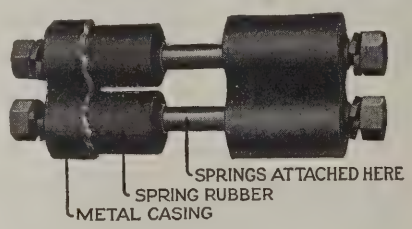
Model 229-A Ford Carbureter



AMONG the new products of the Stewart-Warner Speedometer Corp., Chicago, is Model 229-A Carbureter for Fords. This is a replacement for the regular Ford carbureter unit and it is said to incorporate a number of highly valuable features which contribute to increased power, smooth running, easy starting, improved acceleration and diminished consumption. The carbureter is installed the same as the original unit. Acceleration from low speed is made powerful and positive through the aid of a fuel passage arrangement whereby the mixture is automatically enriched to a suitable amount to secure strong response on opening the throttle. While a single main adjusting screw controls the fuel flow at all times over the whole range of operation a supplementary adjustment screw permits of setting the idling mixture independently of the main needle. This permits the setting to be such as will give maximum power at all points, without getting the mixture too rich for idling. The only working parts in this model are those in the float mechanism which have been built into a unit with the float chamber cover to facilitate removal and inspection. The whole float chamber is readily dismounted without removing the carbureter. The fuel passage upon which the main adjusting needle seats is made of a size that prevents the operator from making the mixture much too rich even if he should open the needle several turns beyond the position giving the best all around performance.

Model 229-A Carbureter for Fords

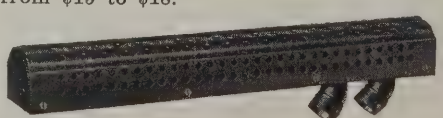
Fits 1926 Fords



ANNOUNCEMENT has been made by the W. H. Thomas Mfg. Co., Spencer, Iowa, that the Improved Bull Dog Foot Accelerator fits the 1926 Ford models as well as all previous Ford models. The company says that the change in the brake pedal design on the new Ford models makes operation of the Bull Dog accelerator still easier and more comfortable.

Toggle Switch

Powell Rubber Shackles

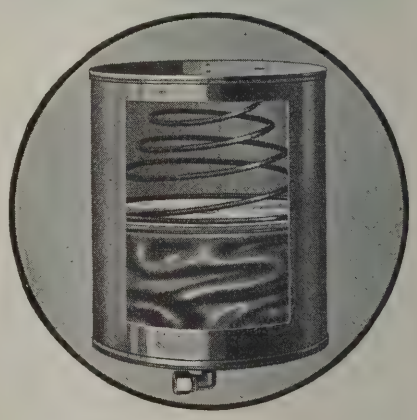


THE Powell Rubber Bushing Co., Utica, N. Y., is manufacturing rubber shackles for Ford cars. These are so made that all weight of the car rests on bolts that go through 16 rubber bushings. The rocking of the springs is taken up by the twisting of the rubber. The manufacturers claim that they can be attached in 20 mins., and that the riding qualities of the car will be greatly improved. List price $17.50 per set of four.

Powell Rubber Shackles

Rail-Type Heater

A NEW Rail-Type Heater, made by the Stewart-Warner Speedometer Corp., 1826-52 Diversey Boulevard, Chicago, is built in three models, designed for easy installation on all types and sizes of cars. Model 268-A is 26 in. long by 3¾ in. wide and is adapted to cars of large and medium size. Model 268-B is 22 by 3¾ and for smaller cars. Model 268-C is 22 in. by 3¾ and is designed especially for Fords, with a special valve for Ford installation. The entire heating unit is installed above the floor, utilizing all the heat. The heat is controlled from the instrument board, the control arrangement communicating with a valve which can be opened to any degree. The heating element is of drawn steel which heats quickly. The valve is gas tight and can not jar loose. Prices range from $15 to $18.



Rail Type Heater

Cutler-Hammer Toggle Switch

MOUNTED on the dash the Cutler-Hammer Toggle Switch controls such circuits as the spotlight, parking lights, courtesy lights, dome lights, running board lights, electric windshield cleaners, etc. The product is made by the Cutler-Hammer Mfg. Co., Milwaukee, Wis. The toggle lever actuates a large fan-shaped make-and-break wiping contact giving smooth, quiet operation. Ease of operation, a one-hole dash mounting, a large fan-shaped wiping contact, sturdiness and widely spaced terminals are the distinctive features claimed for the device by the producers. The entire mechanism is enclosed in a dust-proof cover, and the metal parts are attractively finished in nickel. Made in two sizes of stem, $\frac{5}{16}$ in. and $\frac{9}{16}$ in.

Alemite Radiator Condenser

IN the Alemite Radiator Condenser, a product of the Bassick Manufacturing Company, 2650 North Crawford Avenue, Chicago, is found a salvaging device which is said to hold to a minimum the expense of supplying alcohol solutions in winter and to be effective in conserving the water supply in both winter and summer. The condenser is attached to the overflow pipe of the radiator catching, condensing and thereby "saving" fluid and fumes that otherwise would be lost by evaporation from the circulating system. After condensation the solution is returned to the radiator by the pressure of a coil spring which tends to empty the container. With this appliance in use the makers say one filling of alcohol solution will last all winter for efficient service. The Alemite Radiator Condenser is 8¾ in. high by 6½ in. wide and may be installed on the frame of the car or on the cowl dash under the hood. The retail price east of the 100th degree meridian is $6.50 and $6.75 west.

Alemite Radiator Condenser

EDITORIAL

Tax Cut in Sight

THE industry seems to be pretty well agreed upon what it expects to get from Congress in the way of tax reduction. The bill as reported by the Ways and Means Committee of the House provides for reduction of the tax on passenger cars from five per cent to three per cent of wholesale price. On the basis of experience the first half of this year that means an average saving of $11.60 on every passenger car sold. Of course in practice it will be more on some cars and less on others, depending upon the price. But the important thing is that it is a substantial reduction and it is equivalent to a price reduction.

The industry was inclined at first to carry its fight for complete elimination of the tax to the floor of Congress, but a careful survey of the situation showed this probably would be unavailing. The industry, therefore, has agreed to accept what is offered it and in return the Ways and Means Committee has provided a way for dealers to be reimbursed for the difference between the old rate and the lower rate on all cars bought by them before the reduction becomes effective but still on hand at that time.

Although the passenger car must continue to bear a tax burden, all other branches of the industry are to be given complete relief. Tires and accessories will be tax free so far as the Federal Government is concerned and industry will be given an impetus that ought to swell income tax receipts.

A Christmas "package" holding an automotive gift will be much more fitting this year than one of the wobbly kind from the Old Crow reservation.

At Worst—A Bad "Spot"

FARM prosperity, which is regarded by economists as an important element of general industrial prosperity, seems to be involved somewhat in arguments as to the effect of a slump in the corn market. The situation is not serious enough to warrant any national uneasiness although it stands to reason that if a great proportion of the farmers of Iowa and other states are to check out losses on their 1925 corn a regional lowering of farm buying power will result.

Just where the Iowa farmer stands financially on a comparative basis is a point on which authorities do not agree. On the one hand we hear it said continuance of the present low price level will put the Iowa corn farmer considerably in the hole, while again it is advanced that this largest corn crop in the history of the state will produce an income 10 per cent greater than that realized last year. If that 10 per cent means "net" the situation manifestly is not so bad as it has been reported but if it means that the gross income is 10 per cent greater—more or less of the excess must be charged to the cost of the larger operations.

It is difficult to say, therefore, what the comparative status of the corn farmer is. We can only hope that he will be able to find his way out with a compensating return.

Automotive interests of the Mid-West are watching the situation but they are not worrying. Leading bank reviews of business conditions see nothing in the Iowa situation to cause disquietude or stop the march of general national prosperity. Mail order houses established records in November and expect December to set new marks—which would seem to indicate that the nation's rural dwellers, on the whole, have surplus money. At worst it would appear that the Iowa corn situation is simply a bad "spot" in a picture which generally is good and inspiring.

Sullen service never brought a customer back—unless to kick.

Association Merger Rejected

BEHIND the action of the Motor and Accessory Manufacturers' Association in rejecting the proposed merger with the Automotive Equipment Association appears to be the desire of the members of the first named association to continue its identity as a group composed exclusively of manufacturers. The Automotive Equipment Association has both manufacturers and wholesalers as members and has been unusually successful in bringing about cooperation of these two branches of the industry which are naturally somewhat inclined to view each other with a certain amount of antagonism. Making them realize their mutual dependence in the struggle for business advancement has been the great work of the A. E. A. On the other hand the M. & A. M. A. has performed a valuable service for the industry in promoting the efficiency and standing of a large manufacturing group. It is to be expected that both associations will continue as strong and influential groups in the respective fields.

When an automotive merchant sees a new competitive product in service he can mumble huskily to himself: "Someone else—has asked 'em to buy."

Factories Reduce Output for Inventory

Sales Continue on Good Basis for Time of Year

Dealers Stocking New Cars Steadily Following Assurance of Rebate on Taxes

NEW YORK, Dec. 9.—With many factories shutting down this month for the annual inventory and for various changes in machinery and plant layout it is likely that the production total of cars and trucks will be the lowest since early in the year, and well below the total of 379,300 units which was turned out in November, marking a new record for that month. Sales continue on a satisfactory basis, taking the country as a whole and considering the season of the year.

Dealers are stocking steadily with new cars. Their fears that they would have to absorb the difference between the old tax rate and the new one that is expected to be effective in March or April of 1926 have been dispelled by the action of the House Ways and Means Committee in deciding to make the reduction cover cars in stock when the new schedule goes into effect.

The production total for the year to date, 3,997,954 cars and trucks, exceeds the record total of 11 months in 1923 by 5.6 per cent. It is thus likely that even with curtailed output this month the total for the whole year will be from 20,000 to 50,000 higher than the previous record-breaking year.

Looking a little ahead, the favorable indications for the new year are the low prices and attractive quality of the cars now in production and the signs of industrial advance that apparently augur well for general prosperity. On the other side of the ledger are over-supplied used car market; a gain in repossessions of cars sold on time—which may, however, be merely seasonal; the possibility that too large stocks of new cars may be built up before the spring selling season begins, and the possibility that the price cuts and liberal selling terms of 1925 may have anticipated the normal 1926 market.

EXPORT SCHOOL HELD

WASHINGTON, Nov. 21.—A preliminary study of export and import conditions in foreign countries and the methods of the U. S. government in assisting the automotive industry in its acquisition of foreign automotive trade, was the subject of a two weeks course just completed by nine representatives of the Dodge Brothers Motor Company, who will leave the United States next week for foreign offices. Those here and their foreign territories were: H. G. Rohns and W. W. Stillson who will go to Calcutta; S. V. Schrappacasse, to Johannesburg; G. E. Blomquist, to Buenos Aires; William Childs, to Panama City; G. H. Krogh and R. Cook to Hamburg; T. Holst to Paris, and F. J. Yhuse to Shanghai.

NEW AUBURN DEALERS

AUBURN, Ind., Dec. 5.—Below are listed new dealers who have recently been added to the Auburn organization:

Service Garage, St. Augustine, Fla.; John Tobin, Augusta, Ga.; J. C. Kimmell & Son, Ligonier, Ind.; Long's Garage, Lorain, O.; Pershing Garage, Danbury, Conn.; E. Hope & Son, Tamaqua, Pa.; Auburn-Bridgeton Co., Bridgetown, N. J.; C. M. C. Motor Co., Franklin, Pa.; Watt Smith, Muncie, Ind.

NEW JEWETT PRICES

DETROIT, Dec. 5.—Following the introduction of the New-Day-Jewett car described in detail through these columns last week, the Paige Detroit Motor Car Co., announces the prices of the de-luxe touring model and the chassis. The open car lists at $1,095, the same as the de-luxe sedan while the chassis is priced at $825.

Rollin Motors Plans to Discontinue Making Cars

CLEVELAND, Dec. 7.—Rollin Motors Company, Cleveland manufacturer of Rollin cars, has discontinued production and plans for winding up the affairs of the company are being developed. This admission was made by Gardner Abbott, secretary and attorney for the company.

"Production has been discontinued simply because we are unable to sell cars," Abbott explained. "Plans for liquidating the business have not been developed as yet and I do not know what will be done. We have a good car and we have a good engineering staff. Beyond that I do not care to discuss the question at this time."

James G. Heaslet, president, said today he had forwarded his resignation to the company six weeks ago and that he had not been near the local plant since that time. It was said at the company's offices that Mr. Heaslet was still president. Mr. Heaslet is expected to tie up with an important manufacturer within the next week, but he said today he did not care to discuss his plans.

WARFIELD LEAVES GILL

CHICAGO, Dec. 5.—E. E. Warfield has resigned as vice-president in charge of sales of the Gill Manufacturing Co. His plans have not been announced. George A. Cramer, advertising and assistant sales manager of this concern, also has resigned.

M. & A. M. A. Directors Vote to Reject A. E. A. Merger Plan

Manufacturers Believe Membership and Industry Will Best Profit By Continuance

NEW YORK, Dec. 7.—Rejection of the proposed merger of the M. & A. M. A. with the Automotive Equipment Association, was voted by the board of directors of the former association at the meeting here Friday.

The board accepted the resignation as president and director of the Motor and Accessory Manufacturers' Association, of E. P. Chalfant, vice-president of the Gill Manufacturing Co., who has accepted the executive vice-presidency of the National Standard Parts Association. Mr. Chalfant has been an M. & A. M. A. director for two years and was elected president last January.

The board also accepted the resignation as director of E. V. Hennecke, vice-president of the Moto-Meter Co., who was elected in November a director and vice-president of the Automotive Equipment Association. These vacancies probably will be filled at the annual meeting in January.

The statement of disapproval of the proposed merger, as sent to the members of the M. & A. M. A. was as follows:

"When the merger of this association with the Automotive Equipment Association was first suggested, the idea met with a certain amount of favor. On the surface it seemed to be a progressive move for both associations. Several months have now been given to intensive study and investigation of the subject, and your board of directors, after thorough consideration of all the advantages and disadvantages of such a merger, has concluded that the interests of our membership and of the industry, would be served best by continuance of this association as constituted at present, that is, as an organization of manufacturers.

"The board, therefore, at its meeting held in New York December 4, unanimously voted to disapprove the proposal to consolidate or merge this association with the Automotive Equipment Association."

PIERCE ADDS EQUIPMENT

BUFFALO, N. Y., Nov. 28.—An especially designed Winterfront is now being issued as standard equipment with both the series 33 and the series 80 Pierce-Arrows. Houdaille shock absorbers are also being issued at present as standard equipment on the series 80. Some recent improvements have also been made in the gasoline system and in the appearance of the gas tank on the series 80.

Compromise Is Reached on Automotive War Tax Relief

Bill Before Congress Provides Way to Rebate Dealers for Loss on Unsold Cars

NEW YORK, Dec. 8. — Automobile manufacturers will seek no further reduction in the tax on passenger cars than that provided for in the bill already prepared by the House Ways and Means Committee and now before Congress. While maintaining the principle that automobiles as necessities rather than luxuries should not be submitted to federal tax, they have decided to discontinue their efforts to remove the remaining 3 per cent tax on passenger cars in return for certain concessions from the committee, regarded by the manufacturers and dealers as essential to the continuance of good business conditions in the industry.

The committee has inserted in the bill a provision under which the 2 per cent reduction on passenger cars will not become effective until 30 days after the passage of the act. The committee has also provided a rebate of the tax on all cars in the hands of dealers at the expiration of the 30 days.

There had been every indication that the 2 per cent reduction would induce prospective buyers to hold off until the entire tax had been removed. For this reason dealers feared a business slump, and they also raised the question as to whether they or the manufacturers, the latter having pledged themselves to pass the reduction along to the consumer, would bear the loss involved on cars already taxed but still on dealers' floors when the reduction became effective.

Present indications are that the law will be passed by March 15. This would mean that the relief on the passenger cars would not begin until April 15. Under the agreement dealers and agents would then be permitted to apply for a refund of the tax they had paid on passenger cars, on hand, on April 15.

The date of the relief on truck and accessories' taxes was not altered and will be taken off on the date that the bill becomes effective.

The manufacturers participating in the discussion included H. H. Rice, president of Cadillac and chairman of the legislative committee of the N. A. C. C.; F. J. Haynes, president of Dodge Brothers; A. T. Waterfall, vice-president of Dodge Brothers; H. H. Bassett, president of Buick; Lawrence P. Fisher, of the Cadillac company; S. E. Ackerman, sales manager, Franklin Motors; Alvan Macauley, president, Packard; B. E. Hutchinson, treasurer, Chrysler, and J. L. Pratt, vice-president of General Motors.

A CORRECTION

In connection with the description of the New-Day-Jewett in the December 3 issue of MOTOR AGE the tire diameter as stated on page 18 was given as 27 in. This should have been 29 in.

BUICK STARTS EXPANSION

FLINT, Mich., Dec. 5.—Marking the first step in its $2,000,000 expansion program, the Buick Motor Company has started construction of an addition to its engine plant to make possible the production of 1,200 engines per day. The engine production is calculated to take care of the recently announced daily production of 1,200 Buick passenger cars. This output is expected to be reached by next summer.

GRAHAM PLANS NEW TRUCK

NEW YORK, Dec. 5.—A 3½ ton bus and a truck of the same capacity, powered with large size Dodge Brothers engines, will be brought out by Graham Brothers about January 1, according to Robert C. Graham, director of the commercial car and truck division of Dodge Brothers and vice-president of Graham Brothers.

Hudson Is Launching Big Sales Drive in Carolina

CHARLOTTE, N. C., Dec. 5.—Approximately 500 automobile distributors, dealers, salesmen and officials of a number of banks in North Carolina were expected to attend a conference here December 9, when officials of the Hudson Motor Car Company, of Detroit, Mich., will launch an intensive sales campaign, according to an announcement by B. D. Heath, president of B. D. Heath Motor Co., Hudson distributor, of Charlotte. Harry G. Moock, sales promotion manager of the Hudson Motor Car Co., and R. S. Somerville, assistant service manager of the company, are on the program to deliever addresses at a banquet.

The six Hudson-Essex dealers in this state are W. H. Wray, of Gastonia; W.-S. Motors, Inc., of Winston-Salem; Hudson-Essex Sales Co., of Wilmington; Weaver Motor Co., of Asheville; Motor Sales Co., of Wilson, and Heath, of Charlotte.

The bankers were invited to the conference to participate in discussions relative to the financing of motor car purchases. Mr. Heath is carrying large advertisements in the newspapers of this city, in which he is emphasizing that a Hudson coach may be bought for $295 down and the Essex coach for $195 down. This policy is indicative of the vigorous efforts being made by several of the more important distributors here to move their cars into owners' hands through the deferred payment plan's operation. In consequence, the automobile financing companies' branches here are reporting an unprecendented and increasing volume of this class of business.

ROBERTS JOINS MILLER

AKRON, Dec. 5.—Arthur O. Roberts has been recently placed in charge of the dealer service division of the advertising department of the Miller Rubber Company. The new dealer service man brings to his new position a wide knowledge of advertising and especially of the problems faced by dealers. This knowledge he gained through close contact with many phases of advertising in various fields.

N. A. C. C. Frowns Upon Hotel Room Exhibits During Show

Directors' Resolution Says Such Displays Are Designed to Distract Needed Attention

NEW YORK, Dec. 7.—Directors of the N. A. C. C. have adopted resolution denouncing the practice of making exhibits of parts and accessories at hotel rooms during the national automobile shows in New York and Chicago as antagonistic and a menace to the shows.

These exhibits in hotel rooms, say the directors, "are designed to take advantage of the shows without contributing anything to their well-being and therefore unworthy members of the industry.

"They are an attempt to transact, at other places, business for which, in part, the shows are promoted.

"They are an attempt to distract the attention of factory representatives whose business requires their attendance regularly at the shows.

"They will, if continued, have a serious effect on the display of parts and accessories and are, therefore, a menace to the success of events which have for 25 years played an important part in the upbuilding of the industry.

"They are disloyal to the car manufacturer who properly expects his efforts in connection with the shows to be supported by a display of the component parts of his car.

"The directors believe, further, that the cultivation of more intimate acquaintance between members of the industry is essential to the continued success of the national shows."

OVERLAND VOTES DIVIDEND

TOLEDO, Ohio, Dec. 5.—Liquidation of an obligation of $6,559,726 in accumulated dividends on the preferred stock of Willys-Overland Co., through issuance of common shares on a basis of $25 a share, was approved by directors at the meeting here. The back dividends of 29¾ per cent have been piling up since October, 1920. In addition the regular quarterly cash dividend of $1.75 is made payable to the preferred stockholders on January 2 to those of record December 20. Certificates of rights which will be negotiable will be issued for the common stock distribution at the same time. No action was taken on any dividend for the common shareholders.

FRENCH PRICES RAISE

PARIS, Nov 21.—(by mail)—By reason of the depreciation of currency, automobile prices are on the upgrade on the French market. The Talbot Company has increased all prices 10 per cent; Unic has added 2,000 francs to the price of all chassis; Citroen has increased the price of his 5 h.p. model 1,500 francs, the larger model remaining unchanged. Up to the present Renault has made no change, but an increase is expected.

Sectional Meetings of S. A. E. Are Announced for December

Many Subjects of Importance to Industry Will Be Discussed in Various Cities

NEW YORK, Dec. 5.—The Society of Automotive Engineers has just issued a list of its December sectional meetings, together with the subjects to be discussed.

The Pennsylvania section will meet at Reading, Pa., on Dec. 8, will make an inspection trip through the plant of the Carpenter Steel Co., and will listen to a paper on "Automobile Steels," by Dr. B. H. DeLong. The Indiana Section will gather at the Hotel Severin, Indianapolis, Dec. 10 and hear a talk on "High Duty Engines," by F. S. Duesenberg. The City Club at Los Angeles will be the scene of the Southern California meeting on Dec. 11, and, following a dinner addresses will be delivered by R. E. Haylett and J. B. Terry on "Manufacture and Utilization of Gasoline". The Washington Section will meet at the Cosmos Club, also on Dec. 11. On this occasion a paper on "Steam Cooling" will be read by A. G. Herreshoff.

"Gas-Electric Drive" is the topic to be taken up at the Cleveland meeting on Dec. 14 and the speakers will be J. C. Thirlwall and E. M. Fraser. The Buffalo section, on Dec. 15, will listen to Ernest Murphy, who will have as his subject "Transportation Service". At the Engineers' Club, Dayton, O., O. T. Kreusser will speak Dec. 16 on "Organization and Operation of General Motors Proving Ground". December 17 the Detroit Section will gather in the General Motors Building to hear a discussion of "Cylinder Lapping" by factory representatives of Ford, Dodge, Packard, Hupp, Paige, Chrysler and White companies.

The Chicago meeting will take place Dec. 18 at the Engineers' Club when F. S. Duesenberg will speak on "High Efficiency Engines". The final meeting of the month will be that of the Northern California Section on Dec. 29 at the Engineers' Club, San Francisco, when Harold Jarvis is to address the meeting on "Problems of Fleet Operation".

FIAT TAKES 6-DAY MARK

PARIS — (by mail) — Averaging 48¾ miles an hour for 144 consecutive hours, a standard 10 h.p. Fiat captured the world's six-day record on Monza track, yesterday evening. The Fiat, which had a four-cylinder engine of 14550 cc. (88.4 cubic inches) was fitted with the Silvani head, with pushrod-operated overhead valves, and was handled by the four drivers Silvani, Botta and Mangiarotti, and Belgir. After breaking all world's records from 1,500 to 7.000 miles, thus capturing 38 world's records and 48 international records for the 1,500 cc. class, the Fiat continued after the 144th hour and came to a stop with a total distance of 7,145 miles to its credit.

DEALER HOLDS CONTEST

PORTLAND, Ore., Dec. 5.—"Eight Hundred or Bust" is the slogan of a sales contest inaugurated by employes of Braley & Graham, Dodge Brothers dealers. The purpose of the contest is to show a total of 800 retail deliveries in Portland of Dodge Brothers cars for the calendar year. The sales force has been divided into two teams of nine each.

PAIGE DEALERS MEET

WASHINGTON, Dec. 5.—Paige and Jewett dealers from the District, Maryland, Virginia and West Virginia, 100 in all, together with Paige-Detroit factory officials and members of the staff of the local distributor organization were guests of Washington-Virginia Motors this week at a luncheon and banquet held at the Mayflower Hotel. T. T. Mott, president of the Washington-Virginia Motors, introduced the speakers; C. P. Gaunt, sales manager for the Paige-Detroit Company; Robert Seymour, vice-president of the Commercial Investment Trust Company of New York, and H. H. Hill, district advertising representative for the Paige-Detroit Company.

Indianapolis Dealers See Excellent 1926 Business

INDIANAPOLIS, Dec. 5.—With November new car selling certain to be from 15 to 20 per cent better than the same month last year, and with October corrected figures showing a gain of 25 per cent over the October, 1924, records, and with every promise that December will show a very substantial gain over this past month Hoosier automotive sales circles are looking forward to the new year with considerable cheer.

December is always a good month in this state as compared to November. The new registration year begins December 10 and many sales of November are carried over for December registration. This gives an otherwise dull season a friendly boost and helps dealers and salesmen.

The last month, and in fact the entire last quarter so far has witnessed a large gain in accessory selling over last year's record. The biggest jobber here is elated over the biggest month's business in the long history of the organization.

ACCESSORIES MOVE WELL

CHARLOTTE, N. C., Dec. 5.—Accessories dealers of the Carolinas are reporting a steady demand as the holiday season approaches, and the slight softening of the market, developing late in October, proved only temporary, according to leading jobbers here. The demand is well spread out over the jobbers' lines, and it is hardly accurate to say that any class of products is a leader at this time, it was explained. The demand for garage supplies and equipment, as well as other heavy items of the trade, is brisk. That was accepted as an indication that the automobile repairing industry is expanding in keeping with the unusually heavy demand for new automobiles. All orders are being filled promptly.

Ford's New Steel Rolling Mill Running in Detroit

Plant Adds Almost Final Link in Policy to Make Everything Needed in Cars

DETROIT, Dec. 5.—Henry Ford has entered the ranks of the steel magnates. At the River Rouge plant of the company, rolling steel has begun in the new steel mill, adding almost the final link in the company's policies to manufacture every article that goes into the manufacture of its cars.

The new mill is housed in a building more than a quarter of a mile in length and 460 feet in width. It is one of the largest structures of the River Rouge plant. It will produce bars of various sizes, all of steel made according to Ford specifications and intended for the manufacture of the various parts to be used in assembling Ford cars.

The rolling mill, which has a capacity of handling between 15,000 and 20,000 tons of steel in a month, is the first unit of the steel plant to start operation. Not until March or April of next year will the plant function as a whole.

Electricity from the Ford lines has been harnessed to provide power for all the jobs which formerly demanded manual labor. Even the furnace, once stoked by man, is now fed by a turn of a valve. Throughout, the process seems comparatively simple and, aided by electricity, the work is done in such a manner as to cause the steel men of former days to wonder.

TRUCK OUTPUT GAINS

FORTWAYNE, Ind., Dec. 5.—The International Truck Company's plant here is now producing an average of 25 motor trucks daily, an increase of previous production records. Contemplated additions to the staff at the plant, which was opened about 18 months ago, will bring the December production above the 30-truck-daily mark, according to officials. Indications are that orders on hand will necessitate a production schedule of not less than 50 trucks daily during January.

NEW DURANT OFFICE

ATLANTA, Dec. 5.—Star and Durant dealers in the central Tennessee and central Kentucky territory will henceforth obtain their equipment through a new wholesale office opened by Durant Motors, Inc., at 1312 Starks Bldg., Louisville, Ky., it has been announced by the southern branch of the company in Atlanta.

HEADS AIR EXPRESS

LOS ANGELES, Dec. 5.—Harris M. Hanahue, until recently manager of the Apperson Automobile Company's branch in Los Angeles, has accepted the post of general manager of the Western Air Express, Inc., which has been organized largely by automotive men to promote commercial aviation.

New Car Sales Show Big Increase in San Francisco

Gain of 40 Per Cent Over November Last Year Reported by Northern California Dealers

SAN FRANCISCO, Dec. 5.—Sales for November in central northern California show an increase of about 40 per cent over November of last year and 20 per cent over October, 1925, which in turn showed an increase of about 30 per cent over October last year.

Used car sales are holding up well with rebuilt cars taking the lead and dealers in new cars doing the greater part of the used car business. Dealers in used cars only are having rough going and a number have been forced out of business.

Truck sales show an increase of about 20 per cent over November of last year due largely to late rains and the marketing of almost the entire fruit crop without loss. The state as a whole is very prosperous and sales of cars priced above $2,000 here show a gain proportionate to that of cars sold at $1,500 or under for the first time in five years.

Delay in distribution of the new model Fords turned many unexpected sales to other companies. Dealers all say that many prospects bought cars for Thanksgiving instead of waiting for Christmas and that as many cars were sold for Thanksgiving delivery this year as were sold for Christmas last year.

Indications are that December in nothern and central California will be as good as or better than November.

Velie Holds Session of District Representatives

MOLINE, Ill., Dec. 5.—A two-day conference of district sales representatives of the Velie Motors Corporation opened here last Monday. Sales services and advertising plans for the coming year were discussed under direction of C. W. Hadden, general sales manager.

C. M. Gustine, service manager and H. C. Snow, chief engineer, addressed the gathering along their respective lines. On Tuesday advertising plans were discussed by A. M. Taylor, advertising manager, and LeRoy T. Goble, representing Critchfield & Company, advertising agents for the Velie also spoke on this phase of the business.

District representatives who attended were: G. C. Morgan, Chicago; R. A. Spillane, New York; G. E. Anderson, San Francisco; Al Kinnear, Omaha; C. F. W. Poggenburg, Philadelphia; Willard L. Velie, Moline and J. C. Muir, Pittsburgh.

FORD PLANT SPEEDS UP

CLEVELAND, O., Dec. 5.—Between 175 and 225 Ford automobiles are being assembled here daily in the Ford Motor Company assembly plant, A. B. Pease, general manager has announced.

Heads New Oakland Department

W. L. Buck, manager of Oakland's new used car department

Chevrolet Sees 1925 Gain Of 60,000 in Production

DETROIT, Dec. 5.—By the end of December, Chevrolet Motor Co. will have manufactured upwards of 500,000 passenger cars and trucks. This number will exceed previous Chevrolet production by approximately 60,000 cars.

According to W. S. Kanudsen, the company's total production to date for 1925 is greater than its combined production during the entire first eight years of its existence. Much of the 1925 output is attributed to the series of record breaking months during which production consistently remained around the 50,000 mark each month.

The outlook for 1926 is said to forecast an even better business than that done during the present year.

GUAYULE PLANT RUNNING

MARATHON, Tex., Dec. 5.—Crude rubber at the rate of one ton a day is being extracted from wild guayule shrubs at the plant of the Border Rubber Company at Marathon. This company is subsidiary of the Thomas T. Wilson Company, Inc., of New York. Its plant here was constructed in 1905 and was operated almost continuously for about nine years. The growth of wild guayule shrubs in this part of the upper Rio Grande border region was exhausted and it was not until last July that operation of the industry was renewed. In the meanwhile a new and very prolific growth of the rubber-producing shrub had sprung up and there is enough of the raw material to keep the factory running for several years, it is stated.

Entry Blanks Mailed for Big Memorial Day Classic

Cars This Year Will Have Half Piston Displacement of Ford Engine—Builders Busy

INDIANAPOLIS, Dec. 5.—Racing cars half the displacement of a Ford engine, with a speed of upward of 120 miles an hour is the prediction of racing car builders of Europe and America, who are busily engaged in making the vest-pocket motors for the 1926 Indianapolis race.

The preliminary starting bomb of the Fourteenth Annual International Sweepstakes was fired today, when entry blanks were sent to every driver of prominence in America and Europe. The race will be held next year on Monday, May 31.

The outstanding feature of the announcement is that the piston displacement of the competing cars has been reduced from 122 cubic inches, where it was placed for 1923, 1924 and 1925 Internationl Sweepstakes, to 91½ cubic inches.

There will be no change in the distance, which is 500 miles; there will be no change in the prize money which is the largest amount ever offered by any racing organization. The one-day change in time is due to Memorial Day coming on Sunday in 1926 and the Indianapolis Motor Speedway clings rigidly to its rule of scheduling the race for the next day.

H. W. Booth Joins Ajax as Assistant Sales Manager

RACINE, Wis., Dec. 5.—Announcement is made by George C. Hubbs, general sales manager of Ajax Motors Company, of the appointment of Harold W. Booth as assistant sales manager and of W. H. Shadburne as factory representative. Mr. Booth comes to Ajax Motors from the Willys-Overland Company, having been in charge of retail sales of Overland and Willys-Knight cars in St. Louis for some months past. Prior to that, Mr. Booth for a number of years was associated with Mr. Hubbs at the factory of the Dodge Brothers in Detroit. Mr. Shadburne comes to Ajax Motors from Studebaker, having been in charge of retail sales for the Studebaker Chicago distributor for some time past. He is well known in motor car circles and an authority on retail sales.

"COURTESY SERVICE" OPENED

BOSTON, Dec. 5.—The Courtesy Service Corporation has been incorporated at Springfield, Mass., and it has taken over the business conducted under the name of Those Motor Twins. The Courtesy Service Corporation operates service and rental stations in Boston and Cambridge and it sells its customers yearly maintenance contracts. C. S. McDonald is general manager, and Stephen E. Couch, for years with the Western Massachusetts Cadillac Company, is manager of the service department.

Los Angeles New Car Sales Reported on Average Level

Time Payment War Ends in Agreement to Reduce Period to 18 Months

LOS ANGELES, Dec. 5.—New car sales throughout Southern California were maintained at a satisfactory level during November, with an increase over the same month last year. As compared with October, however, November sales showed a decrease, in accordance with the usual seasonal influences. There has been an appreciable increase in used car stocks during the last two months, and a large number of dealers are admittedly overloaded. Most of these dealers have slashed their prices to the bone, taking heavy losses in order to move them. Even at ridiculously low down payments and attractive prices buyers for used cars are hard to find.

Of outstanding importance in the Southern California market is the return by virtually all dealers to a maximum 18-month time payment plan after a veritable "finance war" between various leading distributors, which was climaxed when one distributor offered 27 months. It is known that several factories "requested" their Los Angeles distributors, who had extended their payment periods to meet competition, to immediately return to a maximum 18-month basis.

Officers of the leading finance companies in Los Angeles, realizing that unless they shortened the payment periods serious business reverses would occur in Southern California automobile merchandising, because the used car was losing its market, called a meeting and agreed to make 18 months the limit. One Los Angeles distributor, who is credited with having started the "time payment" war still features the same low down payment, however, but necessarily has increased the amount of monthly payments owing to the contraction of the payment period.

It is generally agreed by Los Angeles distributors that competition this year in Southern California is the keenest on record, and that if the "time payment" war had continued there undoubtedly would have been serious business consequences. Now that the situation has been relieved, the outlook for the remainder of the winter in this territory is considered very favorable.

CADILLAC DEALERS MEET

DALLAS, Tex., Dec. 5.—Cadillac dealers from all parts of the Dallas territory were here this week to hear G. E. Mapes, sales expert from the factory, outline the company's sales system, recently adopted after tests extending over a period of two years. While here the visiting dealers were entertained by the Munger Automobile company, Cadillac distributors. The dealers were here from Fort Worth, Lubbock, Vernon, Wichita Falls, Waco, Waxahachie, Brownwood, Breckinridge, Gainesville and Paris.

He Holds Distance Record

NEW YORK, Dec. 5.—F. S. Mann of Adelaide, Australia, is travelling 11,500 miles to participate in the second Motor Transport Congress to be held here Jan. 11-13 at the time of the automobile show. Mr. Mann represents the Motor Traders of South Australia. At the beginning of 1925 it was estimated that there were 28,300 motor cars and 3,000 commercial vehicles in South Australia.

F. P. McGough Is High Man For U. S. in Velie Contest

MOLINE, Ill., Dec. 5.—In a delivery contest staged by the Velie Motors Corporation during the month of October, the following sales men were awarded prizes:

High man for the United States, F. P. McGough of the Velie Bell Co., Chicago.

High man, Minneapolis district, J. S. Malchow of the R. C. Smith Automobile Co., Minneapolis.

High man, Philadelphia district, Melvin Yearly of Triple Towns Garage, Riverside, N. J.

High man, Pittsburgh district, D. A. Heindel, Youngstown, O.

High man, Moline district, Harry Alpaugh of Dean Motor Company, Inc., Moline.

In the New York district, F. J. Cunningham of the New England Velie Co., Boston, and P. V. Becker of Schenectady, tied for first place. In the San Francisco district, Philip Gerst and J. C. Kail, both of the Edward Roesch Co., Seattle, Wash., tied for first place. In the St. Louis district, Frank T. Dugan of Curran Motor Co., Kansas City, and H. D. Kennedy of John Peter Heiser, Inc., Denver, Colo, tied for first place. Under the rules of the contest, prize money in case of tie was divided.

NEW DIANA COLOR SCHEME

ST LOUIS, Dec. 5.—An innovation in Duco color combinations was introduced by the Diana Motors Co., recently when a number of special Diana roadsters finished in black and white Duco, were placed on display by several of the larger Moon-Diana distributors, as an experiment in special body finishes. The black and white roadsters were intended mainly for show purposes but have been so quickly absorbed that a second lot, considerably larger than the first is being brought through the Diana plant for immediate delivery.

LACQUER PLANT ENLARGED

BUFFALO, N. Y., Dec. 5.—Pratt & Lambert, Inc., 75-year-old varnish making firm has begun the construction of a new unit to the vitraloid plant, which will double the plant capacity. It will cost not less than $50,000.

Cincinnati Buys Used Cars As Investment for Spring

In Many Instances Same Man Purchases Three or Four and Stores Them for Strong 1926 Market

CINCINNATI, O., Dec. 5.—Briskness of the used car market in the Cincinnati district is occasioning considerable comment. Used car sales in October and November constituted the largest factor in the auto trade, according to the statement of dealers, and this month is taking precedence over new cars sold by a substantial margin.

Explanation given by dealers is that the fans are picking up bargains in used cars wherever they can find them. In several instances buyers have taken on three or four used cars and have had them delivered direct to their garages for storage. No effort has been made to obtain license tags for them or to operate them. They are apparently being held as an investment.

This situation is apparently general for used car dealers say they are selling everything they had to offer in cars of all standard makes from 1923 and up. They say that the demand is the most brisk they have ever experienced. Several dealers took the trouble to inquire from purchasers why they were buying two and three and even four used cars at this time. It is said the buyers replied that used car prices would not be so cheap next year and they expected to turn their purchases at a nice profit next spring or summer.

Dallas Dealer Gives Free Gas With Used Cars Sold

DALLAS, Tex., Dec. 5.—The Worsham-Buick Company of Dallas has inaugurated a new sales idea in connection with its used cars. With every used car sold the company gave 100 gallons of gasoline. The company told the public of the new proposition through considerable display and want ad space in local daily papers.

The company did not pad the prices on used cars during the "free gas sale." All prices were marked in plain figures and the 100 gallons of gasoline went to the purchaser no matter whether he brought a reconditioned Ford coupe at $300 or a Cadillac at $2,500.

One hundred gallons of gasoline at retail prices prevailing in Dallas meant a saving of $20 to the buyer of a used car. Many buyers took advantage of the "100 gallons free gas sale" the company officials said.

WHITE VISITS COAST

LOS ANGELES, Dec. 5.—Walter C. White, president of the White Company, Cleveland, recently made his first trip to Los Angeles and the Pacific Coast since 1913 for the express purpose of attending the formal opening of the new branch of The White Company established in Los Angeles.

Dodge Brothers Announce Refinements in B Sedan

Overall Height Reduced, Pillars Made Smaller, and One-Piece Windshield Added

DETROIT, Dec. 5.—A number of improvements have been incorporated in the Dodge Brothers type B, all-steel sedan which add materially to its appearance. The body is now finished in sage brush green lacquer with a fine red stripe and the top and running gear is black.

The overall height has been decreased about two inches and a reduction in the size of the pillars has resulted in increased visibility. A one piece windshield, hinged at the top, has replaced the former two-piece design and a cowl ventilator has been added. Rear quarter windows are operated by lever regulators instead of the crank type previously used.

Changes in the tilt of the seats make them more comfortable and the doors overlap the floor as a protection against draughts. The windows on this model are now interchangeable and the doors are hung with three hinges instead of two.

Shipments from the factory are stated to be at the rate of 400 daily.

CANADIAN TIRES UP

TORONTO, Dec. 5.—Following immediately on the heels of the 5 per cent advance on smaller size tires last week, prices on 30x3½ tires are again advanced approximately 20 per cent. Prices are now over 50 per cent higher than those which ruled in April of this year on this size of tire. Tubes, which were advanced last week, were not changed to correspond with the further advance of tires. Tire manufacturers also have announced an advance in the price of gums, combination vulcanized and unvulcanized patching rubber and fabrics for repairing cord tires. These advances are directly due to the strong crude rubber market.

NEW HUDSON DEALERS

COLUMBUS, O., Dec. 5.—The Walter B. Zimmerman Co., central Ohio distributor for the Hudson and Essex has announced a number of agents in the territory, outside of Columbus, which is covered by it. The dealers and localities are:

Logan, F. C. Ambrose; Milford Center, L. W. Anderson; Washington C. H., The H. & E. Motor Co.; Ashley, C. L. Bennett; Adelphi, C. B. Boyd; Groveport, Buchman & Gloyd; Chillicothe, O., L. Cartright Motor Co.; Circleville, O. L. Cartright; Fredericktown, H. E. Cassell & Son; New Straitville, P. C. Clark; Mt. Sterling, Mt. Sterling Hudson Co.; Delaware, J. M. English, Cresline, W. W. Gallentine; Plain City, F. H. George; Danville, H. K. Darrah; Dresden, Ryan Motor Sales; Shelby, W. C. Gump & Co.; Pickerinton, Hanna Garage; Hebron, Hebron Garage; Upper Sandusky, Charles Johnson; Mt. Vernon, Singer Hudson Motor Sales Co.; Lancaster, George W. Johnson Motor Co.; Gahanna, Clotts & Sindel; Johnstown, Johnstown Hudson Co.; Crooksville, Gordon Appleman Co.; Roseville, Golden Rule Garage; Marion, Lott & McKim; New Washington, Ludhart & High; London, W. J. Meech; Mansfield, McMullen Motor Sales; Galion, George C. Patterson; West Jefferson, Pence & Barber; Richwood, Perry Auto Sales, Bucyrus, A. J. Pfeifer; McConnellsville, Robinson Bros. Motor Co.; Nelsonville, Rodebush Garage; Marysville, The Scheiderer Motor Co.; Mt. Gilead, C. D. Schaff; New Lexington, Schuster Motor Sales; Utica, Smith-Wolfe Oil Co.; Zanesville, Shannon Motor Sales; Centerburg, Thorp's Garage; Pataskala, The Van Motor Co.; Newark, B. V. Weakley; Sunbury, John Williamson & Sons; Westerville, N. C., Farber; Frazersburg, Riley Motor Sales and Zanesville, Triangle Motor Sales.

Visits His Dealers By Plane

SAN FRANCISCO, Dec. 5.—An advertising stunt which received much notice in California, was staged by D. C. Warren, Velie distributor for central and northern California, when he used an airplane to call on his agents in several towns, and announce to them the arrival of new models of the Velie. Warren called on dealers in San Rafael, Santa Rosa, Marysville, Sacramento, and Stockton, all the towns in which there were landing fields.

Demand for Tractors in South Promises Record

ATLANTA, Dec. 5.—Due to the heavy demand for tractors this year in the south for industrial use, this business is estimated to be at least 100 to 125 per cent better than last year. Tractor dealers in the southeastern territory are almost certain to enjoy one of the best years in the history of the business, providing sales continue to hold up the next six weeks as they have the last four or five months.

In addition to this industrial demand for tractors there has also been a marked increase the last two or three months in agricultural tractor sales, the total business of the southeastern dealers from August to October, inclusive, estimated to have exceeded the corresponding period of last year by at least 60 per cent.

With both tractor and power farming equipment sales in this district during November certain to exceed the volume of business enjoyed during November, 1924, this will make the eighth consecutive month that dealers in the Southeast have enjoyed a substantial gain in this business over the corresponding months of last year, the average gain in sales for this eight month period estimated at close to 50 per cent.

HAS NEW MANIFOLD

MISSOURI VALLEY, Ia., Dec. 5.—The Patent Model Co. of this city has begun the manufacture of an intake manifold carbureter heater which is designed to give quick starting in cold weather.

Hoover Reports on Work of Automotive Division in 1925

Review of Activities Shows Continued Expansion in Service Given by Bureau

WASHINGTON, Dec. 5.—Continued expansion and improvement of the facilities of the Automotive Division with improved export statistics and informational services is reported by Secretary of Commerce Herbert Hoover in his annuel report just made public here.

Reviewing the activities of the Automotive Division during the fiscal year ended June 30, 1925, Secretary Hoover points out that representatives of the division visted more than 50 automotive plants and conferred with executives at Detroit, Cleveland, Toledo, Pittsburgh, Philadelphia, Cincinnati, Chicago, St. Louis, Indianapolis, South Bend, Lansing and Springfield, Ohio.

"To obtain direct information on foreign competition," says the portion of the report relating to the Automotive Division, "the chief of the division visited nine European countries, attended international motor shows at Paris and London, inspected more than 30 automotive manufacturing plants, and interviewed numerous foreign government and trade-association officials, manufacturers and dealers.

"Conferences have been held with officials of the National Automobile Chamber of Commerce, the Motor and Accessory Manufacturers Association, the National Association of Engine and Boat Manufacturers, and the Motorcycle and Allied Trades Association.

"Special information has been furnished various legislative and executive departments on exportations, importations, tariff restrictions, labor, consumption of material, use of motor cars, etc."

BELKNAP JOINS McFARLAN

CONNERSVILLE, Ind., Dec. 5.—Robert B. Belknap, who, for the last several years has been identified with the Lexington Motor Company in various executive capacities, leaves the position of assistant to the general manager of that organization to accept the second vice presidency of the McFarlan Motor Corporation.

CRAIG SUCCEEDS GLENNY

MINNEAPOLIS, Dec. 5.—With the appointment of E. F. Glenny as supervisor of territorial organization for the Olds Motor Works, G. M. Craig has been made his successor as manager of the Minneapolis Oldsmobile branch and supervisor of the Northwest zone with Minneapolis headquarters. The branch includes Minnesota and North Dakota, 20 counties in Wisconsin and eight in Montana. The zone includes supervision of distributors in Sioux Falls, S. D., who cover the state and part of Iowa; also distribution from the Billings headquarters, which includes the state and the northern half of Wyoming.

Orders Still Lead Output On Central Eastern Coast

Deliveries Big Problem in Carolinas After Three Months of Cautious Progress

CHARLOTTE, N. C., Dec. 5.—A demand for automobiles and motor trucks of proportions seldom equalled in this territory at this season of the year is emphasizing the unpreparedness of dealers and distributors for unseasonal conditions and slow progress is being made in reducing the accummulation of orders as the year enters its closing month.

The automotive trade, which proceeded cautiously three months ago, now is struggling to obtain deliveries to meet the retail demand. Deliveries from the factories are increasing. Dealers' reports agree that the volume of retail orders is holding about steady. Sales effort apparently is increasing somewhat in vigor.

Explanations of this condition cover a wide range of opinion and none of them appears to be entirely satisfactory. While all lines of industry and trade are prosperous in this state, South Carolina conditions, recently somewhat unsatisfactory, are showing improvement, especially in the Piedmont section, where the demand for motor trucks is decidedly better than it was a month ago.

The movement of accessories into dealers' and consumers' hands was increasing rapidly with the approach of the Christmas holidays and the steady fall of the temperatures, according to jobbers' reports. Gift accessories were selling rapidly when December arrived.

Denver Reports Improved Conditions for November

DENVER, Dec. 5.—Trade conditions in Colorado continue to improve. November has shown approximately a 10 per cent increase over October, and 15 per cent over November 1924. Early frosts in the Horn District, comprising the territories surrounding, Boulder, Loveland, Longmont, Greeley and Fort Collins have cut the potato crop in two, and the early drouth made a light beet crop, so this section is below the average for five years, with little prospect of improvement this season.

Northeastern Colorado and the San Luis valley are much above par, and all business is excellent. From Denver south to Pueblo conditions are fair, and on the Western Slope they are good. Denver itself is going ahead in spite of several failures during November.

Local dealers report considerable advance buying of cars for Christmas. All over the state the used car market is improved, due to caution in trading, and reasonable prices on resales. Installments are being paid promptly and the last month showed very little repossessing in this section.

"SILVER SHELL" APPEARS

ST. LOUIS, Dec. 5.—The first issue of "The Silver Shell," designed for Moon and Diana distributors, dealers and salesmen and issued by the Moon Motor Car Co. made its first appearance last week. Harry Ford, is managing editor of "The Silver Shell". The paper is to be issued twice a month and will contain information and news of particular interest to members of the Moon and Diana organization. Factory announcements, comments on current conditions by Moon executives, pictures of various activities of the Moon Co. will be contained in the paper.

Citroen Introduces New Four Wheel Brake Car

PARIS, Nov. 21—(by mail)—With the appearance this week of the new model 10 h.p. Citroen, every French automobile manufacturer now uses four-wheel brakes. The Citroen is a modification of the chassis which has been in production since 1919, having a special front axle, semi-elliptic front springs in place of quarter elliptics, and new frame members. The mechanical front wheel brakes are cable operated by a brake camshaft mounted on the axle itself. With four passenger phaeton body and balloon tires the new Citroen sells at 21,500 francs.

The first to get into big production after the war, with a car having been designed during 1917 and 1918, Citroen was unable to follow the move towards front wheel brakes as rapidly as other French manufacturers, and because of this he has been at a disadvantage during the last two years, for rival firms, Renault in particular, have directed an active campaign against all cars not equipped with four-wheel brakes.

To make the change over to front brakes it was necessary, in addition to a new and stiffer axle with closed eye ends and inclined steering pivots, to abolish the quarter elliptic front springs in favor of semi-elliptics, and this involved changing the chassis side rails. The small 5 h.p. Citroen remains as before with a transmission and rear wheel brakes.

BAKER R & L CHANGES NAME

CLEVELAND, O., Dec. 5.—The Baker R & L Company has changed its corporate style to The Baker-Raulang Company. The company is a quantity-producer of closed bodies for automobiles under the name "Raulang" and also a complete line of electrical industrial material-handling tractors and trucks under the "Baker" name. Both products have been widely and consistently advertised for many years and the name-change has been made to effect a closer and unmistakable tie-up with the company's advertising. The change is a change in name only, as ownership and management continues as before. E. J. Bartlett, for many years vice-president and general manager, was recently elected president, F. W. Treadway, the former president, becoming chairman of the board.

Firestone Shows Sales Gain of $40,000,000 in Year

Net Income in Fiscal Period Increases More Than $5,000,000

AKRON, O., Dec. 5.—Report of the Firestone Tire & Rubber Co., showing an increase in sales of approximately $40,000,000 for the fiscal year ended Oct. 31, is regarded as an indication of what may be expected from statements of other rubber companies for the year.

Sales of the other big rubber and tire companies, including Goodyear, Goodrich, United States, and Fisk, have been about 35 per cent higher this year than in 1924.

Total sales of the Firestone Co. for 1925 were $125,597,993, compared with $85,610,000 in 1924.

Net income, after depreciation, federal taxes and interest, was $12,800,412, against $7,116,689, in 1924.

Announcement is made of the sale of $10,000,000 additional 7 per cent preferred stock. Officials of the company explained that the expansion of business and the high cost of crude rubber requires a larger working capital.

The Oct. 31 balance sheet shows a surplus of $39,762,281. Total assets are $72,298,535, of which $43,500,000 are net quick.

200,000 Attend Motor Car Show in Beaumont

BEAUMONT, Tex., Dec. 5.—The automobile dealers of the cities of South Texas and Western Louisiana associated themselves with the Automobile Dealers' Association of Beaumont in staging the annual motor car show here. The show was staged in connection with the South Texas Fair and was attended by more than 200,000 persons.

All the latest motor vehicles were on display. The passenger cars occupied the greater part of the space for show purposes and were the center of attraction, but the dealers exhibited the latest trucks and trailers to merchants and oil men who rely on motor cars for rapid transportation.

In the passenger cars, closed bodies predominated. Gay colors featured the finishings. More convenience, more room and a general trend to smaller cars appeared in evidence from an inspection of the newest models.

A. A. A. APPOINTS CLARK

WASHINGTON, Dec. 5.—The appointment of Charles P. Clark as assistant general manager of the American Automobile Association, to take effect immediately, is announced from the national headquarters of the A. A. A. Although the appointment is just officially announced, Mr. Clark has been acting in the capacity of assistant general manager for several months, especially during the absence of General Manager Ernest N. Smith from Washington in connection with important organization problems.

Revenue From Industry in 10 Months Gains Heavily

Government Receives $64,578,981 More Thus Far in 1925 Than in Same Time, 1924

WASHINGTON, Dec. 5.—A decrease of $3,417,458.22 is noted in the internal revenue collections from the automotive industry during October, 1925, as compared with those of October, 1924, but an increase of $8,103,668.61 still stands in collections from the automotive industry for the period from July 1, 1925 to October 31, 1925 as compared with the period from July 1, 1924 to October 31, 1924, it is announced here. The October, 1925, collections are given as $7,319,443.42.

A study of the collections shows that trucks, automobiles and motorcycles contributed the bulk of the $3,417,458.22 while automobile parts and accessories came nearest to holding their own. The October, 1924, collections from "automobile trucks and automobile wagons" is set at $580,027.97 as compared with $1,301,298.25 in October, 1924; "other automobiles and motorcycles" during October, 1925, paid $5,089,306.35 as compared with $7,468,652.72 in October, 1924 while "automobile parts and accessories" in October, 1925, paid $1,650,109.10 as compared with $1,966,950.67 in October, 1924.

Total collections for the month of October, 1925, amounted to $109,045,342.92 compared with $113,548,599.44 for the month of October, 1924, a decrease of $4,503,256.52. The collections from July 1, 1925 to October 31, 1925 amount to $800,746,404.80, compared with $736,167,423.68 from July 1, 1924 to October 31, 1924, an increase of $64,578,981.12.

AUBURN REDEEMS STOCK

AUBURN, Ind., Dec. 5.—The Auburn Automobile Company has filed certificates with the secretary of state, redeeming $500,000 preferred stock, and also has filed certificates increasing the capital stock from $1,500,000 to $3,000,000. The increased issue is of common stock.

McKINNON BUYS WILLIAMS

ST. CATHARINES, Ont., Dec. 5.—An industrial merger of importance is announced by General Manager B. W. Burtsell of McKinnon Industries, Ltd., which company has secured by purchase outright, the entire plant and business of the J. H. Williams & Co., Ltd., in this city. The latter employs 80 men and manufactures small tools. Both plants will be continued in operation under the McKinnon management and extensions are planned at the new acquired factory. The McKinnon Company is one of the oldest of St. Catharines, having been conducted here for 51 years. In April, 1920, the interests of Whitman & Barnes Mfg. Co., of Chicago, and St. Catharines, Ont., were merged with those of J. H. Williams & Co.

CHEVROLET SALESMEN TIE

PORTLAND, Ore., Dec. 5.—September was an exceptionally good month for Chevrolet sales on the coast and there were ties for both first and second place in what is known as Zone 19, which comprises western Montana, Idaho, Washington and Oregon. B. L. Sanderson of the Pierce-Harrison Motor Company of Medford, Ore., and H. George of the Nugent Motor Company, Everett, Wash., tied for first place in their zone with a percentage of 325 of their quotas. A. D. Martin of the Fields Motor Company, Portland and C. Alexander of the Mount Hood Motor Company of Hood River, Ore., tied for second with a percentage of 275.

R. M. W. Shaw Is Appointed Olds Advertising Manager

LANSING Mich., Dec. 5.—The appointment of R. M. Wilmot Shaw as advertising manager of Olds Motor Works is announced by D. S. Eddins, general sales manager of the company. Mr. Shaw has been connected with the Oldsmobile organization for nealy four years as assistant advertising manager. Previous to that he was with newspapers, in both the business and editorial departments for five years. Mr. Shaw succeeds E. J. Shassberger, former advertising manager, recently was appointed territory analyzation manager.

R. M. Wilmot Shaw

AJAX DEALERS MEET

ST. LOUIS, Dec. 5.—George C. Hubbs, general sales manager of the Ajax Motors Co., Racine, Wis., told salesmen and associate dealers of the Southwest Nash Motor Car Co., Nash and Ajax distributors here, of plans of the Ajax Company to enlarge its factory to enable the company to meet the nation-wide demand for the Ajax car, at a luncheon meeting at the Warwick Hotel arranged by the Southwest Nash Co. The production of the Ajax, Hubbs declared is still far behind the demand.

Chicago Dealers Report Good Business Throughout Month

Stocks Show Slight Increase in Preparation for Holiday Sales Rush

CHICAGO, Dec. 5.—In general, November sales were more numerous than those of October. There was little or no trouble from the standpoint of delivery, as production in nearly all factories has been sufficiently heavy to supply the demand.

Stocks in the Chicago territory are increasing to some extent. Dealers are working under the theory that stocks naturally should increase slightly at this season in order to give immediate delivery on holiday business.

The increase in sales over November averaged about 10 per cent. As compared with last, November sales were about 25 per cent greater.

Collections are good and repossessions few. A tendency toward more lenient terms has cropped up, but has been frowned up by all recognized authorities and has not become general as yet.

November sales of accessories are about even with October and from 10 to 15 per cent greater than November last year.

Tire sales have shown a decided increase, believed largely due to recent increases in original equipment prices and the reports of further potential increases in retail lists.

Optimism predominates among the dealers and wholesalers, and the campaigns to boost Christmas business have already justified themselves beyond expectations.

ELECTRICAL MEN TO MEET

DETROIT, Dec. 5.—D. W. Burke, president of the Auto Electric & Service Corp., and secretary of the Automotive Electric Service Association, announces that the 1926 convention of the association will be held on Feb. 2 and 3, during the Chicago Automobile Show, in the Florentine room of the Congress hotel, Chicago.

NORTH EAST OPERATING

TORONTO, Dec. 5.—The North East Electric Co. of Canada, Ltd., has begun the manufacture of North East starters, generators and ignition equipment. The company will supply electrical equipment to car manufacturers of Canada who are using North East products as standard. The new company occupies the entire building that formerly housed the Canadian branch of North East Service, Inc. In addition to the manufacture of equipment it will take over the service work in Canada formerly handled by the Toronto branch. J. W. Neun who was formerly manager of the Toronto branch is in charge of the new company.

Along Automobile Row

BOSTON.—The Commonwealth Overland Company has been organized here to market the Overland and Willys Knight lines in Boston with salesrooms and service departments at 838 Commonwealth Avenue in the heart of automobile row.

LITTLE ROCK, Ark.—R. B. Lavender, for seven years connected with the American Southern Trust Company, has resigned to join the sales force of the S. R. Thomas Auto Company, local Dodge Brothers agency.

MOLINE, Ill.—The Service Motor Sales Company of Rock Island has opened its new showroom and garage on Moline's main thoroughfare, Fifth Avenue. Julius Gottlieb of Rock Island is president of the company which has agencies for the Star, Durant and Flint cars in Rock Island, Henry and Mercer counties, Illinois, and Scott and Clinton counties in Iowa.

RALEIGH, N. C.—The interests of B. S. Aronson and O. R. Brown in the H. and E. Motor Company, of Raleigh, were bought by the Horton Motor Company, Inc., which will operate the business purchased at the same location. By this transaction, James Horton, who was a Hudson dealer in 1916, again acquires that line, as well as the Essex.

PENDLETON, Ore.—A contract has been let by G. W. Byers for a new garage building at East Court and Vincent Streets which will provide a new home for the East Oregon Motor Company, Ford dealer.

DECATUR, Ill.—C. H. Wilson has joined the sales force of the Gardner car with the Reo Motor Sales Co., 250 East William Street. The Reo agency handles the Gardner, Gray and Reo.

SPOKANE, Wash.—N. E. Rioth is now the sole owner of the Rickenbacker agency here and the name has been changed from Hume & Rioth to the Rickenbacker Spokane Agency. D. F. Hume no longer serves the firm in any capacity, it is announced. The agency has moved into enlarged quarters at 226 E. Sprague avenue.

SYRACUSE, N. Y.—George B. Tyler, manager of the Ford Buffalo branch addressed a meeting of 75 Ford dealers in this part of the state at a meeting at the Hotel Syracuse.

TOLEDO.—The Overland East Toledo Co., has been chartered with an authorized capital of $25,000 to deal in autos and accessories.

ROCKFORD, Ill.—Salesmen and field representatives of the Burd High Compression Ring Company, manufacturer of parts for motor vehicles, met here in a two day convention. Lectures and factory demonstrations were features, and there was a sales conference in conjunction.

ST. LOUIS.—Gamache Motor Car Co., 2626 Sidney Street, has been named as an authorized Oldsmobile dealer by the De Luxe Automobile Co., Oldsmobile distributors here. J. E., J. A. and D. T. Gamache are proprietors of the concern.

BIRMINGHAM. — Announcement has been made of the installation of a battery department, top and body department, and wood working department in the Packard division of the McCormack Brothers Motor Company of Birmingham.

DETROIT.—Horace Potter, one of the best known Packard salesmen in this city and formerly connected with the Detroit branch of the Packard Motor Car Company, has been named to aid in handling the custom body business of the company, R. E. Chamberlain, general sales manager has announced.

HARTFORD, Conn.—James W. Mayers, proprietor of the Sigourney Garage, in observance of seven years he has been in business entertained his sales service force at dinner at the Hotel Bond Annex. Mayers is an associate dealer in Hupmobiles.

LOS ANGELES.—Canon A. Doyle, formerly general sales manager for Union Motors, Inc., erstwhile Maxwell distributor, and more recently retail sales manager for Geer-Robbins, Chrysler distributor, has joined forces with Arthur J. Shafer, of the Liberty Automotive Service, in the establishing of a metropolitan Hudson & Essex agency.

CLINTON, IA.—The Van Epps Sales Company, for four years Velie agent in this city, has accepted the Peerless agency also and will display both cars on its floors.

ELLENSBURG, Wash.—Valley Chevrolet Company has been organized by J. H. Padavich, Vern Ewan, M. V. Padavich and C. F. Trower.

MILWAUKEE. — The Moore-Overland Co. of Milwaukee, has established a used car department at 778-782 Twentieth Street, between Fond du Lac and North Avenues. The entire building will be devoted to the reconditioning, display and sale of used cars exclusively.

SPRINGFIELD, O.—H. J. Brubaker, president of The Brubeker-Saunders Co., dealer in Willys Knight and Overland cars, announces that Karl Frankenberg will be sales head and that LeRoy McCoy will have charge of the service department.

SPRINGFIELD, Mass.—Sdward J. Donovan has purchased the business of the Parmenter Co., wholesale and retail dealer in automotive parts. Mr. Donovan was for five years treasurer of P. D. Powers, Inc., Hudson and Essex dealer in North Adams and later had the franchise for the same cars in Great Barrington, Mass. For the past two years he has been in charge of Hudson and Essex sales for the Arrow Co. of Springfield.

ST. PAUL, Minn.—The Mack International Motor Truck Corp., 2234 University Avenue, has bought an acre and a half of land at University and Cromwell Avenues, one block from the Overland building, on which it will erect a $400,000 building next year for assembly, sales and service.

PHILADELPHIA. — The Penn-Flint Company of Philadelphia, Pa., announces the appointment of Thomas B. Seaton of Merchantville, N. J., as a Flint dealer.

MONTREAL.—Clermont Motor Sales, Ltd., 4450 St. Denis Street, has been appointed authorized agent of McLaughlin-Buick cars.

GRAND FORKS, N. D.—Buick dealers throughout this district recently attended a conference held by the J. E. Sandlie Co., Inc., wholesale distributors, here. Speakers included Jalmar Evenson, assistant sales manager of the Pence Automobile Co. of Minneapolis, Sam Walton, service manager and Chester Walker, territorial manager of Pence, A. A. English of the General Motors Acceptance Corp., and W. A. McMillan, manager of the Pence branch at Fargo, N. D.

CHICAGO.—A digest of the laws of Illinois which particularly affect the automotive industry, is being published by the Illinois Automotive Trade Association. The book will contain about 24 pages and a feature will be several pages devoted to legal forms of various kinds used by dealers in connection with their business transactions.

PROVO, Utah.—F. J. Russell, Chrysler agent at Kamas, has taken over the Provo agency of this car, succeeding the Richins Motor Co.

SAN FRANCISCO.—F. J. Helderle, formerly secretary and treasurer of the Sterling Products Corp. of St. Louis, manufacturers of replacement parts, has joined the George W. Miller Co., known as the "House of a Million Parts," as general manager here.

SPOKANE, Wash.—C. Lloyd Lockwood, formerly with the Lockwood Motor Company of Missoula, Mont., has been appointed retail sales manager of Ajax cars for the Spokane Nash Company.

CAMBRIDGE, Ill.—T. M. Bloedorn has been named sales manager for the Tracy-White Motor Corporation in this city, joining the firm with which he was associated three-and-a-half years before the Tracy Motor Corporation was taken over by the Kelly Motor Company.

SYRACUSE, N. Y.—The Bresse-Chevrolet Co. of this city is erecting a new four story sales and service building in the heart of the downtown district. The building will be ready for occupancy in four months.

BIRMINGHAM.—J. J. Jordan has been appointed Durant-Star dealer for the cities of Birmingham and Bessemer. Mr. Jordan is well known in this section and will maintain show rooms in both cities.

MILWAUKEE. — The Anger-Chevrolet Co. of Milwaukee has gained distinction of being the first exclusive used car organization to establish downtown Milwaukee headquarters, through leasing of 12,000 square feet of floor space at 614 Grand Avenue. Headquarters of the company have been maintained for many years at Eleventh Street and Grand Avenue, but this site has been purchased for a new hotel.

HILLSBORO, Ore.—Ralph S. Wittenberg is the new Chevrolet dealer, having opened the Tualatin Valley Chevrolet Company.

ST. PAUL, Minn.—The E. B. McGill Motor Co., University and Lexington Avenues, sales agent for the Chrysler, has been bought by W. S. Morris, banker of Wheaton, Minn.; S. C. Odenberg, attorney of Wheaton, and R. W. Sunbeck, district manager for a Duluth wholesale grocery house.

QUINCY, Ill.—Don A. Wheeler and Otto Mohrenstecher have organized the Wheeler Motor Sales Company to handle the Cadillac and Chrysler sales in this vicinity.

SYRACUSE, N. Y.—R. M. Schiele, formerly with the Thomas B. Jeffrey Co. at Kenosha, Wis., has been appointed district manager for the Franklin Automobile Co.

DECATUR, Ill.—The Spiess Auto Sales Co., 244 East Wood Street, has purchased lots at the corner of Church and Wood Streets, and announced that within a short time construction will begin on a one-story and basement garage and display rooms for its Hudson and Chrysler salesroom.

TACOMA, Wash.—The following automobile concerns have recently added the Matched-Unit radio instruments and accessories manufactured by Stewart-Warner Speedometer Corporation, which they will handle in addition to their automobile business; Manley Motor Car Company and Neilsen & Hansen.

With the Associations

Sales Directors Meet

ST. LOUIS, Dec. 5.—Joseph N. Kellerman was elected chairman of the Sales Directors' Bureau, recently formed branch of the St. Louis Automobile Dealers' Assn., at its first meeting held at the Coronado Hotel. L. M. Stewart was named vice chairman. Robert E. Lee, manager St. Louis A. D. A. was named secretary. Sales executives of about 50 of the leading automobile firms of the city were represented by their sales executives.

Lee, who was largely instrumental in forming the bureau, presided. He stated that the name "Sales Directors' Bureau" had been adopted to avoid conflict with the Sales Managers' Bureau of the St. Louis Chamber of Commerce.

"A sales manager is the court of last resort in the contest between the salesman and the owner of the business," Lee said. "He is of necessity a diplomat, a tactician, a psychologist, a glad hander, a philosopher, friend and guide and perforce a master salesman, and a master salesman is one who can show others how to sell, who can bring his own skill and experience and tact to the aid of men on his staff who are on the verge of failure."

Portland Picks Officers

PORTLAND, Ore., Dec. 5.—Members of the Portland Automotive Trade Association chose George L. Sammis of the Sunset Electric company as president, at the annual meeting. Sammis succeeded Edward Burke, who was presented with a Morris chair by the membership in appreciation of his work during the past year.

Other officers chosen were Henry Ward, vice president, Thomas Bradshaw, second vice president, J. E. Nelson, third vice president, A. E. Foss secretary; R. W. Lee, treasurer; Fred Dundee and W. R. Bevens, directors, and the following vice presidents for the various crafts included in the organization:

E. J. Berg, garage and repair shops; E. H. Allen, battery and electrical shops; H. B. Black, machine shops and regrinders; Paul Staiger, paint shops; S. O. Armstrong, sheet metal works; and Paul Bossart, top and trim shops.

Illinois Trade to Meet

PEORIA, Ill., Dec. 5.—The annual meeting of the Illinois Automotive Trade Association has been fixed for Feb. 9 at Springfield. A nominating committee has been appointed to prepare a slate of officers. Considerable business of importance is to be transacted and there will be talks by several men, prominent in the automotive industry.

Pushes Winter Accessories

GREENSBORO, N. C., Dec. 5.—The North Carolina Automotive Trade Association, with headquarters here, is active in its efforts to serve the motoring public while at the same time serving its own interests. One of the association's activities having this dual nature is related to sales of accessories, and, at this season of the year, the organization is endeavoring, largely by means of newspaper publicity, to increase the sales of cold weather necessities and aids to comfort for the motorist.

Among the articles stocked by the accessories dealers to which the association is pointing public attention are heaters, winter fronts and hood covers, automatic windshield wipers, anti-freeze mixtures, chains, robes and gloves.

The association also is particularly active now in its efforts to eliminate, as nearly as possible, the unregulated bright headlights and the lack of tail lights, which are emphasized as dangers to traffic.

Electric Report Soon

CLEVELAND, Dec. 5.—Announcement of the reports of the standardization committee of the Automotive Electric Association on its projected booklet on headlights and on specifications for electric equipment of motor coaches may be expected January 11, according to announcement by Earl Turner, manager of the association, following a meeting of the committee here.

Among the electric experts collaborating on the reports are: Burns Dick, chief engineer of the Wagner Electric corporation, St. Louis, who is chairman of the committee; C. F. Gilchrist, chief engineer of the Electric Auto Lite company, Toledo; T. L. Lee, chief engineer of the Northeast Electric company, Rochester, N. Y.; F. H. Prescott, chief engineer, Remy Electric company, Anderson, Ill., and W. P. Loudon, assistant chief engineer, Dayton Engineering Laboratories company, Dayton, O.

Montreal Boosters Elect

MONTREAL, Dec. 5.—At the annual meeting of Automotive Boosters' Club No. 11, Eastern Canada, held at the Old Colony Club here, the following officers were elected for the coming year:

President, R. M. Oxley, Canadian National Carbon Co.; vice president, Charles Morgan, Raybestos Co.; secretary, T. J. Burke, Pres-O-Lite Company of Canada; treasurer, Fred Hadley, Hall Thompson Co.; directors, W. P. Kearney, Dominion Chain Co., Art Brittain, Lyon Bumpers Equipment, R. Sewell, Champion Spark Plug Co.

The office of president was made vacant by the retirement of A. J. Hopkins who has left for Florida.

Milwaukee Has Celebration

MILWAUKEE, Dec. 5.—Development of automobiles from the infant stages of the industry to its present relative maturity was traced at the dinner celebrating the fifteenth anniversary of the Milwaukee Automotive Dealers' Association held at the Elk's Club. Many amusing features of the early days of the industry were reviewed at the meeting.

The dinner was attended by about 300 of the leading dealers and distributors in the Milwaukee territory and by some of the prominent manufacturers in Wisconsin. In addition special invitations were extended I. G. Hickman, first president of the association, who was an honored guest, and Alfred Reeke, former president of the association, now a Nash distributor in Cleveland.

Mr. Hickman told of the great changes wrought in automobile merchandising since 1910 when the association was formed. James T. Drought, attorney for the organization, vivdly told of some of the early day automobile endurance tests held in this district.

Mr. Reeke lauded the progress made by the Milwaukee dealers' association since the formation of the organization which he directed. Mr. Reeke was also a guest of honor and entertained the dealers with several songs after his talks were completed. Bart J. Ruddle, executive secretary of the dealers' association spoke on the progress and improvement of automobile shows. His talk was illustrated with pictures of the early day motor expositions held in Milwaukee, which drew many laughs from the dealers. Frank Cannon, executive secretary of the Wisconsin Good Roads Association described the progress made by the Wisconsin road construction enterprises of the past few years.

Dr. F. W. B. Achen, president of the association, presided at the banquet.

Radio Trades Organized

LOS ANGELES, Dec. 5.—The Radio Trades Association of Southern California, which embraces in its membership jobbers, distributors, manufacturers' agents, retailers and broadcasters, was formally launched at a meeting held at the Alexandria Hotel in Los Angeles. Meetings will be held once a month throughout the year.

At the organization meeting, Earle C. Anthony, president of Earle C. Anthony, Inc., Packard distributors and operator of one of California's leading broadcasting stations, delivered a report on the recent radio conference held at Washington.

Short addresses given by various jobbers and retailers indicated that the radio business is unnusually active throughout Southern California this year.

JOINS MUSIC MASTER

PHILADELPHIA, Dec. 5.—In order to better take care of its rapidly expanding business, and also help solve the many problems in sales service, the Music Master Corporation has recently established a distribution department. It is expected that the new department will be of great assistance in sales promotion as well as in expediting deliveries to Music Master dealers. H. N. McMenimen has been appointed manager of distribution and placed in full charge of all sales plans and operations. The sales department will hereafter function under his guidance.

RECLAIMING CAPACITY RAISED

AKRON, O., Dec. 5.—To supply the steadily growing demand for reclaimed rubber the Akron Rubber Reclaiming Co. is preparing to increase its capacity 200 per cent by the installation of additional machinery and the construction of another storage room, according to C. E. Bishop, vice-president and superintendent. Other Akron rubber companies, notably the Firestone Tire & Rubber Co., B. F. Goodrich Co. and Goodyear Tire & Rubber Co., are combatting high crude rubber prices by continuing to salvage rubber from discarded manufactured articles.

PACIFIC SHOW PLANNED

SAN FRANCISCO, Dec. 5.—The Tenth Annual Pacific Automobile Show will be held in the Exposition Auditorium here January 30 to February 6 next year. As usual the show will be held under the auspices of the Motor Car Dealers' Association of San Francisco and George A. Wahlgreen, veteran manager will be in charge. Virtually all space is already subscribed. The show will be devoted more extensively than ever to merchandising, to the general public and to meetings, conferences and sales talks. This means that it will be a show for dealers as well as the general public.

Cleveland Car Makers Say November Best on Record

Sales of New Automobiles and Tires Show Slight Decline Early in Month But Recover

CLEVELAND, O., Dec. 5.—The best November on record. Cleveland's entire colony of automobile manufacturers, with one exception, were agreed on this point today as they checked production records for the eleventh month. The single exception is the Cleveland Motor Car Company where 100 workmen have just been laid off temporarily because of a lack of bodies and the inability of the body makers to make prompt deliveries. This unfortunate circumstance prevented the company from hanging up the production record orders on hand warranted.

In the matter of retail car sales the tune must be changed somewhat. The first three weeks of November, although excellent for this season of the year, didn't produce as much business as the first three weeks in October. The final week of the month saw prospects brighten, this being attributed to the holiday season which seems to be getting an early start hereabouts.

Retail tire sales, like retail car sales, showed a noticeable decline over the volume of business for the previous month. Jobbers and retailers of parts all report unusually good business, which seems to coincide with the story told by the parts manufacturers.

Summing everything up, the month of November was most satisfactory for the car and parts manufacturers and the parts wholesalers and retailers, and certainly very far from discouraging for those who retail automobiles.

DEALER LICENSES INCREASE

OLYMPIA, Wash., Dec. 5.—Not only has there been an increase in the number of automobile dealers this year, but License Director C. R. Maybury's record shows that the number of licenses issued to dealers, representing cars used by salesmen, has increased more than 10 per cent. There were 841 automobile dealers licensed last year and they took out 2,997 sets of extra plates at $10 per set. This year the 903 dealers asked for 3,385 extra sets of plates and thus far in 1925 they have paid $76,874.80.

Roadster Plays a Comeback

(Continued from page 12)

closed models but the writer believes that those firms producing an attractive roadster with plenty of speed and power will find a substantial business in this line during the coming year."

Then this one from a company featuring a rumble seat body: "The roadster of today is in reality a five passenger car due to the rumble seat arrangement. The increasing interest may also be attributed to the fact that the roadster is the ideal car for the golf foursome and the compartment is a handy place in which to stow golf clubs. The gypsy curtain at the back of the roadster when removed tends to bring the party closer together so that a party of five riding in a roadster may be as sociable as the same party riding in a closed car. In some weather it is most certainly much cooler riding in a roadster than in a closed car even though the windshield and all windows of the closed car may be open. These advantages may be added to the reasons for the roadster's tremendous popularity in the last year particularly."

BACK IN THE CENTER OF THINGS

The Grand Central Palace, where New York's National Automobile Show will be held Jan. 9 to 14, is in the heart of the city and is readily accessible from the leading hotels and the large railway terminals. It is also close to the Broadway theatrical district. Dealers from other cities who attend the show will appreciate the convenience of this location as compared with that used for the show the last two years. The last two years the show was held in the Bronx Armory, more than a half hour's ride from Times Square by subway and elevated. The trade days at the show this year will be Monday and Tuesday and manufacturers of cars, accessories and equipment are making arrangements to meet dealers at the show on those days when the general public will be excluded. The map above shows the location of the Palace and other points of interest.

NEW PAIGE-JEWETT DEALERS

DETROIT, Dec. 5.—The Paige-Detroit Motor Car Company has appointed new dealers as follows:

Dayton Motor Sales, Dayton, Ohio; T. F. Dreher, Patterson, New Jersey; Taylor County Paige-Jewett Company, Crafton, W. Va.; Stevens Garage, Cadiz, Ohio; R. W. Bort Auto Company, Lyons, N. Y.; E. E. Morrow, North Canton, Ohio; Bernard Lichnir, Bronx, N. Y.; Jones-Amos Company, Columbus, Nebraska; Carl Bingham, Vancouver, British Columbia; and Paige-Jewett Company, Leavenworth, Kansas.

Even where you can
move the crank *only an inch*

"YANKEE"
Ratchet Breast Drill
Cuts Continuously

That's why garages are buying a second and even a third "Yankee" Drill.

The "Yankee" DOUBLE Ratchet enables you to drill in places too cramped for other drills to operate. It saves lost motion because every movement of crank, whether back or forth, sends drill into work.

And that's only one of five ratchet adjustments. A touch on Ratchet Shifter gives Plain Drill, Left-hand Ratchet, Right-hand Ratchet, DOUBLE Ratchet, or Gears Locked.

A finger touch on Ratchet Shifter gives any one of five adjustments.

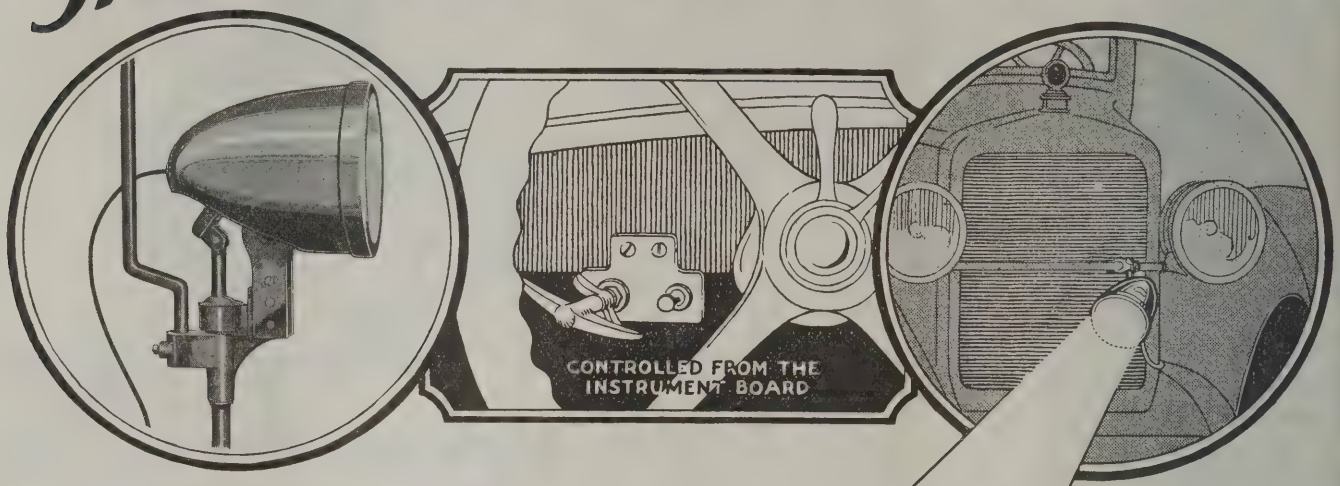
Two speeds; you can change instantly without removing drill from work. Just shift lever at base of hub.

No. 1555 (Illustrated) 3-jaw; No. 555, 2-jaw. Hold ½ in. drills. No. 1545, 3-jaw; No. 545, 2-jaw. Hold ⅜ in.

For smaller drilling jobs use "Yankee" Ratchet Hand Drill No. 1530, with five ratchet adjustments.

Some other "Yankee" Tools
Automatic Feed Chain Drills
Automatic Feed Bench Drills
Ratchet Bit Brace
Ratchet Screw-drivers
Ratchet Tap Wrenches
Vises, with Removable Base

Dealers everywhere sell "Yankee" Tools
"Yankee" on the tool you buy means the utmost in quality, efficiency and durability



Here's a mighty interesting little Tool Book for you. It shows all "Yankee" Tools, their construction, and operation. Write for your copy today.

The Walden Fore-Lite

The Bullet Type Is Going Big

AT

$18.50

The Walden Fore-Lite
Pats. applied for
Chicago, U.S.A.
Trade Mark Reg U.S. Pat Off.

Owners Want the Walden Fore-Lite

There is an established and an active demand for the Walden Fore-Lite. It is one of the things that owners WANT to buy.

For that reason it is particularly important for jobbers and dealers to know about and stock it.

Having the Walden Fore-Lite on hand—ready to sell—is not unduly expensive. And even if it were, the quick turn-over dealers are getting makes the initial cost of stocking it relatively unimportant.

The fittings for the Walden Fore-Lite are practically universal. The popular Bullet Type is made in only one model. It operates on any car. There is no dead stock.

For further information, and descriptive literature—if you are not already familiar with the purpose and principle of the Walden Fore-Lite—write us. WALDEN FORE-LITES SELL!

Rebuilding Used Cars to Sell New Ones

Community Motors, Chicago Oakland Distributor Has Struck Medium Between Doing Too Much and Too Little to Trade-Ins In Making Them Salable and Satisfactory

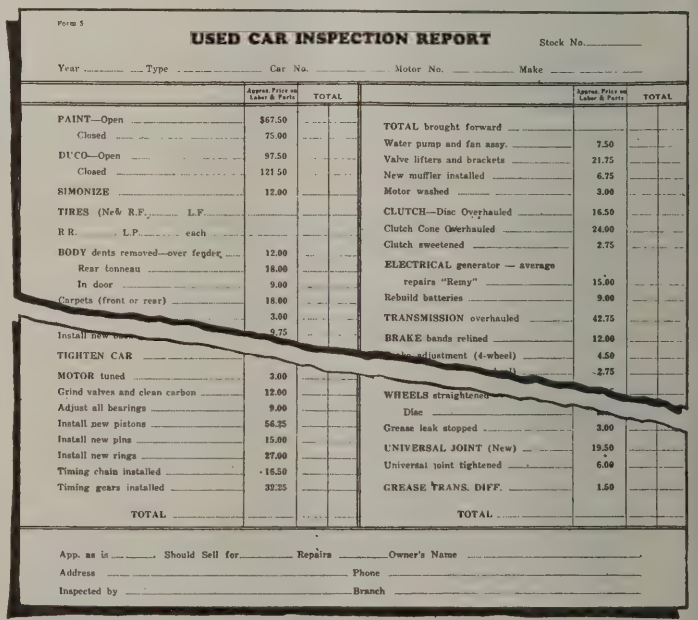
Above is shown a car as it appears before reconditioning. It is a typical example of a car taken in for rebuilding and shows in this case, a mechanic refinishing the cylinder bores. This happens to be the same car shown in the oval.

Here is the way the car looked after passing through the shops of Community Motors, Inc. It is virtually a new car and several refinements have been added. The cowl lights, for example, have been put on. The car carries a new car guarantee.

By B. M. IKERT

SELLING the used car customer a reconditioned vehicle, carrying what practically constitutes a new car guarantee, in the hope that the satisfaction he will have with it may induce him to buy a new car from them is one of the sales promotion plans of Community Motors, Inc., Chicago Oakland representatives.

But in addition to this the company believes firmly in developing a used car clientele and to that end seeks to give customers who buy these cars the same treatment as that handed out to the purchasers of new vehicles. Community Motors feels that as long as it has to contend with used cars it is far better to make a real business of merchandising them than to curse them as a necessary evil.



This company is in business primarily, of course, to sell Oakland cars. Clean sales naturally are the most desirable. At the same time Community Motors knows as well as all dealers know that trade-ins are inevitable.

Instead of making these trade-ins liabilities and deadwood, they are turned into assets—salable merchandise. All because this company uses good judgment in what it takes in as used cars and because it does a real job of rebuilding them.

There are those who say it is best to sell used cars in the condition they come in. Others do not bother with them at all, while still others go the extreme in rebuilding them.

Several enterprises of the past have shown it does not pay to tear used cars down to bed rock and rebuild them. It is too costly and you cannot get out of them the money that went into the rebuilding. It is generally a mistake to take a 1922 model and rebuild it into what virtually is a current model of that particular make.

It also is not sufficient in most cases to merely slap a new coat of paint on a used car when the chassis of that car is not mechanically right. True, the customer is

Inspected by ... Branch ...

The success of the plan used by Community Motors, Inc., in reconditioning used cars is largely due to the thorough manner in which the branch manager makes out the used car inspection report, shown above. The company knows from the report exactly what it will cost to recondition the car and from this can quote the car owner the proper allowance for his car.

Machinery and equipment play a big part in the shops of Community Motors, Inc., and no doubt the time saving effected by proper equipment is largely responsible for cutting down operating expenses. Here, for instance, is shown a motor driven wheel used for dressing down superfluous metal on a welding job. Naturally this is much faster than the hand operated rasp.

largely influenced by the paint, but there must be good value in the car under that paint. Paint means little when the battery goes to pieces or the timing chain slips a tooth.

There must be a happy medium somewhere between doing nothing to a used car and completely rebuilding it. From the success the company is having it would seem Community Motors neither does too little nor too much to its used cars. The work is commensurate with the price the company can get for such a used car and the buyer of it gets approximately a new car.

New Car Prospects

The company feels if the owner of one of its reconditioned used cars drives such a car for a year or more with satisfactory results he is very apt to come back to the establishment when he is in the market for a new car. The logic behind this is good and Community Motors is prepared to show that the plan works out in precisely that manner.

Discretion naturally is exercised in taking in used cars The company knows exactly the makes of cars that have a resale value and confines itself to reconditioning these cars only. There are five branches of Community Motors in Chicago and in every case the branch manager passes judgment on the cars to be taken in for allowance on new car sales. He either accepts or rejects them. If the car is too old or of a make difficult to sell it is not accepted.

A full report of the car's condition is made by the branch manager and back of every item is placed the approximate price to recondition it. The company knows what it can get for the car when it has been reconditioned and the mechanical report shows the cost of reconditioning. Hence subtracting this from the former indicates the price which the company can allow the customer for the car.

How Far to Go

Now, in the rebuilding of any motor car it is a question of just how far to go.

Some concerns have tried complete rebuilding, even to stripping the car down to the bare frame and then one by one rebuilding the various units until there was virtually a new car when all was complete. That is carrying the rebuilding plan to one extreme.

Then we have those who put on a little paint here and there, fit a new tire, install a new battery perhaps, and then call such a car a reconditioned car. The purchaser of such a car gets little more than he would had he bought it before this "reconditioning". This is the other extreme.

There must, then, be a point somewhere between these two extremes, where a purchaser of a rebuilt car gets exactly what the name rebuilt implies.

From our recent observations in the shops of Community Motors we believe this institution works on a

A view in the trim shop of Community Motors, Inc. In every case where the top structure is worn or is in need of refinishing, it is customary to put on new material, new moldings, etc., in order that the structure may be in keeping with the repainted body.

The company uses pyroxylin finishes in painting the cars and naturally these are applied by air brushes which saves time and insures a good durable job. The company also maintains a good wood working shop for rebuilding damaged bodies.

All of the machine work on connecting rods, bearings, etc., is done by skilled machinists. The machine shop of the Community Motors, Inc., is fully equipped with machine tools and other fitments to handle every conceivable kind of job likely to be encountered in reconditioning chassis.

plan whereby not too much nor too little work is done upon its cars rebuilt in its own shops.

Looks is no doubt the first requirement in a motor car and to that end Community Motors has an elaborate paint shop wherein its cars are refinished. But before any paint is applied the body is put into condition. All dents are removed and broken fenders are straightened and welded. The company has found welding such fenders is very practical. The welded joint is strong and all superfluous metal is brought down to the surface by an electrically driven wheel, which is by far a quicker and better method than the old hand operated rasp method.

While the car is being painted the radiator shell, lamp rims, hubs, and similar parts are sent to a nickel-plater and come back by the time the body is refinished. Meanwhile, if the top material does not pass inspection, it is removed and a new covering applied.

There is a carpenter shop which takes care of all body repairs requiring the forming of door pillars, sills, windshield headers, strainers, etc. This department is equipped with power-driven band saw, planer and other wood-working machinery.

Specialists take care of certain work. Thus there is the blacksmith shop wherein craftsmen take care of all such work as straightening axles, frames, welding, and forming special parts requiring forge work.

Well Equipped Machine Shop

The machine shop is excellently equipped and in this connection it is interesting to note that the machinists do all the fitting of parts requiring accuracy. Thus all piston and ring work, bearing work, valve work, etc., is done by machinists, leaving the other mechanics to do only the tearing down and assembling. By thus centralizing the work better control and uniformity of product are assured.

Little delay is encountered in the execution of the work owing to the thoroughness of the inspection report made out for each car. This report in a sense constitutes the repair order.

A copy of the used car inspection report blank is reproduced on these pages and it will be noted that this report has been arranged in about the way a person would judge a used car. Thus the item of paint comes first, because it is the finish which impresses one first. Then follow tires, body, fenders, etc., until the mechanical units are reached.

The prices quoted are those which a customer would have to pay in the shops of Community Motors if the work were done in the ordinary course of service. Thus, if a customer wished to have a windshield glass installed, the valves ground and carbon removed he would pay $9 and $12 respectively.

When the branch manager inspects the car he jots down the prices as given in the column marked "Total" and adding together these prices tells him exactly what it will cost to recondition the car.

Dragging Brake Tests

Naturally after brakes have been relined or adjusted a test must be made, because in correcting one fault the mechanic may have created another and the brakes may be dragging.

A simple rolling test by which the mechanic can test the brakes is given by Mr. G. C. Mather, chief engineer Paige-Detroit Motor Car Co. Here is what he says:

"Fortunately, brakes don't go bad all at once, and as they become less and less effective the driver just naturally applies them earlier and more energetically; however, in emergency, he cannot stop so quickly as he should, so that he is risking accident as long as the brakes are not at their maximum stopping efficiency.

"The opposite fault with brakes, on the other hand, may exist without the driver's realizing it, though if he did he would be just as eager to correct it as to repair brakes that fail to stop the car efficiently. This second fault is dragging brakes—brakes that are too tight, and therefore exert a constant drag on the engine, with a corresponding increase in fuel consumption. On an upgrade climb, the least drag affects the performance of the car.

"Here is a test that anyone can make:

"On a well-paved level highway, attain a speed of 30 m. p. h. then shift into neutral and coast. Begin timing the deceleration when the speedometer shows 25 m. p. h.; at the end of 60 sec. the car should still be rolling 5 miles an hour or faster. If it isn't, look for dragging brakes.

"A more certain test can be made, and is well worth while. Jack up both rear wheels, and with the shift lever in neutral, turn each wheel forward by hand, first one and then the other. If the brakes are free, the opposite wheels should turn backward, easily and evenly. Any 'swishing' sound or resistance indicates that the brake drums are making contact with the bands.

"If the bands are too tight, readjust them. In many cases, however, the dragging is due to out-of-round bands, which must then be trued up."

Business Cases Reported

Volume One of the Harvard Business Reports has been published by A. W. Shaw Company, Chicago, to be sold at $7.50 a copy. This volume of over 500 pages contains reports of 149 business cases selected from over 3,500 cases collected by the Harvard Graduate School of Business Administration through its Bureau of Business Research.

Each case presents an actual situation which arose in real business, the actual method by which the situation was met, and the reasons which inspired its selection as an example. The decision stated in each case is that of the business firm and in no instance has the Harvard school injected its own editorial opinion.

These reports are expected to furnish precedents and examples for the guidance of business men just as the law reports of the various states furnish precedents and examples for the guidance of lawyers and courts. Other volumes of business reports are to be published from time to time.

Here's How "Chet" Hassell Sells 'em Automotive Gifts For Christmas

A Few More Days to Go and Do Likewise

SHEPPARD GARAGE CORP.
240 SECOND STREET
NIAGARA FALLS, N. Y.

November 23, 1925.

Motor Age.,
5 So Wabash Ave.,
Chicago, Ill.

Gentlemen:

I am attaching copy of a letter that I am sending to all our customers, in conjunction with the "Give something for the car for Xmas" campaign.

First of all let me state that I am a firm believer in the "Ask 'em to buy" campaign. Motor Age sold me on that proposition quite some time ago, and I find that our Accessories sales have increased over 34% this year, principally due to the fact that when a customer comes into our service station, I look over his car, and determine just what certain accessory he can use to the best advantage, on that particular car. While I do not sell them 100%, nevertheless I do get a huge percentage of this business.

I am also enclosing a copy of a small "Add" that I am running in our paper for one month, ending Christmas night. The reason for my selling them "Chet" Hassell, along with their accessories, is because I believe if we make this sound more like a personal transaction, we can sell the Ladies. This is from past experience.

I would like for you to publish the copies attached, as I believe that should every Service Manager use something along this line, he will swell his sale of Accessories, which is incidentally good business for his house. Along that line, the more money he makes, the larger his salary can be.

Thanking you for this service, I am

Yours very truly,

SHEPPARD GARAGE CORPORATION.

A. Chester Hassell
Service Manager.

ACH/WFR

"CHET" HASSELL is a service manager. He was not satisfied with his income, so he decided to increase it by selling accessories to customers whose cars came into the shop. He looks over the car and decides what articles of equipment the vehicle needs. Then he makes his proposition to the owner. That's a year 'round business.

But at the Christmas season Mr. Hassell brings in added profit by promoting the sale of automotive merchandise for Christmas gifts. This year he started running an ad in the local newspapers a month before Christmas and will continue it up to the evening of Dec. 24, inviting the public to let him help them select their Christmas gifts. He also devised a very effective circular letter to send to all his customers and prospective customers. This letter is reproduced here.

Did you ever think of giving something for the car for "Xmas"?

Let "Chet" Hassell help you select some useful gift, at

SHEPPARD GARAGE CORPORATION
240 2nd Street,
NIAGARA FALLS, N. Y.

How "Chet" Hassell advertises to sell automotive gifts.

SHEPPARD GARAGE CORP.
240 SECOND STREET
NIAGARA FALLS, N. Y.

Well folks, no doubt you are doing considerable Christmas shopping at this time. We always remember Dad and Brother, also a great many of our friends, with a tie, a pair of socks, silk shirt, cuff buttons, an umbrella, etc.

Have you ever thought of "giving something for the car for Christmas." You know every car owner has a great pride in his car, and wants it dressed up so it will look it's best. If you ride in that car, you will feel a certain pride also, especially if you were the donor of say, a pair of cowl lights, dome lights, parking light, cigar lighter, step plates, rear view mirror, automatic windshield cleaner, skid chains, trunk, spring covers, motormeter, radiator lock cap, rear fender guards, or possibly a heater.

Why not call at 240 Second Street, and ask to see "Chet" Hassell, who will help you select what is most suitable for the car you have in mind.

We have small catalogs with numerous items listed. Call 'phone 147, leave your name and address, and "Chet" will be glad to mail you one of these catalogs, if you cannot come to the garage in person.

Don't forget, - "Something For The Car For Christmas" - this year.

Yours for better service,

SHEPPARD GARAGE CORPORATION.

By A. Chester Hassell
Service Manager.

Letter used by "Chet" Hassell to get Christmas business.

Monthly Flat Rate Service Plan Builds Big Business in Texas

N. J. NEWBY

Head of system servicing cars and trucks for flat rate monthly fees.

Proper Maintenance to Prevent Costly Repairs Is Keynote of System Established by N. J. Newby

SERVICING motor vehicles, under contract, for a flat rate of so much per month per vehicle and making money on it is what the Newby Garage System down in Texas is doing and making a great success of it.

N. J. Newby of Dallas inaugurated the flat rate monthly maintenance system for motor vehicles at Fort Worth some four years ago. Garagemen hooted at the idea, but Newby stuck. Today he operates seven flat rate service shops in as many Texas towns, is establishing the eighth and soon will extend his system to New Orleans, Kansas City, Oklahoma City and other larger cities.

The Newby system is unique and simple. The Newbys entered into a regular contract with individuals and corporations to service motor vehicles at a flat charge of $8 a month. They have simply applied the old adage of "an ounce of prevention is worth a pound of cure," or a "stitch in time saves nine," to the garage business and found it went over big. It has proved a big saving in repair bills to operators of motor trucks and shows a nice profit to the Newbys. The Newbys say they make money preventing repairs.

The Newby argument in soliciting business for the flat rate monthly service is simple, direct and appealing to most business houses.

For example a business concern operates a fleet of 20 trucks. Chances are this firm must employ two mechanics to service these trucks at a salary of $240 per month and rent a place where repair and service work can be done at $40 per month, making a total of $280. In addition the fleet owner must furnish tools and maintain tow-in and trouble cars at heavy cost. The Newbys do the whole thing for $160 a month.

Here is what the Newbys agree to do for a flat rate charge of $8 a month per motor vehicle:

To furnish skilled labor, tools and pull-in service necessary for repairs and upkeep of vehicles.

To inspect and grease once each week for the first four weeks after signing up, and once every two weeks thereafter.

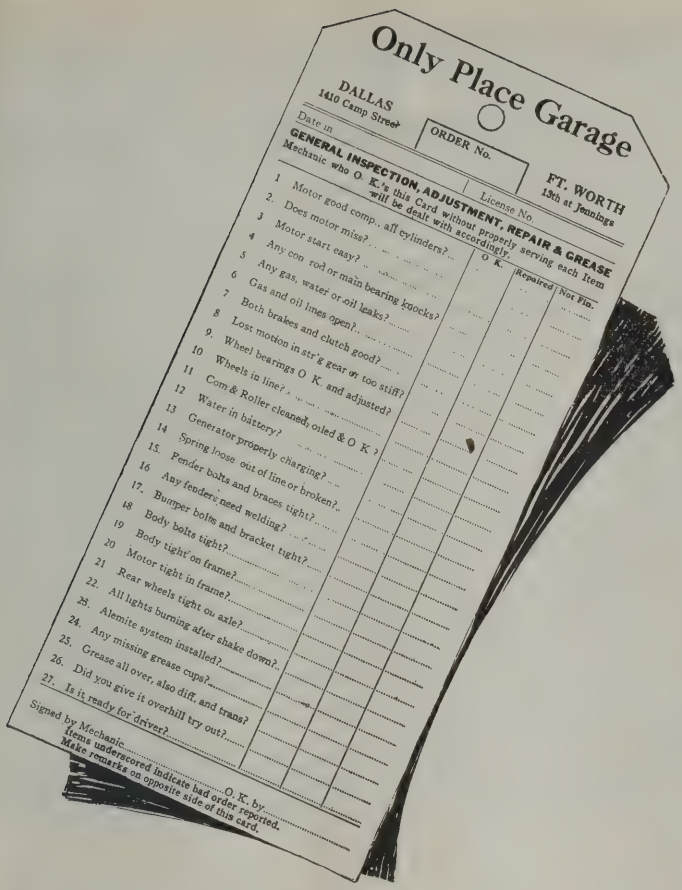
To tighten and adjust all parts, replace broken and worn parts, including accidents, wrecks and burnt out bearings.

To keep their garages open and ready for service all hours, day and night.

To maintain a pull-in service all hours, day and night, by which clients' machines in city limits will be towed to garage without charge and from without city limits at reasonable cost.

To keep trouble car ready for service at all hours, day or night, for benefit of clients whose machines may go dead in action, and repairs must be made before trip is completed.

To furnish all parts used in replacing broken or worn parts, and all grease and oils used on clients' machines at regular manufacturers' list price.



To make no extra charge for labor in connection with removing or replacing parts to be welded, soldered, heated or reground, and to charge not more than prices prevailing at reliable garages for welding, soldering, heating of such parts, or for boring cylinders.

The Newbys do not include tire trouble repairs, recharging batteries, magneto work, repairs on tops, curtains and bodies, washing, polishing and storage in the flat charge of so much a month per vehicle. They assure clients charges for that line of work will not be more than those prevailing at reliable garages.

The Newbys will not enroll part of the total number of motor vehicles of any individual or corporation used for commercial purposes. The entire number must be enrolled before the flat rate contract obtains.

The Newbys will not accept motor vehicles for the flat rate service unless such vehicles are in good condition. Vehicles offered not in good condition, will be placed in acceptable condition at prices prevailing at reliable garages for such work.

The flat rate per month service may be terminated by either party on ten days' notice. If the client terminates the service and there have been accident repairs or motor, front or rear end dissembled and repaired in 60 days prior

Inspection card used as guide in Newby's monthly flat rate service system

to the notice given, the regular charges prevailing at reliable garages for such work will be made.

The Newbys do not buy, sell or exchange motor vehicles of any kind. They are not accessory, parts, equipment, tire or battery merchants. They do not operate their shops in the ordinary manner. Their service is confined to persons or concerns having motor vehicles enrolled with them on a flat basis of so much a month per vehicle.

The Newby system is something like insuring motor vehicles against being out of commission because of damages or repairs. The owners pay a nominal sum monthly and are assured their vehicles will always be in running order. They take no risk. They simply enter into an agreement to pay the service charge monthly, plus the regular list prices for parts, oil and grease and cease to worry about repair bills.

Actual experience taught the Newbys that seventy-five per cent of repair bills on motor vehicles was due to lack of proper adjustments and lubrication at the proper time. Experience also taught them the life of the wearing parts of motor vehicles could be doubled by proper care. In the school of experience they learned that in the majority of repair jobs the labor necessary to remove and replace worn out or broken parts, costs more than the parts themselves.

With these things in mind the Newbys have established a service system for motor vehicles, designed primarily to prevent repairs, rather than making repairs after the damage is done.

Citing some examples of why they must keep machines in tip-top condition under the Newby system, N. J. Newby, originator of the idea, said nearly every Ford axle ever broken was broken near the hub and that the break was caused from lack of proper lubrication. He says any Ford service station charges $2 for towing in a Ford and makes a labor charge of $6 for replacing the axle. The axle itself is then charged to the customer at the regular list price. With the Newbys, the tow-in and the labor in connection with replacing the axle are included in the flat monthly charge. They make a profit of 34 cents on the axle. He says they can't afford to do an $8 labor job for 34 cents, hence they prevent the axle from breaking by proper lubrication and adjustments and make a profit on the lubricants.

For overhauling the rear end of a Ford the regular labor charge is $7, Mr. Newby says. In some cases the new parts to be replaced cost as much as $18. The Newbys make a profit of $4.50 on the parts in that case, but the labor is included in the monthly charge. He says for that reason they can't afford to let rear ends of trucks burn up. They keep them greased, oiled and adjusted and make a profit on the oil and grease.

They have worked the system down to where the shops pay a profit on service alone, because from 200 to 250 vehicles are serviced in each garage every month. From five to seven persons are employed in each garage and the salaries range from $18 to $60 a week. In addition to labor charges, included in the flat charge per month, the Newbys make a profit on parts and on work done on batteries, tires, tops, bodies, curtains, magnetos, washing, polishing, storage, welding, soldering, painting, cylinder jobs, and on oil and grease.

The Newbys are now operating seven garages in the larger cities of Texas. These are located at Dallas, Fort Worth, Waco, Wichita Falls, Houston, Weatherford, and Mineral Wells. Another garage is to be established at Cleburne and still another in New Orleans. About 80 per cent of the vehicles serviced in these shops are trucks. The remainder are passenger vehicles, usually driven by commercial travelers.

Shops Closely Related

These shops are closely related to each other. Each shop has a complete list of all the vehicles signed up by the other shops together with the secret marks on those vehicles. Any vehicle signed with one shop is entitled to service in any of the other shops.

All parts for the Newby garages are bought by the headquarters shop at Dallas. They are distributed among the shops on requisitions and charged to them at wholesale prices.

To facilitate the work in the Newby garages considerable amount of specializing is done. A certain line of trucks is attended to on certain days and nights. For instance department store trucks may be taken care of on Monday night and furniture store trucks on Tuesday night. Wednesday nights may be given over to bakery trucks and Thursday to gravel and cement trucks. As nearly as possible the same crew of men work on the same line of trucks all the time. The Newbys have found, under ordinary circumstance, one fast mechanic can service 10 to 13 trucks in one night.

The contract entered into by the Newbys with their clients is a heavy card form suitable for filling in special filing cases. These contracts are made in duplicate and numbered serially. As many as three sets of contracts may be made with one corporation, depending upon the kind of vehicles to be serviced. Such would be the case with a gravel concern operating ten 1-ton trucks in outside service, three 5-ton trucks in sundry service and fifteen trucks in gravel hauling because these would take a flat service rate of $8, $9 and $14.50 a month, per vehicle.

Refinishing With Pyroxylin *Over Old Paint*

By B. M. IKERT

A MATERIAL called Opex Binder Surfacer which makes it possible to refinish an automobile with pyroxylin paint without removing the old paint has been produced by the Sherwin-Williams Co. This material is recommended for that class of automobiles upon which an expensive repaint job is not justified. This method, however, is said to produce a good looking and durable finish at a price that almost any car owner can afford and that yields the dealer a good profit.

Because the old paint is not removed a great deal of time is saved and the cost is reduced. By this method a car may be refinished in two or three days at the most and although dealers can best determine the price they should get for such a job it is stated that many have found it can be profitably sold for around $35 to $40.

Dealers who are equipped with spray outfits and other devices for the application of pyroxylin paints no doubt will find this method a good one to use in refinishing used cars before offering them for sale. At the same time they have the satisfaction of knowing that the new finish will not peel and scale off, provided, of course, that the old surface is not already at the point of flaking or falling off when the pyroxylin material is applied.

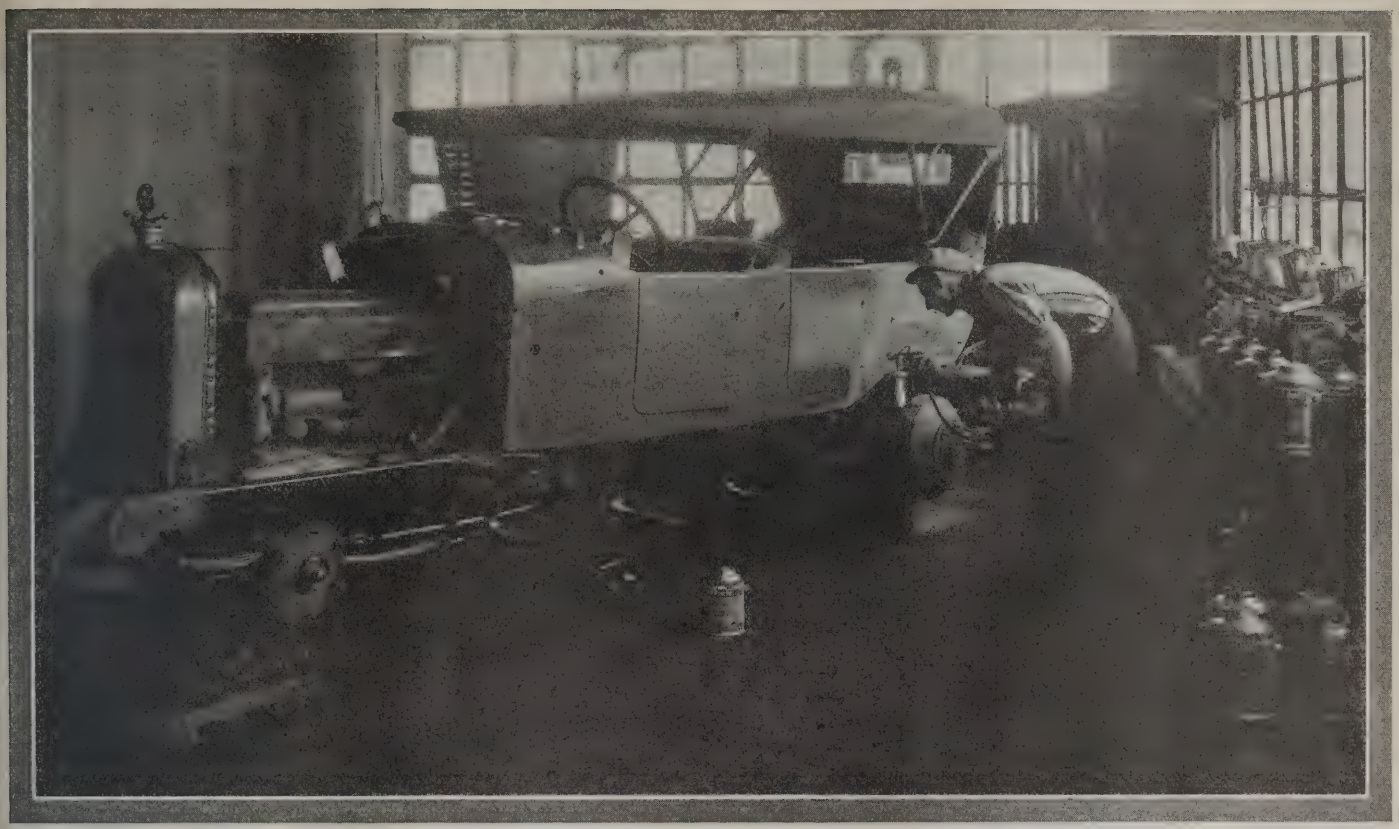
The Sherwin-Williams Co., who developed this system for use with Opex enamel, does not offer it as a cure-all for every kind of repaint job, but does recommend several different methods of using the system, which if carefully followed, are said to produce highly satisfactory results at reasonable cost.

Three methods of applying pyroxylin paint over the old surface through the use of the Binder Surfacer, known as Opex methods A, B and C, are described as follows, by the Sherwin-Williams company:

METHOD A

Preparation—Clean and sand off the car thoroughly. All loose paint, grease, oil and dirt should be removed. The adherence of the product to the old paint will be perfect, providing rust, grease, dirt, oil are eliminated. However if you apply Opex to paint which is almost ready to fall off, there is no reason to expect that the new finish is going to hold the old on. Many refinishers are using ammonia to clean off the varnish and then sand off the remaining color varnish.

1st Operation—Apply one coat Sherwin-Williams Oil Metal Primer and Sealer No. 12. Air dries in 12 hours. Apply directly from can or slightly reduced with turpentine. If a forced dry system is employed, we recommend Sherwin-Williams Oil Metal Primer and Sealer Red No. 36, which will dry in 4 hours at 150 degrees F. When dry, sand lightly to knock off the nibs.



2nd Operation—Apply one light coat of Opex Binder Surfacer Gray, light or dark, reduced with equal parts of Opex Binder Thinner No. 2. This material dries for recoating and sanding in one hour.

3rd Operation—Apply successive coats, depending upon the condition of the original finish. Usually two or three coats of Opex Binder Surfacer Gray, light or dark, are sufficient to give a foundation which when sanded out, leaves a perfectly smooth finish ready for the application of the Opex Enamel.

4th Operation—Wet sand to surface

A corner in an Opex lacquer spray department. This shows, besides some of the equipment used, the manner of removing the hood, radiator shell and similar parts

Applying the Opex binder surfacer. The binder seals in the original finish and acts as an intermidate coat on which to build up the lacquer finish.

with fine sandpaper. Deep cuts or scratches should be avoided. A hard, glossy surface should be secured.

5th Operation—Apply Opex Enamel.

METHOD B

Preparation—Clean and sand off the body and car completely, taking all care suggested with regard to oil, grease, etc., as in Method A.

1st Operation—Spray one very light coat of Sherwin-Williams Opex Binder Surfacer Gray, light or dark, reduced with equal parts of Opex Binder Thinner No. 2 directly over the cleaned and sanded body.

2nd Operation—Apply successive heavier coats of Opex Binder Surfacer Gray, light or dark, reduced as above until sufficient material has been applied to sand to the proper surface.

3rd Operation—Apply Opex Enamel, reduced with equal parts of Opex Thinner No. 10.

METHOD C

Preparation—At times for the cheapest type of job, nothing is desired but a freshening up of the surface after all bare metal spots have been touched up with Sherwin-Williams Oil Metal Primer and Sealer No. 12, the Opex Enamel is applied directly over the old finish without surfacing. It must be understood that Opex Enamel will not in any way surface a car, but only gives it a new brightened up look. The car should be cleaned and prepared the same as in the two previous systems, taking special care that all grease, dirt, oil and loose paint are removed.

1st Operation—Spray one light coat Opex Enamel, reduced with equal parts of Opex Binder Thinner No. 2. A heavy coat will probably raise the old finish. A dust or very light coat if applied properly will never raise the old finish.

2nd Operation—Apply two or three additional coats of Opex Enamel, thinned with Opex Thinner.

In addition to these three there is the method as used by many of the large custom shops in and around New York City. This is known as the "Metropolitan Division Schedule For Passenger Car Finishing" and is described by the company as follows:

Operation No. 1—Wash off all dirt and grease from surface and in crevices and then sand with No. 0 dry sandpaper, dusting off the entire body and wiping same with a cloth dampened in gasoline.

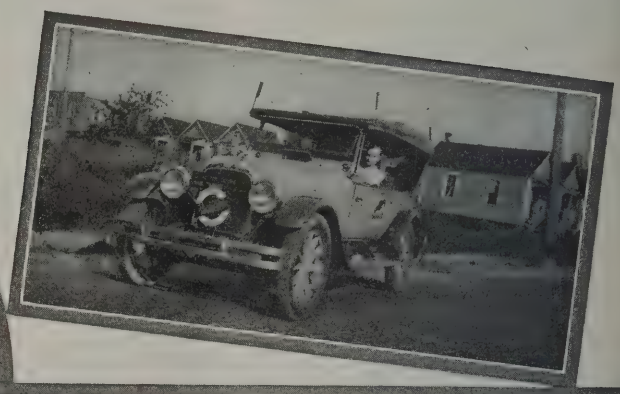
Operation No. 2—After the entire surface is dusted and cleaned, apply the first coat of Opex Clear Binder CPL 130, thinned with equal parts of Opex Thinner, RX 04502, which is to be sprayed over the entire surface. Putty glaze where necessary.

Operation No. 3—Apply one or two, or possibly three, surfacer coats (depending on the condition of the body) with Opex Surfacer Light, RX 28703, thinned with equal parts of Opex Thinner RX 04502. Where a darker finishing color is desired, use RX 28704 Dark Surfacer. After one hour the last surfacer coat may be sanded with No. 220 Wetordry Tri-M-ite sandpaper wet.

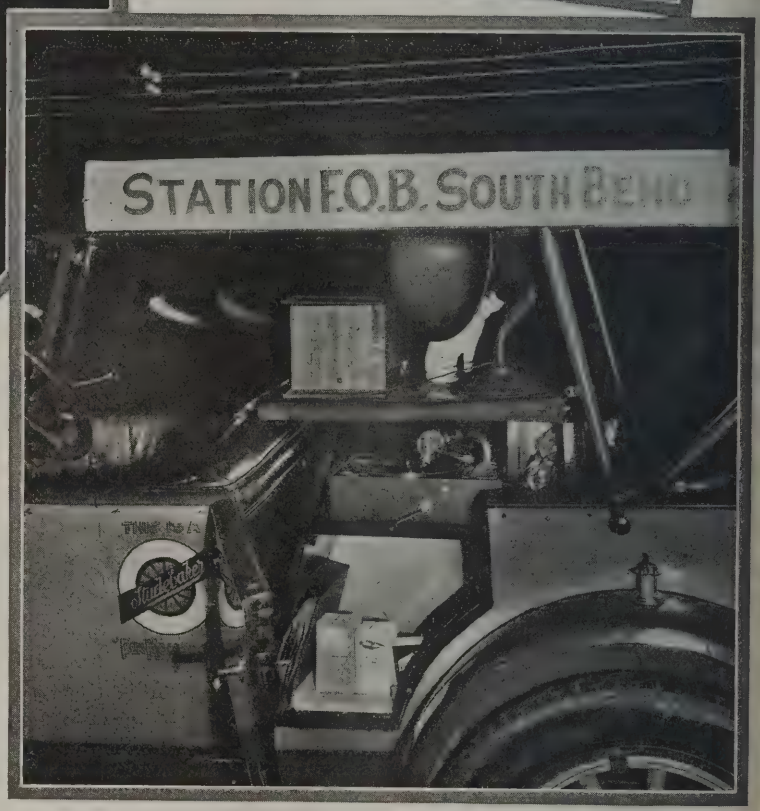
Operation No. 4—After obtaining a smooth surface, apply another coat of Clear Binder, the same as the first coat. Give this Opex Binder coat a very light sanding with No. 320 Wetordry Tri-M-ite sandpaper wet, allowing one-half hour drying time.

Operation No. 5—Then use Opex color coats in the 31000 line, thinned with equal parts of Opex Thinner, Rx 04502. It will be necessary to apply two of these color coats if a dark color is used, and three coats if the shade is a light color. These colors should be allowed to dry at least one-half hour between coats. If an exceptionally high class job is required, we suggest sanding lightly these color coats with No. 400 Wetordry Tri-M-ite sandpaper wet.

Operation No. 6—Following this method you will obtain a fairly high natural gloss. If this gloss is not enough, a polish will be necessary which will give the appearance of a varnish job.



In this particular method reference is made to Opex Clear Binder CPL 130, which is a different product than the Binder Surfacer in that it has no pigment. In this system the Clear Binder and the pigmented Binder Surfacer are used together to obtain the proper surfacer. This method naturally costs the refinisher more money because there are more coats applied and more material used but this is the method that should be particularly recommended for the very best type of refinishing job.



Then there is still another method that would be a little quicker and a little less expensive than the Metropolitan Division's schedule which combines the Clear

(Continued on Page 19)

Advertising Car a Big Hit in Florida

Studebaker Distributors in Southeastern State Send "Struttin' Stude" from Town to Town as Means of Attracting Attention.

Upper left: Night view of advertising car stressing lighting equipment; upper right: Front view of "Struttin' Stude" as seen in the daytime; lower right: Showing how musical equipment is installed in the advertising car. The car, which undoubtedly is one of the most highly decorated vehicles put on the road, has made a hit wherever it has gone.

BY dressing up a car in a novel way and displaying it in the towns of Southwest Florida, O. B. Jones, publicity manager of the Peninsular Motors Company, Studebaker distributors in Tampa, St. Petersburg, and other West Coast towns of Florida, has captured prominent news space in many of the newspapers and attracted an avalanche of attention to the line of cars that his company distributes.

"Struttin' Stude" makes a hit wherever she goes. The car is undoubtedly one of the most highly decorated affairs ever put on the road. It is equipped with 16 electric lights of various colors, two bumpers, six balloon tires, a windshield wiper, 1925 Duplex roller curtains, cigar lighter, rear vision mirror, sun visor, electric signs front and rear, snubbers, spring covers, a radio, a Victrola with even the Victor dog in evidence, side windshields, a literature compartment and a clock.

A radio "riggin'," which circumnavigates its upper works, is the most distinctive thing about the first-hand impression given out by the "Struttin' Stude". Mr. Jones alleges that the thing really works, and he takes pleasure in demonstrating. In order to make assurance doubly sure, however, he packs along a small Victrola, hidden in a compartment just below the loud speaker.

The car cost the company very little to equip. It is a 1923 model, rebuilt in the shop of the Peninsular Motors Company, the work being done so skillfully that the car looks new. The accessories and extra equipment were donated by a large wholesale automotive house of Tampa.

Mr. Jones uses the car as his personal vehicle, and it never fails to attract attention wherever driven, especially at night when its white, green and red lights are all a-glow. Literature carried in the car is distributed to spectators as they collect about the novel arrangement.

Refinishing With Pyroxylin Over Old Paint

(*Continued from page* 17)

Binder CPL 130 and the pigmented Binder Surfacer mixed together in equal parts, of which only two coats are necessary. The object here is to cut the cost of application and materials a little and obtain practically the same results.

Many may wonder why a Clear Binder is used at all. The company from years of experience and testing states that the adherence depends upon the amount of binders used (cotton and gum), and grade as follows:

1. Clears
2. Enamels
3. Surfacers
4. Fillers

Therefore, a clear has greater adherence than any other product. However, a pigmented product has the advantage of greater covering capacity, more durability, etc. Hence, a combination of the two makes the ideal surfacer.

Also, the greater amount of non-solvents present, such as benzol and other cheap substitutes, have a greater effect upon paint undercoaters. Hence, a good thinner having 100 per cent solvents, clears having about 80 per cent solvents and enamels having 60 to 70 per cent solvents have less effect on paint undercoaters than a surfacer having 50 to 60 per cent solvents and fillers 30 to 40 per cent.

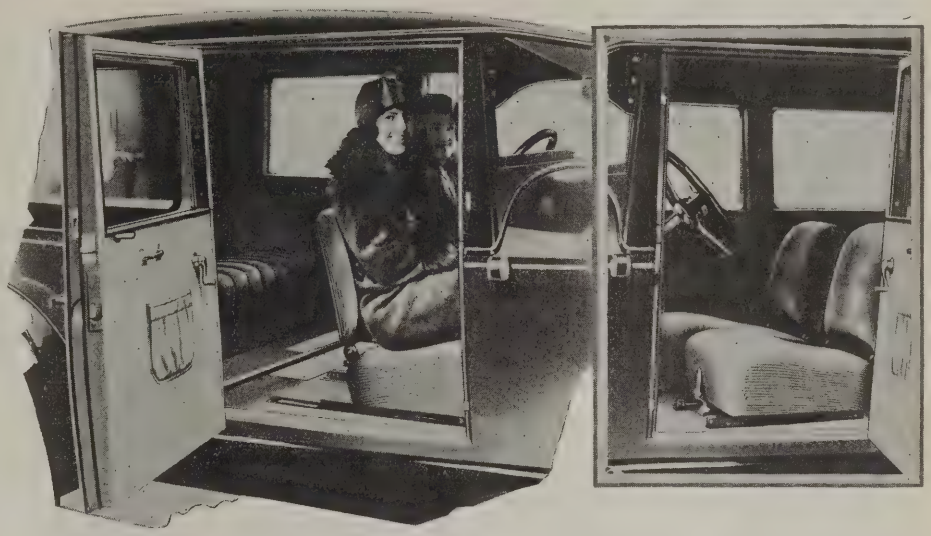
In every case the company recommends the use of its No. 2 Binder Thinner for reducing purposes where applying Pyroxylin over the old surface. Naturally there is a very good reason for this. This particular Thinner is made up with a large percentage of expensive medium and high boiling point solvents without any non-solvents being present whatsoever.

Any shop can determine the grade of thinner they are using by watching its drying speed and noting its smell. The higher priced the thinner the more easily applied, the slower drying, better flowing and less rubbing necessary. The cheaper thinners with their cheap solvents and substitute non-solvents have a much more rank odor than a good thinner which is made up of the better low, medium and high boiling point solvents.

The Sherwin-Williams Co. believes the possibility of applying Opex over the old surface opens up another new field for the dealers not only because they can turn out more cars in less time and at less expense as far as the car owner is concerned, but also because they can afford to finish their used cars in lacquer and thus make them much more saleable.

Kissel Has Sliding Front Seats in Two Models

IN presenting a new Kissel feature, sliding front seats, the company has added to the comfort of front seat occupants by permitting them to adjust their seats to any position to meet their convenience.



Instead of being mounted stationary to the floor with hinges as are commonly used, Kissel has mounted the seats upon a track and with the aid of rollers they easily and noiselessly slide forward or back to suit the driver's convenience. A neat nickeled lever is mounted on the front part of the seat which releases the rollers so sliding is possible and also serves as a lock to retain the desired position.

The advantages claimed in this innovation is that the seat on the driver's side being readily adjustable it can be set at any distance from the steering wheel and pedals to suit the individual proportions of the driver. Also when entrance or exit is desired to the rear, all that is necessary is that the person sitting on the right side slide forward without leaving the seat and ample passage is immediately made available without inconveniencing anyone.

The track is so constructed that it fits level with the floor and no interference is experienced by the party entering the rear or the person occupying the sliding seat.

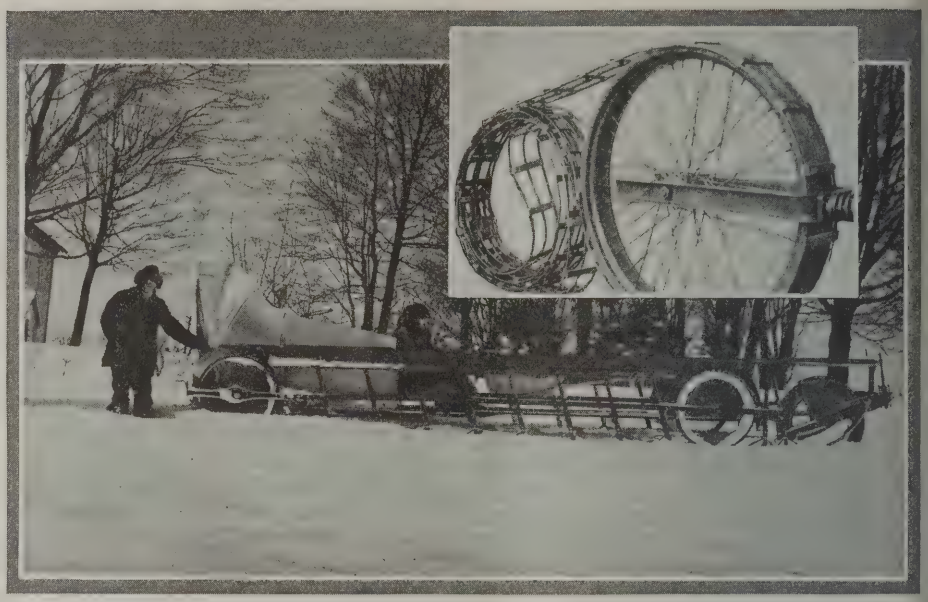
The models equipped with sliding seats are the six cylinder brougham and the straight eight brougham.

The adoption of the sliding front seat in no way changes the angle of the cushion or back, and in a recent test of the seat by a representative of this publication the ease with which the seat can be shifted to the most desirable position was very apparent. The operating lever is so mounted that it can be easily reached by the occupant of the seat, and there is nothing intricate about the locking mechanism that would cause sticking of the seat in any but the desired position.

Left: Right side view showing front seat occupant slid forward allowing ample space for entering or leaving rear. The track is so constructed as not to interfere with the smooth floor surface of entry way; right: Left side view showing driver's seat and neat conveniently located adjustment lever. About 4 in. are available for adjustment to suit driver's most convenient position from wheel or pedals.

New Style Oakland Landau Sedan

A new style Landau-Sedan featuring a longer body, new colors and larger windows is now in production at the Oakland Motor Car Co's plant.



The most noticeable change in the exterior appearance of the new sedan is the adoption of square finish rear windows in place of the former type. Rear corners of these windows have been rounded to conform to the rear roof lines of the body. The bows on either side mounted on the leather rear quarters have been retained. In addition to lengthening the body to provide more room in the tonneau, the rear seat has been widened.

A pyramid gray finish has been adopted for the lower body with the upper structure black. Red striping is employed along the belt line on the hood louvres and on the artillery wheels. The price of the car remains unchanged at $1,295 including complete equipment in the form of snubbers all round, front bumper, rear fender guards, automatic windshield cleaner, dash gasoline gage motormeter and car heater.

Autosleigh Makes Snow Travel Easy

The Autosleigh, it is asserted, makes possible the exploration and development of Northern Canada and other Artic regions that will aggregate millions of miles of service that does not now exist.

At a race and Carnival at Timmins, Ontario, an Autosleigh made 12 miles an hour over snow 2½ feet deep and surmounted 10 feet of hillocks of snow as if they never existed while its regular speed on a foot depth of snow averaged 16 miles an hour.

View of Autosleigh which combines features of Alaskan dog sled, automobile and caterpiller track. Insert—Showing closeup of front wheel and driving cable

THROUGH the invention of a practical combination of the Alaskan basket dog sled, the gasoline motor of the automobile and the caterpillar track of the world war tank, an Alaskan inventor has evolved the Autosleigh which is now doing yeoman service in British Columbia and Alaska carrying mail, passengers and express.

The AUTOSLEIGH, which is 23 feet long and 36 inches from center to center of the runners and weighs 1400 pounds, is made of hickory thoroughly braced with rawhide, making a strong, light and flexible construction. The wheel carrying the caterpillar tracks are mounted in light steel channels and carry solid rubber tires. The caterpillars are of three armored steel cables 2½ inches apart, connected by a flat steel crossbar, every 6 inches. The runners which carry the weight of the machine and its load, extend from rear driving wheels to the front idler wheels. Each runner carries two steel shoes, the center cable of the caterpillar passing between them.

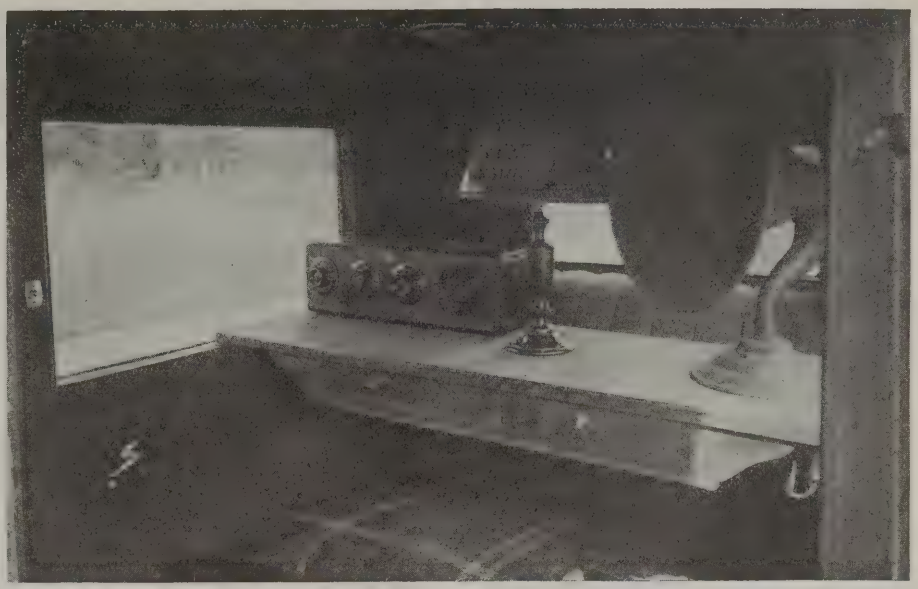
The steel shoes of the runners slide over the top of the crossbars connecting the cables to the caterpillar. When traveling in soft snow, the snow forms a thin layer on the tops of the crossbars, and, the steel shoes of the runners pass over it with the natural snow between the crossbars and prevent the runner from touching the crossbar, thus reducing friction! The caterpillar is therefore buried in the snow immediately under the runner, thus giving absolute traction in any kind of snow. The power plant is mounted on the rear axle and the driver rides on the rear, thereby tilting up the front end, making it easy to steer the machine with a sharp disc adjustable mounted in the extreme front and controlled by an ordinary steering wheel in the driver's compartment.

An air cooled motor 3½ in. bore by 4 stroke, 4 cylinders, flat opposed, two connecting rods being mounted on one throw of the crankshaft, making this the same length as a two cylinder motor of the same bore and stroke. Steel cylinders, aluminum alloy heads, and overhead valves are used. A multiple disc clutch, 3 speeds and reverse transmission, and a worm gear drive in the rear axle, constitute the unit power plant.

A drum carrying 150 feet of cable is mounted on the rear axle where the full power of the motor, through the transmission and worm gear, may be delivered to it giving a pull of 5,000 pounds, which is available for use in climbing steep hills and pulling loaded machines out of different places.

This drum is operated independent of the caterpillar and rear axle. The cargo space is 12 feet long and 33 inches wide. The load carried ranges from 400 to 1200 pounds depending on the condition of the snow. The speed ranges from 3-15 m.p.h, depending on obstructions under snow.

Stewart model 17x, 6-cylinder, 1½ to 2-ton truck which is built in two wheel-base lengths, 145 in. and 160 in. The engine has a 3¼ in. bore and 4½ in. stroke and develops 60 h.p. on the block. The rear axle is of the spiral bevel gear type fitted with a Brown-Lipe differential mounted on Timken roller bearings. Wheels are cast steel spoke type with Firestone demountable rims. Electric lights, starter, horn, tool kit, oil gun and jacks are regular equipment and the truck is finished in black enamel and red wheels



Automobiles Used to Sell Radio Sets

AUTOMOTIVE dealers who handle radio in order to swell their balance at the bank can smooth the road to increased profits by demonstrating their receiving sets in the automobiles they handle. This method has been found to be a successful means of getting the name on the dotted line in the case of Bennet & Elliott, Ltd., Atwater Kent distributors of Toronto, Canada.

Each Car is fitted with a Model 20 Compact, Model M Radio Speaker and an advertising lamp mounted on a neatly constructed shelf across the rear seat and carefully cushioned to avoid jarring. A fan-shaped antenna extends from the radiator cap over the top of the car, and ground connection is made on the frame of the car when running.

This idea has been found to be particularly adaptable when selling radio among scattered populations or to farmers. Such an arrangement makes possible a large number of demonstrations each day over a wide territory. Whenever the car is standing a more effective ground can be made by driving a rod into the earth, thus enabling the demonstrator to receive from great distances.

A valuable asset in a scheme of this kind is to be able to pull into the curb in front of your prospect's house with the radio set playing merrily away on the rear seat. It is a convincing demonstration and speaks for itself

No radio sales argument is more effective than an actual demonstration of a receiver's potentialities. Here is a way that automobile dealers can carry radio to their prospects.

Hercules Aerial Mast

S. W. HULL & CO., Cleveland, Ohio, have announced a new series of "Hercules" aerial mast. The masts are made in three standard lengths, 20 ft., 40 ft. and 60 ft. and are of all steel construction. A specially designed foundation eliminates the use of concrete and permits all sizes to be erected in the earth or on the roof. Each mast is tested to withstand a 500-lb. pull at the top. Each mast outfit is furnished complete with galvanized guy-wires, mast-head pulley, etc.

Big Show at Atlanta

ATLANTA, GA., Dec. 11.—The first annual Radio Exposition was held at the large Atlanta Auditorium the week of December 7th, with more than sixty companies exhibiting at the show representing the northern and eastern manufacturers of radio sets and equipment, and the dealers and jobbers handling radio goods in Atlanta. The show was sponsored by the Atlanta Radio and Electrical Association, and is claimed by officials of this organization to have been the largest radio show in the United States during 1925 outside of Chicago and New York. Thousands visited the show each day, and as a special effort to make the show a really worthwhile merchandising affair selling was the keynote of its purpose, and companies exhibiting reported that they did several thousand dollars worth of business during the week of the event.

Prominent among the exhibitors were the Atlanta automotive companies which also handle radio goods, and it was largely due to the efforts of this group that the show became a reality.

Among the automotive companies in Atlanta handling radio goods who exhibited at the show were the following: Hopkins Auto Equipment Co.; the Alexander-Seewald Co.; the Southern Bearings and Parts Co.; the Southern Auto and Equipment Co.; the Automotive Sales and Service Co.; the French Battery Co.; the Stewart-Warner Products Co.; the Philadelphia Storage Battery Co.; the Electric Storage Battery Co., and a co-operative exhibit of the various magneto service stations in Atlanta.

Carry Radio to Neighborhoods

FORT WAYNE, IND., Dec. 9.—Carrying out an aggressive distributing campaign here, the Wayne Auto Equipment company is naming as dealers for Neutrowound and Superton radio apparatus garages, filling stations and auto repair shops.

The campaign is bearing immediate results. Nightly residents of Northern Indiana, and of northeastern Ohio hear one or both of the sets distributed by the Wayne Auto Equipment company.

The use of filling stations as sales depots has been demonstrated as especially valuable, according to M. G. Boyce, vice president and general manager of the Wayne Auto Equipment company.

"Hundreds of motorists stop at filling stations each night," he points out. "In addition the filling station, especially the filling station that also handles accessories or does repair work is the neighborhood gathering place in many instances."

The advertising value of well-selected and well-placed sales agencies in garages and filling stations is immense, F. H. Cutshall, president of the company, declares. The garages and filling station dealers are being backed up by an intensive advertising campaign.

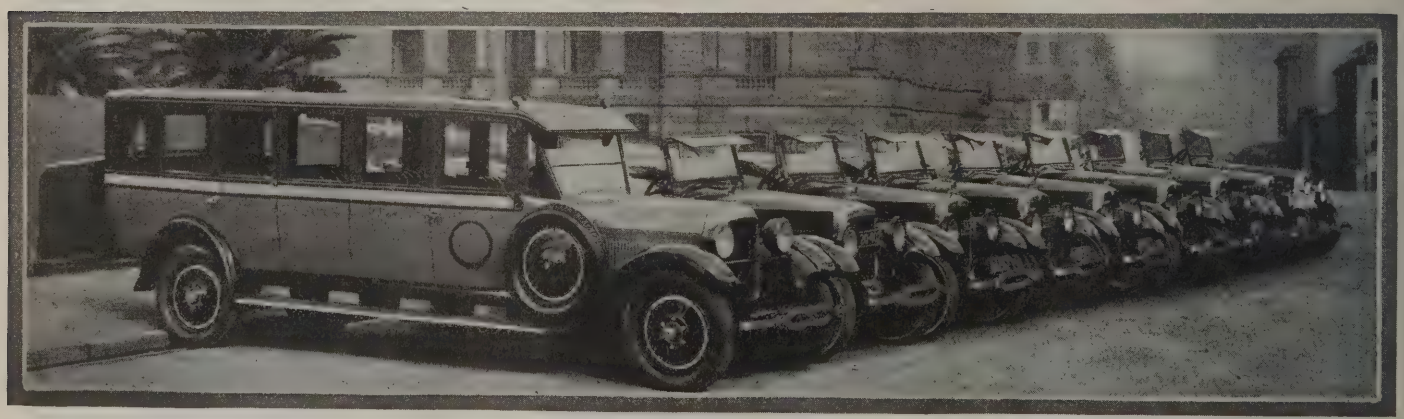
In but a few cases has the Wayne Auto Equipment company deviated from its policy of naming automobile repair shops, filling stations and garages as dealers. In several instances where no automobile shop was found in the neighborhood which the distributors desired to cover furniture stores were named.

"Our policy is to concentrate our sales in the automobile business as much as possible," Mr. Boyce declares. "These men are progressive, they know salesmanship and they have access to the audience which must be reached for the intensive sale of radio apparatus."

Home Demonstration Outfit

A HOME demonstration outfit, consisting of a specially constructed case providing space for wet A batteries, B batteries, loud speaker, tubes and a cable for connection to the receiver is manufactured by the Electrical Research Laboratories of Chicago, Ill., which points out the bad impression which may be created when the housewife to whom a set is being demonstrated views the array of batteries, wires and other accessories usually strewn about. The case also provides an easy way of carrying these various accessories.

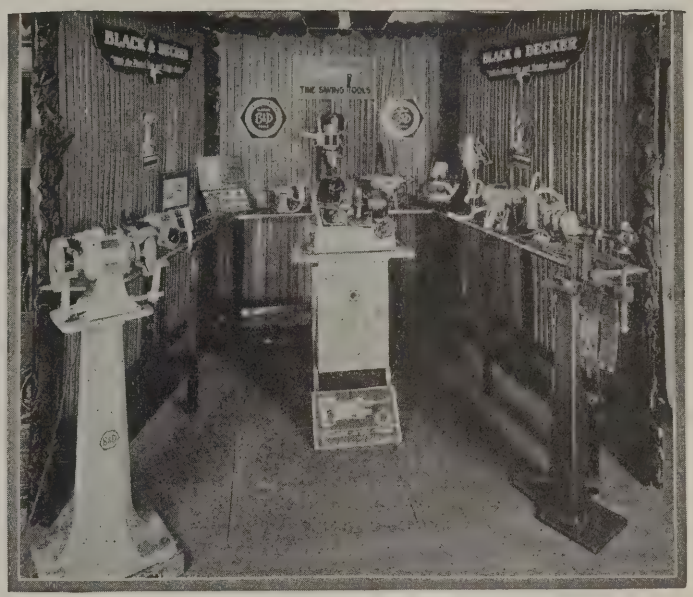
MOTOR AGE'S PICTURE PAGES



FLASHING THE MESSAGE. Above: Gigantic Rickenbacker sign displayed by Don Hogan, Denver dealer at 1227 Broadway. The ring revolves.

TRANSPORTATION MUST BE SERVED. Above are shown the Liberty Tunnels at Pittsburgh, Pa., the longest in the world for automobiles. They are built of concrete under a lofty hill and are 3,000 ft. in length. They cost approximately $500,000.

EQUINE ARISTOCRACY. Right: Prize-winning California horses travel in style in a Reo bus built especially for their accommodation. This surely represents the last word in personal transportation of equus caballus, commonly known as the horse.



FAITHFUL PUBLIC SERVANTS. Fleet of Studebaker Big Sixes and one of the new buses sold to the New South Wales Travel Agency of Sydney, Australia. The bus is used for tourist transportation to Katoomba, 62 miles distant over the Blue Mountains.

OF AUTOMOTIVE INTEREST

TO KEEP THE OLD BUS RUNNING. Facilities of the Cassidy Tire Co., Portland, Oregon, and associates, where local and out-of-town motorists are made to feel at home and where they may supply their transportation needs.

WHERE EQUIPMENT SELLS ITSELF. Actual demonstration is the best way to sell shop equipment. This is one section of the shop equipment display in the store of Onandaga Auto Supply Co., automotive jobbers, at Syracuse, N. Y. This section shows tools used for carbon cleaning, valve grinding and reseating, and brake relining .

GETTING UP IN THE WORLD. Left: Oakland Six which crossed the six highest peaks in the Sierra Nevadas and climbed to an altitude of 30,900 ft., traveling 730 miles in 30 hours and 42 minutes, smashing the "Six Peaks" record.

TEDDY SHOULD HAVE KNOWN THEM. Peter Vander Plaate, his wife and 14 progeny, who travel in four automobiles instead of railroad trains because it is cheaper. The picture shows the rebuilt Buick Six which they bought in Spokane en route from Saskatchewan to California. It costs them from $50 to $60 a day to travel

The Carbureter Manual Tells the Story

Q.—What is the best way to determine the size of carbureter for an engine?—M. C. Van Sandwyk, South Africa.

This is done by referring to the service manual put out by the carbureter concern in question. There does not seem to be any simple way of making this determination. In one carbureter service manual for example, a one inch carbureter of a certain model is intended to take care of engines having a piston displacement of from 195 to 265 inches, while another model carbureter of the same nominal size, that is, one inch, is supposed to take care of engines having a piston displacement of from 133 to 184 inches. In addition to these variations there are four or five different venturis which are used for different size engines, while in other carbureters there will be various jet sizes to use depending on the engine size and characteristics. For this reason it would be well to get in touch with the representative of some good carbureter or else negotiate with some representative carbureter concern and handle their products. If you do this you will be supplied with a manual which will give you all the information you need for selling and servicing the carbureter in question.

Q.—There seems to be a difference in engine power between the Superior model Chevrolet and the latest Chevrolet, Series K. Why should this be?

The bore and stroke is the same on both, that is, 3 11/16 in. by 4 in. so that unless the compression is slightly different on the two cars to which you refer there should be no appreciable difference in the power. The condition of an engine will have a lot to do with the power it develops and if one car you are observing has pistons and rings which fit well and valves which seat tightly, it may operate more powerfully than another car which is not in such good condition.

HERE'S HELP ON OIL PUMPING AND BEARING LEAKAGE

We have a letter from one of our subscribers in which he gives his experience and that of a number of other mechanics in overcoming oil pumping in a Dodge Bros. car. He approves of the points brought out in the Clearing House section of the November 12, 1925, issue of MOTOR AGE and mentions a few others. Among these is included piston and connecting rod alignment, for a poorly aligned rod which causes the ring lands to touch the cylinder wall will cause oil pumping similar to the action caused when a Ford piston ring is put in upside down. A number of other practical points are brought out and he also gives a method for stopping rear main bearing leakage on Oldsmobile cars. If any of our subscribers are interested in his methods we will be glad to make copies of the letter and mail to those interested. He claims that his work on Oldsmobile cuts down oil consumption from a quart every 50 or 60 miles to less than a pint in 500 miles.

CORRECTION ON SHORTENING CHEVROLET MANIFOLD

On page 26 of the November 12, 1925 issue of MOTOR AGE we had an article entitled "Shorter Manifold Works Better." This article referred to changes in a Chevrolet. We are now advised by Mr. Harold Scott of Marmarth, N. D., that the instructions given were not accurate, his letter being as follows:

"I call your attention to your reply to H. W. Wright, Allen, Kansas. The late short or "ramshorn" type manifold for the series K or 1925 Chevrolet positively cannot be applied to a 1923 Chevrolet, and I do not think it can be applied to the 1924 car, on account of the steering mast being too close to the engine, for the longer "horns," further the carbureter flangs would have to be changed as it is at right angles to the engine, fitting the new type carbureter.

The writer cut out 5 in. out of the original manifold on a 1923 coupe and installed the air distributers and tube in the head and made an average of 25 plus to the gallon of gas on a camping trip and got a smoother running machine at slow speeds, also a touring car (same year) so equipped made 31 miles to the gallon on a test run here, used the original carbureters on both cars.

Would advise Mr. Wright to install the air distributers and tube, or "air straighteners" with the original carbureter and shorten the original manifold but he will either have to counterbore the cylinder head intakes or he can cut special gaskets so as to get air tight joints, Chevrolet part No. 344161, intake manifold top-flange gasket will have to be installed, with the air straighteners. —Chevrolet Fan, Harold Scott, Marmarth, N. Dak."

The Readers' Clearing House

THIS department is conducted to assist dealers and maintenance station executives in the solution of their problems.

All questions are answered direct by letter, so the name and address should be given in full. This saves waiting for the answer to be published, which sometimes occurs several weeks late, depending upon the space available.

Readers' names will not be published with articles, if a request to this effect is received with the letter.

Inquiries not of general interest will be answered by personal letter only. Emergency questions will be replied to by letter or telegram.

Also state whether a permanent file of MOTOR AGE is kept, for many times inquiries of an identical nature have been made and these are answered by reference to previous issues.

Addresses of business firms will not be published in this department but will be supplied by letter.

Technical questions answered by B. M. Ikert and A. H. Packer; Legal, by Wellington Gustin; Paint, by G. King Franklin; Architectural, by Tom Wilder; Tires, by a Practical Tire Man; General Business questions, by MOTOR AGE organization in conference.

Ambitious Car Climbs Out Of the Ruts

Q.—We have a Chevrolet touring, 1924 model which guides hard. Although it does fairly well on level ground you cannot hold it in ruts. It will climb up on the sides every time. We have aligned the wheels or had them tested and they seem to be all right. One man told me the axle was bent. Should the axle set up straight or should it lean forward or backward? Will slippage of the axle in the spring holes cause this trouble? The trouble seems to be mainly on the right wheel as it pulls to the right more than to the left. We have tested for lost motion and can find none. The car has been run nearly 10,000 miles. We have oversize tires on the rear and old worn tires on the front. Would this affect the steering?—Weldon Teague, Texhoma, Okla.

The worn tires will have some effect. The writer has noticed that in driving in car tracks it is easier to stay in when new tires are used. The upper portion of the axle should be tilted backward slightly. If the axle is tilted too much it tends to cause front wheel wobble and if not tilted enough it tends to cause the car to steer off either to the right or to the left. From your description we are inclined to believe that the axle is not tilted back enough at the top.

It might be well to measure accurately from the center of the rear axle to the center of the front axle at both the right and left side of the car. This will tell you whether slippage of the axle on the springs has put the axle out of time. You might also refer to page 26 of the October 29th, 1925, issue of MOTOR AGE which shows a method of lining up the wheels on a Ford car. The procedure will be quite similar on a Chevrolet.

Planning Your New Building

By TOM WILDER

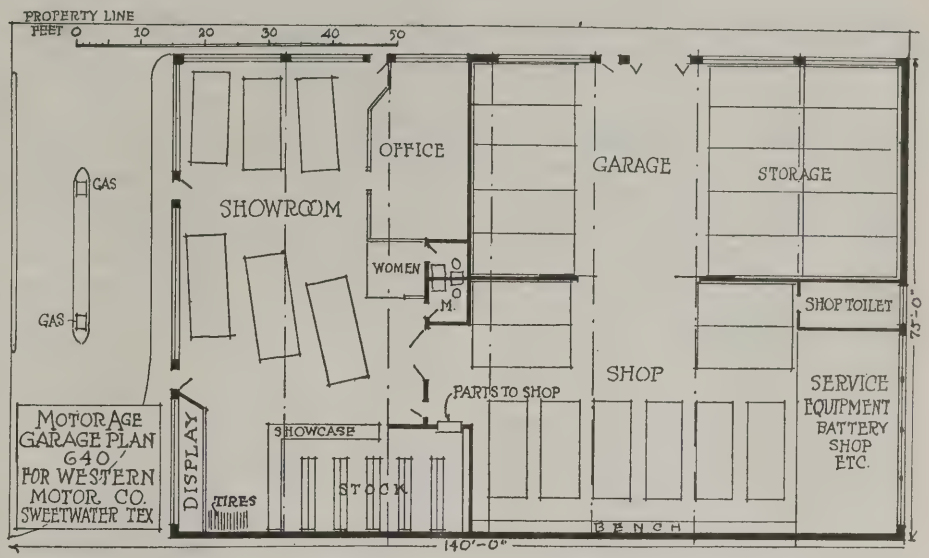
The READERS CLEARING HOUSE

This Is Like Plan Number 630 But Different

Q.—We are contemplating the erection of a new building and have observed with considerable interest the plan No. 630 submitted by you for the Clen E. Tope Motor Co., Prague, Okla., in the October 15th, issue of Motor Age. If you have any more complete drawings of this plan we would certainly like to see them.

We have an 80 by 140 ft. lot on the northeast corner, the 80 ft. fronting on the main highway and the 140 ft. on a side street. We would like to have your idea on a plan similar to this if you would think it practicable, using 75 ft. on highway and extending back 100 ft. or 120 ft. We are not particular about the used car market shown in the plans referred to. The building could be whatever depth was necessary to make easy and convenient drives to the filling station. We contemplate handling about the same lines of business as the Tope Motor Co.—Western Motor Co., Sweetwater, Texas.

We regret that we have no more complete drawings of the design made for the Tope Motor Company. It would, however, be quite impossible to use this plan on a smaller lot and consequently we have made a new layout for you following the style of the other as near as possible and at the same time making it conform to your lot.



Skylights Are Best

We note that you wish your building to be 75 ft. wide and suspect that you intend to use the 5 ft. strip so that you can use the windows on the side away from the street without the danger of your neighbor cutting you off. In this respect we would favor building right up to the line and using skylights to get your light. Windows on a 5 ft. alley with a wall opposite are practically worthless for lighting purposes, while skylights will give you a flood of good bright light and enable the men to do their best work.

We have allowed a good liberal space in front for your filling station making the building 115 ft. long and if we were in your place we think we would build the whole width of the lot. If this is done there would be space for one more car in the width of the garage and it would be 40 feet wide instead of 33.

The cars shown stored in the shop would be night storage only as during the day, the space would be used for handling cars in and out at the bench.

The space shown as women's waiting room is not intended to be enclosed, but merely a corner furnished with some nice furniture. However, this is only a personal opinion and it may be enclosed if seemingly more desirable.

Automotive buildings are different from most others. Because of the definite sized spaces needed for handling cars a 140 foot building cannot be reduced proportionately to fit a 100 foot space

LEGAL QUESTIONS ANSWERED

By WELLINGTON GUSTIN

of the Chicago Bar

TRACING CAR OWNERSHIP

Q.—We have a car that has been here for over 60 days with charges exceeding the value of the car. What procedure is necessary so that we may sell same as a recourse. Also, is it necessary that we first find out if it is stolen property? If so, just how would we have to go about it when there are no license plates and the car is five or six years old.—Wabash Harrison Garage, Chicago, Ill.

You could not pass title to a stolen car for the true owner alone has title. It might be possible to trace the car by the engine number from the manufacturer and on down to the owner. To secure the benefit of the statutory lien in Illinois you must file your lien claim within 60 days from the completion of repairs or date charges are due. If charges are for storage it would appear that lien could be filed at any time. This lien can be enforced by foreclosure and sale according to details of the Illinois Statue, which see. If the car has been abandoned then you have a very effective remedy under the statute on Abandoned Property. This provides for advertising and sale of the property at public auction. Either remedy must be followed strictly according to the statue.

Again if you can obtain service of summons on the customer or car owner, you may bring suit for your charges and once obtaining judgment you may sell to satisfy the judgment. Of course, if the car is stolen and abandoned by the thief, you should search and advertise for the owner.

JOINTLY AND SEVERALLY LIABLE

Q.—Does a business organization consisting of two or more partners have to be incorporated under the laws of the State of North Dakota, provided no stock in their company is sold, in order for their contracts to be valid, their joint obligations binding; in other words, can two or more persons be held jointly responsible in a financial way if they are not incorporated as a company?—Chevrolet Fan, Marmarth, No. Dak.

Where two or more persons do business as partners they are both jointly and severally responsible for the obligations of the firm. Each partner is an agent of the partnership in transacting business of the firm. The "rub" in a partnership is that each is responsible and liable for all the acts of the others acting for the firm. Parties incorporate that they may evade this personal resposibility, etc., on the firm's contracts. In a partnership the members sue and are sued individually. Parties failing to secure incorporation papers are held as partners.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Auburn Carbureter, Timing and Clutch

Q.—Send me a cut of the Schebler carbureter used on Auburn-6-66 and 8-88 and give instructions for adjusting.—M. D. Leasure, 1380 E. Garfield Ave., New Castle, Pa.

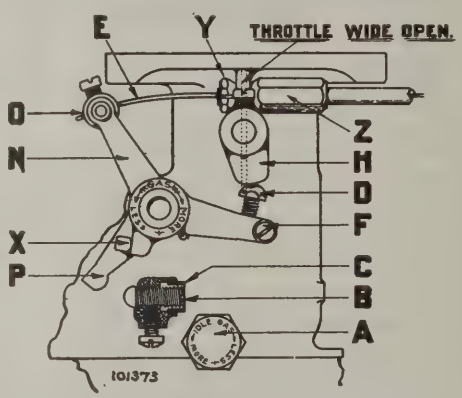
We are showing an illustration of the carbureter used on the eight cylinder model, this being adjusted as follows:

Idle Adjustment: Turning the idle adjustment screw (A) to the right (clockwise) gives a lean mixture. Turning it to the left (counter-clockwise) gives a richened mixture. This adjustment is not sensitive and can be turned from three to ten notches without seriously affecting the idle.

The idle adjustment should be set so that by depressing the air valve slightly (about 1/32 to 1/16 of an inch) the engine will start to cut out showing that the idling mixture is about right. If the mixture is too lean the engine will stop when the air valve is depressed slightly. If the mixture is too rich the engine will speed up slightly on depressing the air valve, and the air valve will have to be depressed considerably before the engine cuts out.

Important: If the idle adjustment is turned to the right (clockwise) too far, the air valve will not seat, since the needle is shut off too far. Turn to the left (counter-clockwise) until air valve seats and adjust as explained above.

Range Adjustment: This adjustment is only effective in the driving range at speeds from 20 to 40 miles an hour and does not affect acceleration or hill climbing. This adjustment as shipped from the factory will usually be found to be the best unless it is necessary to give a lean or richened mixture at speeds from 20 to 40 miles an hour. Turning the range adjusting screw (B) to the left (counter-clockwise) gives the driving range a lean mixture. Turning it to the right (clockwise) so that more of the threads of the screw (B) are exposed gives the driving range a richened mixture.



To obtain the original setting as shipped from the factory, set the end of the range adjustment screw (B) flush with the range adjustment bushing (C). If the range adjustment is changed it is necessary to readjust the idle mixture.

High Speed Adjustment: The adjustment as shipped from the factory ordinarily need not be changed. This adjustment is very sensitive to one turn in either direction for the wide open throttle position. In changing this adjustment try it on a hill, after each change, for best results. In extreme cases it may be necessary to furnish a leaner or richer mixture for wide open throttle position. The adjusting cam tappet screw (D) is turned to the left to give a richened mixture, and turned to the right to give a leaner mixture.

To obtain the original setting as shipped from the factory, the head of the range screw (B) should be flush with the range adjustment bushing (C). With throttle wide open adjust the cam tappet screw (D) until there is about 7/32 to 1/4 in. space between the dash control lever (P) and the end of the range screw (B).

Q.—Give the correct valve timing of the Auburn 8-88.

The intake valve opens on upper dead center and closes 35 deg. after lower dead center. The exhaust valve opens 42 deg. before lower dead center and closes 5 deg. after upper dead center.

Schebler carbureter on Auburn, showing adjustments

Tappet clearance should be .010 in. when checking the timing, but may be reset to .006 in. or .008 in. for quietness after timing has been checked.

In resetting the camshaft, the sprockets on the camshaft and on the crankshaft should be lined up so that the prick punch mark on the crankshaft sprocket is between the two prick punch marks on the camshaft sprocket when these marks are nearest together, and lined up between the camshaft and crankshaft centers. With the sprockets in this position the top dead center mark for No. 1 and No. 8 cylinders will be in line with dead center mark on the crankcase.

Q.—Show a sketch of the clutch and tell how to remove same.

We have no illustration of the clutch available at this time, but gladly give the following description taken from the Auburn-8-88 instruction book.

The clutch is of the single plate design and is composed of three major units, namely—the cover plate assembly, driven member assembly, and the release sleeve.

The cover plate assembly contains the cast iron pressure plate, the pressure springs, the release levers and release lever studs. These parts are carefully adjusted by the manufacturer and should require no future attention. The cover plate assembly being an independent unit is mounted on the flywheel by means of six cap screws.

The driven member unit consists of the spined hub, driven disc and two molded asbestos friction facings. The driven disc is made of spring steel and is spoked to relieve the outer rim tension. This member is slightly conical in form to provide for a smooth, even clutch engagement.

The release sleeve is of the anchor type and has a corded oil reservoir for supplying lubrication to the release sleeve and the release bearing. An oil cup is provided on the top of the floor board and this leads to the release sleeve reservoir. A felt wick insures an even capillary feed to the parts requiring lubrication.

No method of clutch adjustment is required as the pressure springs automatically compensate for all wear of the friction facings. The total spring pressure is approximately 1,400 lbs. and this is more than sufficient to prevent clutch slippage.

Clutch Pedal Clearance

When the clutch is fully engaged the clutch pedal should have about 3/4 in. clearance so it will not ride against the floor board. This is the only adjustment and should be checked every 1,000 miles.

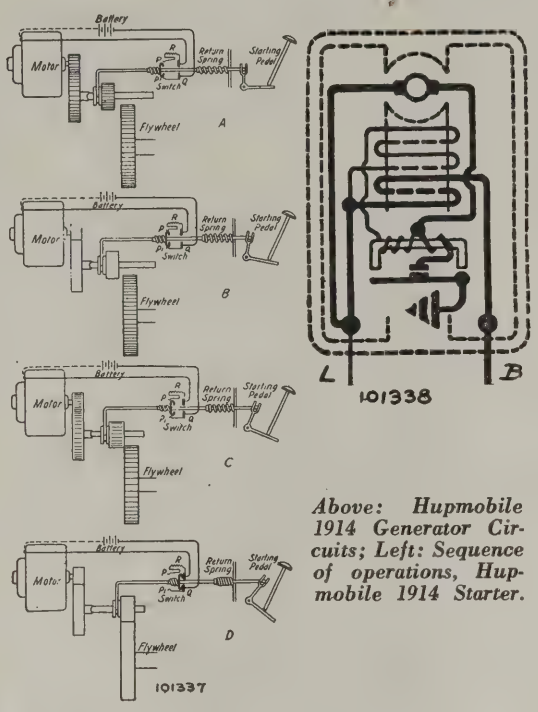
When reassembling the clutch to the flywheel, it is necessary to use a splined dummy shaft. This will align the spline clutch hub with the pilot bearing and permit the transmission to be placed in position.

The driven disc is riveted to the shoulder of the splined hub and the members should be placed in this position when assembling the clutch to the flywheel. Be sure that the outer end of the driven disc stands away from the flywheel.

When the friction facings of the driven member becomes so worn that the rivet heads are flush with their surface, they should be replaced. Especial care must be exercised in assembling new facings to the disc. As this member is dished, hand clamps should be used to bring the new facings tightly together before being riveted. If the facings are not rigidly riveted to the driven disc, trouble will result because of the fact that their unevenness will cause the clutch to drag.

Clearing Up Electrical Trouble

EDITED BY A. H. PACKER



The READERS CLEARING HOUSE

Electrical Data on 1914 Hupmobile

Q.—What is the action of the starter mechanism on a 1914 Hupmobile. The starter turns but the pinion does not engage with the flywheel teeth. The generator also fails as it does not charge the battery.—Brain Craig, Peachgrove Road, Hamilton New Zealand.

We are showing illustrations of the starter mechanism and the generator circuits. At "A" in the starter illustration the pedal is about to be operated and the contact disc marked "P" has not yet touched the contact fingers. At "B" the pedal has been operated a slight amount and the contact disc is making a connection so that current from the battery flows through the resistance and through the starting motor. This causes the pinion which is being moved toward the flywheel to turn slowly, which facilitates meshing. At "C" the pinion is about to engage with the flywheel and the circuit has been broken by the disc "P." At "D" the pinion is fully meshed and the disc is completing the starter circuit without including the resistance. This gives full power to the starting motor and enables it to crank the engine. You will have to investigate the main linkage of the starting device to see why the pinion does not mesh. Perhaps the yoke which moves it is broken or disconnected.

The Westinghouse generator has two terminals but in testing only one need be used as the frame of the machine is used as the other terminal. From the diagram it will be seen that the L terminal, which is normally connected to lamps, is connected to the negative brush, while the B terminal is similarly connected through the reverse series field. A rough test may be made by connecting a battery and ammeter to the frame and to either the B or L terminals and then closing the cutout switch which is mounted at one end of the generator. A normal machine will run slowly as a motor drawing 3 or 4 amperes.

Above: Hupmobile 1914 Generator Circuits; Left: Sequence of operations, Hupmobile 1914 Starter.

MAGNETO POINTS BURN OFF IN HAWAII

Q.—We are having lots of trouble with DU4 Bosch magnetos on White trucks. Nearly every month we have to change contact points. We use Tungsten contact points instead of platinum to see how long they are going to last. What causes the burning of the DU4 Bosch magneto condenser and armature winding?—Manuel Texeira, Paia Maui, Hawaii.

You state that you wanted to see how long the Tungsten points would last on the magneto and you have evidently found the answer. We would recommend your getting the regular genuine parts from the Bosch company or from any authorized dealer handling these parts. If the spark plug points are set too far apart, that is, more than .025 in., you will increase the tendency for the winding and condenser to burn out and will also increase the tendency for the points to burn.

Q.—What is the correct magneto timing on these trucks?

We understand that these magnetos work best on the White truck when the interrupter points just begin to separate with the spark lever in the advance position when the flywheel is 3 in. before dead center. This gives the timing of the spark in the advance position. In the retard position it will also be slightly before top dead center.

A TEST AMMETER WILL CHECK THE INDICATOR

Q.—What causes the battery not to come up in charge when current goes through? On my 1919 Maxwell car on which I have had considerable trouble, I have remedied some trouble by installing a new battery. Panel was new in May. The generator was overhauled a week ago. The word charge comes up on the panel at 15 or 18 miles car speed. But it is clear that the battery will not stay charged.

I do not use a self starter at that. I am the only one driving the car. The lights are dim until at 35 miles per hour they are bright as the generator cuts in. Seems as if there is a weak current going through. What could cause this?—Sidney Topness, Taylor Falls, Minn.

If you will disconnect one of the battery cables and connect an ammeter in series you will know at what speed the generator cuts in and you will know how much current in amperes is going to the battery. The indicator to which you refer merely tells you whether the generator is charging or not, but does not tell you how much. After you have determined the charging current in amperes you should connect a voltmeter across the whole battery and see whether it shows 12 volts or 15 volts while the generator is charging.

The 12 volt indication shows a discharged battery and the 15 volt indication shows a charged battery. You can also test with a hydrometer. If you have a voltmeter with a low voltage scale you can check each cell separately and see whether each one shows 2 volts or 2.5 volts. The 2 volt reading indicates a discharge condition and the 2.5 volts reading indicate a charged condition.

Q.—I would also like to know if a 32 c.p. bulb consumes more current than a 21 c.p. bulb. If this is the case how much more drain on the battery would the 32 c.p. bulb be.

If you put in 32 c.p. bulbs in the headlamps they will draw 1 to 2 amps. additional current from the battery or approximately 50 per cent more current as compared to the 21 c.p. lamps.

Four Brushes Better Than Two

Q.—Since writing you about trouble experienced with a Chevrolet starter we have found that there is a replacement type of brush holder which carries four brushes which can be obtained at an authorized electrical service station and overcomes the trouble that we had where a flat spot would form on the commutator of the starting motor.—E. R. Sizer, 3719 Thompson Ave., Tacoma, Wash.

Since writing to you we have also had this information through authorized service stations. The formation of flat spots on the commutator was aparently due to too heavy a current to be handled by the two brushes, combined with a tendency for the armature to stop in certain position.

POINTS BURN—SPRINGS STIFF

Q.—We have a 1924 Ford car that will burn the coil unit points so badly that they will stick and cause missing. These points will run only about 100 miles without filing. We recharged the magneto with a recharger some time ago. The first points that came with the car lasted almost a year, and we replaced them with genuine Ford points which have been giving trouble ever since.—Granada Garage, Granada, Colo.

We believe that when the new points were installed that the Ford coils were not properly adjusted. If the spring tension is too stiff the points will not open until the current is quite heavy and this will result in burning the points.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Mechanics Must Know Equipment

OTHER things being equal a mechanic will do a certain job in less time with the right tools or equipment for that job, than without such equipment.

But he must understand the equipment and often must show his own ingenuity by getting results from a machine that might otherwise be stamped as imcapable of doing a certain job.

Makers of shop equipment have told us that often they get letters from owners of their equipment stating that the machines will not do the work, or that the mechanics at least cannot get the results the makers claim for their product.

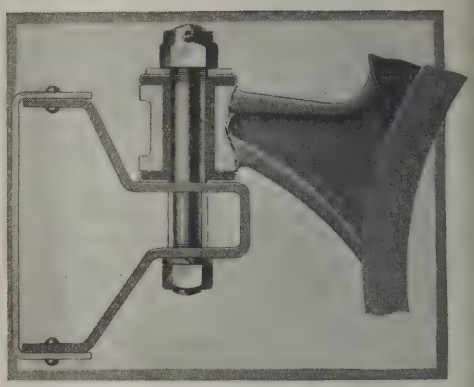
This brings up a point which is pretty well clarified in the machine tool field and in the exclusive machine shop.

Take the lathe, for example. In lathe work the job depends upon the "set-up." Often a machinist has to spend many hours in setting up the work which actually may require only 20 minutes to do.

Now, if he does not know how to rig up the lathe to handle the job correctly, the lathe should not be condemned as unfit for the job. That's up to the mechanic's ingenuity and it is largely a matter of experinence on the part of mechanics to get the best results from any piece of equipment.

One manufacturer of a disk wheel truing apparatus stated that while he had been able to handle practically every conceivable job of straightening disk wheels, yet, it was quite a job to keep this apparatus "sold" to purchasers largely because the latter failed to use a little ingenuity in the "set-up." Every such job is a little different and the mechanic must, therefore, use discretion as to how the job is going to be handled. If this is done, equipment makers will get very few letters from shops and men stating "the machine won't work."

A full understanding of the potential uses of a piece of equipment will greatly add to the speed with which a flat rate operation can be performed. And that means good work and profit.



Carbureter Flat Rates

I have been a subscriber to MOTOR AGE for a number of years and like it very much. In the November 5 issue I noticed an electrical flat rate chart comprised mostly of 1925 cars. Will you please inform us if you have a flat rate chart including cars back as far as 1920 or further. I would like to use this in electrical work. Advise if you have one of these in stock and the price of same. Also same information in regard to carbureter flat rate chart.—Libby, Nicholson & LaRou Co., 686 Congress Street, Portland, Maine.

We would certainly be glad to print and furnish the charts mentioned if they were available. In making up the electrical flat rate chart we first got all information from manufacturers, then from local dealers and electrical service stations and finally went and inspected various cars to estimate the proper charge to make. As far as we know the large electrical concerns have not as yet gone very far in establishing flat rate, and to make them fair it is necessary to study the car construction. This is difficult to do except in the case of the current models. We accordingly have to leave it up to the repair-man in applying the flat rate charge to see whether a 1923 or 1924 car has construction similar to the 1925 car.

If the construction is radically different and it is more of a job to take the generator or starter off, then he might lose money by applying the flat rate table. When the time runs back four or five years there is another danger that rusted bolts and other parts which have suffered from time and wear will complicate the job. Our recommendation accordingly is that the flat rate be applied for not more than three years back and then only in case the construction of the car is similar to the one given in the table. For cars more than three years old it would be safer to use the time basis.

MOTOR AGE has not had the opportunity of developing a flat rate chart covering carbureter repairs and at the present time we do not know of any concern having undertaken this work.

THINGS THAT HELP FLAT RATE

Although the removal of a power plant is not as frequently performed now as in the former days it helps the mechanic if the engine is secured to the frame in a manner that makes quick removal possible. Here is shown a construction that facilitates removal. Incidentally this engine support is set in an insulation of live rubber.

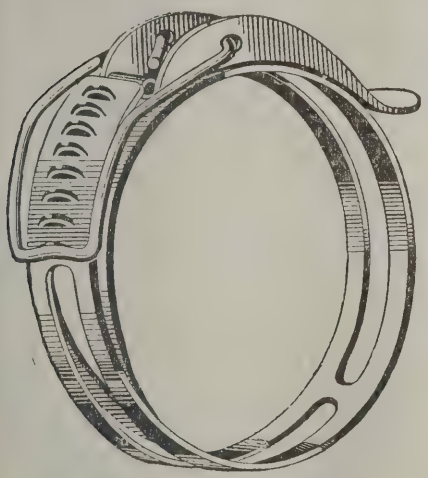
MOTOR AGE'S FLAT RATE FORUM

No. 44

FLAT RATES FOR OAKLAND MISCELLANEOUS ENGINE OPERATIONS

Models 34 to 6-44 Incl.

Manufacturer's Official Designation		Time Hrs.	Time Min.
7-101	Cylinder head, remove, carbon cleaned and head replaced	1	50
7-102	*Cylinder head remove and carbon cleaned and head replaced	1	30
7-103	Cylinder head gasket removed and replaced	1	20
7-104	Cylinder head bolts tightened and tappets kerosened, oiled and adjusted		25
7-105	*Cylinder head gasket removed and replaced		45
7-106	*Cylinder head bolts tightened		10
7-110	Remove 6 pistons, fit new pistons to cylinder bores and assemble pistons with new rings and old or new rods to engine (oil pan off)	5	30
7-111	Remove one piston, fit new piston to cylinder bore and assemble piston with new rings and old or new connecting rods to engine (oil pan off)		45
7-113	Regroove one piston (deepen ring grooves)		12
7-114	Ream one piston and connecting rod to fit oversize pin		15
7-116	Remove 6 pistons and connecting rods, change piston rings, and replace pistons and connecting rods (oil pan off)	3	45
7-117	Remove one piston, change piston rings and replace piston (oil pan down)		35
7-118	Remove one piston, change piston pin or connecting rod, (one or both) and replace piston (oil pan off)		40
7-118	Extra time to be added for each additional piston pin changed		30
7-119	Remove old piston pin from piston and connecting rod and replace with oversize pin		30
7-119	Extra time to be added for each additional oversize pin fitted		20
7-125	Engine side pan, R or L removed and replaced		25
7-126	Engine side pans tightened		15
7-127	Engine oil pan or gasket removed and replaced (one or both), (oil pan cleaned)		45
7-135	Oil pressure regulated		12
7-136	*Oil pump and distributor drive gear and shaft assembly removed and replaced		35
7-138	Oil pump and oil lines removed, cleaned and replaced with necessary new part (oil pan off)		45
7-139	Oil line removed and replaced, engine to dash gage		20



*Denoted operation on model 6-54.

THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Noscrew Hose Clamp

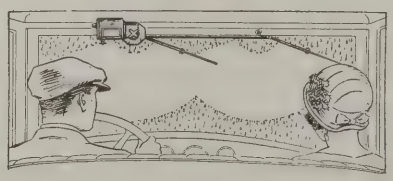
SNAP-TITE Clamp Company 110 W. 14th Street, New York, is manufacturer of the Noscrew Hose Clamp, a clamp which it is said can be quickly and securely attached without tools. In attaching you place the clamp around the hose, slip the spring into its proper notch and clamp down on the lever. It is claimed the spring will last indefinitely under pressure. Any shrinkage due to the rubber is immediately taken up by constant tension of the spring, thus prevent the possibility of leaks which might otherwise be caused with age. List price 15 cents.

Noscrew Hose Camp

S. & M. Road-Lite Reflector Sizes

IN the description of S. & M. Road-Lites, made by the S. & M. Lamp Company, Inc., Los Angeles, in the November 26th issue of MOTOR AGE there was an error with respect to the reflector sizes. The diameter of the reflector of the No. 85 is 6⅜ in. while the diameter of the No. 95 is 7⅜ in. These two models supplement the No. 75, a smaller lamp, the reflector of which is 5¾ in. in diameter.

McConnell Electric Windshield Cleaner



UNIFORM speed under all driving conditions is found in the McConnell Electric Windshield Cleaner, according to the manufacturers, the McConnell Mfg. Co., Newark, N. J. Consistency and dependability of service are claimed for this bad weather facility for motorists. It is said the wiper will not slow down under heavy loads or on hill while its consumption of current is slight. A knob permits hand operation when desired. The McConnell wiper can be operated while the car is parked and with the engine idle. An extra-long wiper cleans an arc 21 inches wide. List price in the United States for four different models is $8.75 while the list for the "Twin" model is $10.50. The "Twin" cleaner has a more powerful motor especially developed to operate two wiper blades.

Tung-Sol Bi-Focal Lamp

Klasp-Tite Kamp Lamp

SOMETHING to interest automobile tourists and campers is found in the Klasp-Tite Kamp Lamp, made by A. B. Stewart & Company, 225 W. Huron Street, Chicago. This is a portable electric lamp which grips to a table, chair, guy rope, tent pole, branch of a tree and other places. It works off the lighting system of the car, being hooked into any socket. A ball socket joint enables the owner to turn it in any direction. It has a six inch aluminum reflector. Ten feet of extension cord come with the lamp, making it valuable as a trouble lamp or doing work around the car. Made in both single and double contact to correspond with car. Dealers list price, $2.50.

Additional Descriptions on Following Page

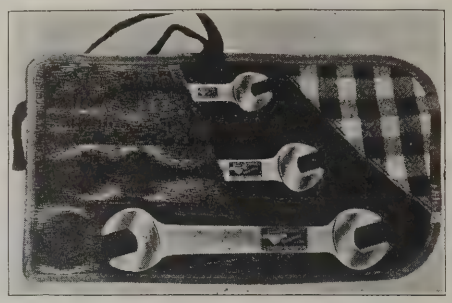
Tung-Sol Bi-Focal Lamp Bulb

THE Tung-Sol Bi-Focal Lamp Bulb, made by the Tung-Sol Lamp Works of Newark, N. J., is a bulb which is declared to solve the problem of eliminating glare and assuring safety when passing another car. This result is obtained without any change in either the position of the reflector or the bulb. The bulb contains two filaments rated at 21 C. P. each, one filament being placed slightly above the other. The lower filament provides a long-range driving beam which illuminates the road far ahead while the upper filament furnishes a depressed, or short-range beam of identical intensity. This beam is directed downward so as to bring the light pattern nearer to the car and out of range of the approaching driver's eyes. It is said to be a more comfortable light to meet in the road than a dimmed light, and makes dimming unnecessary.

Two-unit installation of Hassler Stabilizers for improved Ford, showing front and rear positions.

Hassler Two-Unit Installations

DEVELOPMENT of a simple two-unit stabilizer installation for the improved Ford car has been accomplished by Robert H. Hassler, Inc., Indianapolis, Ind. It is said that the new Hassler installation efficiently equips all of the improved Ford models with two-unit arrangements without in any way interfering with the tire carrier or other construction of the car. One of the special features of the Hassler Stabilizer relates to lubrication, the device being equipped with an Alemite Zerk fitting. It is the contention that lubrication increases efficiency and decreases the wear upon the equipment. Another feature is the detachable belt which may be removed without taking the stabilizer off the car. The belt never enters the case, a feature which is said to minimize strain on this member. The stabilizer, moreover, is controlled by "smooth friction" as opposed to "rough friction".



THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

(Continued from page 29)

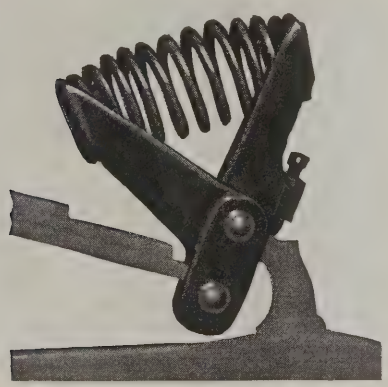
New Bonney Wrench Kit

BONNEY Forge and Tool Works, Allentown, Pa., have announced a new wrench kit known as the No. 1 Sample Kit. The kit contains three of the most popular size double-end Chrome Vanadium Engineer's Wrenches. As these wrenches have a different opening on each end the kit provides wrenches to take care of the six most popular size nuts and bolts as follows: $\frac{5}{16}$ in., ¼ in., $\frac{11}{32}$ in., ⅜ in., ½ in., and $\frac{13}{32}$ in. The three wrenches are put up in an attractive leatherette roll and the outfit is priced at $2.50, approximately 65 cents less than the net list price of the outfit if the wrenches and kit were bought separately. Bonney points out that these three wrenches will take care of a very large portion of wrench work that the average mechanic or car owner has to do.

Bonney Wrench Kit

Center Mounting Shock Absorber

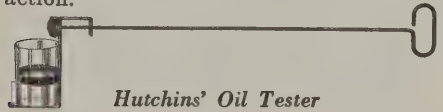
NECESSITY of mounting but one shock absorber on each extreme of the Ford car is an advantage claimed for the Center Mounting Shock Absorber, made by Stewart-Warner Speedometer Corp., Chicago. This device embodies all special features furnished in other shock absorbers made by the corporation. The chief difference is in the new unit's special mounting brackets which makes it possible to do away with two shock absorbers in the necessary set. At the same time the manufacturers declare the two center mounting Shock Asborbers will give the fullest riding comfort. Packed in complete sets ready to install the price is $13.50. West of the 100th meridian, $14.



Stewart-Warner's new "Center Mounting Shock Absorber" for Ford. Two of these complete necessary set.

Wooden Transmission Lining

KELSEY Wooden Transmission Lining for Ford cars is made by the Kelsey Manufacturing Co., Escanaba, Mich. The lining is constructed of tough, pliable long-grained wood which is chemically treated to stand hard service and is recommended by the makers as possessing special durability. Constructed of wood it is pointed out that the lining will not unravel and clog the oil feed pipes, or catch on the magneto posts. It is said to stop chattering, grabbing and bucking. Three wooden linings and 18 rivets come with each carton, the list price per set being $2.50.

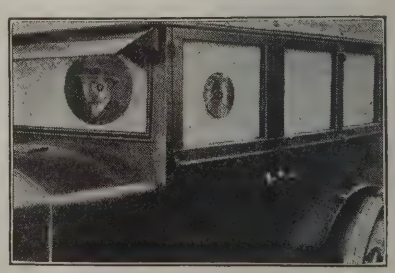


Kelsey Wooden Transmission Lining

Victory Cushion Snubs

Victory Cushion Snubs

VICTORY Products Corporation of Marion, Ind., is producing a shock absorber for Fords known as the Victory Cushion Snub. This shock absorber is so designed that one model fits all models of Fords. It has a special adjustment device. Installation is quickly and easily accomplished. The spring shackles are removed and the Victory Cushion Snub is put in place. Should a spring be broken use of this device still leaves the running gear connected. The manufacturers claim the device prevents sidesway and checks rebound positively and recommend it for Ford cars equipped with balloon tires to control the galloping and rolling action.



Hutchins' Oil Tester

Hutchins Oil Tester

HERE is a device designed to help the service station sell more oil to Ford owners. It is known as the Hutchins Oil Tester and the manufacturer, M. M. Hutchins, 1325 Burns Avenue, of St. Paul, Minn., says it will greatly increase the draining jobs. When this appliance is used the crankcase oil instead of spilling on the ground is drawn into a glass and the sample is shown the owner.

Hulett's Anti-Froster

HULETT'S Anti-Froster is said to prevent frosting and misting of the windshield in the coldest weather. The body of this device is constructed of Pyralin and it is held in place with vacuum cups. In addition to giving service in the manner just described the distributors also recommend the attachment for protection against glaring headlight. The Hedeen Company, Brainerd, Minn., is the distributing agency and the price is $3.95 per set.

EDITORIAL

Shows and More Shows

THIS is the season of automotive shows. Larger towns and cities have figured themselves into the show calendar and likely the smaller places will check out at the end of the season with a list of shows fully as large or larger than in any season heretofore. It is hoped that the number of exhibits in small towns will break all previous records. Apparently a new high in this respect was established last year. It can not be over-emphasized that exhibition and concentrated demonstration of some sort is just as valuable to the small town, considering relative business volumes, as to the large city. One beauty about staging the small town show is that arrangements can be made in short order after an agreement to show has been reached. If all towns from 1000 or 2000 population up would stage automotive displays with special frills to attract public notice the accumulative effect would be tremendous.

Farmers are urged to feed cheap corn to good-priced livestock—not feed good-priced livestock to cheap corn. Dealers who feed new car profits to hopeless trade-ins please take note.

Bigger Business Ahead

AMERICA next year will be in a position to turn out a materially greater volume of automobiles than ever before. Our car production capacity will hit a new high mark. Preparations are under way in numbers of manufacturing organizations to take advantage of the enlarged business opportunity which it is believed the coming year will develop.

Not only is there prospect of a strong buying movement in the United States but the outlook abroad is very favorable. Overseas there is a growing interest in American motor vehicles and signs point to more prosperous conditions.

Unless present signs go by the boards we are likely to see the sale of motor vehicles to foreign users greatly stepped up. It is not impossible that we are on the threshold of a great upward swing in automotive buying in Europe especially which in due course will strike a pace comparable to that marked by buying in the United States. There is no reason why the motor vehicle should not be just as popularly desired abroad as here at home and there is reason to expect coming years will witness a narrowing of the present wide distance between the ownership ratios of this and several other countries.

In view of this condition American producers are warranted in making themselves ready to compete in foreign fields as well as making ready to supply any demand of the home market. Between the opportunity at home and that abroad, both being very bright at this distance, it is not unreasonable to expect good use will be found for much of the added capacity.

We trust, however, that despite this added capacity our makers will follow the safe and sane policy, marking operations from the first of last year, of letting output be measured by consumption's requirement. The only danger in increased production capacity is in the temptation to employ a greater portion of it than buying conditions justify. At the same time it is well and wise to be prepared to meet an increased demand for cars.

Car owners will buy only the products that they "think about." Keep reminders before them. That starts and continues "thinking."

A Lesson from "Red" Grange

THE noted "Red" Grange took advantage of an opportunity while it was thoroughly alive. "Red" quit the university while he occupied the center of a national stage with the determined plan of raking in the shekels promised him in professional settings. Had "Red" delayed this program for a year such a course would have been at the risk of again carrying ice next summer and probably the summer following. It was a case of acting at once while psychological conditions were in his favor or turning his back on a chance to accumulate a quick fortune.

Opportunities, on the tape of the dollar, vary in size and character, yet the rule applying to all is "action" and prompt action—and that is the rule all up and down the line in automotive merchandising. A prospect is worth no more in potential profits than the promptness and effectiveness of the dealer's or salesman's follow-up. That temptation to delay until tomorrow is one of the great snares in the way of success. Yielding to that temptation is a weakness of which all men who sell are more or less guilty. Opportunities abound in the field of automotive merchandising, but like all opportunities they are short-lived and their profits accrue only to those who are quick to see and get busy. Do like "Red."

Much possible maintenance business enters through the door of the sales room. Many possible new car and accessory sales enter through the door of the shop. Man both entrances.

South Boosts December Sales Level

Factories Continue to Slow Output and Take Inventory

Advance in Tire Prices Reaches Manufacturers and Is Causing Much Study

NEW YORK, Dec. 16.—Sales of automobiles are seasonally poor in most parts of the country. Good weather in the south has held the level to an unusually high point, and Florida is taking cars in unprecedented numbers, despite a freight embargo which has obliged the automobile companies to establish distribution points in Georgia and other nearby states.

The factories are marking time, with most gradually curtailing output, closed for inventory, or getting under way on new models. Meanwhile the principal subject of discussion is the price situation. The advance in tire prices has finally reached the motor car manufacturer, and the increase that will have to be met or absorbed somehow is from $30 to $50 on most models.

With the tendency in automobile prices definitely downward, a rather serious problem is presented. The limit of economy in production and purchasing has been reached by most of the large factories, so the tire increase should logically be added to the list price of the car. Whether this will be done depends largely on competitive conditions and how closely the manufacturer has pared down his profit per unit during the current year.

The tendency of raw materials used in the manufacturer of cars is upward, but the advance has not yet gone far enough to affect production costs. Most of the large companies are well covered for their requirements for the first half of 1926.

A bright spot is the prospective tax reduction, which will, so far as the consumer is concerned, nearly compensate for any advances in list price that may be made to meet the higher cost of tires.

Jordan Behind on Orders For New Light Eight Cars

CLEVELAND, Dec. 12.—Inability of Jordan Motor Car company, Cleveland, to supply the remarkable market for the new line eights, despite a daily factory production of 65 cars, was announced here by Edward S. Jordan, president.

At the same time, Jordan announced the company had declared its usual 1¾ per cent dividend on preferred stock and 75 cents per share on common stock, to be paid December 30 to stockholders of record, December 15.

"Despite our record factory production," Jordan said, "there is not a dealer or distributor in the country who has more than one car for demonstration or exhibition purposes, and many dealers have not an exhibition car on their floors.

"During November, we shipped more than 350 cars to Jacksonville, for distribution throughout Florida. These included two trainloads and another shipment of 15 cars. Despite these heavy shipments, there are only four cars in the hands of dealers today and deliverable in the state of Florida."

General Motors Begins to Pay $33,608,026 Dividend

NEW YORK, Dec. 12.—Between today and Jan. 7 General Motors Corp. will pay out $33,608,026 in dividends. This is said to be probably the largest dividend disbursement ever made by an industrial company in a similar period.

Today General Motors began to mail to 29,792 common shareholders checks aggregating $7,741,931 representing the regular quarterly dividend of $1.50 per share. On January 7 the same holders will receive checks totalling $25,866,095 representing the $5 extra cash dividend declared last month.

Previous common dividends this year amounted to $28,500,000, bringing the total common dividend disbursement for 1925 to upwards of $62,000,000, or about 60 per cent of net income for the current year. In addition approximately $7,200,000 will have been distributed to preferred stockholders this year.

McNaughton and Stephens Are Promoted by Cadillac

DETROIT, Dec. 14.—Lynn McNaughton, vice-president and general sales manager of the Cadillac Motor Car Company, has been appointed assistant to President Lawrence P. Fisher. He will assist President Fisher in administrative lines in addition to retaining general supervision of sales.

H. M. Stephens, now general manager of the Cadillac Chicago branch, comes to Detroit as general sales manager in direct charge of sales. He is succeeded at Chicago by R. G. Tiffany. Mr. Stephens was appointed manager of the Chicago branch a year ago.

These appointments announced today by President Fisher are in line with the new expansion program of the company and are effective at once. The above appointments followed immediately after figures released by the company showed that business during the past five months has been running double of what it was in 1924 and that the current orders insure a capacity output for the winter months.

G. F. Disher Is Re-Elected To Presidency of A. M. A.

Warfield and Pettingell Also Succeed Themselves as First and Second Vice Presidents

CHICAGO, Dec. 14.—G. F. Fisher of the Gemco Manufacturing Co., Milwaukee, was re-elected president of the Automotive Manufacturers' Association at its annual meeting here. E. E. Warfield of the Gill Manufacturing Co., Chicago, and C. D. Pettingell of the Apco Manufacturing Co., Providence, R. I., also were re-elected to the positions of first and second vice-president respectively.

Forty-two members of the association attended the annual meeting and banquet. Officers and chairmen of committees made their reports, and two addresses featured the session. These were by F. B. Hutchison, lecturer on advertising and retail merchandising, School of Commerce, University of Iowa, and E. E. Warfield, vice-president of the association.

Mr. Hutchison spoke on "Bridging the Gap Between National Advertising and Retail Sales." Mr. Warfield presented a review of the accomplishments in the industry in 1925 and the outlook for 1926.

Directors elected included President Disher, Robert Dunlap of C. A. Shaler Co., Waupun, Wis., A. R. Johnson of Jefferson Electric Co., Chicago, B. N. MacGregor, Packard Electric Co., Warren, O., N. A. Petry of N. A. Petry Co., Philadelphia, Harry G. Sparks of Sparks-Withington Co., Jackson, Mich., J. P. Whitaker, Whitaker Battery Supply Co., Kansas City.

The six holdover directors are J. A. Anderson, Stone Manufacturing Co., Chicago; Smalley Daniels, New Era Spring & Specialty Co., Grand Rapids; A. C. Johnson, Apex Electric Manufacturing Co., Chicago; John F. Shuford, Wedler-Shuford Co., St. Louis; B. J. Koral, E. Edelmann & Co., Chicago; and Noah Van Cleef of Van Cleef Brothers, Chicago.

Rolls-Royce to Keep Firm Of Brewster & Co. Intact

NEW YORK, Dec. 12.—Henry J. Fuller, president of Rolls-Royce, which recently acquired Brewster & Co., says that the tradition and prestige of the century-old name of Brewster will be preserved. The Brewster business will be conducted in its premises as heretofore at Long Island City and William Brewster will continue as president and become vice-president of the Rolls-Royce concern.

Rolls-Royce probably will take over the Fifth avenue showrooms of Brewster, at the corner of Fifth and 56th street.

N. Y. Rubber Exchange Is To Open About Jan. 15

At Least 100 Members Are Expected to Begin Trading on Separate Floor

NEW YORK, Dec. 12.—The Rubber Exchange of New York, plans for which were announced recently by F. R. Henderson, president of the Crude Rubber and Foreign Produce Corporation, 250 West 57th street, is expected to open for trading about January 15, with at least 100 members.

Despite the fact that the Rubber Trade Association opposed inauguration of the exchange at this time, and that the New York Cocoa Exchange has appointed a committee to confer with trade interests regarding arrangements for trading in rubber and rubber products on the floor of the Cocoa Exchange, Mr. Henderson and his associates are proceeding with the plan for an independent exchange in the conviction that rubber's increasingly important place justifies such action.

They believe that crude rubber, which was fourth among imports last year, will be higher than sugar this year and will obtain first place in value of imports in 1926.

They do not believe that the recently announced increase under the Stevenson act of the exportable allowance from British Malaya and Ceylon to 100 per cent, effective Feb. 1, will bring about any material change in the price of crude rubber.

The increase to 100 per cent will release about 15,000 additional tons for the quarter beginning Feb. 1, but this is not regarded as sufficient to lower the price and already crude rubber on the London market has reached a new high after reacting under the first influence of the increase by the Stevenson committee.

Studebaker Announces New Financing Plan for Dealers

NEW YORK, Dec. 12.—Through the Industrial Acceptance Corp. and one of the largest insurance companies in the country Studebaker Corp. of America has just made effective a new financing plan whose rates are described as just as low and in some cases lower than those available from any other manufacturer.

T. M. Hall, vice-president of the Industrial Acceptance Corp., said these rates were on a par with General Motors rates and reduced the delivered price to a minimum. Fire and theft insurance is included in the plan and applies to every car sold. This means that the purchaser of a Studebaker will not be able to insure the car through his own broker or agent and Mr. Hall says the advantages of the rates are such that he will not wish to.

Insurance is placed through the 35,000 local agents of the insurance company so that the purchaser obtains real insurance service through the personal interest of the local agent.

The new plan is with recourse in every instance and conforms to the resolutions adopted by the National Association of Finance Companies. Down payments of at least 33 1/3 per cent and time payments over a period of twelve months are the rule though in extraorinary instances longer terms may be granted.

Any More Queries, Your Honor?

MILWAUKEE, Dec. 12.—A bit of irony prompted by the great number and variety of facts demanded by the secretary of state of Wisconsin this year in connection with the licensing of automobiles has arrived at the state capitol. The issuance of automobile licenses and certificates of title made it necessary for the secretary of state to include a longer than usual list of questions in the application blanks.

After answering the requireu questions a banker of Hudson, Wis., wrote:

"Here is the dope with all the trimmings, even the source of ownership. I might also add that I have several teeth filled and love my wife."

WALKER BUYS KELLAND

CHICAGO, Dec. 12.—Due to the increase in Walker Electric Trucks in Newark, N. J., Walker Vehicle Company of Chicago has acquired the business of the Kelland Motor Car Company, Newark, and has established a service station for Walker Electric Trucks as well as Kelland Electric Trucks at the former Kelland plant. B. A. Kelly and J. E. Anderson, formerly of the Kelland Motor Car Company, will be in charge of Walker sales and service. The Kelland plant at 58 Elm Street, Newark, has been converted into a service station not only to accommodate Walker and Kelland Trucks, but also to service all makes of electric trucks in Newark. The Kelland truck will be discontinued.

FORD SALESMEN DINE

LOUISVILLE, Dec. 12.—The winners of a Ford salesmen's contest were guests of the Ford Motor Company, Louisville branch, at a banquet at the Brown Hotel here. The dinner preceded a trip to Detroit where the salesmen were guests of the Ford Motor Company. Winners are, A. J. Patterson, Eline Motor Company; George Shuster, Strube Motor Company; George A. Spencer, Monarch Auto Company; Jesse G. Miles, Schwarz, Clifford & Scott; Joe Gardner, Summers-Herrmann and G. J. Richardson, Universal Car Company.

Three Bills That Affect Industry Reach Congress

One Would Reduce Taxes, One Would Repeal Them and Third Would Aid Highways

WASHINGTON, Dec. 12.—The introduction of three bills into Congress this week directly affecting the automobile industry marked the opening session of the Sixty-ninth congress. They are:

The tax bill (H R 1) repealing the 3 per cent tax on automobile trucks and automobile wagons; repealing the 2½ per cent on tires, inner tubes, parts, or accessories, and reducing the tax on automobiles and motor cycles from 5 to 3 per cent.

A second tax bill, introduced by Congressman Grant M. Hudson, of Michigan, for the repeal of all automotive taxes, and

The Dowell bill, introduced by C. C. Dowell, of Iowa, providing for $196,000,000 federal aid for highway construction for fiscal years ending June 30, 1928 and 1929, one-half to be expended in each year.

In addition to these three measures assurance was given representatives of truck manufacturers that amendment would be introduced on the floor, amending the tax bill so that dealers and agents who have trucks on hand when the bill is passed, making the repeal retroactive, along the same lines as was agreed upon last week which would permit a rebate to passenger car dealers on cars in stock. The rebate to the truck dealers will turn back to them approximately $500,000.

Open criticism of the first bill is voiced by Congressman Henry T. Rainey of Illinois, who has declared that he will wage a fight for the complete repeal of all automobile taxes.

"We are not rendering much of a favor to men of small incomes when we relieve them of the income tax they now pay of about $7.50 and impose a tax of from $15 to $30 on the automobiles they buy," Mr. Rainey declares. "We could restore the exemptions to where they are in the existing law and release $47,000,000 and this could be applied to reductions in the automobile taxes still retained in the bill and would remove approximately one-third of the taxes on automobiles and on motorcycles."

Action by the House on the measure is expected to begin next Monday or Tuesday and the automobile section will probably be reached on Wednesday or Thursday.

TRUCK MAKERS TO MEET

NEW YORK, Dec. 12.—A convention open to all motor truck manufacturers will be held by the N. A. C. C. at its New York headquarters Jan. 11, during Automobile Show week. The morning meeting will be merged with the opening session of the Second World Motor Transport Congress at Hotel Roosevelt.

Western Dealers Gather in Denver for Sales Congress

Colorado, New Mexico, Wyoming, Utah and Nebraska Represented at N. A. D. A. Meeting

DENVER, Dec. 12.—The first Denver Automobile Sales Congress met this week at the Brown Palace Hotel, under the auspices of the National Automobile Dealers' Association, the National Automobile Chamber of Commerce and the Denver Automobile Dealers' Association. Dealers from Colorado, New Mexico, Wyoming, and parts of Utah and Nebraska were in attendance to the number of about 500 as the guests of their Denver distributors.

The session was called to order by President Myron T. Smith of the Denver association, who called upon Tom Botterill, widely know Hudson-Essex distributor of this city, to preside. C. A. Vane of the National Automobile Dealers' Association spoke on the budget and cost accounting system and highly commended the work of Harry A. Fancher of this city for his assistance to the national organization in developing and perfecting this system.

A. R. Kroh, sales specialist of Chicago, then spoke on the necessity for systematic and efficient business methods in order to make all four departments of the business, i. e. new sales, used cars, accessories and shop or labor departments, show a profit. He urged an accurate cost accounting system as an aid to showing the dealer which department needs adjusting, and claiming that most dealers do not have accurate information on the profit and loss from each branch of their business, stated that a survey made of last years' business showed that the average profit made was 3.4 per cent and that this figure does not include the 21 per cent of the dealers who were forced to close.

He also urged greater care in picking prospects on whom to work, stating that much time and money are lost in indiscriminate canvassing, where a little care in sorting out prospects, and concentrating upon the more likely leads would result in more sales.

C. H. Howe, manager of the automobile show to be held in the municipal auditorium beginning Feb. 2 spoke in the interest of the show, and Ralph Fishel of the Norton Buick Motor Company, a member of the legislative committee of the Denver association, talked on legislation already effected, and on that to be urged at the coming session of the legislature.

The congress closed with a banquet at the Brown Palace Hotel at which C. A. Vane made the principal address. He declared that "if during the coming year automobile dealers will make their business a real business, not a side line or a plaything they will enjoy the most prosperouse year in automobile history."

SECOND PEERLESS MODEL

CLEVELAND, Dec. 12.—A second model on the new Light Six medium priced chassis has been announced by the Peerless Motor Car Company. The new model, a five-passenger two-door sedan, is a variation of a Standard Sedan announced Nov. 19, and will list at $1,495., or $100 less than the four door sedan. Equipment furnished is identical with the formerly announced model and includes snubbers, automatic windshield wiper, sun visor, rear vision mirror, rear traffic signal, dash gasoline gage, cowl lights and door and gear set locks.

GOESELE JOINS G. M.

NEW YORK, Dec 12.—Gustav A. Goesele has resigned as automotive and mechanical engineer in charge of transmission and axle gear design for the International Motor Co., New Bruswick, N. J., to accept a position as foreign field service representative with the General Motors Export Corp. Previous to his New Brunswick connection Mr. Goesele was with the Western Electric Co., New York, Niles-Bement-Pond Co., New York and Plainfield, N. J., and the Arbenz Motor Truck Corp., Zurich, Switzerland.

NEW NASH COUPE

KENOSHA, Wis., Dec. 12.—Announcement of a new Two-Passenger Business Coupe listing at $1,165, mounted on the special six chassis, has just been made by the Nash Motors Company. The new model, which is the lowest priced closed model manufactured by the company, is finished in a two-tone green gray duco with leather upholstery. Equipment furnished at list price includes a set of five disk wheels, automatic wind shield wiper, sun visor, cowl ventilator, rear vision mirror, cowl lights and door and gear set locks.

Ajax Dealers from Canada Visit Three Nash Plants

RACINE, Wis., Dec. 12.—Among the visitors to Racine this week were delegations of Ajax dealers from Philadelphia and the Canadian cities of Toronto, Windsor, Ottawa and Winnipeg. For many it was their first close-up of the Ajax factory and the men who are behind the Nash-built Ajax.

Guides conducted the delegation to every department of the factory where the dealers had an opportunity to see at first hand the quality of materials used, the kind of craftsmanship employed and the rigid Nash-established standards that are adhered to in the manufacture of the Ajax Six.

While at the Ajax factory, the dealers were addressed by C. W. Nash who pointed out the reason why the Ajax Six was conceived and manufactured—to answer a definite need for a high-grade quality car in the $1,000 field. Before returning home the dealers visted the Nash plant at Kenosha and the Nash-Seaman body plant at Milwaukee.

North Carolina Boosting Winter Business Campaign

Dealers and Distributors Make Great Efforts to Keep Sales Line Level Throughout Year

CHARLOTTE, N. C., Dec. 12.—Motor car dealers and distributors in North Carolina are making efforts of tremendous vigor to maintain a steady volume of sales. The tire and accessories dealers and the branch plants of tire manufacturing companies likewise are driving hard for retail sales. The outward evidence of this effort of the automotive trade is given by newspaper advertisements, and large copy is being used in all the more important cities of the state by both car and tire dealers. Some of these advertisements emphasize the Christmas gift idea, while others stress price and terms of payment.

Outstanding examples of this agrressive newspaper advertising campaign are the full-page advertisements of the Greensboro Motor Car Co., Buick dealer, of Greensboro, and of Blackwood Tire Sales Co., also of Greensboro, large advertisements by B. D. Heath Motor Co., Hudson-Essex distributor of Charlotte, and a special proposition on Firestone tires advertised in full-page copy by the Gate City Motor Company, of Greensboro.

Sales in this territory in all lines are generally good for this season of the year. The intensive sales efforts are being made in this territory because of the desire of the manufacturers to overcome as far as may be possible the slump in Northern and Eastern states, where the weather and other seasonal conditions are exerting an unfavorable influence on the automotive trade, it was explained. Not only are these efforts represented in advertising, but every other available means of developing a larger demand is being utilized, according to sales managers.

HERRON IS PROMOTED

TORONTO, Dec. 12.—Milo J. Herron has just been appointed sales director in Canada for Dodge Brothers (Canada). Mr. Herron has been in Canada since the opening of Dodge Brothers Toronto factory, having charge of the Graham Brothers division.

JOINS CANADA G. M.

OSHAWA, Ont., Dec. 12.—H. L. Broomfield, general secretary of the Oshawa, Ont., Y. M. C. A., has relinquished his position to become supervisor of industrial relations at the plant of the General Motors of Canada at Oshawa. He will work under the direction of the factory manager and will come into personal contact with the employes. He will be in charge of the work of discussing and explaining the co-operative effort required from each individual to insure safe measures being carried out in the factory.

Dealers Will Have Two Days at National Shows

Free Admission of Trade Representatives, With General Public Excluded, on Monday and Tuesday Increases Value of New York and Chicago Exhibitions

IN promoting the National Automobile Shows to be held in New York, Jan. 9-16 and in Chicago Jan. 30-Feb. 6 Sam A. Miles, manager, and his assistants in the show department of the National Automobile Chamber of Commerce, are emphasizing four points as vital to the continuance of the national and trade qualities of these exhibitions.

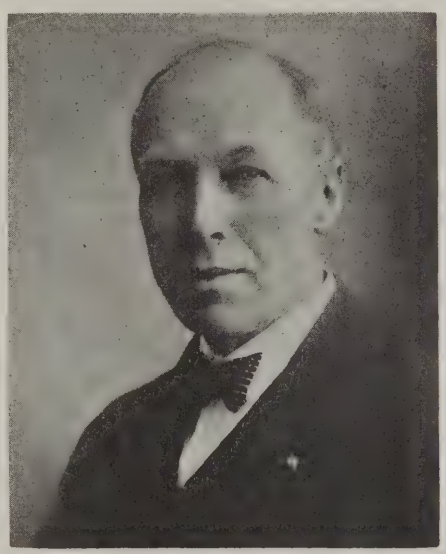
These points, worked out as a result of the luncheon at which Mr. Miles asked the advice of the trade press on the problems involved, are as follows:

1—The necessity of making the trade days—Monday and Tuesday mornings—as widely representative of the trade itself as possible.

2—The necessity of discontinuing the practice of holding exhibits of parts and accessories in hotel rooms apart from the show itself.

3—The necessity of attendance at the show exhibits, especially on the trade days, by chief executives, sales or technical executives qualified to answer any and all questions about the product.

4—The necessity on the part of exhibitors of providing to the trade press advance information about their exhibits.



To make the trade days as widely representative of the trade as possible Mr. Miles will send to at least 35,000 dealers about ten days before the New York show a letter urging their attendance on these days and enclosing special tickets.

In promoting the trade days Mr. Miles has obtained the cooperation of such organizations as the Motor and Accessory Manufacturers Association, the National Automobile Dealers Association, the Automotive Equipment Association and the Society of Automotive Engineers.

Each of these organizations is urging its members to take advantage of the trade days. Commissioner William M. Webster of the A. E. A. will spread word by mail and through the Association bulletin. C. A. Vane, general manager of the N. A. D. A., will send letters to 5,000 dealers urging attendance on the New York trade days, and later he will do the same with reference to the Chicago show. Coker F. Clarkson, secretary and general manager of the S. A. E., will send a similar letter to the engineers.

Neal G. Adair, manager of the show department of the M. and A. M. A., reports that exhibiting members have been urged to emphasize the trade days in their trade paper advertising and to write letters to their customers and prospects telling them about these days and the free credentials available for men in the industry. The M. and A. M. A. will also emphasize to all its members, exhibiting or non-exhibiting, the opportunity for business contacts on the trade days. A large attendance of executives will be urged. The association also plans to send similar material to the manufacturing and wholesaling trade units.

In seeking the second objective—discontinuance of hotel exhibits—Mr. Miles will give wide publicity to the action of the N. A. C. C. directors in denouncing the practice as antagonistic and a menace to the shows. These attempts to transact at other places business for which, in part, the shows are promoted, distract the attention of factory representatives from the shows, where his business requires his attendance.

Sam A. Miles, manager of National Automobile Shows.

The N. A. C. C. directors are convinced that if hotel exhibitions are continued they will have a serious effect on the display of parts and accessories at the shows, and that these outside exhibits are disloyal to the car manufacturer who expects his efforts in connection with the shows to be supported by display of the component parts of his car. Hence the directors urge that outside displays be stopped, and that all members of the association refrain from visiting those which continue and use all proper means to discourage them.

Point three covers the tendency marked in previous shows to deprive the product exhibited of the personal attendance of someone who is thoroughly versed in its technicalities. The necessity of filling this need is obvious. Mr. Miles will write personal appeals to all car exhibitors to have their best informed men on hand, especially on the trade days, and the M. and A. M. A. has already done so among the parts and accessories exhibitors.

To cover point four Mr. Miles has sent to the publicity representative of exhibitors a letter urging them to send to the trade press in advance of the shows all information about their exhibits, even if some of this has to be confidential and for release only at the time of the shows. Pointing out that such confidence will not be violated, Mr. Miles notes that advance information suggests ideas of value to the trade press, the exhibitor and the show management. The exhibitors are also asked to send to the trade press without delay a list of its representatives at the shows and the dates of any meetings or dinners planned.

Mr. Miles has also sent a letter to all exhibitors urging them to mention in the New York and Chicago newspaper advertising the fact that they will exhibit at the shows.

NEW ELECTRICAL BOOK

A new book covering all the phases of electrical trouble shooting and repair on motor vehicles has been published by A. H. Packer, associate editor of MOTOR AGE, and author of the "Bill Fixit" articles on automotive electrical subjects appearing regularly in current issues of MOTOR AGE.

The new volume, bearing the title "Electrical Trouble Shooting on the Motor Car," contains over 450 pages, 41 chapters, 300 illustrations and four charts. It also contains 600 questions, answers to which are given in the back of the book. A complete index is provided.

The contents includes: Tests for lighting trouble, the cause of a short and how to find it, right way to use voltmeter or ammeter, how a condenser works and how to test it, all sorts of information on magnetos, how to make an ignition coil testing outfit, how to charge batteries, and a wealth of other material of value to the automotive service station.

There is a chapter on focusing headlamps, one on armature and field testing, one on voltage and current regulators, one on business management, flat rates and electrical testing equipment, and many other chapters.

The book is published by A. H. Packer, 8115 Harper Avenue, Chicago, Ill., and the price is $4.

Road Builders Planning Big Chicago Meeting and Show

Ways and Means to Make Highways Safer Will Be One of Features Jan. 11-15

CHICAGO, Dec. 12.—Ways and means of making American highways safer for motorists through the widening of pavements, elimination of grade crossings, reduction of the crown in roads, elevation of curves, removal of highway signs, elimination of blow-ups, cracks and corrugations in road pavements and provisions for clearer views in all directions at road intersections will be among the many subjects to be discussed at the Good Roads Convention and Exposition to be held in Chicago January 11 to 15 inclusive. The meeting will be under the auspices of the American Road Builders' Association.

The matter of constructing safer highways is now engrossing the road building industry, lately become the third largest industry of the nation, and the discussion at Chicago is expected to develop more practical methods by which, in so far as the road itself is at fault, accidents on the highways of the country can be reduced.

The program for the great convention is being formulated under the direction of W. H. Connell, chief engineer executive of the Pennsylvania state highway department and president of the American Road Builders' Association, assisted by committees headed by Frank Sheets of the Illinois state highway department, representing the highway officials, and Samuel Williams, representing the road contractors.

Among the other subjects that will receive serious consideration, also, are those of continuing Federal aid funds for road building, salvaging old roads, the gasoline tax, tests for road building materials, detours, traffic regulation, highway finance and accounting, research, design, beautification, patroling and policing, repair and maintenance, snow removal and the latest methods entering into the construction of unsurfaced concrete, brick, granite block, wood block, sheet asphalt, sand asphalt, asphaltic concrete, asphalt penetration, tar macadam, waterbound macadam, gravel, earth and sand clay roads.

From 25,000 to 30,000 delegates from the United States, Canada, Alaska, Porto Rico, Cuba, Hawaii, Phillippine Islands, Mexico, Panama, Columbia, Haiti, San Domingo, Uraguay, Paraguay, Bolivia, Argentina, Chile, Brazil, Peru, Japan, Great Britain and other countries will be in attendance. The governor of each American state and the mayor of each American city as well as the county board of every county in the country, will appoint official delegates to attend. Several governors of states and practically all U. S. Government road officials, as well as senators and congressmen will attend in person.

OHIO SALES INCREASE

COLUMBUS, O., Dec. 12.—During the month of November 1,370 new cars were sold in Franklin County as compared with 609 in November of last year, according to the report of County Clerk Harold Gockenbach. During the same month a total of 3,342 used cars were transferred as compared with 2,413 in November of last year. These figures show the general prosperity of the automobile business in central Ohio.

FACTORY MEN ON COAST

SAN FRANCISCO, Dec. 12.—San Francisco automobile distributors have been hosts to a number of factory officials and representatives from eastern car manufacturers recently. R. H. Grant, vice-president and general sales manager, and J. E. Grimm, Jr., advertising manager, of the Chevrolet Motor Company, were guests at a dinner and meeting in the St. Francis Hotel, attended by executives of the Chevrolet Motor Company of California, and dealers from all sections of the central and northern parts of the state. L. G. Peed, general sales manager of the Willys-Overland Company, with headquarters in Toledo, is on his annual tour of Pacific coast distributors and factory branches.

NEW DURANT DEALERS

NEW YORK, Dec. 12.—The following automobile merchants have recently taken over the sale of Star and Durant products:

Sulphur Springs Motor Co., Sulphur Springs, Ark., Dauben & Haywood, Rogers, Ark., Community Garage, Crockett, Cal., Star Motor Co. of California, Santa Barbara, Cal., J. R. Andrews & Company, San Joaquin, Cal., Foothill Garage, Oakland, Cal., R. A. Snedden, Packenham, Ont., A. L. Phillips, Niagara Falls, Ont., C. H. Pletsch, Mildmay, Ont., Audet & Gariepy, Baie, St. Paul, Que., Mackle Motors, Brampton, Ont., Card & Fenwick, Kleinburg, Ont., Lachine Motorists, League, Reg'd., Lachine, Que., Cossette & Lanouette, Amos, Que., W. H. Beamish, Shoal Lake, Man., L. Lawler, Kenton, Man.

Hugh Kimmel & Eaton Bros. Grand Junction, Colo., Clapes Brothers, Stamford, Conn., Manor Star Sales, Chicago, J. A. Hood Garage, Rushville, Ill., Carpenter & Goodell, Elkhart, Ind., Miller & Thurston, Alexandria, Ind., Ostenberg Brothers, Salina, Kas., J. S. Trembley Motor Company, Hutchinson, Kas., Great Eastern Motor Company, Baltimore, H. A. Larson Garage, Aitkin, Minn., Security Service Company, Hibbing, Minn., J. C. Bollis Motor Company, Mathiston, Miss.

I. L. McCoy, Rockport, Mo., Schneider-Trapp Corp., Buffalo, N. Y., Charles M. French, Utica, N. Y., Patterson Motor Company, Burlington, N. C., Wilson Motor Company, Wilson, N. C., D. S. McCormick & Son, Libson, O., Clarence Collins, Lebanon, Ore., W. L. Wetenkamp Motor Company, Palestine, Tex., Harold S. Davies, Tacoma, Wash., Leevale Coal Company, Leevale, W. Va., Haan Motor Company, Huntington, W. Va.

CORRECTION

In the November 26 issue of MOTOR AGE the address of the Biflex Corporation was incorrectly given as Brooklyn, N. Y., through a typographical error. The address should have been Waukegan, Ill.

November California Sales Greatest in Last 5 Years

Used Car Situation Declared Better Than in Three Seasons Past—Trucks Go Quickly

SAN FRANCISCO, Dec. 12.—October was the highest month of the year in automobile and truck sales in California, and was 36 per cent higher than October, 1924, according to figures just made public. It is the general opinion of dealers that November will exceed October of this year, and probably run 40 per cent better than November, 1924.

In all respects, automotive merchandising in California for October and November, and, in fact, for all of 1925, is very materially better than it has been for more than five years. Owing to some five factors—a steady and consistent immigration of about 120,000 permanent settlers a year, a late dry season permitting the gathering of all the fruit crops with little loss, high prices for all crops with labor more plentiful than usual, reductions in prices of all makes of cars, and a marked improvement in methods of financing the buyer of a new car—California has had this record year in sales.

The used-car situation is better than it has been in three years, due to the general factors outlined above for the new-car business, and also due to the widespread policy of dealers to rebuild trade-ins before offering them for sale, and then selling them on an accurate basis of their mileage capabilities. Used trucks are snapped up as quickly as they are offered, and new trucks are selling better than they have sold for three years.

AJAX REACHES 10,000

RACINE, Wis., Dec. 12.—The ten thousandth Ajax Six has been produced. It came off the "line" at the factory in Racine just one week less than six months from the day the first Ajax was built. There was keen interest among the workers throughout the Ajax plant in the 10,000th car. The motor, as it proceeded down the final assembly line, was decorated with a bouquet of American beauty roses and a hearty cheer greeted the finished car as it was run off the assembly line and out onto the company's test track for final inspection before shipment.

BUFFALO PLANT AT CAPACITY

BUFFALO, N. Y., Dec. 12.—The branch of the Ford Motor Co., is now turning out 300 cars per day which is the plant capacity. While there will probably be a seasonal falling off in demand during December, at the present time that production barely keeps pace with the demand of the district. Retail sales of Fords at the present time are just twice as great as they were a year ago.

Cleveland Plants Making Plans for Big Production

Estimates of Labor Needs Show Every Company Is Arranging for Huge 1926 Output

CLEVELAND, Dec., 12.—Automobile, body and accessory manufacturing plants in the Cleveland metropolitan district, instead of facing a winter slump, will start 1926 with plenty of work for every company in operation in this district.

This optimistic forecast of the automotive industrial situation in the second largest auto producing section in the country was prepared today by B. C. Seiple, Cleveland employment commissioner.

Actual estimates of labor needs during the closing weeks of December and for early 1926, given to Seiple by employment officers of the largest automobile plants in the city, indicate that the industry in Cleveland is on the verge of a general program of increased production.

Officials of the White Motor company have sent in a call for increased force of draughtsmen. The plant is now running behind orders.

A week ago officials of the Peerless Motor Car company gave Seiple to understand that they were ready within a few weeks to throw their plant into high gear and on increased production, and called for additional skilled men.

The Fisher Body company plant here, which laid off a few men more than a month ago, is calling these men back and has sent in requests for additional skilled men, Seiple said.

The same is true of the Murray-Ohio Body company which recently laid off a number of men following the close of seasonal production in their automotive toy division. These men are being recalled for body work and additional men are being employed.

The plants of the Chandler Motor Car company and the Cleveland Motor Car company are now running at full blast, the latter being somewhat handicapped by slow deliveries of closed bodies. The Jordan Motor Car company's November production was nearly 190 per cent in excess of the November, 1924, production.

WILL SELL EARL PLANTS

JACKSON, Mich., Dec. 12.—Sale of the real estate of the Earl Motors, Inc., has been authorized in an order signed by Circuit Judge James A. Parkinson. The sale is scheduled to take place January 25 at the plant, corner of Horton and Leroy Streets. The petition to sell was filed by Frank H. Shaw, receiver for the concern and sets forth the buildings to be offered on the auction block on that date. These buildings comprise a total of 300,000 square feet and include one building with a total of 115,000 square feet.

Marathon Pianist Boosts Sales

WASHINGTON, Dec. 12.—To draw public attention to the endurance claims made for the Star automobile, the Clark Motor Company, Star distributors here, engaged B. G. Burt, champion marathon piano player to attempt to establish a new world record for non-stop piano playing in its show window on Fourteenth street.

Through co-operation by local automobile editors who acted as judges, the company obtained a good deal of publicity on account of this stunt which might be adapted in other cities. An award of $100 was offered to anyone who found Mr. Burt take both hands off the keys during the contest.

GRAHAM TO EXPAND

SAN FRANCISCO., Dec. 12.—Following the annoucement of the purchase of Graham Brothers by Dodge Bros., Inc., the official statement was made here that $200,000 is to be expanded immediately in the enlargement of the Graham Brothers' factory at Stockton, California. Four new buildings are to be erected to house an assembling plant for both Dodge Brothers passenger cars and Graham trucks. Joseph Graham, one of the three brothers, is to come here from the Detroit plant to approve the plans for and supervise the construction of the new plant at Stockton.

Accessory Houses Report Big Northwest Business

SPOKANE, Wash., Dec. 12.—As a result of better crop conditions in the northwest wholesale automobile accessory houses report greatly increased business in comparison with the fall and early winter of a year ago. Conditions in the territory served by Child, Day & Churchill, 1217 W. First avenue, are greatly improved, H. N. Child, manager, states. Heaters, anti-freeze solutions and alcohol, and windshield wipers are in especial demand in eastern Washington, western Montana, eastern Oregon and northern Idaho, he says.

Lee Olney, manager of Stewart-Warner, reports that business is ahead of any previous years since his firm served the northwest and that the total business of the local branch was fifth nationally during October.

Agricultural prosperity in the northwest is especially reflected in this report as California branches were behind the local branch's business, Fresno being 26th, San Diego 28th, Los Angeles 9th and San Francisco 22nd. Stewart-Warner serves all of Montana, eastern Washington, and parts of Idaho and Oregon from the local office.

Revenue Collections Decrease In First 10 Months of 1925

Receipts Total $115,628,121 As Compared to $122,039,462 in Same Period, 1924

WASHINGTON, Dec. 12. — Internal revenue receipts from the automotive industry for the first 10 months of 1925 totaled $115,628,121.68 or $6,411,341.10 less than for the first 10 months of 1924 when the collections were $122,039.462.76, it is announced here by the Internal Revenue Bureau.

Segregation of the collections shows that automobile trucks and wagons for the current 10 months netted but $6,734,-795.73 as compared with $9,452,175.75 for the first 10 months of 1924; other automobiles and motorcycles ran up a slight gain with $89,986,071.80 in collections for the first 10 months of 1925 as compared with $88,056,044.28 for the first 10 months of 1924 and tires, parts or accessories bringing $18,907,254.15 for the first 10 months of 1925 as compared with $24,-531,242.75 for the first 10 months of 1924.

Perusal of the collections from the 12 principal automotive producing states shows that Michigan slumped during the first 10 months of 1925 when her collection from "automobile trucks and wagons" were but $1,011,468.57 as compared with $4,269,007.79 for the first ten months of 1924 when she was the outstanding revenue paying state in this item. For the first 10 months of the calendar year Ohio led in the collections from "automobile trucks and wagons" with $2,149,-553.16.

The three outstanding states in paying revenue on "other automobiles and motorcycles" during the first 10 months of 1925, maintaining the same rank they held for the same period in 1924, follow: Michigan first, with $65,988,525.06; Ohio second, with $7,011,932.15 and Indiana third, with $6.981,391.98.

NEW CADILLAC DEALERS

DETROIT, Dec. 12.—The following new dealers have been added by the Cadillac Motor Co.:

The Athens Nash Company, Athens, O., Carter Motor Company, Colorado, Tex., Oskaloosa Nash Company, Oskaloosa, Ia., Hattiesburg Auto Sales Company, Hattiesburg, Miss., Mebane Buick Company, Eustis, Fla., Everett Cadillac Company, Melbourne, Fla., Eagle Garage Company, Platteville, Wis., Wright-Sperco Motor Company, Inc., Summit, N. Y., Holdrege Buick Company, Inc., Holdrege, Neb., Bessie Brothers, Kearney, Neb., Breier Motor Company, Winner, S. D.

NEW CLEVELAND DEALERS

CLEVELAND, O., Dec. 12.—New dealers recently added to the organization of the Cleveland Automobile Co., follows:

Highland Motor Co., Denver, Colo., Fitz Motor Car Co., Cambridge, Mass., Vigilant Garage, W. Philadelphia., Monmouth Auto & Tire Co., New Port, Ky., C. C. Brown, Marion, O., Lawn Manor Motor Sales, Chicago, Weamer Motor Co., Altoona, Pa., Warren Auto Sales, Detroit, Howard E. Kelly, Hamilton, O.

Belgian Show Is Only Truly International One in Europe

Competition Develops Between French and American Makers—Germany Bars Foreigners

BRUSSELS, Belgium, Dec. 12.—The Nineteenth Annual Belgian Automobile Show opened Saturday with 750 exhibitors of all classes, a record number, comprising 92 passenger car manufacturers, of which 40 were French, 28 American, 13 Belgian, 9 Italian and 2 Austrian. This show is the only international exhibit on the Continent this year, admitting all but German exhibitors.

The Berlin show, which closed four days after the Brussels show opened, barred all foreign make of cars and was marked by a strong anti-foreign publicity campaign. The feature of the Brussels shows is the strong commercial competition between American and French makers, both striving hard for the Belgian market.

Citroen announced reduced prices on the opening day, but, as French prices recently increased, it is believed that this is only a temporary move and that prices will rise again at the close of the exhibition. One Citroen model, offered for the first time, with four wheel brakes at extra cost, was listed at 16,000 francs. However, there were few new models and not many mechanical changes.

Delaunay-Belleville produced a new 2-litre overhead valve chassis, with Perrot front and transmission brakes. French B. N. C. has a sport model. Nagant has a new 8-cylinder 3-litre overhead valve chassis on the same lines as the previous four. Vagova small six has positive valve-losing mechanism, but all others have confined themselves to detail changes. Every European car in the show had front brakes, the Perrot type dominating. Dewandre vacuum serve-mechanism is extensively adopted among those using it being Minerva, Nagant, Excelsior, Isotta-Fraschini and Voisin.

Some smaller Belgian firms are feeling foreign competition strongly and are abandoning passenger car manufacture in favor of trucks, in which field there is comparatively little competition, except from the Ford Co.

The closed car situation is immensely strengthened, the indications being that the open type will eventually become confined to sports models here. Metallurgique offers an open car at 42,000 francs and a sedan for only 3,000 francs more.

Pyroxalin finishes are being used by Nopab. Under American influence, balloon tires are enormously developed, even Michelin, the European opponent of balloons, building them for the Belgian cars. Marelli has produced a new magneto, which gives four sparks per revolution.

"WINTER WEEK" HELD

CLEVELAND, Dec. 12.—The Reeke-Nash Motor Company and Nash distributors throughout the Cleveland metropolitan district for which it is distributor this week are celebrating "Winter Week". The special sales drive is intended to check any tendency experienced in other years toward a downward trend in sales volume at the coming of winter. Closed models, which, it is pointed out, have virtually eliminated seasonal use of automobiles, are being featured.

BUCKWALTER SELLS INTEREST

CHICAGO, Dec. 12.—C. J. Buckwalter has sold his interests in the American Bureau of Engineering and a new corporation has been formed, to be known as the American Bureau of Engineering Company. C. J. Buckwalter is confining his efforts entirely to the business of the Buckwalter Radio Corporation, manufacturers of the Supertone Super-Heterodyne 8-tube set, and the Supertone 5.

ROADS POSTPONE INCREASE

NEW YORK, Dec. 12.—Executives of western railroads have deferred consideration of classification increase on carload shipments of automobiles which had been slated for action at their January meeting. Deferment followed representations by the traffic committee of the N. A. C. C., which did not object to participating with other commodities in general rate adjustments, but opposed any classification increase.

San Francisco to Combine Dealer Talks With Show

SAN FRANCISCO, Dec. 12.—An effort will be made to combine an exhibition of automobiles for the general public and a series of meetings for automobile dealers, with a merchandising campaign in the next automobile show at San Francisco. This is the tenth annual Pacific Automobile Show, which opens January 30 in the Exposition Auditorium, and closes February 6, 1926.

Practically all the space at the show has been taken, and for the benefit of the public, new models and new methods of presenting them will be on exhibition. For the dealers there will be daily talks by engineers from the construction departments of the various factories on the mechanics and operation and upkeep of their cars; meetings of trade groups each evening, and probably some forenoons, and demonstrations by factory representatives of sales-methods.

The tenth annual show is being conducted, as usual, by the Motor Car Dealers' Association of San Francisco, with George A. Whalgreen, perennially at the helm, as manager. The main floor of the auditorium will be devoted to new models of cars and the basement and galleries for trucks and other commercial vehicles. For the first time there will be a comprehensive exhibit of motor buses and stages.

Huge Automobile Arcade to Be Constructed in Miami

Nearly Every Dealer in City Making Plans to Center Activity in One Spot

CORAL GABLES, Fla., Dec. 12.—The largest and finest automobile mart ever projected in Florida, to be housed in a single great arcade 620 feet long in the Biltmore section of Coral Gables, is announced by Telfair Knight, vice-president and general manager of the Coral Gables Corporation.

Virtually every automobile dealer in the Greater Miami district will have his headquarters in the Coral Gables showrooms. William P. Frost, director of the homes department of Coral Gables, and in active charge of the automobile project, reports that 12 dealers have already definitely pledged their co-operation.

The object of the new "Automobile Row," and the reason for the interest and enthusiasm already being displayed by Miami automobile dealers is to provide a year-round salon in one of the most unusual and attractive buldings in the entire country, and in a situation of unequalled advantage as regards being in close touch with the wealthiest and most active interests in Florida.

The arcade will be freed from the handicap of traffic congestion so prevalent in other parts of Miami, and will be provided with adequate parking-space. It will be in the heart of the future residential and retail center of Greater Miami, and will be close to the junctions of nine county highways. Furthermore, the new arcade will be on the direct route of travel to the Miami-Biltmore Hotel and Country Club, to the great Biltmore Casino, and adjacent to the exclusive section of rapid-transit apartment sites.

"The trouble here today is not in selling automobiles, but in getting them," Mr. Knight said. He stressed the fact that automobile dealers in every part of the world are realizing the advantages of congregating in a "row," and pointed out that the underlying idea was the same as that which brought about the old Maiden Lane jewelry center in New York City, the enormous success and development of which was past history. The location that was being considered for the "Automobile Row" was the center of a vast and wealthy community, in close contact with the people who bought automobiles and to the homes of many of those who were engaged in their selling.

CONTROL MASTER MOTOR

CHICAGO, Dec. 12.—C. C. Smith, president, and T. G. Jackson, vice-president and sales manager of the Master Motor Truck Co., Chicago, have bought out the interests of Henry Moses and M. Levinsohn in that company. Messrs. Smith and Jackson are now sole owners of the Master Motor Truck Co. and of the organization which formerly sold parts for these trucks.

All Car and Truck Booths Taken at Kansas City Show

Many Spaces for Buses and Accessories Also Contracted for Feb. 13-20 Exhibit

KANSAS CITY, Dec. 12.—Arrangements for the next Automobile Show at Kansas City are so far along that all the booths for cars and trucks have been rented, and a number of those for buses and accessories.

The date of the show is Feb. 13-20, and the place is the newly rebuilt pavilion of the American Royal Stock Show. This structure has been made absolutely fire proof throughout, and every precaution will be taken so no repetition of the conflagration which closed the last Auto Show can be possible.

Wednesday, Feb. 17 has been set for dealers' day, and according to estimates of Secretary George Bond, there will be more than 6,000 dealers present as guests of the association on that date.

Radio will have a large place in the exhibits at the show. This is in accord with the statement of Secretary Bond that 75 per cent of the radio sold in this territory is marketed through automotive agencies.

The possibilities of the market for new cars in this territory will make this the greatest show that has been held here. Mr. Bond states that there will be sold in Missouri and Kansas during 1926 at least 100,000 new cars for each state. The sale will be largely among the farmers, whose condition is greatly improved, and who are to buy more largely because they have not been buying for several years.

Paige Dealers in Ohio And Pennsylvania Meet

CLEVELAND, Dec. 12.—More than 100 retail dealers and salesmen from 58 dealer organizations in northern Ohio and western Pennsylvania representing the Paige-Ohio company, Paige and Jewett distributors, held sessions at the showrooms of the Cleveland organization to perfect plans for 1926.

W. A. Hall, general manager of the Paige-Ohio organization who had charge of the meeting, called attention to the large number of dealers who attended, all but three being present, and predicted 1926 would be one of the most prosperous years in automotive history.

In connection with the dealers' meeting, a luncheon was held at noon at the Winton Hotel. Among the speakers were General Manager Hall, J. W. Ferguson, assistant general manager, A. B. Garrett, of the advertising department of the Paige Detroit Motor Car company; F. B. Denzel, district manager of the mechanical department; G. B. Tannet of the financial department, and C. A. Wells, auditor of the Paige Ohio company.

Dobbin Thrown for Another Loss

MILWAUKEE, Dec. 12.—Traffic cops will cruise about Milwaukee streets in cars as a result of an experiment which the city has decided to make. The first batch of disciplinary Fords will consist of a unit of four such cars, for use in the outlying districts of the city. If successful, the plan will be enlarged upon and extended to other sections.

Poor old Dobbin was again thrown for a loss when the council decided to get Fords instead of horses. Well-formed plans for mounting traffic officers on horses fell through because of opposition from Mayor D. W. Hoan.

To cap the climax it was announced almost simultaeously that complete motorization of the Milwaukee fire department will take place in 1926 when the last of the 40 horses now attached to the department pass into memory.

Pierce-Arrow Small Car Aids Sale of Big Model

BUFFALO, N. Y., Dec. 12.—L. E. Corcoran, general sales manager for the Pierce Arrow Motor Car Co., referring to much speculation in the automobile industry on the effect the introduction of the series 80 a year and a half ago would have on the dual-valve series 30, states that the "success of our moderately priced car has strengthened the position of our larger car.

"The fact is that there always has been and always will be a demand for a car of large proportions. A long wheelbase gives engineers an opportunity which is denied them in cars of short wheel base. They possess superlative comforts of road comfort and luxury.

"The introduction of our series 80 enabled us to quadruple our sales and service points throughout the country. This brought our larger car within geographical reach of thousands of people who formerly were too far from a service headquarters to warrant owning a car. For that reason the sales of our larger dual valve six models continue strong."

FT. WAYNE PLANS SHOW

FORT WAYNE, Ind., Dec. 12.—Fort Wayne automobile distributors and dealers voted through a mail referendum this week to hold a 1926 automobile show in January in the new $1,000,000 Shrine Temple which was opened officially November 21. No automobile show was held in 1925 due to lack of a suitable auditorium to accommodate the many cars. As a result a week was set aside as "Automobile Show Week" and each dealer had individual exhibits, providing individual entertainment.

Utah Expects Good Holiday Business From Rural Trade

Entire Territory in Excellent Financial Condition As Result of Bumper Crops

SALT LAKE CITY, Dec. 12.—Utah and its immediate trade territory at this time are in wonderful financial shape. There is more money in this section and prospects are better than ever before. A good business is anticipated in the country sections on account of the bumper crops and the big prices they are making.

The sale of open cars, except in the lightest classes of machines, is becoming less and less, and for this reason used-cars, unless they are good closed models, are being moved with greater difficulty than ever before. Prices on these machines are being forced down, but they are still higher than they should be. The tendency for the prices of new cars to drop is making it still harder to handle used stuff without cutting the prices severely.

A few dealers in Salt Lake City and Ogden are very heavily stocked with used-cars at this time, but the majority seem to be carrying less than normal. On the whole the situation in this respect is not much different from what it was last year at this time. One dealer said today that because of the tendency for dealers to accept very small down-payments and extend the time for payment of the balance people who would ordinarily buy a used car are in the market for a new one.

Accessory Men in Atlanta See Big Holiday Business

ATLANTA, Dec. 12.—That accessory dealers in the Atlanta trade district are apparently looking forward to the best holiday business this year they have ever enjoyed, and therefore are carrying much larger stocks than usual at this time of the year, is the opinion expressed by the larger accessory jobbers in Atlanta, who state their sales volume the last two weeks of November was the largest it had ever been before for that period. There is every reason why dealers should feel confident over the outlook for the holidays. Industrially, commercially, financially and agriculturally the Southeast has never been in better shape than it is right now, and naturally this is certain to have a favorable effect on accessory sales by dealers, not only for the holidays, but through the coming winter months.

OVERLAND TRAINLOAD BOUGHT

DECATUR, ILL., Dec. 12.—L. C. Starr, distributor of the Overland car, who recently purchased a train load, reports that the territory absorbed every one contained in the 41 car loads. This is the largest consignment to a single dealer ever forwarded in the Illinois territory outside of Chicago.

Along Automobile Row

CHICAGO.—James J. Lake, Auburn dealer at 3238 West Jackson Boulevard, has been awarded the direct factory distribution in Rockford and four surrounding counties, for the Auburn, and has opened a new show and salesroom on Rockford's Automobile Row.

MEMPHIS.—Stewart-Warner Products Service Station, N. J. Magna, manager, has formally opened a new home in a new building at 319 Union Avenue. R. M. Becker is manager.

DETROIT.—Joseph E. Garbarino of Detroit is the latest dealer to be added to the Oakland forces in this area. Mr. Garbarino is the nineteenth dealer retailing Oaklands in this territory.

CAPE GIRARDEAU, Mo.—The Southern Motor Company, handling Oakland automobiles is moving from 420 Broadway, to 418 Broadway and will occupy the building vacated by the Rueseles Motor Company.

COLUMBIA, Tenn.—H. G. Foster & Co., of Pulaski, Tenn., Dodge Brothers dealer, announces the opening of a branch in Columbia with Ewell Gregg of Lynnville, Tenn., in charge of the branch as manager.

ST. PAUL, Minn.—W. A. Rosendahl, as the Summit-Chevrolet Company, has discontinued the Chevrolet line and will retail in St. Paul and immediate territory the Marmon line, changing the firm name to Summit-Marmon Company.

EVANSVILLE, Ind.—Branch personnels at Vincennes, Indiana, and Owensboro and Henderson, Kentucky, were represented at the annual market planning meeting at the Kixmiller Tire Company, Main and Water Streets, Firestone distributor and dealer.

SALT LAKE CITY.—McMillan & Naylor, Inc., of Richfield, Utah, will handle Studebaker cars. Cyrus McMillan is president of the company and has been in the automobile business five years.

ST. JOSEPH, Mo.—The Chrysler motor car agency in St. Joseph has been taken over by the M. L. Breon Motor Company, with salesrooms in the Fairleigh building, Ninth and Felix Streets, formerly occupied by the street railway company.

BURLINGTON, Ia.—The King-Sanburg Company, Inc., is the new name of the Burlington Cadillac-Nash Company, which has disposed of its Cadillac franchise to the Burlington Cadillac Company and will devote its sales force to the Nash and Ajax cars.

CHEHALIS, Wash.—Harry B. Quick, for the last eleven years local dealer for Buick automobiles, is completing his new building adjoining the present location. This gives the Buick a new and up-to-date hope with complete service.

CLEVELAND.—The Sirl Brothers Motor Sales Company, Cleveland, was incorporated here with capital of $10,000. The backers are Joe E. and John Sirl, brothers, who for several years have been dealers in Paige and Jewett. The present step merely represents an incorporation of the business.

FORT WORTH, Tex.—The Smith-Swinnet Motor Company of Forth Worth has been chartered with a $20,000 capitalization. The concern will handle Hudson-Essex automobiles and will be located at 1105 Commerce Street.

EVANSVILLE, Ind.—The Phillips-Osborne Motor Company, Studebaker dealer, has opened a branch Studebaker retail agency at Henderson, Ky. The new branch will be managed by R. M. Lowden, formerly with the Kixmiller Tire Company of this city.

SALT LAKE CITY.—The Erwin Chevrolet Co., 763 South State Street, expects to move into a new building at South Eighth and South State Streets during the first week in January.

ABERDEEN, Wash.—Anson C. Hart, son of former governor Louis Hart of Washington, has taken over the Hupmobile sales agency in Grays Harbor county, and has opened a salesroom and service department here. Mr. Hart has been identified for years with the automobile rows of Tacoma and Seattle with Hupmobile and Studebaker cars.

SALEM, Ark.—A. F. Toliver and Austin Barker have formed a partnership in the garage business. They have the agency for the Star car.

CLEVELAND.—The Heights Chevrolet Company, of Bratenahl, a suburb, has been incorporated.

CAPE GIRARDEAU, Mo.—Hundreds attended the formal opening of the Cape Nash Company's new garage and salesroom at Independence. The building was open to visitors throughout the day and a crowd that packed the large salesroom was in attendance until 11 o'clock.

GALESBURG, Ill.—Frank Hitchcock, salesman of motor cars for many years at Elmwood, has decided to embark in business for himself and has purchased a garage in this city and will sell the Overland and Willys-Knight cars in the Knox county territory.

COLUMBUS, O.—Stanton Motors, Inc., headed by A. T. Stanton, formerly a Chrysler sales director and now Columbus distributor, has signed a 99-year lease on a corner at High Street and Second Ave.

SYRACUSE, N. Y.—The Budd Wheel Company has appointed a new dealer in Syracuse, Louis Vaeth's Sons, of 31832 S. West Street. The new distributor now has exclusive charge of the Budd Wheel interests in Syracuse.

GREENFIELD, Mass.—A Gideon Germain has been appointed sales representative of the Kissell Motor Car Co. for Franklin County.

BEARDSTOWN, ILL.—William Fry, former Springfield automobile dealer, has purchased the Ford and Lincoln agency of R. C. Schell in this city and will handle the lines here.

SPOKANE, Wash.—Roy E. Hotchkiss has taken over the Auto Sales Company, and changed the name to the Hotchkiss Motor Company. He is handling Hudson-Essex cars and giving day and night garage service.

MINNEAPOLIS.—Matt E. Barry has been made manager of the retail division in the city of the Northwest Nash Motors Co., distributor of Nash cars. For three years he has been manager for the Studebaker Sales Co., St. Paul. He will have charge of used cars as well as sales and service at retail.

PORTLAND, Ore.—J. C. Lawson has opened the J. C. Lawson Automobile Company on the east side where he will handle the Oldsmobile car. Lawson was recently connected with the Willys-Overland Pacific Company, where he was office manager of the Portland branch.

CINCINNATI.—Andrew J. Lodder and Clarence D. Barr have formed a partnership under the firm name, Lodder-Barr Motor Company. The new film will represent Chrysler exclusively.

LOUISVILLE.—The Alemite Lubricator Company of Kentucky with headquarters in Louisville, has announced a change in management. Joe A. Busath, G. C. Bottom and T. M. Bibb are now directing the business. E. R. Hurst, former head of the concern is now connected with the Coral Gables development in Florida.

DES MOINES, Ia.—The Overland-Huntzinger Co., retail Overland distributor, has moved from 1110 Locust Street to 1312 Locust Street.

STOUGHTON, Wis.—The Capital Garage of Madison, Wis., has opened a branch Chevrolet garage and office in the quarters of the Peterson Automobile Company in this city. E. W. Riley, formerly of Beloit is in charge of the local branch.

SALT LAKE CITY.—T. B. Meldrum, advertising man of Ogden, this state, who entered the automobile business in that city two or three years ago, has moved to this city where he has just organized the Jordan-Salt Lake Company, with headquarters at 131 Motor Avenue.

LANSING, Mich.—Lawrence McCracken, former Lansing, Mich., newspaper man has joined the Peerless Motor Car Company of Cleveland, Ohio, as assistant advertising manager.

CLEVELAND.—The Ideal Auto Paint Company was chartered here to do a retal business in automobile paints and varnishes.

DENVER.—A new automobile sales firm has been formed in Denver, Colorado, to sell Chrysler cars under the name of Colorado Motor Sales, Inc. Officers of the new firm are Miles R. Kennedy, president and general manager; O. C. Peterson, vice president; and Robert S. Grant, secretary and treasurer.

BEAUMONT, Tex.—The Andrus Motors, Inc., Chrysler dealer, has moved from temporary quarters at Tevis and Pine Streets to a new sales and service building at 226-228 College Street.

PHILADELPHIA.—A new service station soon will be operated by the Philadelphia branch of the Buick Motor Company, in the vicinity of its new branch factory building at Sixteenth Street and Indiana Avenue. The four city retail dealers maintain service stations of their own.

KANKAKEE, Ill.—Louis Heil has organized the Heil Motor Sales Company here and opened a garage and sales agency at 531 South Washington Avenue. He will sell the Hupmobile in Kankakee County.

KENTON, O.—W. H. Berkshire has been made a Chrysler dealer in Kenton, Ohio, with sales rights for all of Hardin County.

MINNEAPOLIS.—The Perlin Battery Company has been authorized to incorporated to manufacture and distribute Perlin automobile and radio batteries.

BIRMINGHAM.—The Western Auto Supply Company, of Kansas City, announces the opening of a new branch store in the south, the latest addition to the chain being located in Birmingham, at 2021 North Third Avenue. This is the twentieth store of the chain, nine of which are in the southern territory.

MINNEAPOLIS.—O. H. Gray, of the Gray Motor Company, Studebaker dealer in Minneapolis and St. Paul, has sold his business to the Studebaker Corporation of America. He intends to retire from business, spending the immedate future in California. Studebaker will take over the entire Gray plant and organize and operate it as a factory branch. B. C. Helm comes from South Bend as retail manager. Mr. Helm has been with Studebaker for two years as adviser on retail problems to Studebaker dealers. He was formerly sales manager for Packard in New York.

With the Associations

California Tradesmen Meet

LOS ANGELES, Dec. 12.—More than 200 automotive merchandisers, including retailers, distributors and jobbers, attended the annual convention of the Southern California Automotive Trades Association recently held at Elsinore. A series of discussions of hard-headed merchandising problems were mixed freely with a variety of recreational and entertainment features that kept the delegates fully occupied during the two days of the convention.

The principal speakers before the convention were J. W. French, of the Richfield Oil Company, a petroleum engineer; Ferris R. Miller, of the Better Business Bureau, of Los Angeles; Lou Blodgett and C. C. Bates of the San Diego Automotive Trades Association, J. Harold Wilson, of the Mission Auto Electric Company, Riverside; Harold Strong, of the Riverside Auto Trade Association, H. J. Banta, president of Banta & Co.. Los Angeles jobbing house, and James E. Granger, secretary of the Los Angeles Automotive Trades Association.

Banta delivered an interesting address in which he stressed the value of co-operation in the handling of automotive merchandising problems. He cited as an example of what can be done through co-operative effort the benefits obtained from the Research Club, of which his firm is a member.

Bates described a co-operative advertising plan which has been successfully used by automotive merchants, other than motor car dealers, in San Diego. The members of the organization buy their newspaper or other advertising space through the secretary of the trade association. The association secretary, after being advised by the members how much space they desire to contract during the ensuing six month's or year, makes a contract with the various publishers for the total amount to be used by the membership, thus obtaining a better rate than if each member should deal individually with the publishers. The publishers are paid, of course, for the advertising by the organization, which collects the money from the various advertising members.

J. Harold Wilson, president of the Mission Auto Electric Company, Williard distributors in Riverside county, was again chosen to head the organization during the ensuing year. George Bellis, Lee tire distributor, Los Angeles, is vice-president, and James E. Granger continues as secretary.

Baltimore Re-Elects Officers

BALTIMORE, Md., Dec. 12.—The Baltimore Automobile Trade Association, Inc., has re-elected all its officers for another year. A. H. Bishop, of the Autocar Sales & Service Co., was elected to serve his fifth year as president. The other officers re-elected are E. T. Backus, of the Backus Motor Co., vice-president, and Walter F. Kneip, of the Franklin Motor Car Co., treasurer. Thomas W. Wilson, Jr., of the Wilson-Nash Motor Co., was re-elected a member of the board of directors. John E. Raine is secretary of the association.

Washington, D. C., Elects

WASHINGTON, Dec. 12.—Stanley H. Horner, president of Stanley H. Horner, Buick distributors for Maryland, Virginia and the District of Columbia, was chosen this week president of the Washington Automotive Trade Association at the annual election.

Other officers chosen were: Fred Haller, first vice president; J. M. Dugan, second vice president; L. S. Julloen, treasurer; E. M. Wallace, secretary; Paul B. Lum and Whitney Leary, directors for three years and Rudolph Jose, retiring president, director for two years.

January 30 to February 6 was chosen as the date for the 1926 automobile show, to be held in the Washington auditorium.

St. Louis Service Men Elect

ST. LOUIS, Dec. 12.—A. L. Jagemann of the Atlas Auto Repair Co. was elected president of the maintenance division of the Associated Automobile Service Companies of St. Louis at its annual meeting. Other officers chosen were; Paul Gebhardt, first vice president, Walter Hawn, second vice president, H. K. Hotze, treasurer, John L. Travers, secretary and J. Rose, sergeant-at-arms.

Robert Stranahan, president Champion Spark Plug Co., addressed the meeting on the benefits of organization. He said the underlying reason for organization of such bodies is to render good service.

B. M. Ikert, technical editor of MOTOR AGE, addressed the service men on mechanical subjects.

Greensboro Dealers Organize

GREENSBORO, N. C., Dec. 12.—The newly organized Greensboro Automobile Dealers' Association elected Harry Clendenin, president of the North Carolina Automotive Trade Association, as president; H. M. Chamblee, vice-president; J. Max Rawlings, secretary-treasurer. These officers and J. L. Rossell, T. C. Hunt and C. L. Howard constitute the board of directors.

New Members Admitted

NEW YORK, Dec. 12.—New members of the Automotive Service Association of New York, Inc., included Otto Bieber, general sales manager, The Oil Jack Co., Inc.; R. G. Howner, District Tool Co.; B. O. Tobin, manager, New York branch, Eaton Bumper & Spring Service, Long Island City, N. Y. Ten membership applications are pending.

Atlanta Elects LeRoux

ATLANTA, Dec. 12.—Charles M. LeRoux, general manager for the Atlanta branch of the Willys-Overland Co., was elected president of the Atlanta Automobile Association for the coming year at the annual meeting of the organization held at the Atlanta-Biltmore Hotel. He succeeds T. K. Johnson.

Other officers named for the coming year were E. G. Beaudry, president of the Beaudry Motor Co., Ford dealers, first vice president; Ed Yancey, of the Atlanta branch of the Stewart Warner Products Co., second vice president; J. R. Cheshire, of the Coddington Cheshire Co., McLaren tire distributors, third vice president; J. B. Moore, of the Ansley Garage and Battery Service, fourth vice president; Waldo Keller, assistant manager of the Atlanta branch of the Buick Motor Co., secretary, and J. M. Harrison, president of the J. M. Harrison Co., used car dealers, treasurer. C. V. Hohenstein, who has been executive secretary of the association for several years was re-elected to this position.

Members named for the board of directors in addition to the above officers included George Woodruff, of the White Co.; R. E. Cullinance, of the Rippey Motor Co., and E. H. Baughman, of the E. H. Baughman Motor Co.

The annual report of Secretary Hohenstein showed the association to be in excellent shape financially with ample funds in hand for carrying on its work during the coming year. The report also showed that the association the past year has enjoyed the most successful season in its history.

The vice president elected serve as the heads of the different divisions of the association each of which functions separately but is a part of the main body.

Bobb Joins Service Men

GREENSBORO, N. C., Dec. 12.—C. J. Bobb, of this city, assumed the duties of assistant manager of the Certified Service Men's Association, launched here several months ago by C. W. Roberts, secretary of the North Carolina Automotive Trade Association. The association aims to more completely win public confidence and distinguished recognized mechanical ability of individual employes of the automotive industry.

Toronto Boosters Elect

TORONTO, Dec. 12.—The annual meeting of the Automotive Boosters' Club to No. 12 took place at the Prince George Club, Toronto, recently when the election of officers and directors for 1926 took place as follows: President, A. H. Fraser, Vice-president, S. E. Ryder, Secretary, C. F. Walch, Treasurer, E. J. Banfield; Directors, H. C. Lea, J. L. Stewart, Arthur Kinzinger, C. A. Massee and E. D. Weed.

NEW MARMON DIVISION

INDIANAPOLIS, Dec. 12.—Percy E. Chamberlin, sales manager of Nordyke & Marmon Company announced today that the company has established a used car division of the sales department with H. M. Horton of Albany, New York, as manager. Mr. Horton has been a retail salesman and salesmanager and has a wide experience. His first work in the new division will consist of an extensive survey and study of used car conditions of Marmon dealers in all parts of the country.

PEERLESS ADDS DEALERS

CLEVELAND, O., Dec. 12.—Fourteen additional dealers in New York City and vicinity were added this week by the Peerless Motor Car Company, it was announced today at the factory offices here. Contracts were handed the New York men at the factory, after they had made a tour of inspection of the company's manufacturing plant. The addition of the fourteen dealers raises the number of Peerless representatives and service stations in the New York metropolitan district to 50, it was announced.

Buffalo Reports November Sales Above Last Season

Business in Used Cars Is Normal and Stocks Are Lower Than Last Year

BUFFALO, N. Y., Dec. 12.—Comparatively speaking November proved to be a good month for the Buffalo automotive field. Reports from a majority of the car dealers including those handling the leading makes, indicate that sales range from a narrow margin above those of November, 1924, to a margin double those of 1924 at that time, as in the case of the sale of Fords. New car sales are almost exclusively closed cars.

Used car sales are normal and in some instances stocks are less than in November, 1924. Several dealers report the used car situation better than in any recent year for the month of November.

Buffalo automobile manufacturers without exception report business better than last year. This also holds true for the manufacturers of accessories and bodies.

Tire sales show a depression from October which is purely seasonal. Tire sales are much in excess of those of November, 1924. Dealers' stocks of tires are low. Those of manufacturers are also low and are likely to remain so until after January 1.

Wholesale accessory dealers report a phenomenal fall season. A large amount of the fall business is attributed to the general and almost complete acceptance by the public of the closed car and the consequent activity in the new car market. Part of the activity, however, is due to the campaign for re-conditioning cars during the winter. Sales of radiator covers have fallen off somewhat but the increase in the sale of shutters has more than made up for this.

NASH-AJAX NEWS APPEARS

LOS ANGELES, Dec. 12.—Among the new comers in the house organ field is the Nash-Ajax News, published monthly for Nash-Ajax owners and friends in the Southwest by the Troy Motor Sales Co., 1060 South Figueora street, Los Angeles. The first number of its house organ, published in November, is an eight-page magazine, edited by Rupert L. Larson.

ATHLETE OPENS TIRE STORE

ATLANTA, Dec. 12.—Everett Strupper, former football star at Georgia Tech, selected three times on the All-Southern team some years ago, and by many writers given a place on the All-American team, recently organized a new tire dealer concern in Atlanta under the name of Everett Strupper, Inc., 428 Spring Street, handling the Dunlop tire line. Associated with Mr. Strupper in the enterprise is William M. Todd, formerly identified with the Dunlop southern branch in Atlanta.

Rollin Motors Co. Files Petition in Bankruptcy

CLEVELAND, O., Dec. 12.—A voluntary schedule in brankruptcy, listing assets of $741,380.93 against liabilities of $958.035 was filed here in federal court by the Rollin Motors Co. The schedule, filed by Grover Higgins, assistant secretary, pointed out that the company's financial affairs were laid before the company's directors at a meeting December 7, at which time it was decided to wind them up. Officials of the company said the Rollin car, out of production for several weeks, had not sold with the rapidity anticipated, and with a view of insolvency proceedings, the company's assets had been liquidated quitely over a period of several months, until they now are practically all in cash.

November Sees Decline in Iowa Sales of New Cars

License Law and Delay in Harvesting Are Believed Responsible For Showing

DES MOINES, Dec. 12.—New car sales in Iowa suffered a slump during November. Estimates put the total of new car registrations for the month about 25 per cent below that of a year ago. November usually shows a considerable falling off in registration, partly due to the fact that 1926 licenses are available on December 1 and that cars licensed during November are subject to one-quarter the yearly tax.

Dealers located in the smaller trade centers were hardest hit by the November slump. This is accounted for in part by the fact that corn harvesting has been greatly delayed. Farmer customers are very busy.

The movement of used cars is sluggish. Colder weather and some unemployment has cut down the demand. Dealer stocks are comparatively low. Dealers seem determined to enter the winter months with low used car inventories.

Radiator shutters, car heaters, winter enclosures and all kinds of cold weather equipment and supplies are moving fast. Accessory business is good. Radio sales are excellent. Collections are only fair.

NEW LOCOMOBILE DEALERS

BRIDGEPORT, Conn., Dec. 12.—The Locomobile Company of America, Inc., announces the appointment of the following as direct dealer to handle the Junior Eight car:

J. A. Wren, Scarbro, W. Va., J. J. Corcoran Motor Sales Co., Chicago, H. F. Krueger, Milwaukee, Wis., Harry A. Nelson, Erie, Pa., Austin Auto Sales Company, Lakewood, O., Locomboile Company of Monmouth County, Long Branch, N. J., Rialto Motor Sales, Joliet, Ill.

GENERAL TIRE DEALERS FROM AKRON DISTRICT MEET

Photo shows a group of General Tire & Rubber Co. dealers who recently held a convention in Akron. All are from the Akron district and either attended, or represent dealers who attended the first convention of Akron district dealers in 1918. Top row, left to right, C. R. Mess, Grand Rapids, Mich.; L. E. Lewis, Rochester, N. Y.; R. E. Bauman, Cleveland; W. W. Hazlett, Youngstown, O.; J. C. Kullman, Columbus; H. W. Kanouse, Dayton; C. R. Crippen, Columbus; W. J. Mehling, Fremont, O.; W. D. Bauer, Detroit, and G. M. Garrity and H. E. Taylor, Akron. Bottom row, Carl Grabosky, Syracuse, N. Y.; C. Whalen Tucker, Erie, Pa.; Newton Hand, Utica, N. Y.; Cyril O' Neil, Cleveland; Ray Purviance, Akron; J. R. Lotze, Canton, O.; B. J. Carney, Terre Haute, Ind.; J. L. Casey, Canton, O.; H. A. Bischoff and S. W. Sohngen, Cincinnati, and W. O'Neil, president, General Tire & Rubber Co.

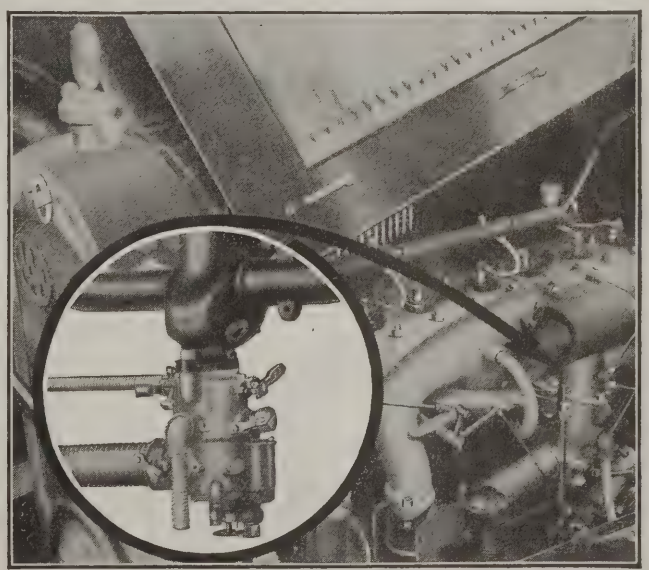
MARVEL CARBURETERS



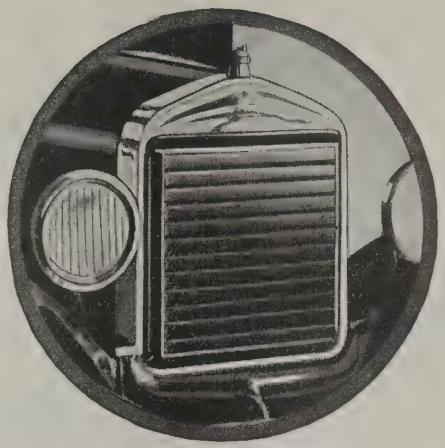
Have what no other carbureters have:

The exclusive patented feature of exhaust heat jacketed around the throttle automatically controlled.

Exhaust heat around the throttle changes the fuel "Rain Drops" in the mixture to the proper combustible gas as shown, and this heat is available from the first explosion. Think what this means to

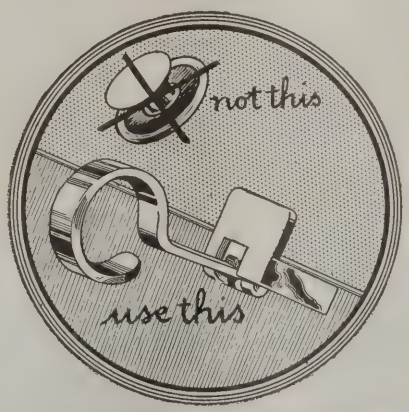
STUDEBAKER OWNERS

A complete Carburetion System. Showing Marvel-Studebaker Installation.



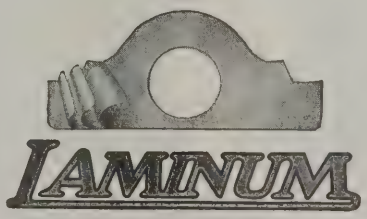
QUICK WARM UP FROM COLD ENGINE
LESS CHOKER MANIPULATION
LESS CRANK CASE DILUTION
LESS CARBON DEPOSIT
POSITIVELY BETTER WINTER PERFORMANCE
POSITIVELY INCREASED MILES PER GALLON

The heat must be at the throttle and under automatic control to get the change in mixture conditions shown above. This has been established as a scientific fact.



SEE WHAT THIS DOES TO YOUR STUDEBAKER
Our guarantee protects against dissatisfaction.

MARVEL CARBURETER COMPANY
1100 St. Johns Street FLINT, MICH., U. S. A.



VERNAY ALL YEAR ROUND SHUTTER

Beautifully enamelled. Bearings and operating mechanism all brass. Vanes cannot stick, rust or work loose. Patented bearing prevents rattle.

Another outstanding feature is this hand control from the dash. Nothing to get out of order. No holes to drill. Clamps on dash.

LAMINATED Shims save time, money labor. Just PEEL 'em down to fit.

An All-Year 'Round Shutter That Every Ford Owner Can Buy

$5.50

Here at last is a **real** shutter for Fords at a remarkably low price—an all year 'round shutter that is put on and stays on. There are high-priced Ford shutters of good quality and low-priced makeshifts. But now, for the first time, the Ford owner can get a shutter as good or better than any on the market, regardless of price—for $5.50. Not automatic. Controlled from the dash. Handsomely black enamelled, sturdy in construction, made of pressed steel, with brass bearings and bearing mechanism. Cannot rust, rattle, stick or go wrong. Briefly that's the VERNAY—unbelievable value for $5.50.

Grasp the magnitude of your possible sales with this Shutter. A price which makes volume possible. An article you can guarantee to customers who buy on sight. Immediate shipments can be made.

See This New Shutter at Space C-111, New York Show

Manufactured by

LAMINATED SHIM CO., Inc.

14th Street and Governor Place, Long Island City, N. Y.

Vol. XLVIII Chicago, December 24, 1925 No. 26

MOTOR AGE

FACTORIES concentrate on 1926 program with production steadily slowing. No general price cutting expected during shows. Page 32.

More economical and efficient methods of distribution expected to result from action of National Conference. Page 32.

Stutz dealers and officials gather to see 1926 product at factory. Page 33.

Kansas City salesmen and dealers meet with N. A. D. A. Page 33.

Firestone Co. declares extra dividend at annual meeting and election. Page 34.

Truck manufacturers refuse to approve tax rebate plan. Page 34.

Durant announces improved Star four models at new prices. Page 18.

Texas business will enter the new year with new records in nearly every line of the industry. Page 39.

Buffalo, N. Y., dealer employs novel system for disposing of used cars. Page 39.

New York dealers boost winter automobile sales with window displays. Page 39.

General Motors sales in November total 60,371 cars. Volume delivered is almost double that of same month last year. Page 35.

Robert C. Graham is made general sales manager of Dodge Brothers. Page 35.

Profits, sales and used cars are subjects of discussion at sales meeting and banquet of N. A. D. A. in Chicago. Page 43.

Hoover declares rubber situation is wholly artificial and suggests means of relief from monopoly. Page 43.

Milwaukee expects greater automobile show this year as dates come between those of New York and Chicago exhibitions. Page 36.

Oakland, Cal., car and accessory men hold big show in bank lobby. Page 36.

New car sales in Columbus are up to the November average of other years. Page 36.

Six foreign sleeve-valve racing cars will appear at Indianapolis classic May 31, present plans indicate. Page 37.

White Co. forms new service branches in two more cities. Page 37.

In Next Week's Issue—Some New Cars Described

Stunts Are This Dealer's Specialty

There is always something in these show windows to attract attention. Persons on the right are watching bees in a glass hive. Those on the left are patiently waiting for four turtles with letters painted on their backs to spell the word Ford

And Having Attracted the Attention of People He Skillfully Turns Their Interest Toward the Cars He Has to Sell— Makes Profitable Use of Windows

By DIRK P. DeYOUNG

I ALWAYS stop at the Morgan Motor Company, Inc., when I go in to the New Jersey metropolis, Newark. There is generally something new there, a hive of bees in the window, a small zoo, an aquarium with trick performing turtles, or a Ford "looping the loops," or something of the circus which interests even grown-up boys, like myself.

This automobile sales and service concern is among the largest Ford dealers in the state and undoubtedly the most advertised. William J. Morgan, the head of it, was formerly automobile editor of the New York Globe, before it went down and out through Munsey newspaper consolidations. A hardy Welshman by birth, he has a lot of the Barnum instincts—the knack of originating stunts which draw the crowds and keep the name of his firm before the public. Besides, he is a very interesting character, one of those gentlemen of the old school who still finds time to cross his legs and chat with a fellow about the good old days. It was this same Morgan who originated the idea of an automobile outing day for children of the city, when he was on the Globe, heading the procession down Broadway in one of the ancient chariots of that day. At different times I have talked to "Senator" Morgan, as he is familiarly known in Newark. I have discussed almost every subject under the sun with him—evolution, politics, business, and bees—he is a real bug on bees and keeps a colony in his back yard in the suburbs of Newark. The last time I saw him he said that he was up before daylight that morning watching his bees get back with honey. They go out at dusk and nestle in the flowers all night, bringing in the first load at dawn and return immediately for more. The "Senator" goes out in the dewey grass in his bare feet, on the theory that it is a healthful practice. And when he gets back to the shop, he likens these bees of his to a Ford, both being so industrious. But while one might write a short book about Morgan, for the sake of brevity, I am going to confine this story to what he told me about his window displays. And since he is such a good talker himself, I shall let him tell it in his own words.

"Window display and window dressing is now a fine art and has been adapted to all kinds of businesses with success. But in the automobile field the idea has not been used as extensively as it might," began the "Senator." "The Bible has something to say about hiding one's light under a bushel, or our talents in a napkin. I think that the up-to-date merchant should both use his genius for originating advertising ideas and let his light shine through his windows.

"Our first automobile salesroom was two doors away from our present place. It had but one window, not a very large one as compared to the two large ones we now have in our building at 999 Broad Street, Newark—the Broadway of the town. Yet that small one served our purpose for several displays of various kinds.

"To start with, in the old place, we borrowed one of the Goodrich Rubber Company window displays and we also got up several of our own, introducing among other things a colony of bees in a glass hive set right in the window conspicuously. These bees got in and out of their hive by means of a pipe through an opening in the window. They would therefore go in and out, gathering their honey from Newark parks and gardens, which performance attracted hundreds of people to our windows. Frequently, underneath the bee-hive, I noted unusual data about bees, such as, for instance, that although a bee has

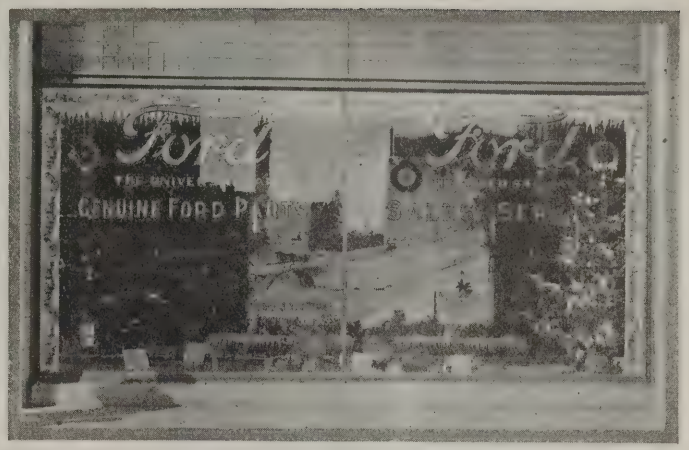
This old Ford was run around the streets to advertise the latest models offered by Morgan Motor Car Co.

no father, it has a grandfather, the number of trips a bee has to make to gather a pound of honey, and so on. The more inquisitive ones will come in and want to know more, which I tell them; and, of course, we build up prospects for buyers in that way. And we make people talk about the Morgan Motor Company, and the more we are talked about in that way the better we like it. The newspapers also take such things up, where they would not notice the more prosaic efforts of a dealer.

Prize for Slogan

"A year or more ago we staged a contest, offering a prize to the person who would make up the best slogan connecting up the bees with a Ford car. This created a lot of interest, and the winning person—a Newark schoolma'am—won the ribbon with this phrase, 'You May Get Stung by a Bee But Not by a Ford.'

"I consider the bee-hive, which I still use, one of the most economical of advertising efforts because it serves the display purpose of attracting attention, while at the same time being remunerative—we got 30 pounds of honey from this hive last year. Gradually we improved on the position of the hive to make the work of the bees more visible. At first we only had the side facing the window made of glass, but now we have all sides of the hive made of glass. We remind those who look at the bees—and there is always a crowd stopping there—that the bees are as dependable and productive as a Ford car.



"Experiencing such success with our window display of bees, we recently staged one called the 'Society of Prevention of Cruelty to Animals.' This exhibit consisted of pictures of starved animals and implements of torture that were used as weapons on the poor creatures. Of course, we did not fail to remind the onlooker that the automobile had done more to do away with the beast of burden than all other mechanical inventions.

"In our present building, which has two large windows, we have the bee-hive on one side, and a wooden tank with six turtles in it in the other. Four of the turtles have letters, painted in white, one letter on the back of each, which when all up make the word 'Ford.' We offer a special cash prize of $25 to the person who first sees the turtles in complete alignment, spelling 'Ford,' or we will allow them $50 on the purchase of a new car or truck.

"Just before last Christmas a tramp scenic painter, sent hither by others who knew we were strong on window display stunts, came along asking for work," continued Mr. Morgan who has about as many window display stories to tell as Sinbad the Sailor with his yarns of the sea.

An annual time and endurance test around the state of New Jersey is staged by the Morgan company

Last Christmas this window helped sell Fords and accessories. A painting in the background depicts Santa Claus taking orders for new cars

"I asked him if he could paint a Santa Claus picture. He surely could, and his price was $10 a day or $50 a week. This was something new at Christmas time for us, although we had two girl artists two different summers, painting portraits of notable men, including Henry Ford, his son Edsel, Thomas A. Edison, and others, which we also found a good drawing feature. The young girls were rather nice looking, full of pep, and sketching rapidly, faces which the public recognized.

"So, on the strength of the summer artists, which helped to keep up interest in the dull months of summer, I took on the scenic painter to push along the holiday business. He did a fine job, producing some wonderful Christmas scenery, with a Santa Claus, booking Ford cars as Christmas presents. This work was completed in 24 hours, the size of the picture being 8 by 12 feet. I employed him for the whole week, however, in which time he completed three other pictures, used for other purposes.

Accessories Displayed

"We also display special Ford accessories in the windows and have a cut-away Ford chassis, electrically operated, going all the time—motion-motion-motion, is my idea of it all—which has attracted thousands. It was loaned to us three years ago by another concern, and it has been running ever since.

"Of course, we have offers of things for our windows which are not appropriate. The sensational should be avoided. Instructive and human-interest displays should be the aim of the automobile merchant. I would not mind, however, to have an exhibition of classic statuary representing men, or girls, or both; or even a beach scene with a diving tank in which some living mermaids disported themselves. Some might class this as sensational, but I don't think so. What is seen every day at the seashore should be permissible on main street."

The Morgan Motor Company, Inc., as "Senator" Morgan tells us, has two windows, each 60 feet in length, high up, thus lending themselves to such displays as mentioned. The building is right in the downtown part of Newark, a city of some 500,000 people, a block or two from the city hall. Thousands of people pass it every day. They always keep a Ford flag flying on the flag-pole extending from the roof. On patriotic days, they hoist "Old Glory" above the Ford. Although established only about four years ago, this concern has forged to the front among Newark Ford dealers, of which there are eight or ten in the city. This phenomenal growth is generally credited to the Morgan sense of good publicity methods, such as his clever window displays.

Six New Racing Records in 1925

Pete DePaolo, winner of 1925 A. A. A. racing championship

Earl Cooper and Frank Elliott Smash Speed Marks in Contests Sanctioned by A. A. A. —Pete DePaolo Wins Championship

THE 1925 campaign for the "knights of the roaring boards," including 13 sanctioned A. A. A. automobile races, was brought to a close with the contest on Nov. 29 at Culver City, California, the 13 events of the year being participated in by a total of 26 nationally prominent drivers.

The greatest speed of all times was established by the daring drivers and every track in the country saw the former records of speed broken.

Six new world's records were established during 1925, with several 1924 marks broken on one or two occasions during the present season.

New records announced are:

Lap trials—By Earl Cooper at Culver City, Nov. 29, averaging 141.6 miles an hour. Former mark made by DePaolo 136.4 miles an hour made at Salem, N. H., Oct. 31.

75 miles—New mark by Earl Cooper, 132.6 miles an hour, made at Culver City, Nov. 29. Old record by Leon Duray of 128.6 miles.

100 miles—Cooper, 131.8 miles an hour. Old mark held by Duray, 128.55 miles an hour.

150 miles—Cooper, 130.7 miles an hour, old mark of 127.30, held by Hill and made in 1924.

200 miles—Cooper 129.5 miles. Old mark of 126.9 held by Hill made at Culver City 1924.

250 miles—Frank Elliott, time 1 hour 57 minutes 18.20 seconds, average 127.87 miles an hour. Old mark held by Milton, 1 hour 58 minutes 13.60 seconds and established March 1, 1925.

Leading drivers finished with points as follows: Pete DePaolo 3260, Milton 1735, Harry Hartz 1640, Bob McDonogh 1510, Earl Cooper 935, Frank Elliott 880.

The record of the official races follows:

Culver City, Calif.
250 Miles
March 1, 1925

Winner—Tommy Milton, second Pete DePaolo, third Harry Hartz, fourth Bob McDonogh.

Time: 1 hour 58 minutes 13 seconds, average 126.885 miles an hour. A new world's record. Old record held by Bennie Hill made in 1924 at Culver City, 1 hour 58 minutes 18 seconds, average of 126.6 miles an hour.

Nineteen started.

Fresno, Calif.
150 Miles
April 30, 1925

Winner—Pete DePaolo, second Tommy Milton, third Leon Duray. Time: 1 hour 25 minutes 49 seconds, average 102 miles an hour.

Charlotte, N. C.
250 Miles
May 11

Winner—Earl Cooper, second Harry Hartz, third Tommy Milton, fourth Fred Comer, fifth Pete DePaolo, sixth Bob McDonogh. Time: 2 hours 2 minutes 50 seconds, average 121.6 miles an hour.

Indianapolis, Ind.
500 Miles
May 30 (Memorial Day)

Winner—Pete DePaolo, second Bennett Hill, relief for Dave Lewis, third Phil Shafer, fourth Harry Hartz, fifth Tommy Milton.

Time: 4 hours 56 minutes 39 seconds, average 101.13 miles an hour. (A new record.)

Altoona, Pa.
250 Miles
June 13, 1925

Winner—Pete DePaolo, second Frank Elliott, third Tommy Milton, fourth Harry Hartz, fifth Fred Comer. Time: 2 hours 9 minutes 45.10 seconds, average 115.9 miles an hour.

Laurel, Md.
Baltimore-Washington Speedway
July 11. 250 Miles

Winner—Pete DePaolo, second Bob McDonogh, third Harry Hartz, fourth Fred Comer, fifth Frank Elliott, sixth Tommy Milton, seventh, Jimmie Hill. Time: 2 hours 1 minute 39.28 seconds, average 122.84 miles an hour.

Altoona Sept .7
250 Miles

Winner—Bob McDonogh, second Harry Hartz, third Earl Cooper, fourth Fred Comer, fifth Leon Duray, sixth Norman Batten, seventh Phil Shafer. Time: 2 hours 6 minutes 54.5 seconds, average 118.4 miles (a new Altoona record).

Frank Elliott who established new world's record in 1925 by driving 250 miles at an average speed of 127.87 m.p.h.

Earl Cooper, internationally known race driver who set five new world's speed records in 1925

Syracuse, N. Y.
Dirt Track, 100 Miles, Sept. 19

Winner—Ralph DePalma, second Leon Duray, third Ralph Hepburn. Time: 1 hour 15 minutes 18.98 seconds. Twelve entries.

Fresno, Calif.
150 Miles
Oct. 5, 1925

Winner—Fred Comer, second Bennett Hill, third Raymond L. Cairens, fourth Dr. William E. Shattuc. Fifteen cars started. Time: 1 hour 28 minutes 5 seconds, average 102.2 miles an hour.

Laurel, Md.
250 Miles
Oct. 26

Winner—Bob McDonogh, second Pete DePaolo, third Tommy Milton, fourth Ralph Hepburn, fifth Earl Cooper, sixth Phil Shaffer. Sixteen started. Time: 1 hour 59 minutes 2.71 seconds, average 126.30 miles an hour (new track record).

Salem, N. H.
250 Miles
Oct. 31, 1925

Winner—Pete DePaolo, second Ralph Hepburn, third Earl Cooper, fourth Tommy Milton, fifth Harry Hartz, sith Earl DeVore, seventh Norman Batten, eighth Jerry Wonderlich. Time: 1 hour 59 minutes 25 seconds, average 126.85 miles an hour. (New track record.)

Charlotte, N. C.
250 Miles
Nov. 11 (Armistice Day)

Winner—Tommy Milton, second Harry Hartz, third Jerry Wonderlich, fourth Norman Batten, fifth Fred Comer, sixth Frank Elliott, seventh Ralph Hepburn, eighth Leon Duray, ninth Dave Evans, tenth Dr. W. E. Shattuc. Time: 2 hours 1.67 seconds, average 125.31 miles an hour.

Culver City, Calif.
250 Miles
Nov. 29, 1925

Winner—Frank Elliott, second Harry Hartz, third Fred Comer, fourth Bob McDonogh, fifth Earl Cooper. Time: 1 hour 57 minutes 18.2 seconds, average 127.87 miles an hour (new world's record).

The only fatal accident of the year was the death of Raymond L. (Red) Cairens, 27 years old, of Los Angeles, who died Dec. 2 of injuries received Nov. 29 in the Culver City race.

25 Years Ago In the Automobile Industry
As Recorded In MOTOR AGE

(From MOTOR AGE of Dec. 26, 1900)

Secures Illinois License

The Hub Motor Transit Co., having secured the right to operate in Illinois, will proceed to place 50 omnibuses on the streets. The motor has already been described in MOTOR AGE. Each bus is to carry 40 persons and the fare is to be five cents. The company was incorporated last fall and its capital is $1,000,000.

Motor Company Expanding

GRAND RAPIDS, Mich., Dec. 21.—The Wolverine Motor Works has secured a three-story building on Front Street, and is fitting up the building in most convenient shape for its large business. Twenty-five new machines have been purchased. The machinery is being placed and will be ready to operate in about three weeks. Fifty or sixty men will be employed here and about the same number at the branch boat building plant in Holland.

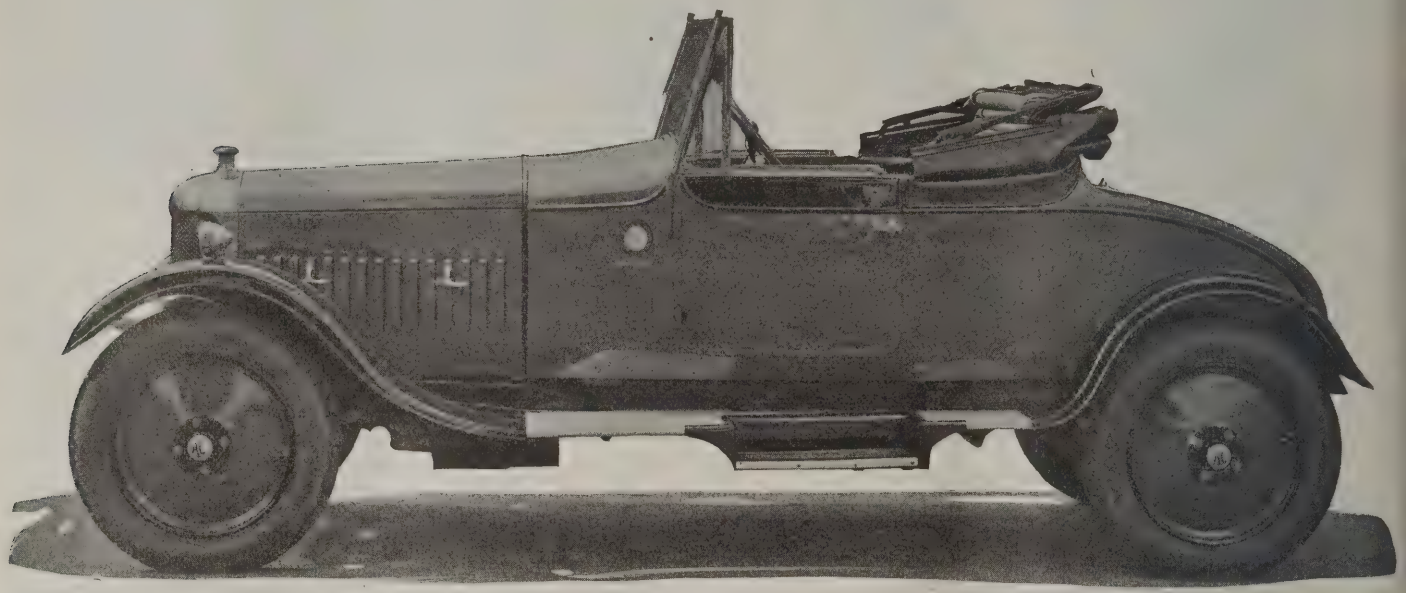
Minneapolis Wants a Show

There is a movement on foot to give an automobile show in Minneapolis next spring. Local dealers are interested, and the owners of automobiles take kindly to the idea. There are at present 30 owners of automobiles. They were all purchased during the present year, but the indications are that this number will be greatly increased during 1901.

New Transfer Co.

Frank E. Scott, well known among railroad men, is manager of a new concern known as the Chicago Transfer Co., whose business it will be to handle baggage between depots, hotels and residences. The first of this company's trucks was on exhibition last week at the Union Depot.

A Petition to Congress



NEW YORK, Dec. 21.—Ex-President George F. Chamberlain and James C. Church of the Automobile Club of America, have in charge the drafting and presentation to congress of an amendment to the U. S. Revised Statutes, permitting the transportaion of gasoline motor vehicles on ferries.

Automobiles Affect Realty Values

PHILADELPHIA, Dec. 22.—Property on North Broad Street, is experiencing a boom in values along Automobile Row. Values have increased 50 per cent in some instances and single offices which formerly could be secured for as low as $25 and $30 a month now command $45 and $50.

Now It's Open—*Now It's Closed*

A British Car of Novel Construction Giving the Advantages of Both the Open and the Closed Car

This photograph shows the 6-cylinder A C Aceca model, open-closed car with top and windows down. The glass windows slide into the door panels

ONE of England's largest automobile manufacturers has solved the problem of complete protection from severe weather for himself and a large number of his customers by making an open-closed car that is quickly convertible from a smart roadster with top down to a perfectly sheltered vehicle with glass windows.

Being averse to driving an ordinary sedan or coupe type of car and yet desiring complete protection from inclement weather, the head of one of the large British companies designed this car for himself and put it into production. This man is S. F. Edge, governing director of A C Cars, Limited, manufacturers of the AC car. The car is an A C with Aceca "open-closed" body.

In a letter to the editor of MOTOR AGE, Mr. Edge says: "This is the car I use myself and it is just my idea of what a car should be. It is possible to put the hood up with one hand while driving and then there are no side curtains to be worried about. There are Triplex glass side windows which can be pulled up, this making the whole thing a perfectly weatherproof closed car. It has the important advantage of being extremely light, the complete car weighing only 16½ cwt."

The car is made in both four and six-cylinder models, but the specifications are the same except for the engines. The overall length is 147 inches and the overall width is 59 inches. A dickey seat which is practically invisible when closed is 35 inches wide. The car sells in England at prices equivalent to about $2450 for the four and $2750 for the six.

This view shows the Aceca with top up ready for windows to be pulled up out of the door panels. When the windows are closed the enclosure is weather proof. The operation of raising top and windows can be done with one hand without stopping the car

Window Pictures That Make 'Em *Stop and Look*

Proper Tie-Up Makes Them a Valuable Sales Asset and Interests Passers-by In Automotive Merchandise on Display

By LESLIE H. ALLEN

MAKE 'em stop—make 'em look—make 'em step inside to listen to what the salesman on the floor has to say about what they stopped to look at.

This is the formula behind every window display. But how to make 'em stop and the rest of it when the window display looks like just another lot of automobiles or accessories?

One way to answer this question is to take a leaf from the large success of the pictorial newspaper—the tabloid. Why are these tabloids crowding many a newspaper of the old type to the wall? Because of their pictures.

People like to look at pictures. Reproductions of photographs are much easier to "get" than typed statements about events. It's interesting to read about a big football game. It's even more interesting to study a picture of one of the great plays in that game. And pictures in the tabloid newspaper may be so posed and captioned that the significance of the event they illustrate may be grasped in a single moment by even the lowest common denominator among the readers—or lookers.

News photographs in a show window have a strong appeal to the passing public, but unless they are directly tied up with the merchandise displayed in the same window they have little or no sales influence. Here are some suggestions on getting the right kind of pictures.

News pictures added to window displays for the purpose of attracting attention of the passerby are nothing new. You see them on almost every business street. Next time you see them, stand around five minutes and count the number of persons who, after looking at the pictures awhile, step into the showroom. Probably you could count them on either hand if both were fingerless. Why? Because the value of just any news picture in a window display is almost wholly a fictitious value. The theory is that any old news picture will persuade the wandering eye to take in also the goods displayed around and behind it. This theory is not sound. Why should a news picture of some brown girl swimming the English channel—or part of it—persuade him who pauses to gaze at it to wonder whether he doesn't want to buy automobile accessories? There is no relation between the two. The theory that the one will produce the other is built merely upon chance. It is a gambler's chance.

But these pictures might be transformed into a real asset if they were directly related to the goods whose sale they are supposed to assist. For example, a tire window display might attract attention by means of a picture of that tire in use on a car on a slippery street, or of the millionth or so tire of that make, with its manufacturer standing by. There is news waiting to be photographed about every accessory sold. The passerby will stop to look at such pictures just as readily as he will stop to look at pictures of an unrelated sporting event, because what he is primarily interested in is pictures of some sort. He must be, or the tabloids would not sell as they do. And if the window picture tells him a graphic story about the products behind and around it, he will inevitably pause longer to look at those products as well as the picture. Then, if he really needs the product, he will either step inside or make a mental note of the place where he saw the picture, to call again some other time.

The man who trims the window may say, "Very good. But where am I to get such pictures? I can get plenty of straight news pictures, but where are the photographs which tell a story about my products?"

In catalogues, for one place. Catalogue pictures can be enlarged to proper size for window display. In addition, manufacturers have photographs which are available for this use. If the proper sort of pictures—those that really tell a story about the sales points of the product—are not available otherwise, then the man selling the products can take his own. If he finds it difficult to see just how he can work the news value of his product into a photograph, he can call up some newspaper friend, or talk it over with other friends whose ideas would square with those of the man in the street to whom he wishes to appeal. The proper kind of news pictures about a product are either available now or can be made so by the seller with ideas.

As an example of all this argument, the Sales Equipment Co. of Detroit have a Ford-O-Graph service which supplies Ford dealers with two or six pictures each week, every picture telling a news story about some Ford product in action. These photographs appear on posters 16 by 22 in size. Above the picture is the title "Ford-O-Graphs," and below it appear the caption telling the story that the picture tells, and the selling line, "Ford—A Smart Looking Car." The company holds that every pedestrian who stops to look at a Ford-O-Graph becomes thereby a potential prospect.

The value of such a service, of course, is the fact that the pictures are tied up directly to the product. Pictures thus related to the product work day and night for the boss of the man who trims the window. They make the prospect stop himself and eventually sell himself on the product he has seen pictured in use and action. An actual test in 10,000 towns has proved that an average of 200 people daily stop and read and look at every news-photo in window displays. If the photo has no relation to the product the percentage of prospects among the lookers will be small, if any. If the tie-up to the product is there that percentage will be much larger. And gradually the pedestrian will assimilate, unconsciously, a liberal education in the practical uses and advantages of the product.

Women Enter Storage Garage Business

Two Active in Operation of New Day and Night Parking Institution in Fort Wayne, Which Handles 1200 Cars a Day

WOMEN have invaded the garage and automobile storage business in Fort Wayne, Ind., in the opening of the New Washington Garage, Inc., recently, by Mrs. Nettie Preble, Mrs. Cloe C. Bryant and J. C. Law. The business is incorporated with a capital stock of $15,000, and the three stockholders, all of whom are active in the management, have been elected to the following offices: President, J. C. Law; vice president, Mrs. Nettie Preble; secretary treasurer, Mrs. Cloe C. Bryant.

The new venture is unique in Fort Wayne in that it is the first garage to open in the immediate downtown shopping district and catering especially to motorists wishing a safe parking position adjacent to department stores, hotels, theaters and office buildings.

The three owners conceived their idea of a popular priced storage garage shortly after a fire gutted a building known as the Washington market and overtures were made to the landlord of the property which resulted in a long time lease on the three story and basement building with a floor space of 70 by 150 feet on each floor.

In Good Location

Not one of the three owners has had previous garage experience, but applying business ability gained in other affairs picked the location only after studying all angles. Three of the principal highways in Indiana merge in passing through Fort Wayne and on these highways is located the New Washington Garage, 128 West Washington boulevard. The three highways whose routes pass the doors of the new garage are the Lincoln Highway, Yellowstone Trail and Indiana State road Two. The landlord values the ground at $200,000 and in rebuilding the interior expended the sum of $70,000.

"Better and Bigger" has been adopted by the owners as their advertising motto and the motto is advertised as pertaining to service, courtesy and physical property. Every effort is being made to impress customers with the willingness of the management to render every possible service.

Eight uniformed attendants comprise the employed staff of the garage in addition to the three owners. Service of the garage begins at the door as motorists relinquish the wheels of their cars at the entrance to one of the attendants, who drives it to its proper parking space. The owner is given a claim check at the cashier's office by either Mrs. Preble or Mrs. Bryant. Upon his return to the garage the claim check is presented and his car is returned to the entrance by the attendant.

Day and night parking garage in center of Fort Wayne business district. Above, Mrs. Cloe C. Bryant, secretary-treasurer (left), and Mrs. Nettie Preble, vice-president, in the garage office on opening day

Ramps about 100 feet long and sloping at a 14 per cent grade connect the various floors and basement. The ramp leading to the second floor heads directly into the entrance on Washington boulevard and the ramp leading from second to third floor is located on the opposite side of the building and slopes upward towards the front of the building.

In returning cars to lower floors attendants are instructed to keep the engine connected in low gear in order to prevent the slipping of tires. Customers are told of this and other measures of special care taken to safeguard their cars.

No general repair service is given by the garage in an endeavor to avoid all possible conflict with customers who might be dissatisfied and refrain from using the parking space. Space has been provided on the main floor, second and third floors and in the basement for the parking of 300 cars at one time and it is estimated that the garage can easily handle 1,200 cars daily.

Tire repairs will be made at nominal charges for patrons wishing that service while their cars are parked. Washing racks have also been placed at the rear of the main floor, upon which a battery of searchlights are trained, making service rendered at night fully as efficient as the daylight service. Each time a car is washed the interior is completely cleaned with a vacuum cleaner.

In addition to the tire repair and washing service the New Washington offers its patrons the Alemite service, gasoline and oil supplies and greasing.

Extreme care has been taken to conserve all floor space for the storage of cars from which most of the revenue is to be derived. The office is located on the main floor under the ramp leading to the second floor. A small cashier's cage is located near the entrance making quick and careful service possible.

As a convenience for patrons, both men and women, toilets have been installed on the first floor in an inconspicuous position. A small rest room for women is adjacent. A door leads from the entrance to the garage into a cafeteria and restaurant.

Mechanical Equipment Complete

Mechanical equipment of the garage, while complete, occupies but little space. Two gasoline pumps occupy a place alongside the ramp on the first floor. Six oil tanks and pumps also sit along the ramp. The gasoline tanks are buried beneath the floor at the rear of the garage. Proper spaces for the parking of cars have been marked on the three floors in paint.

The city government has placed stringent regulations upon the practice of park-

(Continued on page 17)

Special Finish Sells New Cars in Detroit

DID you ever stare into the blackness of a bedroom at midnight trying to figure out a business problem instead of sleeping? That is what Charlie Brady, manager of the Detroit branch of Olds Motor Works, did late this summer just prior to the announcement of the latest Oldsmobile. The fact that Charlie lost some sleep is neither here nor there, but the fact that he did discover a new twist to the psychology of selling is, perhaps, worth a story.

Here was Charlie's problem:

He had been manager at the Detroit branch but a short time and was following a "go-getter" who had made records. Furthermore the factory was about to introduce new models and he wanted to make a "splash" that would be heard in the most blase automotive community on earth—Detroit.

Had it been possible he would have liked to have sold every new Oldsmobile with the understanding that the purchaser was to placard the car with banners and drive it every day with horn tooting. That was the result he was aiming at—to call attention of every Detroiter to each new Oldsmobile as it rolled down Woodward avenue. What had first looked like a white elephant gave Charlie his first clue, and to understand his final solution a short history leading up to the white elephant is necessary.

Some weeks previous Oldsmobile officials had several dozen cars finished in various color combinations and then selected the colors that were to be standard. A beautiful, but conservative, shade of Buckingham gray was selected for the coach. The cars with the discarded color combinations were distributed around to the various branches as showroom attractions. Charlie had drawn a coach with the lower part of the body finished in opal-pearl gray and the upper part in a slightly darker storm-cloud gray, the striping being a light green.

CHARLES P. BRADY

Manager Detroit branch of Olds Motor Works who turned "White Elephant" into big sales asset

This coach with its light and almost bride-like finish had first appealed to Charlie as a white elephant. As his problem grew, however, it loomed larger and in a different light in his mind. Here was a car that certainly was distinctive. It was one that would be recognized instanter. It would proclaim itself the latest Oldsmobile. But would it sell?

Charlie believed that Detroiters find no distinction in owning an automobile, it's too common in the motor city. Therefore they must have something different from the usual to satisfy their individuality. To accomplish this requirement a custom-built job or a special finish—both expensive propositions.

Charlie felt he had decided the problem, but to make sure he awakened his wife and outlined his plan to her, asking her if she would care to drive the white elephant in Detroit.

"Certainly," was her reply, "it is a beautiful car and it's—different."

The next day Charlie was at the Olds factory in Lansing, selling them his idea. He obtained a promise of 20 of the "white elephant" coaches. Since then he has ordered and reordered, and his only difficulty has been in getting enough to satisfy the demands of blase Detroiters for this distinctively finished coach that had first been listed among the undesirables.

Other branch managers and distributors in large cities have followed Charlie's hunch with the result that Oldsmobile coaches are now being turned out regularly both in the conservative and light, distinctive gray finishes.

Women Enter Storage Garage Business

(*Continued from page 16*)

ing automobiles in the downtown district, owing to the narrow streets and the ever increasing burden of vehicular traffic.

The New Washington management has arranged contracts with leading department stores and other downtown business houses whereby patrons would be provided with parking space at the New Washington.

The patron is informed by printed notices on the checks and by newspaper advertising that at the time of making a purchase at any of the leading stores of the downtown district he should present his garage claim check, which will be given on O. K. by the clerk. The claim check with an O. K. is accepted by the New Washington as cash for three hour's parking.

A similar arrangement has also been made with leading nearby theaters whereby between the hours of 7 and 12 p. m. a claim check returned with the O. K. of a theater on the preferred list receives his parking free of charge, or rather at the expense of the theater management. The location of the garage makes arrangements of this kind exceedingly worth while, as the New Washington is only about 1,000 feet from the highest rental district in Fort Wayne. A number of leading department stores men's and women's clothiers and theaters are within a distance of two and three blocks.

Twenty-four hour service is maintained by the garage and cars are delivered and accepted at all hours by the attendants, all of whom are licensed chauffers.

Regular rate for transient patrons is 25 cents for the first hour, 10 cents for the second hour, 5 cents for each hour thereafter. Attractive offers are made to regular patrons for hourly, daily, weekly or monthly parking. Business men wishing storage during office hours only are given special reductions in space rentals. Washing and interior vacuum cleaning ranges in cost from $1.50 to $2.50, according to the size and condition of the automobile.

Mr. Law, as president of the corporation and general manager of the garage, will oversee the operation of the property. He will be assisted by the women of the corporation, who will act as cashiers and in the absence of Mr. Law assume direction of the garage.

Both of the women are widows and are accustomed to business activities. Mrs. Bryant resigned a position as clerk in the county treasurer's office. Mrs. Preble is the widow of a real estate dealer and took an active interest in her husband's business preceding his recent death. Mr. Law was formerly in a lumber business.

Several Important Body and Chassis Changes in Star Four

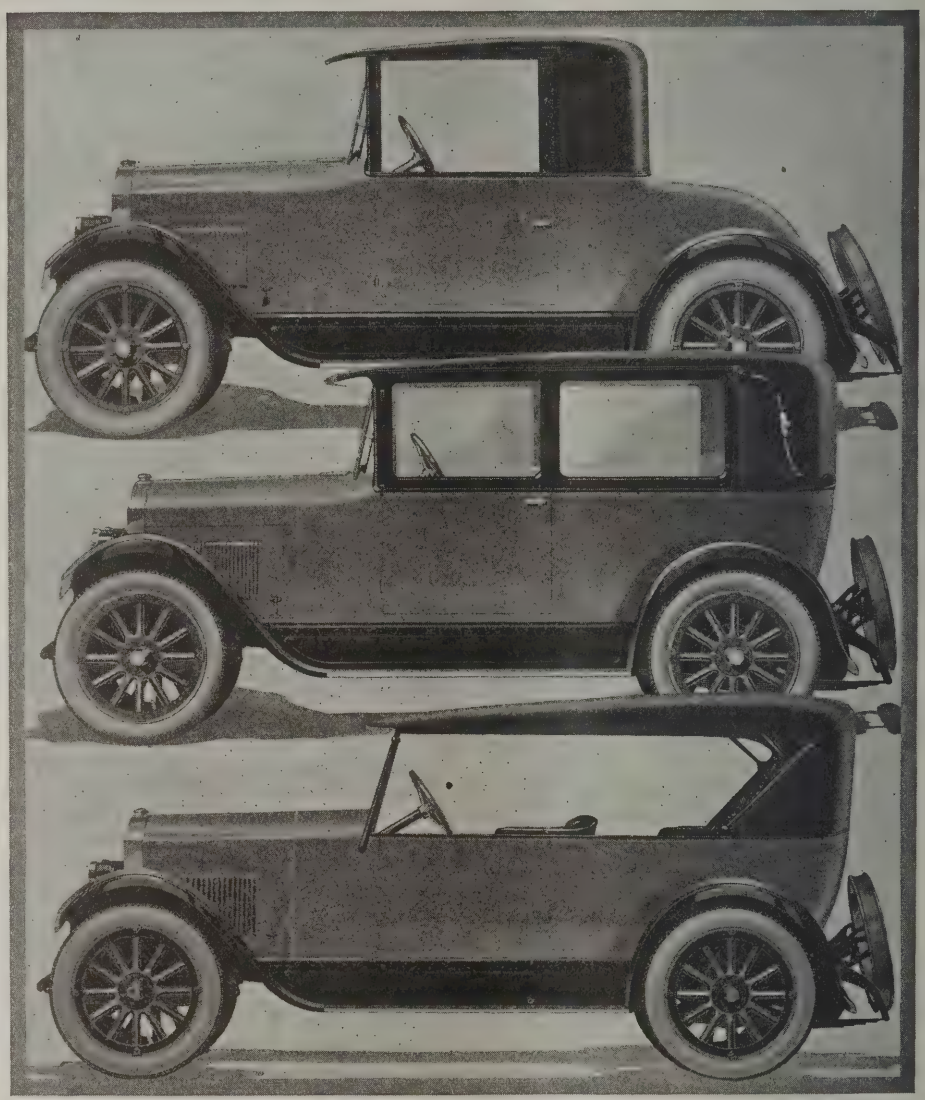
By DONALD BLANCHARD

As a result of numerous changes, the Star Four chassis from the rear engine supports back, is practically a duplicate of the new Star Six chassis which was described in Motor Age of October 22. The wheelbase has been increased to 103 in., and the frame has been completely redesigned. The side rails are of heavier material, 4½ in. deep, and are made with a kick-up over the rear axle. This feature, together with the new drop center front axle, has made possible a general lowering of the body with consequent improvement in appearance and roadability.

No changes have been made in the 3⅜ bore by 4¼ in. stroke Continental engine, but the clutch, transmission and axles are entirely new units.

Prices and body styles making up the Improved Star Four line follow:

Commercial chassis	$425
Roadster	525
Touring	525
Coupster	610
Coach	695
Sedan	805



Bodies, which are built by the Hayes-Hunt Corp., have a well stream-lined appearance and are of substantial construction. Lacquer finish in conjunction with a gold stripe around the belt molding, is used on all models. The shells enclosing the Fedders radiators are of a new design, heavily nickeled and highly polished, and carry the new Star name plate.

The coach is finished in biege brown and is upholstered in gray cloth having a brown stripe. The sedan is done in bronze green with brown velour upholstery. Both of these models are equipped with one-piece ventilating windshields, two screened ventilators above the shield, cowl ventilators, integral sun visors, automatic windshield wipers, rear vision mirrors, dome lights and rear window shades. In addition, the sedan has shades on the rear quarter windows.

Finished in Royal Blue

Both the coupster and touring models are finished in royal blue and are upholstered in artificial leather, the colors being gray in the former and black in the latter. A feature of the coupster model is the large compartment in the rear deck. The windshield on this model is a one-piece type and a cowl ventilator is provided. On the touring car, a two-piece ventilating windshield is used.

All models have black artillery wheels fitted with 20x4.40 in. balloon tires except the open cars, which have 30x3½ clinchers.

Three of the new body models of the Star Four. Top to bottom, the coupster, coach and touring car. Lacquer finish with a gold stripe around the belt moulding is used on all models.

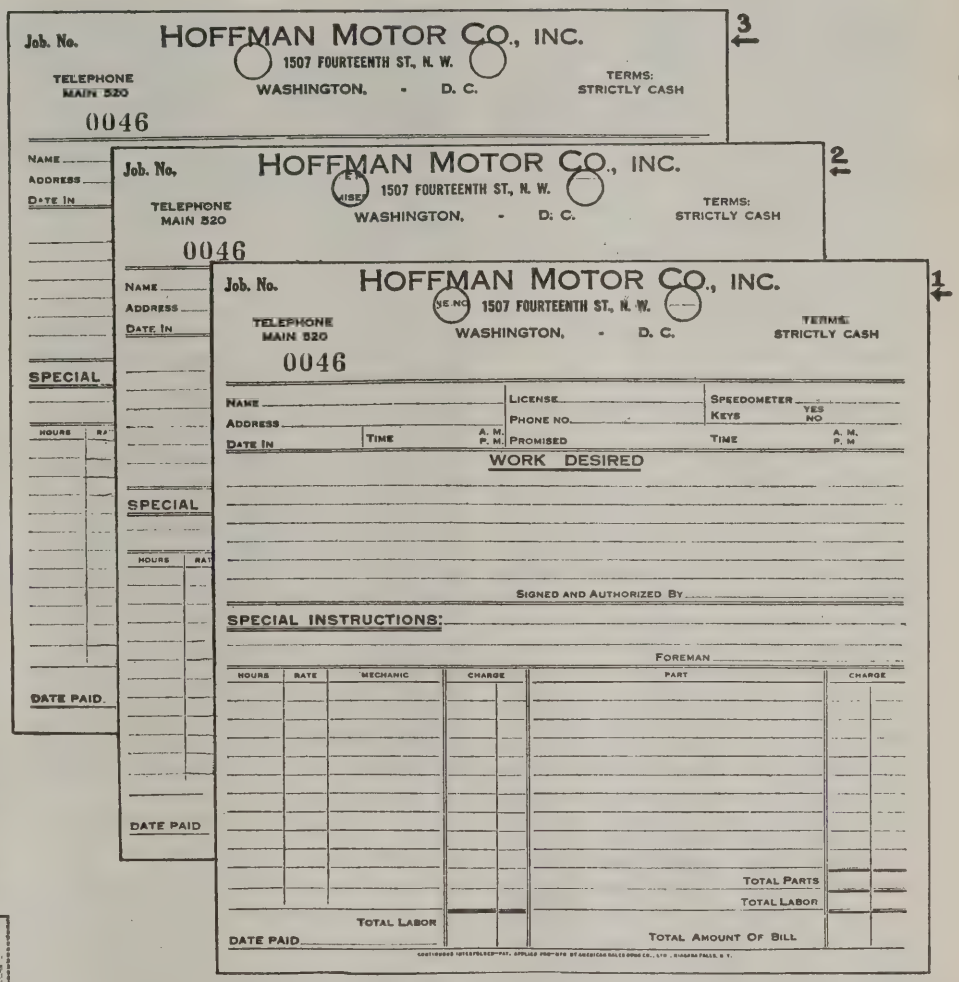
The clutch is of the single plate, dry disk type. It is self-adjusting and operates with a light pedal pressure. Between the clutch and the transmission, which is carried amidships in a substantial sub-frame, is a rubber-ball type of universal.

The transmission provides three speeds forward and reverse and drive to the rear axle is through a tubular propeller shaft and Spicer universal joints. Rear axle torque and propulsion are taken through the springs.

A semi-floating, helical bevel rear axle is used with alloy steel reduction gears providing a reduction of 4.87 to 1. Axle shafts are a spline fit in the differential, which is mounted in heavy duty ball bearings. The pinion shaft and wheel bearings are Timkens. The front axle is a reverse Elliot type of I-beam section with Timken bearings at the wheels.

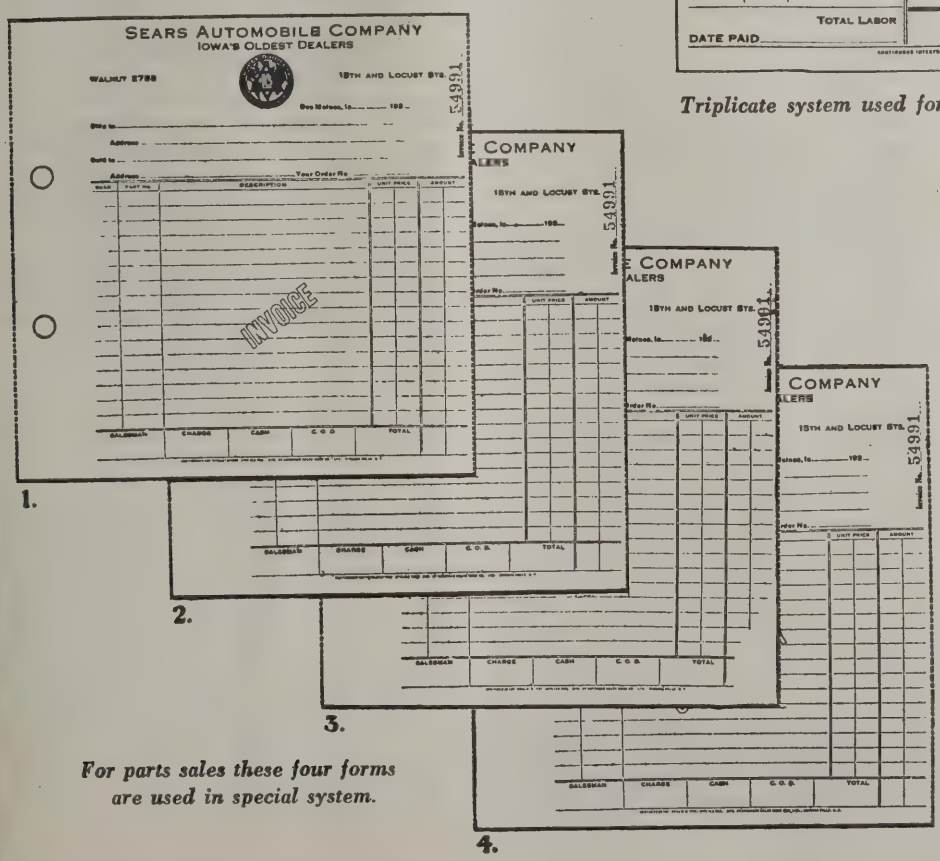
Rear springs have been lengthened several inches, their length now being 55¾ in., while the corresponding dimension for the front springs is 35⅞ in. The service brakes act internally and the parking brakes internally on 11 in. diameter drums on the rear wheels.

Two Record Systems for Repairs and Parts



TWO of the automotive accounting forms furnished by the American Sales Book Co. of Elmira, N. Y., are described in printed matter recently issued by that company. One of these is a triplicate system for repair orders in a moderate sized garage and the other is a quadruplicate system for all classes of sales in the parts department.

The Hoffman Motor Co. of Washington, D. C., makes use of the repair order forms, which are carried in a special Wiz flat packet register made by the manufacturer of the system.



All repair work is done on a cash basis. When the customer brings in his car, a record of his name, address, phone number, license number, etc., is taken on the tickets while in the Wiz machine, as well as the date, time placed in the garage, and time the garage promises completion of the work. The speedometer reading is entered to show the mileage the car has traveled to test out repair work, and a notation is made whether or not the keys are left.

Following this, the car is examined in the presence of the owner and notations are made as to the work desired. The customer signs the repair ticket, thereby showing the authorization for the work that is to be done. A job number is assigned to all tickets.

The original ticket goes to the office

Triplicate system used for all repair work in medium sized garage.

For parts sales these four forms are used in special system.

where it is filed alphabetically as a memo of work that is in the shop, and serves as information memorandum for the employees, in case a customer calls up as to the progress, etc., of the work.

The duplicate goes to the office where it is filed according to the job number. As parts used in the repair work are called for by the mechanic on the job, the stock keeper enters the charge in the lower right hand portion of the ticket as indicated by specimen.

The triplicate is printed on 80 lb. tag manilla to stand up against rough usage. It is placed in a look-out leather folder which is attached to the radiator of the car. This is a convenient place where the foremen can enter in the lower left hand corner of the ticket the hours, rate per hour, the mechanic, and the total charge.

On completion of the work the tickets in the shop and the one in the stock department are totaled and taken to the office. The stock and shop charges are there refigured, checked, and copied on

(Continued on next page)

A Differential and How It Operates

IN a recent sales bulletin issued by Dodge Brothers, Inc., there was given a simple explanation of the conventional type of differential gear used in present day motor vehicles.

In the belief that many readers of MOTOR AGE would like to know more about the principles on which a differential operates we give here the bulk of the sales bulletin as well as the illustrations.

A differential gear is a mechanism that allows one wheel to travel faster than the other when the vehicle rounds a corner. It applies the power delivered by the pinion through the master ring gear to each wheel in inverse ratio to the resistance offered.

If you will jack up the rear axle assembly so that both rear wheels are off the ground—if you will put the low gears in mesh by placing the shifting lever in first speed position—if you will then, by hand, revolve either wheel the other wheel will revolve in the opposite direction. If you will now place the transmission gear in neutral, start the motor, disengage the clutch, place the shifting lever in first speed position, let in the clutch gradually, then both wheels will revolve as they would if the car was going forward. If you will then resist the movement of either wheel you will see that the other wheel increases speed. If you hold one wheel stationary the other wheel will double its original speed.

Here is a device that will show you how a differential works. The pieces E and F, Fig. 1, are bolted solidly to the table. The racks A and B are free to move in the directions of the arrows. The pinion C is also free to move. It is attached to the rod D which can be moved forward or backward by the hand H.

If the hand pulls the rod, the three (A, B and C) will follow without changing their relative positions.

If, however, the rack B is held in place and the hand H pulls the rod D, the pinion C will roll on the rack B and will thrust the rack A to the left.

If the rack A is held in place the pinion C will roll on A, causing the rack B to be thrust to the left.

Now, it doesn't matter whether or not A or B is held in place or whether their movement is merely resisted. The total distance covered by A and B will be just twice the distance covered by C.

Let us take the racks A and B and put them in the form of gears, Fig. 2. The same principle applies. Suppose the hand H moves in the direction of the arrows. Then if we hold the gear A stationary C will roll on A, causing the gear B to revolve. If we hold the gear B then A will revolve.

In Fig. 3 is the same layout except that we have placed an automobile wheel on each shaft and have used bevel gears instead of the straight gears.

As the differential must be carried in the rear axle housing we need something to make it revolve. This is accomplished by connecting the assembly to a large ring gear H, Fig. 4, which supplies the turning power just as the hand did in the previous illustrations. We also have added the gear D.

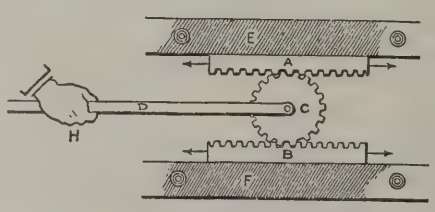


Fig. 1

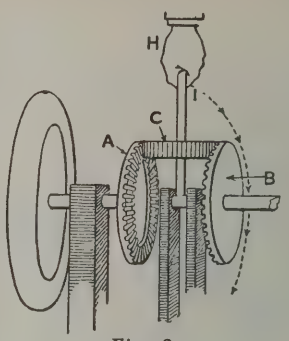

Fig. 2

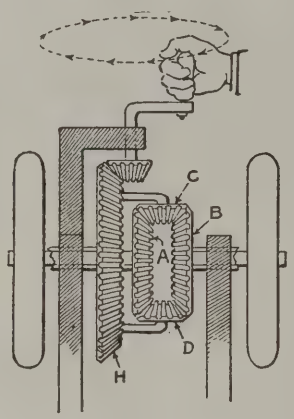

Fig. 4

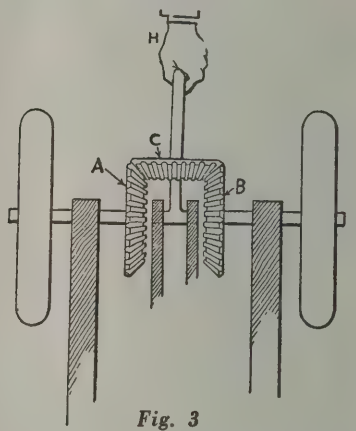

Fig. 3

Two Record Systems

(*Continued from page 19*)

the original ticket. This then becomes the bill to the customer. It shows the orders for repairs, hours spent on the car, rate per hour, mechanic, as well as all parts used and their cost. This bill is receipted and goes to the customer. From the duplicate the hours of labor and the mechanic's name are copied on the triplicate or the heavy tag manilla sheet and it is filed in the office in alphabetical order. The duplicate is sent to the stock room to enable them to keep their perpetual inventory record, and it is filed there by the job number.

The Hoffman Motor Company, claim long life and light upkeep for their cars and to prove their statements to a prospect they can refer to the tag manilla card in the office and show a record of every car in use and what it cost to maintain the car over a given period. It is an original entry, no guesswork. It gives the salesman definite information to use to hand out to his prospects.

A typical use of the system for parts sales is that by the Sears Automobile Co. of Des Moines, Ia. The four forms for this system are printed lengthwise and issued to the left. The first carbon is cut back so that net prices do not appear on the second sheet (packing slip). This is desirable, because when car owners call for parts to be charged to the garage which is to install them, they should not see the discounts, but only the "unit" figure, or regular retail price.

Sheet No. 1, Invoice—The invoice is priced, extended, and mailed to the customer the same day the goods are shipped.

Sheet No. 2, Packing Slip—This slip is put into the package and sent to the customer so he may check the shipment when it arrives.

Sheet No. 3, Parts File—This sheet remains in the Parts Department where it is used in filing the order. It is then filed in numerical order for future reference and to check inventory records.

Sheet No. 4, Office Copy—This remains in the locked compartment of the WIZ until the end of the day. It is removed in a continuous Flat Ziz-Zag Folded packet and taken to the office. Slips are there torn apart at the perforations and sorted into classes of sales. Charge sales are posted to the ledger and filed on post binders in numerical order.

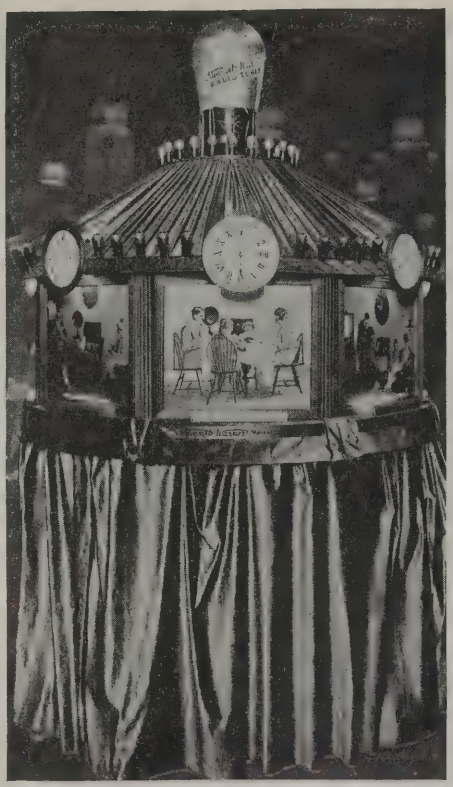
With the new system the customer's invoice, in every instance, goes out the same day the goods are shipped. In addition to this, the customer gets a memorandum with the goods, showing the unit retail price for each article.

Farmers Are Good Radio Prospects

NINETEEN TWENTY-FIVE has been an exceptionally good year financially for the agricultural sections and farmers have plenty of money with which to buy things other than the bare necessities of life.

Automotive dealers who handle radio can cash in on this economic situation by selling radio sets to this class of prospects. It ought to be easier to sell farmers than urban dwellers due to the fact that those out in the open spaces do not have to face the competition of multitudinous local stations which interfere with satisfactory DX reception.

That those in the rural communities are intensely interested in radio and hence good outlets for receiving sets, is indicated by the following:



Winconsin farmers are finding radio of real value to them in addition to its entertainment value, according to the findings of a state-wide investigation, just made public at Madison. By the end of 1925 it is expected that there will be between 12,000 and 13,000 radio receiving sets on Wisconsin farms, in sharp contrast to the 4,500 in use in 1924. During 1926 it is expected that the figure will be doubled. Farmers are finding especially useful Station WLBL at Stevens Point, where market reports for farmers and handlers of farm products are broadcast daily. Other market reports and farm information of great educational value is available on the air for the farmers of the state, and this is proving a great incentive to purchase of receiving sets.

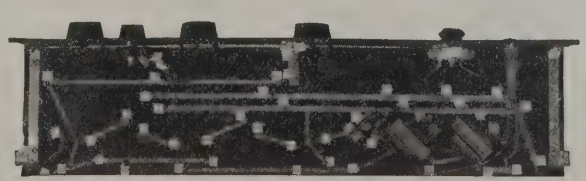
To Get the Message Out

CINCINNATI, O., Dec. 19.—Kodel Radio Corporation is erecting a steel tower 125 feet in height on top of the Hotel Alms where their broadcasting station WRKC is situated. It is said that this tower will be one of the highest in the country when completed and certainly it will be completely in about six weeks, it is stated.

Atlanta Association Formed

ATLANTA, Ga., Dec. 18.—A temporary organization known as the Atlanta Radio and Electrical Association has been formed here by dealers in the city and suburban territory handling radio merchandise, and W. D. V. Hopkins, president of the Hopkins Auto Equipment Co., Atwater-Kent dealers in Atlanta, and distributors of this line for the state of Georgia, has been elected temporary president of the new association. Later this year, or during the early part of 1926, another meeting of the dealers will be held, at which time a permanent association will be organized.

Unique Stewart-Warner Exhibit at Chicago Radio Show



The new association directly results from the successful radio exposition held in Atlanta the early part of December, and which proved so successful, particularly from a sales standpoint, that the association will hereafter hold this exposition annually.

Nearly all of the dealers and jobbers in Atlanta handling automobile accessories are charter members of the new association, as they also operate radio departments.

Does Radio Pay?

THE Splitdorf Electrical Company of Newark, N. J., a subsidiary of the Splitdorf Bethlehem Electrical Co., through its president, Mr. M. W. Bartlett, reports for the four months ending October 31, 1925, an increase of nearly one hundred per cent in sales as compared to same period 1924.

Consolidated figures for the company and its subsidiaries are as follows: sales (net), $1,829,185.44; profit (from operations), $214,572.31; net income (before charging depreciation), $175,169.85.

View of Ambu Five radio receiver showing copper connections inlaid in panel

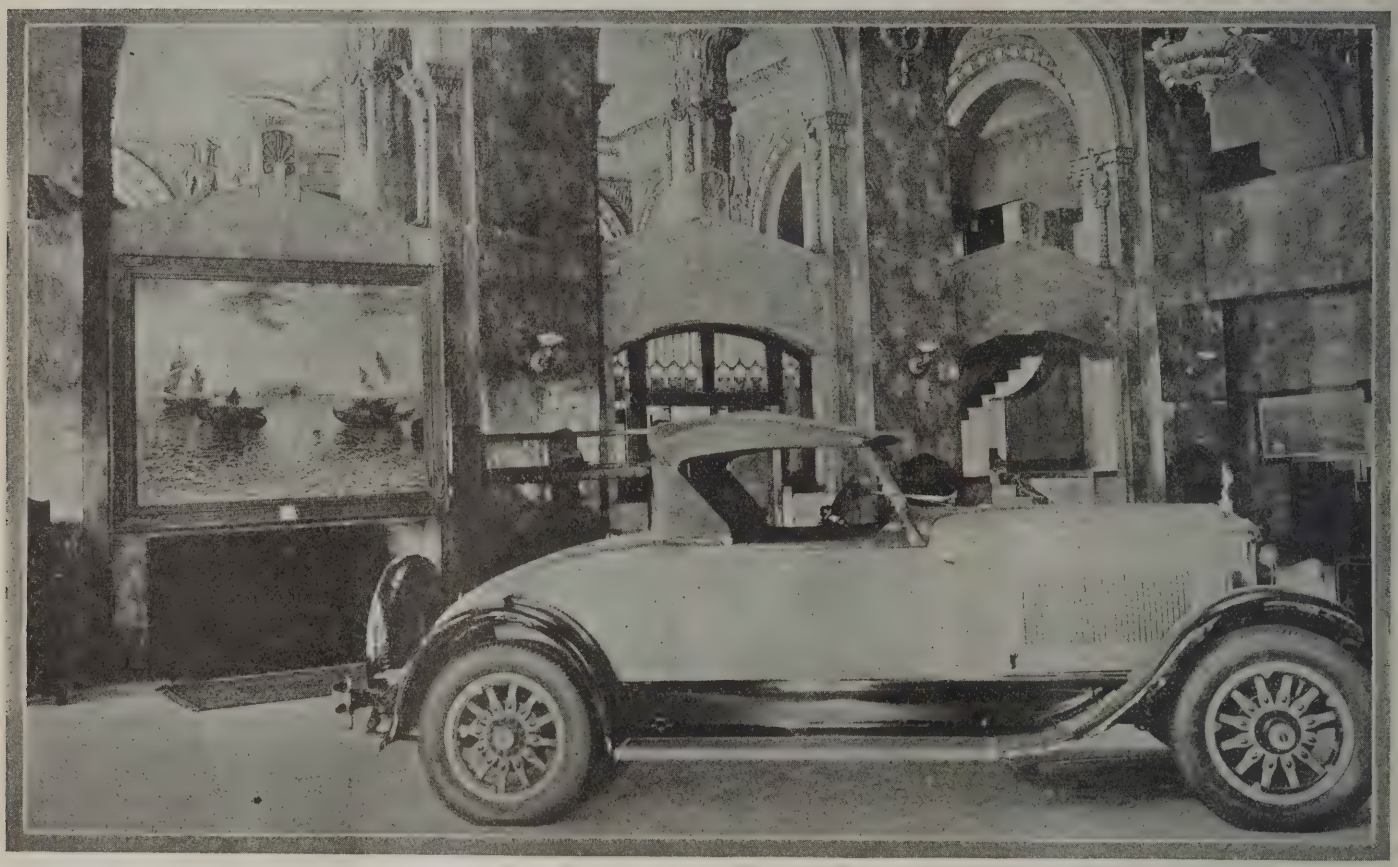
Around the Clock

STEWART-WARNER had a novel display at the Chicago radio show, pictured on this page. The company has been circulating a booklet with illustrations showing how radio plays an important part in American home life every hour of the day. The exhibit contained three of these illustrations. The title of the picture on the left is "Tea Time Is Radio Time for the Ladies." In the center the family is pictured enjoying music with their meal, and on the right is illustrated "Children's Hour" and Sonny is tuning in.

New Orleans Business Booms

NEW ORLEANS, La., Dec. 18.—Radio business in both New Orleans and the territory of Louisiana and Mississippi in the New Orleans jobbing district is at a high mark at the present time, according to reports from the New Orleans radio jobbers and from Robert H. Cone, Jr., president of the New Orleans Radio Association.

The dreams of some dealers, especially the new ones, were too roseate, according to the reports, but with the older, more experienced establishments the present conditions and prospects are very satisfactory. Retail business in radio began to pick up about October 15, and has continued to climb, radio playing a big part in the Christmas gift trade.



Both retailers and jobbers say that the people are as a whole demanding the higher priced sets. Instruments in period designs that will be ornamental to a home and which will harmonize with other fine furnishings are in demand, one department store reporting that its average price per set of all radio instruments sold during the last month reached $190.

Both the Interstate Electric Co., and the Walther Battery & Equipment Co., electrical and automotive jobbers, and radio jobbers, report a big distribution business throughout their territory.

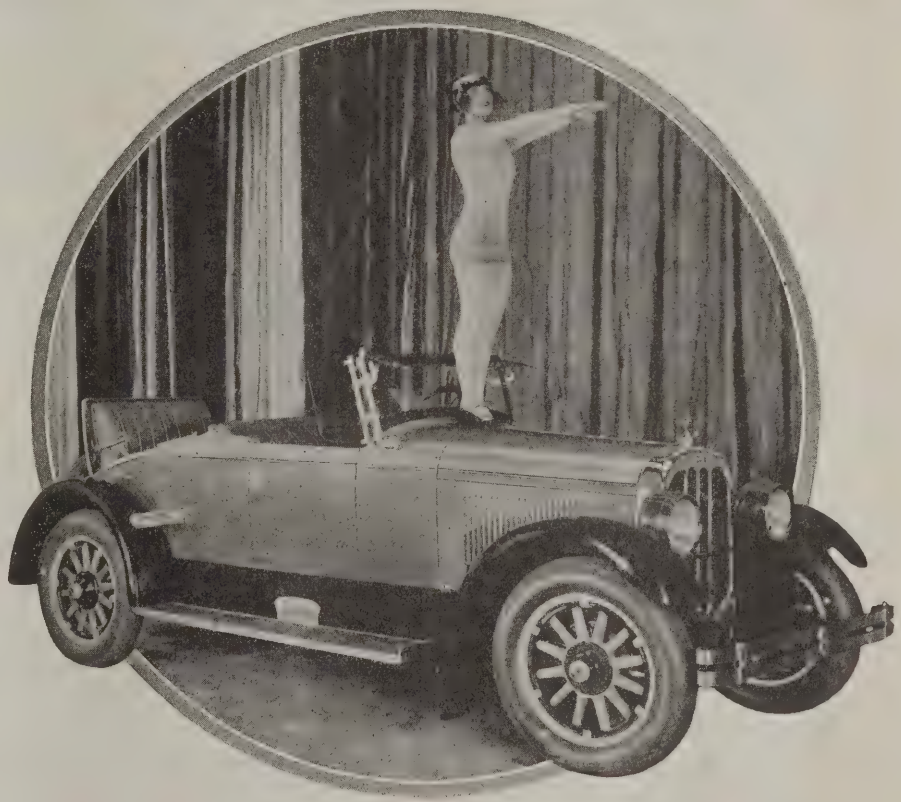
Ambu Five Radio Receiver

AN outstanding and exclusive feature of the new five tube radio set made by the Ambu Institute, Radio Division, Chicago, Ill., is the so-called "shot" panel which eliminates the usual wiring necessary to connect up the various parts of the set. Grooves traced in this panel and filled with hot copper provide the necessary connections when the parts are screwed into place. Thus permanent connections are quickly made without the use of solder. The Ambu set also is equipped with the Armstrong all-wave coils which provide for reception of all wave lengths from 40 to 600 meters.

MOTOR AGE'S PICTURE PAGES

A GORGEOUS SETTING. The Diana Light Straight Eight Roadster on display in the beautiful lobby of the Paso del Norte Hotel, El Paso, Texas. The exhibition was arranged by Mr. Oscar Stroebel, manager for R. C. Sowder, distributor at El Paso, through the courtesy of Mr. Paul Harvey, managing director of the hotel.

TO SPEED UP TRAFFIC. The California Highway Commission has had painted on the Peninsula Highway, immediately adjacent to San Mateo, south of San Francisco, one strip 4½ in. wide down the center line of the pavement and two additional strips with 9 ft. 6 in. clearance on either side of the center line strip. All three strips are painted on the asphalt concrete surface which is slightly over 20 ft. wide, leaving two 8-ft. strips of bare concrete shoulder on either side of the old pavement, or a total of 8 ft. 6 in. outside the traffic strip. The width of the lanes is: outside strips, 8 ft. 6 in., and the two center lanes 9 ft. 6 in. Slow moving traffic is expected to confine itself to the outside lanes.



AN ECHO OF THE PAST. At the left is the Maxwell of remote vintage exhibited at the recent Southwestern Automobile Show, Dallas, Texas, by W. W. Glover, one of the first motor car owners in Dallas County. Mr. Glover forgot when he bought his bus, but thinks it was about 1913.

OF AUTOMOTIVE INTEREST

HERE'S SOMETHING NEW UNDER THE SUN. Above is shown the monster Remington Burnelli plane, the largest commercial aircraft in the world, the interior of which has been converted into an automobile salesroom. A complete coach and office equipment have been installed inside.

A DIVER'S DIVERSION. At the right we have Miss Annette Kellerman, internationally known diving Venus, and the new Chandler Comrade Roadster. This undoubtedly is a Class A publicity stunt.

A FLEET FLEET. The Chicago, North Shore & Milwaukee R. R. has bought four new Studebaker buses from W. F. Russell, Kenosha, Wis. The three pictured below are of the 18-passenger type. A 21-passenger bus also has been delivered.

Questions and Answers on Dealers' Problems

BUILDING ▲ ELECTRICAL ▲ FLAT RATES
SHOP ▲ LEGAL ▲ PAINT & TRIM ▲ ACCOUNTING

Adjusting Vacuum Controlled Oil Pressure

Q—There is a Stephens Salient six car here that other garages tried and failed to raise the oil pressure on. The pressure works o. k. when oil is new or cold, but will not register on the gage when it gets warm. The pressure is regulated by the vacuum in the manifold. The trouble may be in the bearings or gears in the pump, but I do not think so as this car has only been driven eight thousand miles. I have not had a chance at it yet, but if I do I would like to know how to remedy it. Any information you can give me will be appreciated very much. The motor No. 35750.—James E. Jackson, Foxpark Service Station, Foxpark, Wyo.

Oil Pressure Regulated Through Vacuum

The information on the engine lubricating system taken from the Stephens instruction book is as follows: A vacuum controlled oil pressure system has been employed; this system carries a pressure gage on the instrument board with reading up to sixty lbs. oil pressure. The oil pressure is regulated through vacuum, with vacuum line running from intake side of motor to the adjustment on right side of motor and directly over the front main bearing.

The regulator is of the plunger and piston type and is so regulated that more pressure is available while the motor is laboring, i. e., at a set speed on level road, the pressure shown on gage will not register as high as at the same speed on a hard pull. In other words, the oil pressure increases in relation to the demand as required. The adjustment is arrived at as follows: back off the large lock nut and screw adjustment down (clockwise) to increase pressure, back out the adjustment (anti-clockwise) to reduce pressure, after the proper adjustment is made making sure that the lock nut is again firmly tightened. The pressure should be set to read 40 lbs at a maximum speed with warm water, sudden wide open acceleration of the throttle. Watching the travel of the hand on gage will show you when this point is reached. Be sure and close the throttle again immediately after opening it.

Never open the throttle and race the motor when car is stationary for a period longer than five seconds, nothing can be more detrimental to your motor. At idling speed the pressure gage will not show any pressure, but will respond at once to the slightest acceleration, however, on idling, while no pressure is shown there is sufficient lubrication for all purposes.

The overflow of oil after lubricating such points as already mentioned, is utilized to lubricate the timing gears, returning to the oil reservoir and its original point of entry in the pump. Aside from the positive lubrication as noted, the pistons, piston rings, piston pins, and cylinder walls are lubricated by the oil spray which is thrown from the main and connecting rod bearings. The oil mist formed by the operating conditions rises through the holes in the tappet ledge and lubricates the entire valve mechanism, providing adequate lubrication to these parts at all times.

In pressure systems it is essential to see that there is no leakage of a great quantity of oil from any one bearing. A test of this kind is made by removing the engine pan and pumping oil through the system. Another suggestion would be to disconnect the vacuum line and see if the pressure is quite high.

The Readers' Clearing House

THIS department is conducted to assist dealers and maintenance station executives in the solution of their problems.

All questions are answered direct by letter, so the name and address should be given in full. This saves waiting for the answer to be published, which sometimes occurs several weeks late, depending upon the space available.

Readers' names will not be published with articles, if a request to this effect is received with the letter.

Inquiries not of general interest will be answered by personal letter only. Emergency questions will be replied to by letter or telegram.

Also state whether a permanent file of MOTOR AGE is kept, for many times inquiries of an identical nature have been made and these are answered by reference to previous issues.

Addresses of business firms will not be published in this department but will be supplied by letter.

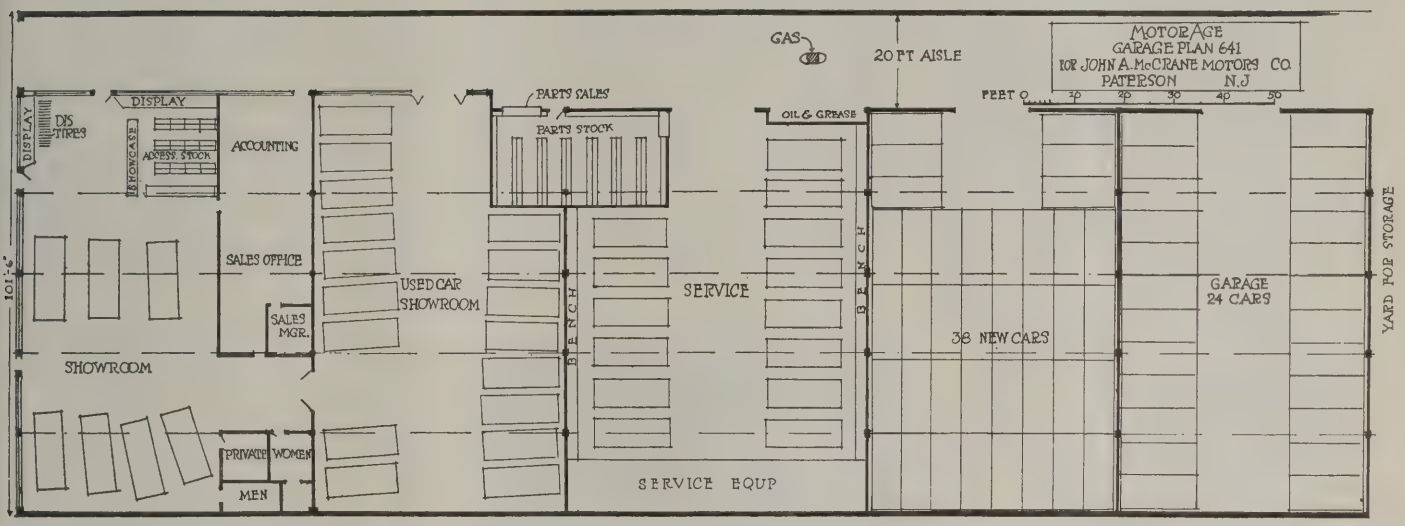
Technical questions answered by B. M. Ikert and A. H. Packer; Legal, by Wellington Gustin; Paint, by G. King Franklin; Architectural, by Tom Wilder; Tires, by a Practical Tire Man; General Business questions, by MOTOR AGE organization in conference.

Car O.K. in High But Quits in Low

Q—I have been working on all kinds of cars for four years and now have a Ford that has me stopped. Not only that, but every man here in town that is working in a garage. This car pulls all right on high and never misses, but when you have to go into low it will not pull itself. Sometimes on the level you have to push it. We put on new coils and new carbureter, also new timer and new plugs, everything new and still the same trouble. When standing the engine will race, but it will not pick up in low gear. The valves have been ground and the compression is good. When you go from high into low it does not spit or choke, but absolutely will not pull. We have done everything but put in a new engine. Some say the trouble is in the transmission, but it was worked on by an experienced mechanic on Fords and he gave up.—George Shaffner, Warren, Ill.

Check Transmission

We would suggest checking the transmission. To do this jack up both rear wheels and block the axle so that the car will not roll off of the jack. Then remove the spark plugs and leave the emergency brake lever in the down position so that the transmission is in high. Now turn the engine over with the crank which of course, will result in turning the rear wheels. This will give you an idea of how hard it is to turn the rear wheels when in high gear.



Now have someone get in the car and push down on the low speed pedal so as to put the transmission in low. Then turn the engine over by hand with the crank and see how hard or how easy it is to turn the rear wheels by cranking the engine by hand. If it turns very easily, then it shows there is no trouble in the transmission and it should also be easy for the engine to drive the car in low gear. However, if it turns with great difficulty, it shows there is something wrong in the transmission and that in overhauling it, it was not properly assembled. We would like to know the rseult of this test before making much of an effort to solve the problem on the basis of engine trouble. The only thing that occured to us along this line is a possible stoppage in the gasoline line which allows gasoline to flow slowly, but does not permit it to flow fast enough to take care of the engine requirements when in low gear. You can check this by disconnecting the gasoline line from the carbureter to see if a full stream of gasoline will flow out.

Planning Your New Building

The READERS CLEARING HOUSE

By TOM WILDER

Wants to House a Rapidly Growing Business

The long straight passage would be a convenient avenue to connect up all departments including the yard at the rear.

Q—We have the Reo contract for Passaic County, New Jersey, handle about 250 units per year out of a showroom, service station and parts department with a floor space in all about 7,000 sq. ft. We recently found it necessary to rent an additional garage for our new car stock and used cars about 5,000 sq. ft. As it is, our show room, service station, the street, empty lots adjoining us, plus our 5,000 sq. ft. building are always crowded, necessitating considerable shifting of cars daily.

Market Street is a main automobile street in our city and I have purchased, ten blocks further out Market Street, property consisting of 101 ft. 6 in. front and 500 ft. deep, and I have figured that rather than pay rent it would be profitable to build as soon as possible, therefore my problem is: What would be a suitable layout, suitable construction and suitable size for my business? No doubt you can give me ideas that make for a modern automobile establishment. I do want to avoid making all mistakes possible in building also as to the size of the building and layout. Therefore I would appreciate your opinion in the matter.—John A. McCrane Motors, Inc., Market at 24th Street, Paterson, N. J.

There are so many ways of laying out a building as large as you contemplate that it is hard to decide on which one would be best. The floor space that you have at present, if combined in one building would amount to 100 by 120 feet and since you say you are crowded in this space, we would suggest that you build your new structure in the neighborhood of 250 feet deep on the 100 foot lot.

The main advantage in the layout we have made is that it can be extended without materially changing or rearranging any of the present building and simply by adding 50 or 60 foot sections as they are needed for garage or service station use.

A double drive way is maintained straight through the building to the yard behind which may be used for storage purposes, washing or any other purpose that seems desirable. The used car showroom is placed just back of the main new car salesroom and offices and cars may be brought into the showroom through the used car room. The stockroom is handy to the service station and is comparatively handy to the street for retail sales. In one section we show how new cars may be packed in to get as many in as possible. We are attaching also a pencil sketch showing another arrangement for the rear part of the building, dividing it in two longitudinally using one half of the space for storage garage and the other half for service. In some respects this arrangement is better than the other. There would be a little more space for storage, but not quite so much space for new car storage, although that would depend upon whether you used the space for shop purposes or for new car storage.

In this plan the trusses would be placed crosswise in the building and supported on a row of posts through the center, while in the other each section would have its own truss system with the trusses running forward and back.

All the lighting and ventilating would be by skylight and roof ventilators.

1917 Model May Need New Carbureter

Q—Would like some information on a Jordan 6-60. It seems the carbureter cannot be set right. The engine is in good condition and works fine when the car is warmed up, but when you first start it will not hit on all six unless you have choker out and then the mixture is too rich, and it lopes and gas comes out of the exhaust pipe. But after it warms up gradually it hits on all six and runs fine. On a hard pull however, it will lope and does not pull well. Carbureter was sent to the factory a year ago and was overhauled.—An Illinois Reader.

We believe that this car is a 1916 or 1917 model and we understand that the gas was taken through a passage in the cylinder head so that in cold weather it would be necessary for the engine to warm up considerably before proper carburetion would be obtained. On a car as old as this one it might pay to install a new type carbureter adapted to the use of present day fuel. It might also be well to install a hot spot in addition to the use of cylinder jacket for heating purposes. Addresses of concerns making hot spot manifolds will be given by letter.

It might also be well to check up the compression and to see that the spark is a hot one. To check the spark you should remove a wire from a spark plug and hold it within $\frac{3}{16}$ in. of the engine while the engine is running. The spark should jump regularly without missing and when viewed in a dark place should show considerable red color or flame surrounding the blue center of the spark.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Timing Ford Valves by Piston Position

Q.—Would you please give me the best method of setting Ford valves as to piston travel and also the necessary clearance for them.—Lloyd Flanagan, Camargo, Ill.

The following method of timing valves is taken from the Ford service bulletin and does not give any specific clearance between the valve tappets and the valve stems. The clearance is made such, however, that the valve timing will be correct. The clearance will be approximately .012 or .015 inches. The procedure is as follows:

The method of accurate valve timing on a Ford engine is to time the valves by piston travel. The measurements are given below.

Previous to 1913 model:

Exhaust opens 3/8 in. before bottom center.

Exhaust closes 1/64 in. past top center.

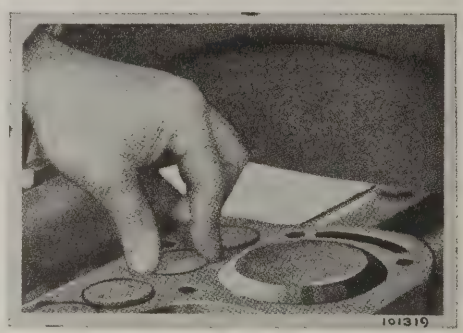
Intake opens 7/64 in. past top center.

Intake closes 3/8 in. past bottom center.

Later than 1913 model:

Exhaust open 5/16 in. before bottom center.

Exhaust closes top center.



Intake opens 1/16 in. past top center.

Intake closes 9/16 in. past bottom center.

The piston as the cylinder is being timed is first brought to top center. (The highest point to which piston rises.) A scale is then laid across the piston and the distance from this scale to the top of the cylinder is measured. The engine is then turned to bottom center and the distance from the piston to the top of the cylinder block is measured again. This is the "bottom center." For example, the top center is 5/16 in. above the face of the cylinder block and the bottom center is 3 11/16 in. below the face of the cylinder block. On a 1913 engine, the exhaust opens at a point 3 3/8 in. below the face of the cylinder block on the down stroke of the piston, the crankshaft turning in the direction of rotation of the engine and closes on top center. The inlet opens 1/4 in. above the face of the cylinder block on the down stroke, and closes 3 1/8 in. below the face of the cylinder block on the upstroke.

Should a valve open early and close late, a small amount of stock should be ground from the end of the valve stem. If the valve opens late and closes early, the stem is too short and a new valve should be substituted. Some repair men draw out the stem by peening the lower end, but this is poor practice as the average man merely turns a burr on the edge and this is soon worn off by the incessant tapping on the stem. The intake valve should be timed accurately on the opening and the exhaust should be timed on the closing as in a motor whose camshaft may be worn it is not always possible to have both the opening and closing check accurately with the figures given.

The method of determining when the valves open and close is as follows: With the spring assembled, close the valve. When it is closed, hold it with the fingers as shown. Twist back and forth on the head while some one cranks the engine slowly. The instant the valve will turn, it has started to open. In the same way the valve may be checked for closing, the valve turning

Checking Ford valve timing according to official instructions

until it has seated. Another way to check the opening and closing is to insert a .001 in. feeler, or a thin piece of paper, between the stem and push rod. The instant the feeler will not move, the valve has opened. The instant it will move after being held tight, the valve has closed.

FLAT RATE INFORMATION EVERY WEEK, TOO

Q.—We are interested in your article in one of the recent issues of MOTOR AGE in regard to the flat rate business on all models of cars. We would like to know where we can get a complete record of all the factories that have this data figured out. If you can get this for us please let us know what it will cost for the data on about a dozen of the standard cars.—Petterborg-Nash Motor Co., Preston, Idaho.

The factory compiled official flat rate repair operations and other flat rate data are available only to authorized dealers selling or repairing the make of car covered by the data. In other words, unless you are a Buick dealer or an authorized Buick repair shop you cannot secure the Buick flat rate schedules. In the April 30, 1925, issue of MOTOR AGE there was printed a chart giving 277 operations on more than 90 per cent of the passenger cars in production. This table is sufficient to be of considerable help to the small town shops doing repair work on all makes of cars.

Front End and Engine Bearing Trouble

Q.—Is there any way of preventing the shock caused by rough roads from jarring the driver's hands. Some eights are quite bad in this respect and we are at a loss to know what to do to prevent it. Is this due to balloon tires or to the steering gear or both.—H. R. Ross, H. G. Markham Co., 2901 Broadway, Oakland, Calif.

In some cars it is essential to balance the wheels when balloon tires are used. This means that when the wheel is jacked up there should be no tendency for it to turn and settle in a certain position. This may mean adding weight to one side of the wheel by means of washers bolted on or by any other convenient method. Looseness of the front wheel bearings will also contribute to this condition. It might also be desirable to check up on the spring in the tie rod and also in the drag link. On some cars it has been found almost essential to use a stiffer spring in the tie rod and drag link or to eliminate the spring.

We are sending you by separate letter instructions which have been prepared by J. S. Bushey Company, 717 W. 11th Street, Los Angeles, Calif., distributors of motor wheel products and Gruss Air springs. These instructions give general information on precautions to take in installing balloon tires, and will doubtless be of assistance to you in checking up on eights or any others which show a tendency toward shimmying.

Q.—What is the best method of preventing rod burning out in a 1925 Studebaker special? Is it necessary to install new pump, oil pan and main bearings?

We believe that this must be some peculiar trouble in the car on which you are working, as we have had no general complaint along this line. The oil pump sends oil to the main and camshaft bearings and ducts in the crankshaft carry oil to the connecting rod bearings. Discharge from a longitudinal groove in the front camshaft bearing lubricates the timing chain. Excess oil draining back from the engine is caught in a pressed steel tray. This tray which is supported by the oil pan has a flared opening at its lowest point. The oil drains through this opening into a cylindrical wire screen supported by a circular plate bolted to the bottom of the oil pan.

The oil must pass through this cylindrical screen before entering the reservoir formed by the base of the oil pan. We believe that bearings burning out would be due to obstruction in the oil line or to leakage or to some trouble in the pump. It might be well to remove the pan and force oil through the system to see that it flows equally from all bearings and does not come in a flood from any one. This would show excessive clearance at that bearing. You could also drive the pump separately and see if this operates effectively.

Clearing Up Electrical Trouble

The READERS' CLEARING HOUSE

Trick Wiring for This Garage Man's House

Q.—I am enclosing a hook-up from my garage to the house. I would like to dim the lights in the house from the garage. Please let me know if the hook-up is right. Also let me know if the lights in the house can be put in series to dim them.—Charles Tuckfield, North Branch, N. Y.

In your sketch you show the lamp bank in the garage which would be in series with the lights in the house. This would work after a fashion, but wastes

Series parallel circuits to dim lights in the house.

current. The series parallel method is best and is shown by a diagram we have made. You will notice that we have divided the lights in the house into two sections. It is necessary that the same number of lights and the same size lights be used in both sections. We have also shown a light on the pole, but have not shown any lights in the garage.

These could be connected up to the plus and minus terminal of the battery after you have the rest of the wiring working all right. You will need a two pole double throw switch for the series parallel hook-up. It will be necessary to wire up carefully to make sure that you follow out the diagram. From positive battery a wire goes to the No. 3 terminal on the switch and an extension of this wire goes to the house, to one side of one of the lamp banks. You will notice that you can also take a connection from the positive wire and run it up to the light on the pole.

A connection from negative battery goes to the No. 1 terminal of the switch and a short circuit or jumper connection must be used to connect the No. 1 and No. 6 terminals of the switch, although there is no external wire put on the No. 6 terminal. The No. 4 terminal is also not used. With the switch thrown to the right the lamps in the house will be bright and with the switch thrown to the left they will be dim. The light on the pole will not be affected by the dimming of the lights in the house.

Q.—I have a Gardner car model 1923, four cylinder using a 6 volt 80 ampere battery with positive side grounded. I use the same battery in a Chevrolet model 1921, four cylinder with the negative side grounded. Is this battery being charged from the same terminal when on either car?

Yes, when the positive terminal is grounded the current is supposed to flow from the frame of the car to the positive terminal and then back to the generator through the wiring. When the negative terminal is grounded the current is supposed to flow from the generator through the wiring to the positive terminal and back through the frame of the car. The direction in which the current flows does not make any difference just so it goes the right way through the battery. It corresponds in a sense to crossing a belt in order to make a machine run in the opposite direction. You might have a machine which has to be driven a certain way. You could either do it with a left hand motor with the belt crossed or with a right hand motor with the belt straight. The results in either case would be that the machine would be driven in the proper direction. The same thing is true electrically when you change the battery from one car to another.

QUESTIONS ON C. P. CHARGING

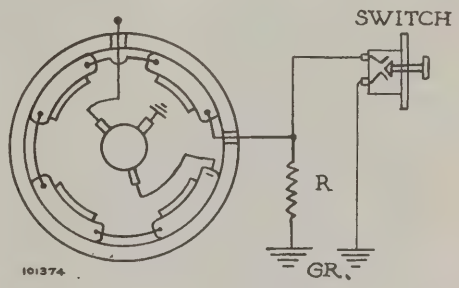
Q.—I would like to have a little information on battery charging. Is charging with a constant potential machine as good as charging with a Tungar or old style motor generator.—D. C. Slick, 2625 Lincoln street, Granite City, Ill.

The constant potential method is quicker, but we do not believe there is any difference in the results if proper care is used in either method.

Q.—Do the batteries take and hold as good a charge?

Yes.

Q.—Do some batteries get too hot on the constant potential system and buckle the plates?



Not if ordinary precautions are used, to see that temperature does not become excessive.

Q.—How do you take care of new and sulphated batteries on this machine?

Resistance wire is used in the connection from the battery to the bus bar. These may be improvised out of iron wire or may be obtained from one or more of the companies making constant potential equipment. These resistance units supplied by these companies can be used in connection with an ammeter so that the exact amount of current flowing is known. They are also adjustable for various conditions of sulphation or heating. Overheating of a sulphated battery is also possible on a constant current charging line unless the current flow is cut low enough to suit the sulphated battery. Under these circumstances the charging rate is unnecessarily low for the others.

The Thermostat Effect, Hand Operated

Q.—Here's a little idea I have copied from the thermostatic generator, but I have made it a hand control. This time of the year it is very hard to get as much current for the battery as is used. If the generator is set up enough, there is danger of burning it out on a long run. My scheme is to set the generator up to 20 amperes as on a Ford for example, then disconnect the field wire which goes to the ground brush and

Circuits used to keep battery fully charged in winter.

bring this wire out and connect it to a resistance, then ground the other end of the resistance. Also run a wire from the resistance to a switch and from the other switch terminal to ground. Now when you start out on a cold morning, leave the switch button pushed in so that the resistance is shorted out and you get the full 20 amperes. Then after you have run 10 or 15 minutes pull the switch out and the charging rate will be about 10 or 12 amperes. If the current is too low when the switch button is pulled out it means that there is too much resisance and if the current is too high it means that there is too little resistance.—E. J. Petry Auto Electric, 326 E. Capitol Ave., Jefferson City, Mo.

This is a good idea and will accomplish by hand control what the Remy thermostat accomplishes automatically.

DOPE ELECTROLYTE

Q—Would like to have your opinion on the ———— battery mixture. I am sending you some literature that I have which refers to this mixture.—A Reader.

It is our opinion that nothing but diluted sulphuric acid, otherwise known as electrolyte, should ever be used in a lead storage battery. We have no knowledge of the mixture in question, but many products making similar claims have been analyzed and found to contain chiefly sulphuric acid and other ingredients which have no benefiical effect.

Motor Age's Flat Rate Forum

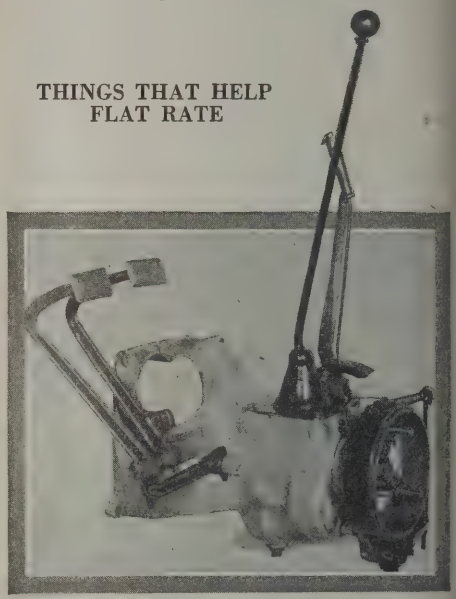
EDITED BY B. M. IKERT

Preserve Your Flat Rate Shop Data

ONE concern running a large automotive business wrote to MOTOR AGE asking for another copy of the electrical flat rate chart, saying that they had used up two copies, these being entirely worn out. They said they would frame the next one, or put it on a card and shellac it so it would be preserved in spite of rough handling.

This brings up a point that is often overlooked in the average shop, for valuable wiring diagrams, service bulletins from the factory, or charts which are helpful to the men are allowed to be damaged on account of being put into the hands of the shop men without protection of any sort.

Where service bulletins from the factory contain essential data for the men, they should be kept in covers which are usually supplied for this purpose. Then if the book or bulletin is in danger of being damaged, it might be well to have it in charge of the shop foreman.



In some shops each flat rate job requires certain tools, with which there are also instructions. The man doing a valve grinding job, for example will go to the tool room where he will get the tools required, also a cardboard on which is shellaced a blueprint which tells exactly what to do and in what order. This would be out of the question for the one man shop or even some larger shops, but the plan of putting shop instructions and job data on blueprints shellacked to cardboard is a good one. These may be washed without damage to the print and an occasional coat of shellac will preserve them indefinitely.

If instructions or a flat rate chart should be used by the service salesman only, it might be mounted under glass near the entrance or wherever the customer gets out of his car and tells what he wants. Then he as well as the salesman could refer to it and see that the price he paid depended on what was needed and was on a fair basis.

Having a flat rate chart laid out flat, either shellacked or under glass, has some disadvantages. Some shop managers feel it is too easy to have the customer make comparisons of the prices on his car with those on some other, and while the variations may be perfectly justifiable, it is not always easy to explain such variations to the customer who is not familiar with the construction of the two cars.

For this reason it would be entirely possible to mount the chart on a cylinder of cardboard, which could be mounted on hubs and spokes and made to rotate with its axis in a vertical position. An outer cylinder of cardboard could then be made which would cover the other, but have a vertical window through which any price could be read. At the side of the window the operation numbers would be pasted. To use the cylinder the inner one would be turned until the car wanted appeared in the upper part of the vertical window. The prices would then be shown, each opposite its own operation.

THINGS THAT HELP FLAT RATE

Clutch throw-out mechanism on one of the popular-priced models showing the adjustment on the outside of the lever which works in conjunction with the clutch pedal. The adjustment is made by releasing the lock nut with a wrench and turning the screw in the boss in or out as the case may be, after which the adjustment is locked

A Flat Rate Thought

A proper recording system is very necessary with flat rate. Few men are well enough posted to give a fair price for all jobs that come into their shop and it is therefore necessary they have some guide. Proper service records will supply this. Another feature of these service records is that it serves as a check on the mechanics. One mechanic may be taking a half an hour longer for a particular job than another. Perhaps if the slower man were shown the method used by the quicker man, he would be able to duplicate his time record.

The Foreman's Desk

Many times a mechanic is in doubt as to whether or not a new part should be installed. He tries to locate the foreman and unless the building is small there is no telling how much time may be lost before he is found. Then, too, it may be a long ways to the parts department and more time is lost.

One company places the foreman's desk between the shop and parts department and the mechanics easily can confer with the foreman as to the necessity of using new parts, reconditioning the old or using them as they are.

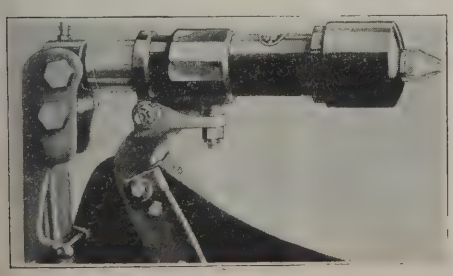
THE MARKET'S NEW OFFERINGS

Accessories -- Equipment — Supplies

Laminum Junior Kit

THE Laminum Junior Kit is a new offering to the trade by the Laminated Shim Co., Inc., 14th Street and Governor Place, Long Island, N. Y., which was shown for the first time at the recent A. E. A. show in Chicago. The kit contains 86 different shims in envelopes, each envelope being labeled according to car make and bearing an index number. There are pictures of the different shims on the envelopes as a further means of quick identification. Then on the underside of the cover of the kit is an index which directs the repairman to the envelope containing the particular shim desired. The price of the kit is $7.50.

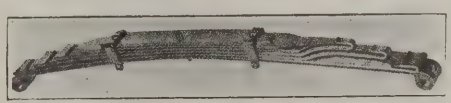


Laminum Junior Kit

Airbuoys

Cut shown below

AIRBUOYS, which are "air spring shock absorbers," are made by the Reliance Manufacturing Co., New Haven, Conn. Fastened between the end of the spring and the frame of the car Airbuoys assist in the depression action of the spring and also control rebound. Road shocks are first taken up by the Airbuoys and then transmitted gradually to the springs. With Airbuoys it is claimed the recoil from rebound is not carried through the body of the car. List price per set of four, installed, $125.



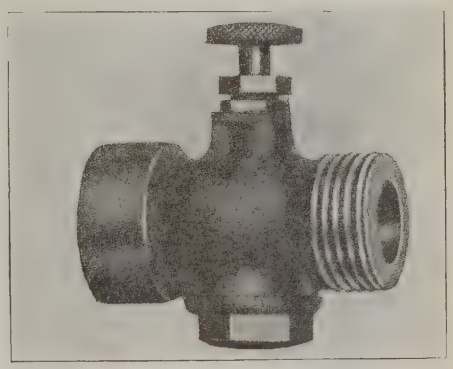
(Left) Pedersen Oiljak
(Right) Bemis Motor Heater

Pedersen Oiljak

The Pedersen Oiljak is being manufactured by the Oil Jack Co. Inc., 1457 Broadway, New York. Only the 10 ton size is now in production but other sizes will be ready for distribution at an early date. The jack is raised by means of an 18 in. handle and lowered by means of a needle valve which permits the oil to travel back into a reservoir. It is stated that the jack may be operated by either short or long strokes of the handle, which permits its use in cramped quarters.

White's Spring Rollers

WHITE'S Spring Rollers consist of roller bearing inserts to place between the leaves of the automobile's springs. The insert is held in position by a clip which clamps over the end of the spring and flanges which prevent the insert's side displacement. The roller bearings are but one-thirteenth of an inch in diameter and are made of very hard steel. They separate the spring leaves but slightly yet it is claimed they serve to reduce friction and produce improved spring action and smoother running. Sets for Ford, Overland and Chevrolet, $5. Made by White Roller Bearing Spring Insert Co., Bowling Green, Ohio.



White's Spring Rollers

Additional Descriptions
On Next Page

Bemis Motor Heater

A DEVICE for keeping the engine warm while in a cold garage is being put on the market by the Bemis Motor Heater Co., 601 Andrus Bldg., Minneapolis, Minn. This is an electrical device operating on 110-volts and consuming two amperes. It is applicable to any water cooled car. In installing the device two holes are tapped into the water jacket and a connection is made. Water then circulates from the water jacket of the engine through the heating device on the same principle which is used in thermo-syphon cooling systems. The heater is supplied complete with necessary fittings and 6 feet of electric cord with connection. The list price is $15.00.

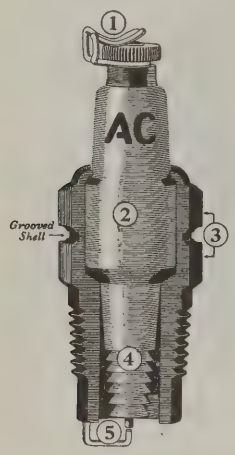
Gaylord Water Saver

Gaylord Water Saver

IN the Gaylord Water Saver made by the Gaylord Mfg. Co., Paterson, N. J., is a handy device for the person, either owner or garageman with a job on hand of car washing. It is equipped with a button which controls the flow of the water. A slight pressure on the button maintains the flow while relaxation of the pressure stops it. The price is $2. The company also furnishes nozzles for any sort of washing jobs. A combination offer of six nozzles and one Gaylord Water Saver for garages lists at $3.50.

Western Wire Products Prices

THE "Twin" Assortment Package containing 50 lock washers and 100 cotter pins put up by the Western Wire Products Co., Third and Spruce Streets, St. Louis, Mo., was designed to provide the trade with a convenient supply of these necessary articles. This package was described and illustrated in the December 3 issue of MOTOR AGE but through an error the prices were incorrectly stated. This company does not quote retail list prices and therefore no prices should have been given in connection with the article. Prices to the trade are quoted upon application.



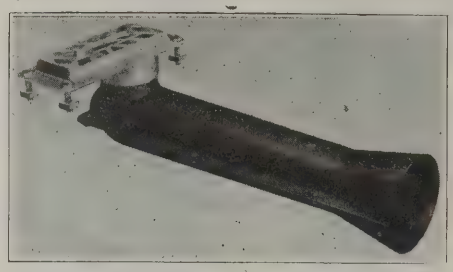
THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

(Continued from page 29)

AC One-Piece Plug for Fords

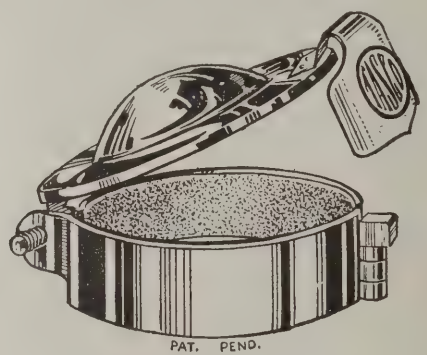
BEING a development of the regular "AC 1075" and designated as "Type T" the AC Spark Plug Company has perfected an improved type spark plug for Fords. The new plug is of one-piece design, insuring against compression leaks. The hexagon is made long enough to provide an easy wrench-hold. It has the special features of the "carbon proof" porcelain, made from Kyanite, a new AC material, heavy electrodes and the spring terminal clip which permits quick removal of the secondary wire for testing plugs or coils.



A. C. One-Piece Plug for Ford

Lyon Tool Box

LYON Metallic Manufacturing Co., Aurora, Ill., is producing a tool box designed for use by the mechanic, to keep in the private garage or home or carry in the car. The box is finished in green enamel and strongly made. It comes in four sizes, from 18 to 22 in. long, six and seven in. wide and six deep. The weight of these boxes ranges from nine to 12 pounds and trays are available for each. Prices from $2.50 to $3. "Make Yourself a Present of This Box" is a sign used in connection with the company's Christmas selling campaign.



Lyon Tool Box

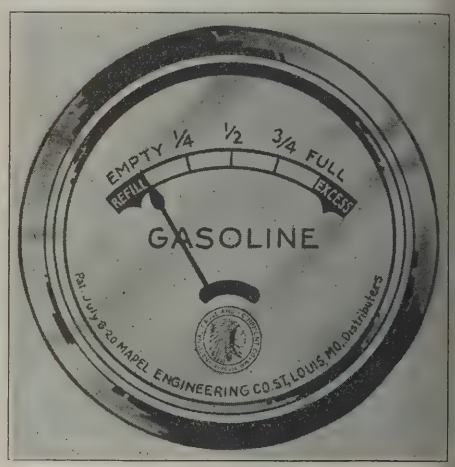
Perfection Heater for Fords

(Cut shown above)

SEVERAL advantages are claimed for the new Perfection Heater for Fords by the Perfection Heater & Mfg. Co., 6545 Carnegie Avenue, Cleveland, Ohio, the manufacturers. This unit is compactly made and is said to possess unusually quick and powerful ability to supply warmth for the car. The body of the heater in two parts, is clamped around the exhaust pipe from which the heat is taken, the heat entering the car through a register bolted to the floor over an opening of but 2½ in. in diameter cut in the floorboarding. Retail price is $6.50.

Tasco Tank and Radiator Cap

Tasco Tank and Radiator Cap

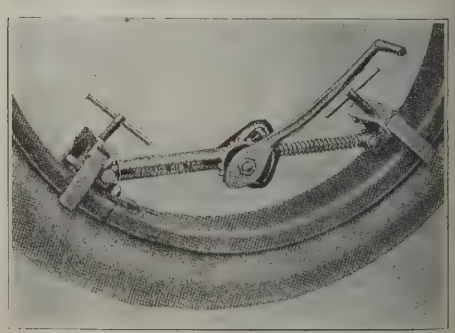


A CAP designed for either the gasoline tank or radiator is offered the trade by the Automotive Specialties Corp., New York City. Being hinged, rather than threaded, the cover of this cap cannot be lost. It opens with a lift of the spring shield and snaps shut. Two sizes fit all cars. The device is made of nickel plated brass and is easy to attach. Price $1.50 each.

"Magnetic" Succeeds "Connecticut"

ANNOUNCEMENT is made by the Magnetic Clock Company, Hartford, Conn., that it has succeeded the Connecticut Clock Co., makers of electric clocks for automobiles, motor boats, airplanes and radio. Products of the Magnetic company will bear the name "Magnetic" instead of "Connecticut".

Mapel Gasoline Gage



THE Mapel Engineering Co., 416 N. Third St., St. Louis, Mo., is manufacturing a gasoline gage with the indicating strument located on the dash. It operates on the hydrostatic principle in conjunction with the fuel supply system and renders a practically constant indication of the amount of gasoline in the tank. The rate of gasoline consumption is also indicated by the pointer moving to the "refill" position each time the vacuum tank is refilled. The instrument is 2 1/4 in. in diameter and is similar in design to the temperature gage manufactured by the same company. The list price is $10.

Dash Indicator of Mapel Gasoline Gage

A. S. Wallace Rim Tool

SIMPLE, yet sure and quick operation are incorporated in the action of the A. S. Wallace Rim Tool, according to the manufacturers, the A. S. Wallace Rim & Tire Tools Co., 12-14 Jefferson Street, Chicago. In operation a clamp attaches to the rim near the split, with another clamp holding to the rim for fulcrum on the other side of the split. A crank is used for expanding the rim.

A. S. Wallace Rim Tool

EDITORIAL

A Sound Industry

NATIONAL prosperity seems to assure continuation in 1926 of the normal growth that the automotive industry has enjoyed since the war, and in turn an active automotive business will contribute in large measure to the general welfare of the country.

Progress of the automotive industry in 1925 has been much more than the establishment of new production and sales records. Its most important aspect has been the general recognition in this country of the motor vehicle as a definite and essential element in the nation's transportation scheme.

It is true that production of motor vehicles reached a new high record this year, the total up to Dec. 1 having been 3,997,954, with December almost certain to add another 300,000, bringing the year's aggregate in excess of 4,200,000. It is also true that sales in nearly every section of the country kept right up with production.

But if the industry had not progressed in the direction of greater usefulness and adaptability in our national transportation program we could hardly expect it to maintain its present position, much less continue its growth. The fact is it has progressed much more in this direction this last year than in any like period in the industry's history. In design and performance the motor vehicle has established itself in 1925 as a comfortable and efficient means of personal transportation and a very economical and practically necessary conveyor of commodities.

The passenger car has left far behind it the tradition of novelty that led hundreds of thousands of persons to use it when to do so was to subject themselves to weariness and discomfort which they bravely bore in a spirit of pioneering. This has been accomplished largely through improvement in the design and construction of vehicles. Better spring suspension, balloon tires, smoother operating engines, more dependable mechanisms, easier steering, sustained speed for long distances, comfortable enclosures at low price, better seating arrangement, and better looks—these are the respects in which the passenger automobile has made its greatest progress in the last year and which practically guarantee its continued growth in popular demand for 1926. As it appears now the demand for passenger cars in 1926 will be limited only by the country's capacity to pay for them and this as we have seen has increased almost beyond belief as the national wealth has multiplied and been better distributed, and as credit facilities have been expanded along lines at one time considered impossible.

The commercial car, too, has grown in popular favor this year. A new degree of safety and comfort has been reached in the design and construction of buses. Motor trucks have increased in production and sale in even greater proportion than passenger cars.

Public acceptance of motor transportation has led to immense state and national highway systems designed and built specifically for the use of rubber tired motor vehicles. These roads are going to be used just as fast as they are built.

A factor promising strong stimulation of passenger car sales in 1926 is the growing tendency for families in moderate circumstances to own more than one car. This practice heretofore has been confined almost exclusively to a few wealthy families. Today original cost is so reasonable and the scale of prices so accommodating, maintenance so well within average means, utility so well established, that many average families are coming to consider more than one car a necessity.

All these factors indicate not only a strong and healthy condition in 1926 in the field of motor vehicles, but also in production and sale of tires and all those articles of equipment and supply that are required for the operation and maintenance of automobiles.

"What's in a name?" is one question and "What's in a window?" is another. Properly trimmed, the answer to the latter is—"Profits."

Try This in Your Selling Policy

ONE of our highly successful dealer organizations has a note in its merchandising policy which it would be well for many other automotive merchants to copy. It is simply this:

Refusal to concede that the winter season is naturally a slump period.

In the beginning of the winter season this company buckles into the effort of selling all the harder. It holds its spring delivery orders to a minimum because of its dogged determination to sell for immediate delivery. It tries to sell the prospect on the thought that the automobile is not merely a seasonal conveyance but in popular acceptance an all-year facility of transportation. And its winter sales hold up remarkably well.

Sales might taper off in the winter but when the dealer succumbs to the notion that winter is bound to be a slump period he establishes at once a hopeless psychology within his own organization. Admit defeat and you are licked. Refuse to "lay down," insist on going ahead, imbue your salesmen with this same inspiration and sledding over winter's snows will be much easier and more profitable.

In some lines all things may come to him who waits but in automotive merchandising they're more apt to come to the go-getter.

Factories Concentrate on New Year

General Price Reductions at Show Believed Unlikely

Raw Materials and Tires Are Up and Higher Lists Expected Early in 1926

NEW YORK, Dec. 24.—Production of motor cars is marking time, while the factories concentrate on preparations for the new year which will begin for the automobile industry with the opening of the national show in New York Jan. 9. The model and price changes that will be made share the center of interest with the legislative projects affecting the industry now before Congress.

Announcement of a drastic price cut last week by a leading producer of four cylinder cars, the extent of which will not be known until show week, recalls a similar situation three years ago at this time. The reduction made then led to a wave of price-cutting, but the state of the market and of production costs as compared with prices is now much different. The producer in question has for several weeks been expected to reduce prices, and the announcement created little surprise in the industry.

The forces tending to increase prices are so strong that any general reductions would be very difficult to bring about and it is believed that if one or two of the larger companies made advances in the lists the others would follow suit. Tire prices are the principal factors that have raised the cost of producing cars in recent weeks, but raw materials have also been generally on the upgrade.

A bill to regulate trucks and buses introduced in Congress last week and supported by powerful interests is a matter of major importance to the commercial car end of the industry. It is widely felt that the growing business of common carrier trucking will be dealt a blow from which it will not recover for years if the bill is passed in its present form. Some form of regulation is regarded as almost inevitable by many, but the legislation now proposed would, it is held, place a tremendous burden on the independent operators.

"CHRISTMAS SHOW" SUCCESS

CINCINNATI, Dec. 19. — Christmas sales of Buicks in the Cincinnati territory took on a big increase due to the movable "Christmas Car Show" arranged by Salesmanager Joseph W. Conner and Harry Leyman, owner of the Leyman-Buick Co. More than 50 cars were sold during the 15 days of the holiday period as a result of the successive exhibit and the special Christmas campaign of the Leyman-Buick Company in Kentucky and West Virginia was productive of fine results. Sixteen models were used in the "Christmas Show."

New York Show Week Events

NEW YORK, Dec. 21.—A list of meetings, dinners, luncheons and banquets to be held by various bodies of, or connected with the automotive industry, to be held during the week of the National Automobile Show here is given below:

Saturday, January 9

Meeting, Packard Motor Car Co., Biltmore.

Monday, January 11

12:30 a. m.—Luncheon, Motor Transport Congress, Hotel Roosevelt; luncheon, United States Advertising Corp. of Toledo, Hotel Biltmore; luncheon, members of Committee of 75, Rubber Association of America, Hotel Commodore.

6:30 p. m.—Dinner to 1,000 guests of Rubber Association of America, Hotel Commodore; dinner, Cadillac Motor Car Co., Hotel Biltmore.

6:30 p. m.—Dinner, Metropolitan Section, Society of Automotive Engineers, Hotel Commodore; dinner, National Automobile Dealers' Association, Hotel Commodore.

Tuesday, January 12

12:30 a. m.—Luncheon, Motor Transport Congress, Highway Division, Hotel Roosevelt; luncheon, Oakland Motor Car Co., Hotel Commodore, Chilton Class Journal Co., Hotel Commodore.

6:30 p. m.—Banquet, National Automobile Chamber of Commerce, Hotel Commodore.

Wednesday, January 13

10 a. m.—Meeting, Board of Directors, American Automobile Association, Hotel Roosevelt; luncheon, Auburn Automobile Co., Hotel Commodore; meeting and luncheon , Velie Motors Corp., Hotel Commodore; luncheon given by President H. H. Franklin, H. H. Franklin Mfg. Co., to visiting Franklin men, Hotel Commodore.

7:30 p. m.—Dinner, Motor & Accessory Manufacturers Association, Hotel Astor.

7:30 p. m.—Dinner, Studebaker Corp., Hotel Plaza; annual dinner, Ols Motor Works, Hotel Commodore; annual dinner, Chevrolet Motor Co., Hotel Commodore.

Thursday, January 14

Luncheon, Chrysler Sales Group, Maxwell Motor Co., Hotel Commodore; luncheon, distributors and dealers, Rickenbacker Motor Co., Hotel Commodore; annual dinner and entertainment, Paige-Detroit Motor Car Co., Hotel Commodore.

6:30 p. m.—Dinner and dance, Greater New York Tire Dealers Association, Hotel Pennsylvania.

6:30 p. m.—Dinner, Society of Automotive Engineers, Htel Astor.

6:30 p. m.—Dinner, Overseas Booster Club No. 9, Hotel Empire.

10 p. m.—Boxing show, Boosters Club No. 13 of New York, 153 West 64th St.

Efforts to Provide Better Distribution Are Planned

National Conference Would Have Congress Provides Census Same as For Manufacturers

WASHINGTON, Dec. 19.—Efforts to improve conditions of distribution, to bring to light the major wastes of marketing and to set up and enforce ethical and economical standards of business practice were brought to a focus at the general meeting of the National Distribution Conference held in Washington, December 15 and 16, under the auspices of the Chamber of Commerce of the United States.

A general program of business and trade association activity in the field of distribution was outlined. Steps were proposed, in accordance with the recommendations of Secretary Hoover, looking to the co-ordination of business effort in the assembling of basic information relating to marketing. Machinery for the self-regulation of business was arranged.

Among the specific steps recommended by the Conference are:

That the Chamber of Commerce of the United States be requested to establish a permanent committee on the collection and publication of commercial statistics.

That Congress be requested to provide funds for an enumeration of distributors and a census of distribution comparable with the biennial census of manufacturers.

That the President of the Chamber of Commerce of the United States be requested to appoint a committee to constitute a Joint Trade Relations Committee, formed of representatives of manufacturers, wholesalers, retailers and the consuming public to act as a clearing house for complaints of objectionable and destructive practice and to promote such coordination as will effect economies and improve mutual relations.

In addition the conference outlined a wide range of activities to be carried on by business men, individually and through their trade organizations, all designed to contribute to the common purpose of putting distribution on a systematic and efficial basis.

GIVE NEW LICENSES

DALLAS, Tex., Dec. 19.—The Franklin Motor Company of Dallas stimulated used car buying this week by giving a 1926 state license with every used car bought. The license was given without additional price on the car. In Texas license for automobiles has to be paid by February 1, 1926. They are due to be paid now.

Stutz Dealers Gather to See 1926 Car at Factory

Service Methods Are Shown to Representatives Who Will Sell New Product

INDIANAPOLIS, Dec. 19.—About 250 members of the dealer and distributor organization of the Stutz Motor Car Co. attended the convention here during the first three days of this week. During the course of the meetings the Stutz product for 1926 was shown to the sales organization and service demonstrations in charge of Bert Dingley, service manager, occupied an important position.

In addition to addresses made by F. E. Moskovics, president, and Col. E. S. Gorrell, vice-president in charge of sales, the meeting was featured by speeches by Charles M. Schwab, E. V. R. Thayer and Carl J. Schmidlapp, who are the most prominent members of the Stutz directorate.

Dealers from all parts of the country were in attendance and several of them brought members of their local organizations. Stutz executives report that a number of dealers of high caliber have been signed up during the last few weeks and that several more can be expected in the near future.

"No orders for deliveries of new Stutz cars accepted for shipment after April first; orders for immediate shipment or shipment within three months only accepted" was the keynote of the convention.

It was not only enthusiasm on the part of some 250 men gathered from all sections of the country to hear about the new policies of the company, to see the new Stutz 1926 automobile offerings but an enthusiasm best expressed in orders for 1,010 automobile for immediate shipment of standard production cars. There was no urge on the part of the company executives on the dealer organizations—no special pressure brought to bear in an effort to move the cars from the factory.

Dodge Brothers Reduces Prices on Complete Line

DETROIT, Dec. 19.—Dodge Bros., Inc., has announced price reductions on the complete line of cars. The exact amount will be announced January 7.

According to the announcement the reductions will apply on all cars purchased after midnight December 15. The amount of the reduction will be immediately refunded to purchasers since December 15.

The reductions, it was further stated, are made possible by completion of the new $10,000,000 expansion program which consists of buildings and equipment which will enable the company to double its capacity during the coming year.

Horse Driver Is Speeder

MILWAUKEE, Dec. 19.—The final straw has been added to the list of insults suffered by Old Dobbin in the wake of the motor age, with the arrest at Stevens Point of a horse driver on a charge of exceeding the speed limit of eight miles per hour. While cars breezed along at much above this speed, and stately limousines "did" Main Street in even less time, Hugh Leonard, teamster, was halted by officers of the law, haled into court and fined $10 and costs for reckless driving. His gallant steed was snapped by a motor cop at eight miles plus. Leonard expressed the thought that it might not have been so humiliating had the arrest been made by a mounted horseman instead of a motor cop.

RADIO CO. INCORPORATES

DECATUR, Ill., Dec. 19.—The Decatur Radio Company, 221 East William Street, which has been manufacturing five-tube sets, has been incorporated and application for charter is now pending. The personnel of the company consists of A. W. Cartwright and H. W. Winings, in charge of the mechanical and engineering departments; C. D. Warren and F. H. Wight. The latter is business manager and Mr. Warren is a former Lakewood banker. When the factory is established the company will begin production on greater scale with prospect of heavy 1926 business. Mr. Winings is well known in this section as a radio engineer.

NEW BUDD PLANT

DETROIT, Dec. 19.—Production is now under way at the new all-steel body assembly plant of the Edward G. Budd Manufacturing Company. The building, covering 290,000 square feet, has been completed in record time—the construction being started early in September and the first body turned out December 8. The new facilities provide for complete finishing of the bodies, a task hitherto left to car manufacturers. The units are shipped in the "white" from the main factory in Philadelphia, thereby taking advantage of low production costs, and are being assembled to the last detail in Detroit, ready to drop into place on the chassis.

SWEET BUYS IN BOSTON

SOUTH BEND, Ind., Dec. 19.—G. W. Sweet, assistant sales maanger of the Studebaker Corporation, has purchased the business of the Donovan Motor Car Company of Boston, distributors for that city and surrounding territory. He will take over the business January 1. The transfer involves taking over a large salesroom and used car department building and the large service building as well as the stock of parts, cars, etc.

Kansas City Salesmen and Dealers Meet with N.A.D.A.

Vane and Shaw Present Program—Several New Members Are Obtained

KANSAS, CITY, Dec. 19.—More than 500 dealers and salesmen attended the national sales congress sponsored by the N. A. D. A. at the Hotel Baltimore here. According to George A. Bond, secretary of the Kansas City Motor Car Dealers' Association, there were about an equal number of dealers and salesmen.

C. A. Vane, general manager of the N. A. D. A., was in charge of the meeting. He stated that it was among the best, and the largest yet held by the association team, with the single exception of the meeting in New York.

Lynn M. Shaw, assistant manager, and H. D. Bullock, field representative of the association, assisted Mr. Vane in presenting the program of the afternoon. A. R. Kroh, sales specialist, was called home on account of sickness in the family before he reached this city.

Among the outstanding features of the congress were the charts showing outlines of the findings of the association in regard to sales, markets, etc., upon which basis of facts a dealer might intelligently plan his sales campaign.

After a short presentation of the work of the national association, a number of new members were obtained. It was announced that the sales congresses would be held more frequently by the association as soon as the income from an enlarged membership would justify the expense.

Registrations in Illinois Show November Decline

CHICAGO, Dec. 19.—November witnessed a marked falling off in the number of new passenger cars registered in Illinois, the decline being 37 per cent as compared with the figures of the preceding month. Losses were general ranging from 24 per cent in the Ford class to 52 per cent for low priced vehicles excluding Ford. In the medium and high priced divisions the losses were 41 and 26 per cent respectively.

Following are the detailed figures for eleven months of 1925:

Month	Fords	Low, Excl. Fords	Medium	High	*Total
Jan.	4,060	2,275	5,748	808	12,891
Feb.	3,424	1,718	4,977	612	10,731
March	5,714	2,729	6,416	784	15,643
April	9,010	3,755	8,801	861	22,427
May	8,751	3,644	8,014	899	21,308
June	6,473	3,400	6,383	828	17,084
July	8,499	4,305	8,787	1,035	22,626
Aug.	4,686	3,218	6,646	720	15,270
Sept.	1,831	3,145	6,292	661	11,930
Oct.	3,953	2,430	4,652	615	11,650
Nov.	2,993	1,143	2,716	451	7,303
Total	59,394	31,762	69,432	8,274	168,863

*Includes miscellaneous cars not named.

The foregoing statistics were compiled from figures furnished to MOTOR AGE *by Robinson's Advertising Service, Springfield, Ill.*

Firestone Declares Extra $1 Dividend on Common

Annual Meeting Results in Election of Harris Creech as Only New Director

AKRON, Dec. 19.—Directors of the Firestone Tire & Rubber Co. have declared an extra dividend, upon the recommendation of President H. S. Firestone, of $1 on the common stock, placing the junior issue equivalent to a 7 per cent basis. This recommendation came, Firestone said, "in view of the very prosperous past year and of the splendid prospects for 1926."

The directors have decided to set $10,000,000 of 7 per cent preferred stock to face the hazards and speculative conditions of the crude rubber market, he said. Harris Creech, president of the Cleveland Trust Co., is the only new director elected. He succeeds the late Dr. L. E. Sisler. Other directors re-elected are, H. S. Firestone, J. W. Thomas, S. G. Carkhuff, C. A. Myers, H. S. Firestone, Jr., and J. J. Shea.

"This year we have a capital and surplus of $60,680,641 sales of $125,000,000 and a profit of $12,800,000," Mr. Firestone said. "We have received many complimentary letters on our wonderful progress and development in such a short time." Mr. Firestone said the number of employes increased from 7,000 to 10,000 during 1925 and that an unusually low turnover indicated stability and satisfaction.

Tire plants in Akron produced over 200,000,000 pounds of product during the year, which is 43 per cent more than in 1924. He said the average daily production of tires reached 32,000 and the tubes 38,000. To emphasize the necessity of better control over raw materials, Firestone said it is necessary for the company to have on hand, afloat and under contract in the Far East, a four month's supply of crude rubber.

"As we are using 10,000,000 pounds a month, it means that we must have 40,000,000 pounds of rubber on hand and under contract," he declared. Rubber today is selling at from 400 to 500 per cent above its value, and is fluctuating very rapidly. It is not at all impossible that within the next few weeks or few months that rubber will drop 50 cents per pound. If the British take off the rubber restriction, no one knows how low the price will drop, and if they tighten restriction, no one knows how high it will go."

NEW CHEVROLET ZONES

DETROIT, Dec. 19.—Chevrolet has just completed the opening of three new zone offices in New York City, Cleveland and Omaha. Four especially designed service buildings have been erected at Des Moines, Minneapolis, Charlotte, and Jacksonville. The establishment of these offices marks the completion of the expansion program and according to R. H. Grant, general sales manager, is to assure quick distribution of cars and parts to Chevrolet dealers.

PLANS PERMANENT EXHIBIT

NEW YORK, Dec. 19.—The Studebaker Corp. of America has taken a five year lease at a total rental of $250,000 on the Rose Room of the Hotel Plaza, where beginning March 1, 1926, it will maintain a continuous display of custom built bodies mounted on a modified Big Six chassis of 136 inch wheelbase. The Rose Room is the only ballroom in the lobby floor of the Plaza and occupies the southeast corner of the hotel facing on Fifth Avenue and Fifty-eighth Street. At the present time Studebaker is utilizing the Rose Room for a display of custom built bodies by Le Baron.

SEIBERLING MAILS CHECKS

AKRON, Ohio, Dec. 19.—With the mailing of checks to stockholders of record December 5, covering final payment (4 per cent) of deferred dividends on its 8 per cent preferred stock, announcement was made that the total business of the Seiberling Rubber Co. this year will be approximately $12,000,000 as compared with $8,500,000 last year. It is estimated by company officials that next year's business will exceed $18,000,000.

FORD PLANS INVENTORY

DETROIT, Dec. 19.—Nine of the Ford manufacturing and assembling plants will close for inventory Dec. 24, it is announced. The date of reopening is not given. The plants are Highland Park, River Rouge, Iron Mountain, Holden Ave., Lincoln, Hamilton, O., Glassmere, Pa., Green Island, N. Y., and Flat Rock, Mich.

Court Restrains Sale of Apperson Service Section

KOKOMO, Ind., Dec. 19.—The legal fight over the right to sell the service department of the Apperson Automobile Co., to the General Parts Corp., of Detroit, resulted here yesterday in the issuance of a restraining order in circuit court, asked by the Pioneer Automobile Co., the holding organization for Apperson real estate and property. The holding company also petitions receivership for the Apperson Automobile Co., the operating concern formed at the reorganization a year ago last July.

The complaint charges that the Apperson officials were proceeding to sell the service department without the knowledge or consent of the stockholders and creditors, causing the request for an injunction against the sale, which was almost completed.

A hearing is to be held next week on the receivership petition. The Apperson company is one of the oldest in the industry. It has not built cars since August, but has planned the manufacture of a mechanical gearshift.

Truck Makers Refuse to Approve Tax Rebate Plan

They Would Rather Absorb Excise On Cars Than Have Effective Date Advanced

WASHINGTON, Dec. 19.—A wire referendum vote from truck manufacturers that they would prefer to absorb the tax rebate on trucks to their dealers, rather than have Congress extend the effective date in the new bill one month and notification to Congress by the American Automobile Association that that body of passenger car users would not be satisfied with less than complete repeal of all passenger car excise taxes, marked the two outstanding developments this week in the new tax legislation now before Congress.

In order to protect dealers and agents handling trucks from being forced to pay taxes of 3 per cent to the government on trucks in stock the day the new tax bill passes, arrangements had been made to have the truck provision of the new bill extended for one month, similar to the passenger car provision, and then the government would rebate to dealers for trucks in stock at the end of the thirty-day period.

A telegraph poll, however, made by the National Automobile Chamber of Commerce to the truck manufacturers resulted in a consensus that the truck manufacturers prefer that the tax to be taken off trucks at the earliest possible moment and that the manufacturers should make some equitable arrangement with their dealers in prorating the tax paid on trucks in stock the day the bill passes. Chairman Green of the House Ways and Means Committee, in charge of the bill, was so notified this week by H. H. Rice, president of Cadillac Motor Car Company and chairman of the legislative committee of the N. A. C. C.

Notice was also sent Chairman Green by Thomas P. Henry, president of the A. A. A. that the national motoring body represented by his association would be satisfied with nothing less than complete repeal of excise taxes on passenger cars and all classes of motor vehicle equipment.

COMMITTEE IS APPOINTED

NEW YORK, Dec. 19.—A committee consisting of Merrel P. Calloway, vice-president Guaranty Trust Co., Henry L. Bogert, Jr., of Eastman Dillon, W. C. Rands of Detroit and Charles H. Platner, secretary, 140 Broadway, has been organized to represent the company's mortgage 6½ per cent ten-year sinking fund of the Murray Body Corp., which went into temporary receivership. They invite holders of these bonds to forward them under a deposit agreement now being prepared. All bonds should be sent to the Guaranty Trust Co., New York, or the Security Trust Co., Detroit.

General Motors November Sales Total 60,371 Cars

Volume Delivered to Users Is Almost Double That of Same Month Last Year

DETROIT, Dec. 19.—Sale of General Motors passenger cars by dealers to users in November almost doubled the sale for the same period a year ago. The past month the sales totaled 60,371 cars and trucks as compared to 33,095 in November, 1924.

Sale of car and trucks to dealers and distributors by the various manufacturing divisions more than tripled those for November, 1924. November, 1925, sales totaled 73,624, a year ago it was 23,631.

The following tabulation shows monthly sales of General Motors cars by dealers to ultimate consumers and sales by the various manufacturing divisions to dealers and distributors.

Dealer Sales

	1924	1925
Jan.	33,574	25,593
Feb.	50,087	39,579
March	57,205	70,594
April	89,583	97,242
May	84,715	87,488
June	65,224	75,854
July	60,836	65,872
Aug.	54,842	78,638
Sept.	48,565	83,519
Oct.	46,003	86,281
Nov.	33,095	60,371

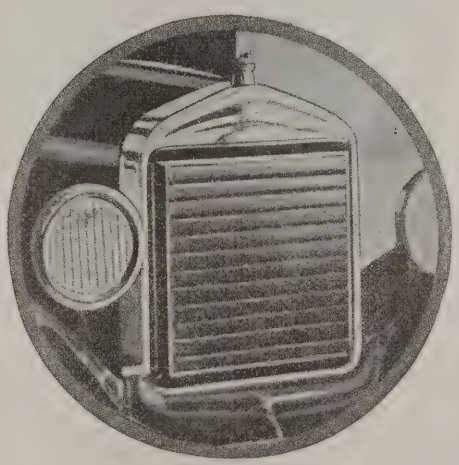
Divisions Sales

	1924	1925
Jan.	61,398	30,642
Feb.	78,668	49,146
March	75,484	75,527
April	58,600	85,583
May	45,965	77,223
June	32,984	71,088
July	40,563	57,358
Aug.	48,614	76,462
Sept.	51,995	89,018
Oct.	49,552	96,364
Nov.	23,631	73,624

Used Car Stocks Reported Heavy in Columbus, O.

COLUMBUS, O., Dec. 19.—The used car market in Columbus and central Ohio continues to be rather quiet and prices are being cut by many dealers to move rather heavy stocks of used cars before the end of the year. Some novel advertising schemes are being used but the net result is that these cars do not sell very rapidly.

Stocks of used cars are heavier than usual and a number of meetings among used car dealers have been held in an effort to solve the problem. Repossessed cars which are sometimes offered by finance companies are rather numerous and this is given as one of the cases for the disturbance in the used car market.



Another factor is the recent ruling of Secretary of State Thad H. Brown to the effect that purchasers of cars at this time will have to provide themselves with 1925 license plates for which they have to pay full price. Efforts to have the ruling that 1926 tags, which are sold at half price would be permitted during the month of December failed.

MAY MODIFY INSURANCE

NEW YORK, Dec. 19.—Modifications of the Chrysler insurance plan have been proposed by its sponsors to a committee of state insurance commissioners. These modifications are designed to meet the objections of the commissioners who have opposed the plan from its first announcement. The changes waive compulsory insurance on cars sold for cash, concede collection of state taxes on premiums received by policy holders and provide that policies shall be delivered through duly licensed resident agents instead of by Chrysler dealers, thereby removing participation by Chrysler dealers in the insuring of the cars, which was the chief objection of the insurance companies and the commissioners to the original plan.

Vernay All Year 'Round Shutter

Laminated Shim Company, Inc., Long Island City, N. Y., is the maker of the Vernay All Year 'Round Shutter for Fords, a new product which was exhibited for the first time at the recent show of the Automotive Equipment Association in Chicago. The shutter while not automatic is said to offer positive hand control from the dash, a feature of the control being that it clamps to the dash without the necessity of drilling holes. The gripping portion of the control is in the shape of a ring, instead of being on the button plan, comfortable

and easy operation being accomplished by inserting a finger through this ring.

Considerably more than the usual radiation surface is claimed for the Vernay when the vanes of the shutter are open. The producers recommend this characteristic to make the shutter good for year-round use. Contributing greatly to the shutter's working efficiency are special all-brass bearings. This eliminates the chance of vanes sticking through rust, dirt is excluded and the job is tight and easy working. All bearings, bearing rods and mechanism are of brass and it is said there is no rattling. The shell is of pressed steel, enameled, shipping weight 5¼ lbs., and the list price is $5.50.

Robert Graham Made General Sales Manager of Dodge Bros.

John R. Lee Is Named His Assistant —Sanford Takes Indianapolis Dealership

DETROIT, Dec. 19.—Robert C. Graham has been elected vice-president and general sales manager of Dodge Brothers, Inc., F. J. Haynes, president of the company announced today. He succeeds F. L. Sanford, formerly general sales manager, who resigned to accept the Dodge Brothers, Inc., dealership in Indianapolis.

Immediately after taking over his new duties, Mr. Graham announced the appointment of John R. Lee as assistant general sales manager. Up to the time of his new appointment, Mr. Lee was assistant to President Haynes.

Since 1921, Mr. Graham had been directing head of the sales department of Graham Brothers and until Dodge Brothers, Inc., acquired control of Graham Brothers a short time ago. He is one of the three Graham Brothers who are now prominently identified with the Dodge organization, a brother, Ray Graham, being general manager. His appointment was announced recently.

Mr. Lee is a veteran in the automotive industry. Becoming assistant to the president he was in full charge of Dodge Brothers' operation in Canada, developing the production and sales organization of Dodge Brothers, Ltd., of Canada. Previous to that he was with the Ford Motor Company.

Chrysler Dealers Meet in Annual Session in South

ATLANTA, Dec. 19.—Dealers handling the Crysler line in the southeastern territory held their annual convention in Atlanta with Harry Sommers, Inc., southeastern distributor, this month, and were practically unanimous in their optimism over the winter business outlook, predicting largest closed car business the next few months in the history of the automobile business in the South.

Harry I. Myers, director of sales for the Crysler company, was the principal speaker at the Atlanta meeting, outlining the company's sales and merchandising plans for the coming year. Other speakers were C. E. Belloate, district manager for the Chrysler company in the Southeast, and Harry Sommers, distributor in this territory.

FORD SALESMEN DINE

SALT LAKE CITY., Dec. 19.—The Ford Motor Co.'s local branch entertained the company's Salt Lake County dealers and their salesmen at the Hotel Utah. Following a banquet on the hotel's roof garden there was a program. Sixty-five guests were in attendance in all.

Milwaukee Sees Greater Show Because of Dates

Exhibit This Year Will Be Held Between Those in New York and Chicago

MILWAUKEE, Wis., Dec. 19.—With prospects of securing many exhibits previously not obtainable because of a conflict in dates with the Chicago show, the Milwaukee Automobile Show to be held Jan. 16-23 this year will undoubtedly set a new record for number and quality of displays, according to the committee in charge. The show follows closely on the heels of the big New York show and many of the exhibits will be brought directly to this city, and from here will be taken to the Chicago show which opens a week after the local exposition ends.

Milwaukee is so favorably situated as to dates this year, that it will also receive many of the miscellaneous exhibits that go to make up a most interesting accessory division. In other years these exhibits did not come here because they could not be released in time to be sent to Chicago for presentation there.

The show committee which consists of Leslie D. Frint, Chairman, A. J. Roehl, Emil Hokanson, M. E. Newald, Herford White, Jack O'Keefe, and Bart J. Ruddle, manager has not yet divulged the decorative scheme. Enough has been learned to indicate that the coloration and general design of the show will be a complete surprise and a novelty from the standpoint of automobile show decoration.

Drawing for space in the passenger car division will take place soon and truck exhibitors will be allotted space by mid-December in order to allow plenty of time for construction of special displays if these are desired. Reservations now in show that there will be more exhibitors in every department than a year ago.

Passenger car distributors who will exhibit at the Milwaukee Automobile Show to be held Jan. 16-23 have been assigned locations for their exhibits and with this important transaction off their hands, Leslie D. Frint, chairman, and Bart J. Ruddle, manager, will begin final work on the decorative scheme which will be completed during the latter part of December.

In the drawing for space, the following distributors of passenger cars in Wisconsin and the cars they will distribute were given space in this order:

Achen Motor Co., Cleveland and Chandler; American Automobile Co., Pierce Arrow; Anger Chevrolet Co., Chevrolet; Buick Motor Co., Buick; Chidester Frint Motor Co., Rickenbacker; Clark Motor Co., Chrysler; Curtis Automobile Co., Reo; A. E. Dufenhorst Co., Peerless; Durant Motors Co., of Michigan, Star; Edwards Motor Co., Dodge Brothers; Ford Motor Co., Ford and Lincoln; Frint Motor Car Co., Oldsmobile; Hokanson-Thompson Co., Oakland; Jonas Cadillac Co., Cadillac; Krueger-Wilson Co., Marmon; Kissel Car Co., Kissel; Lear-Diel-Droegkamp, Inc., Hupmobile; Nash Sales Co., Nash-Ajax; John E. Nelson Co., Inc., Stutz; Osmond Jordan Co., Jordan; Packard Motor Car Co., Packard; Paige Wisconsin Co., Paige and Jewett; Quinlan Motors Co., Moon and Diana; Sanger-Williams Co., Franklin and Rolls-Royce; Stearns Sales Agency, Stearns-Knight; Stebeens-Dentz Motor Co., Case; Jesse A. Smith Auto Co., Hudson and Essex; Shogren-Thomas Co., Wills St. Claire; Velie Sales Corporation. Velie; Willys Overland, Inc., Overland and Willys-Knight; J. G. Wollaeger Co., Studebaker.

CHRYSLER, LTD., PICKS DEWAR

WINDSOR, Ont., Dec. 19.—John D. Mansfield, president and general manager of the Chrysler Corporation of Canada, Ltd., announces the appointment of Alex Dewar as traffic manager. Mr. Dewar's connection in this regard extends over a period of 10 years. He joined the Gray-Dort Motors at Chatham in 1916, as traffic manager, and has been connected with the industry continuously since.

CHEVROLET DEALERS MEET

EVANSVILLE, Ind., Dec. 19.—About 50 Chevrolet dealers and salesmen representing agencies of southern Indiana attended the divisional meeting at the Hotel McCurdy here, Wednesday afternoon. The principal speaker was D. E. Ricketts, sales promotion representative, Chevrolet Motor Car Company, Indianapolis distribution branch. The purpose of the meeting was to map out the sales campaign for 1926.

Oakland Car and Accessory Men Exhibit in Bank Lobby

OAKLAND, Cal., Dec. 19.—Oakland's part in the automotive manufacturing industry is being forcibly demonstarted to the public by means of an exhibit staged by 22 manufacturers of cars, parts and accessories in the lobby of the Oakland Bank. The show opened December 7 to continue for two weeks. The manufacturers in the show represent a capital investment of $6,000,000 and an annual output valued at $30,000,000. Figures present on billboards at the show demonstrate that one automobile in every 25 manufactured in the United States is either made or assembled in Oakland, which has adopted the name of "Detroit of the West."

Practically every product of the automotive industry is shown in the exhibit, in which the officials of the bank are assisting. Among the articles on exhibition are passenger cars, busses, motor stages, motor trucks, tractors, motorcycles, batteries, tires, shock-absorbers, lubricating systems, motor meters, radiator caps, radiators, custom-built bodies, springs, luggage carries, parts of all kinds, aluminum castings, motors, patent axles, bumpers, and all manner of equipment for the comfort of the motorist. Every manufacturing and assembling plant in Oakland is represented. Attendance has been so large that the exhibit has been kept open not only after banking hours in the daytime, but evenings as well.

Columbus New Car Sales Up to November Average

Volume Follows Trend of Former Years and Declines Slightly from October

COLUMBUS, O., Dec. 19.—Motor Car sales in Columbus and central Ohio during the month of November were up to the average, but in most instances were below the records for the month of October. Columbus has always been known as a city where motor car sales always drop off in November and the present year was no exception to the rule.

Dealers report prospects for the coming month as well as after the first of the year as good and are making preparations for a steady pull during the winter. The higher priced vehicles have been rather slow. Farmers in the territory surrounding Columbus are beginning to show some interest and some sales are reported from the rural sections. The volume of business in used cars in Columbus territory was about 12 to 15 per cent less than in October.

Used cars have been very slow and that is the worst feature of the trade. All dealers have heavy stocks of used cars on hand and while cutting of prices has stimulated some buying they have not moved well. This is attributed largely to the rather unsettled economic conditions as well as to the between seasons period.

Most of the distributors have very few new cars on hand while stocks on the average are lower than usual at this time of the year. Banks are making the usual extension of credits and no trouble is being experienced on the financial score.

TIME SELLING NOT USURY

LOS ANGELES, Dec. 19.—A decision was recently rendered in the Superior Court of Los Angeles county which declares that conditional contracts of sale used in the sale of automobiles or any other personal property upon a time payment plan do not come within the purview of the usury laws of the state of California. Is is held that conditional contracts upon a time basis are distinctly contracts of sale upon a time-selling price and have none of the characteristics of a loan or forbearance of money within the meaning of the usury law. The decision holds that anyone selling personal property can have a cash price and also can have a time-selling price, which is considerably higher than the cash sales price. In fact, there is no limit from a legal standpoint as to the amount that can be added by the dealer, if desired upon a time sales basis.

NO PITTSBURGH SHOW

PITTSBURGH, Dec. 19.—Members of the Pittsburgh Automobile Dealers' Association have decided not to hold an automobile show. During the week of Feb. 20 to 27 a special exhibition of all models will be held in each dealer's salesroom.

Six Foreign Sleeve-Valve Cars to Race Here May 31

Michigan Man Buys Three and Guyot of Paris Will Have Three More

PARIS, Dec. 1.—(by mail)—Six cars with sleeve valve engines built under the Burt McCullum patents may be expected to face the starter in the next Indianapolis 500 mile race, by reason of the initiative of H. Albert Schmidt, of Lewiston, Michigan. Mr. Schmidt this week placed an order with Albert Guyot, of Paris, for three 91½ inch single seater racing cars, to be delivered to him April 1. In addition, Guyot is building three similar cars for his own use and will bring them to Indianapolis with French drivers. It is probable that Mr. Schmidt's cars will be handled by American drivers.

Mr. Schmidt, who is of French origin and was connected with some of the leading automobile factories in France during the early days of the movement, is interested in the sleeve valve engine as a possible rival to the poppet valve type and has placed his order for the Guyot cars in order to foster racing and technical development along new lines.

Work on the Guyot sleeve valve engines has been proceding for two years. Next year's 91½ inch models have six cylinders with a roller bearing crankshaft and roller bearing connecting rods. In addition to the intake and the exhaust ports at the top of the sleeve there is an auxiliary exhaust port uncovered by the piston at the bottom of its stroke. The single sleeve has both a reciprocating and a circular motion. A Rootes blower, driven from an eccentric shaft, is used. Chassis feaures are more or less convenional. As it is not intended to race these cars in Europe they will be built with single seater bodies to meet American conditions.

Among other Europeans who may be expected at Indianapolis is E. A. D. Eldridge, who is now building up a couple of 91½ inch cars, in a private shop in Paris. One of these cars will have the engine behind the driver and transmission to the rear wheels by transverse cardan shafts. The other car is a normal type with a four cylinder engine. A feature of the Eldridge cars is their unusually low build and their excellent streamlining. In addition to a considerable amount of racing at Brooklands, Eldridge has been a constant performer during the last eighteen months on Montlhery track, where he has driven the 200 h.p. Fiat.

Pierre de Vizcaya is preparing two straight eight supercharged Bugatti cars, with single seater bodies, especially for Indianapolis. It is understood that one of the cars will be entrusted to Jules Goux.

NEW VELIE DEALERS

MOLINE, Ill., Dec. 19.—New Dealers recently added by the Velie Motors Corp. include:

A. E. Weaver, Penn's Park, Nasife-Velie Company, Philadelphia, Velie Sales Agency, Janesville, Wis., Clyde McKelvey, Potosi, Wis., Standard Motor Sales, Massillon, O., W. A. Goodman, Okeechobee, Fla., Clarence Fenton, Auburn, Cal., P. C. Sacchi, Arcata, Cal., R. O. Spiller, Berwick, Me., Pollard Auto Company, Nashua, N. H., Leon-Swalm Motor Company, Miles City, Mont., Muscatine-Velie Sales, Muscatine, Ia., Al J. Fabry, South Pekin, Ill., G. Albert Barker, Canton, Ill., Capital Auto Livery , Lincoln, Neb., Temple Garage, Temple, Cal., McBride & Kern, Princeton, Ill., W. B. Reynolds, St. Petersburg, Fla., Paul A. Gebhardt, Middletown, Pa., V. F. Weaver, Davidsville, Pa., W. E. Callis, Lompoc, Cal., Llyswen Motor Car Company, Altoona, Pa., C. W. Trumbull, Alhambra, Cal., Norristown Acme Sales Company, Norristown, Pa., D. & B. Auto Sales, Marshall, Mich., H. T. Wetzel, Sterling, Ill.

New King Quality Salesmanager

Burt G. Close, new salesmanager of King Quality Products, Inc., Buffalo, N. Y.

BURST VISITS DEALERS

ST. LOUIS, Dec. 19.—Carl W. Burst, vice-president and works manager of the Moon Motor Car Co., has just returned from a six weeks' trip through the western states where he visited Moon and Diana distributors in the principal cities of 11 states. Burst said he found the stocks of Moon and Diana distributors and dealers low and he also noticed a spirit of optimism prevailing over the outlook for the immediate future and during the coming year for the automotive trade.

OLDS RELATIONS SAME

SPOKANE, Wash., Dec. 19.—Relations between the Olds Motor Works and distributors in the western territory will be continued, F. G. W. Sudrow of San Francisco, Pacific zone manager, announced here. He declared that establishment of direct factory branch connections in other parts of the country will not affect relations in this section where distributors will continue to handle the Oldsmobile.

White Creates New Service Branches in 2 More Cities

Toledo Station Under Cleveland District and Newark, N. J., is Separated from New York

CLEVELAND, Dec. 19.—White Motor company officials here announced today the creation of a new Newark, N. J., service district and the separation of the Newark and Jersey City service branches from the New York city service district.

C. N. Mooney, recently transferred Richmond, Va., to Newark as branch service manager, was appointed district service manager at Newark, in charge of the two branch service stations. H. W. Burch was continued as service superintendent at the Jersey City branch.

At the same time, H. G. Johnson, service superintendent at New Haven, Conn., was appointed shop superintendent at the new Brooklyn service station. George J. Hegan, formerly a service salesman connected with the Long Island City offices, was named service superintendent at New Haven.

Other appointments announced included Ralph Landrum, shop superintendent, as superintendent at Memphis, Tenn., replacing Hale Lyle, who joined the Memphis sales department. W. M. Johnson, formerly with the Memphis sales department, returns to the service department as service superintendent at Little Rock, Ark., branch, and R. L. Leyer, formerly acting service superintendent at the Knoxville, Tenn., branch, becomes service superintendent.

Opening of a new branch sales and service station of the White Motor company, Cleveland, at Toledo, O., was announced. W. M. Kelley, formerly White salesman connected with the Pittsburgh branch for the last eight years, has been named manager of the branch, which will be located at 1811 Jefferson avenue, in a building formerly occupied by the Toledo White Motor Sales company, Toledo White truck dealer. The branch will be operated as a unit of the Cleveland district, under A. L. Hayes, Cleveland district manager.

The new branch is the sixty-sixth direct factory branch of the White company..

MARMON DEALERS TO MEET

ST. LOUIS, Dec. 19.—John T. Salisbury of the More Automobile Co., Marmon distributors in the St. Louis district is chairman of a committee of Marmon distributors which is arranging for the seventy-fifth anniversary dealers' convention of the Nordyke & Marmon Co., at Indianapolis, Jan. 4-6. The committee has sent a questionnaire to all Marmon dealers asking them what the Marmon factory can do to aid them in manufacturing policy, advertising, sales helps, etc. The action of the committee is a result of a desire on the part of the Marmon factory to extend to dealers a voice in the determination of policies back of the car they sell.

Gain in California Activity Causes Personnel Changes

Sales Staffs Increase, Dealers Are Added and New Lines Are Represented

SAN FRANCISCO, Dec. 19— Increased activity in all lines of automotive merchandising in central and northern California and Nevada have brought about numerous increases in sales staffs and several changes in lines handled, as well as the taking on of new lines by dealers in San Francisco, Oakland, Berkeley and other cities on and near San Francisco Bay during the first week in December.

The Durant Motor Company of California made two promotions in its San Francisco branch, when Glen Polk, assistant sales-manager was named sales-manager, and H. M. Circle, a salesman, was appointed to fill the position vacated by Polk.

The Pacific Nash Motor Company announces the appointment of M. V. Ringgold to be sales-manager, with headquarters in Oakland.

The Durant Motor Company of California has appointed Charles C. Pratt as sales-manager of the corporation department, with headquarters at the Star and Durant plant in Oakland.

Ritchie C. Field, Inc., has been appointed dealer for the Hupmobile in Berkeley and Piedmont. Mr. Field is president of the firm, with F. A. Sewell in charge of the office and financial departments, and C. S. Olsen in charge of sales, the firm being composed of these three men.

Alfred T. Selman, divisional manager for the Hudson Motor Car Company in Australasia and New Zealand, sailed for Sydney, on board the Oceanic Line's motorship "Sierra," from San Francisco early in December.

LOUISVILLE SALES GOOD

LOUISVILLE, Dec. 19.—Automobile dealers of Louisville report a slowing up of sales in November as compared to October but records show a satisfactory increase in business over the same month last year, according to the monthly report of the Louisville Automobile Dealers' Association. November sales were 341 cars below the October record but 222 cars ahead of November, 1924. As October of this year was a banner month dealers felt no disappointment because of the past month falling behind.

November Greatest Month In History of Hupp Motor

DETROIT, Dec. 19.—November was the largest month in the history of the Hupp Motor Car Corp. in sales volume in dollars and in the number of cars manufactured, O. C. Hutchinson, general sales manager, announced today. These figures were made possible, according to factory officials, by the demand for the Hupmobile eight and six.

In attaining its November mark Mr. Hutchinson said that the sales of cars were three times as great as in November 1924 and 57 per cent higher than October 1925. Although Hupp November sales were the largest for any month for the entire 1925 year, the company carried approximately $7,500,000 worth of cars in unfilled orders over into December.

Mr. Hutchinson further said that the company would continue to be oversold on the new six cylinder car the remainder of the year and that every car it would be possible to build during the entire month had been alloted to dealers and distributors. This demand, it is believed, will necessitate a new production schedule for the current month. It is also probable that the output of both the six and eight for 1926 will be governed almost solely by the productive capacity of the plant.

Overland Shipments Gain 50,600 Cars to December 9

Record Not Only Beats 1924 but Is 3,000 Ahead of Same Period in 1923

TOLEDO, Dec. 19.—With 1925 shipments up to December 9 showing an increase of more than 50,600 cars over the period from January 1 to December 9 of 1924, Willys-Overland is enjoying its greatest sales volume.

Not only has the shipment record to date this year beaten that of 1924, but it also is approximately 3,000 automobiles ahead of the shipping record for the same period of 1923, the best year in the history of Willys-Overland. Production for this period in 1923 totalled 194,364 Overlands and Willys-Knight.

Coincident with the unusual activity marking shipment records at Willys-Overland is the fact that twice during the fall months boat shipments on the Great Lakes established new shipping marks for this type of freight, while several trainloads to such points as Chicago, Decatur and the two southern points Miami and Memphis have further contributed to Willys-Overland's unusual shipment records.

In addition, an extraordinary shipment activity has marked the endurance of the Willys Derby, national sales contest in which more than 10,000 members of Willys-Overland's field organization were entered. This contest closed on November 30, but the factory has noted an urgent Christmas demand among prospective owners and dealers which is reflecting itself in the dearth of cars now on hand.

PLAN TO MAKE WESTCOTT

SPRINGFIELD, O., Dec. 19.—Preparations are being made by James T. Lay of Detroit, and Cleveland men, owners of good will, material and parts of the Westcott Motor Car Co. sold by Receiver J. M. Rehe, to manufacture the Westcott car in the Winton plant in Cleveland, according to announcement made here. The material and parts were moved to Cleveland a short time ago. The new owners of The Westcott Motor Car Co. expect to continue the manufacture of the car and extend the trade. It is understood that they will retain the present name.

NASH DEALERS MEET

PORTLAND, Ore., Dec. 19.—An important conference of Northwest Nash and Ajax dealers was held in Seattle during the past week. It was attended by Charles Wentworth, head of Wentworth & Irwin, Oregon distributors. Dealers from all parts of the Northwest were present at the session which resulted in a determination to carry on an intensive sales campaign during the coming season.

Lupton's Automotive Supervisors Meet

In the center of this group of supervisors for the automotive division of David Lupton's Sons Co., Philadelphia, is E. H. Spears, manager of the division. Reading from left to right the others in the front row are E. H. Mitchell, H. Edgren, D. Gardenier, designing engineer, George Chapman, Detroit, G. O. Moore, N. S. Abbott and W. T. Bruce Top row, R. B. McHale, C. A. Colmesnil, F. W. Aker, W. E. Spencer, F. W. Chapman, C. E. Hughes, Carl Stanley, F. N. Carson and G. R. Egbert.

Texas Business to Enter New Year With Records

First Eleven Months of 1925 Ahead of All 1924 in Sales of New and Used Cars

DALLAS, Tex., Dec. 19.—The automotive business in Texas and parts of adjoining state went into the last month of the year hitting on all six and with the assurance that new records would be established in practically all lines of the trade.

Reports from scores of wholesalers and retailers from many parts of the district were to the effect that the sale of new and used cars for the first 11 months of 1925 exceeded the total sales for the preceding year by a considerable figure. The new car sales in Texas during 1925 probably will be a little more than 200,000 which is some 30,000 more than for 1924.

In estimating the value of the new cars sold in Texas so far this year retailers said the figures would reach $190,000,000 and that those figures would be pushed over the $200,000,000 mark before the first of the year in all probability.

Sale of new and used cars for the last month of the year will probably exceed that of November it was said by wholesalers and retailers. The "Christmas shopping" is now being done and dealers report this line of business is the heaviest in history. Santa Claus will deliver at least 1,200 automobiles of the brand new variety, ranging in price from $600 to $4,800 in Texas.

DENVER CO. INCORPORATES

DENVER, Dec. 19.—The R. R. Hall Cadillac Company, who have handled Cadillac cars in this city under one name or another since 1903, have been incorporated under the name of Hall Cadillac Company. The officers are R. R. Hall, president, Fred S. Andrews, vice-president, Tyson S. Dines, Jr., secretary, and Edna Smith, treasurer. There is no change in the active management except the addition of Fred S. Andrews who has become a stockholder and vice-president.

STRONG BUYS BUICK STORE

OAK PARK, Ill., Dec. 19.—B. W. Strong, son of E. T. Strong, general sales manager of the Buick Motor Company, Flint, Mich., has purchased the entire interest of the Buick Motor Company's retail store at Oak Park, and will take over this business January 1. Mr. Strong, during the last five years has been working in different divisions of the sales department, and for the last two years has been serving as the assistant branch manager of the Buick Motor Company's Flint branch.

MARMON SHIPS TRAINLOAD

INDIANAPOLIS, Dec 19.—A solid trainload of fifty freight cars full of Marmon automobiles, representing the largest shipment of merchandise ever made from Indianapolis, left for Jacksonville, Florida, where the cars will be distributed by drive-aways to fifteen Marmon distributors and dealer points throughout the state. Cars valued at more than half a million dollars were included in the shipment. The size of the shipment is unusual for a car in the Marmon price class, Marmon officials say.

Cadillac's New Sales Manager

H. M. Stephens, new general sales manager of Cadillac Motor Car Co.

Buffalo Dealer Has Novel Used Car Selling System

BUFFALO, N. Y., Dec. 19.—Hoesch & Klinck, Inc., Buffalo Flint distributor, has successfully employed a plan for disposing of used cars which was like this:

The company canvassed the garages of Buffalo and vicinity and enlisted someone at each as a junior salesman. It also included some barber shops and cigar stores. It arranged to keep these auxiliary salesmen informed of the used cars that came into its possession and agreed to pay them liberal commissions on the sale of the automobiles that might be disposed of through their instrumentality.

These junior salesmen were privileged to bring prospects dug up by them to the sales rooms of Hoesch & Klinck Inc., to send them there with a card or a letter or a phone message to indicate whence they came; or to have salesmen from the company call on the prospects. When necessary a car was sent to take the prospect to the salesrooms.

As fast as used cars came into the possession of the company typed descriptions of them, with the price, etc., were sent to the auxiliary salesmen, likewise lists, withdrawing those sold.

New York Dealers Boost Winter Automobile Sales

Nash Shows Displays Similar to Those Recently So Successful in Chicago

NEW YORK, Dec. 19.—Car distributors and dealers in the metropolitan section are making unusual efforts to transform the early winter sales slump into a hump.

Most striking of the methods employed is the "Winter Week" being observed at all Nash salesrooms this week. Repeating the successful campaign carried on in Chicago recently, the Warren-Nash Motor Corp., distributor, published advertising last week which directed attention to the coming winter week and Nash showrooms designed window displays corresponding with the advance advertising. These displays consisted of the words, "Nash Winter Week is Coming," on a background, painted on the plate glass, suggesting a snowstorm.

The week opened when these displays were washed off the plate glass, revealing a Nash car in a winter setting. On the first days of the week full page advertisements, emphasizing the wisdom of buying a new car in December and displaying the specific claims of the Nash to the honor of being the proper purchase, appeared in all the newspapers. These advertisements are being repeated through the week on a smaller scale.

The single idea of the whole campaign is to educate the buying public to the desirability of winter car purchases by emphasis upon the greatly increased comfort of passenger cars.

In their efforts to relieve the seasonal sales slump, dealers and distributors generally are emphasizing the down payment rather than the total price.

MEMPHIS SHIPS TRAINLOAD

MEMPHIS, Dec. 19.—The first trainload of Memphis made cars have been shipped. There have been many solid trainloads received but this was the first one shipped out. The local Ford Motor Company plant built them and they were shipped to Jacksonville, Fla. The train contained 300 automobiles and was made up of fifty cars of automobiles, an engine and caboose.

OVERLAND DEALERS MEET

CHARLOTE, N. C., Dec. 19.—The necessity for consistent sales effort at this season and the importance of emphasizing financing propositions were discussed at a conference here of 70 North and South Carolina dealers in Overland and Willys-Knight motor cars. The meeting was called by C. F. Sullivan, of Charlotte, in charge of sales for this territory, at the request of C. M. LeRoux, manager of the company's Southern branch, at Atlanta, Ga. Mr. LeRoux and C. H. Dickert, Southern branch service manager, addressed the dealers, who were guests of Mr. Sullivan at a banquet

Along Automobile Row

SAN FRANCISCO. — The distributing branch of the Budd Wheel Company in San Francisco has been enlarged to cover double its previous space. Additional shop equipment which has been installed including a new lathe and drill press. New air pressure for the paint shop is also being installed.

PULASKI, Tenn.—Dodge Brothers announces the appointment of H. G. Foster Co. as Dodge dealer at Pulaski, with branch offices at Columbia and Lawrenceburg, Tenn.

ST. LOUIS.—Hudson-Frampton Motor Car Co. has opened a used car branch at 3620 Gravois Avenue. Hudson-Frampton distributes the Hudson and Essex in the St. Louis district.

EVANSVILLE, Ind.—The Phillips-Osborne Motor Company, Studebaker dealer, 418-20 South Fifth Street, is adding a second story addition to the rear section of its establishment, which will provide a large repair shop and result in rearrangement of departments to offer greater space for the used car department.

ROCHESTER, N. Y.—Heinrich Motors, Kissel distributor here, has been appointed associate dealer for Essex and Hudson in this city.

PORT ARTHUR, Ont.—Parker's Garage has secured the Ajax agency for Port Arthur and Fort William and now has these cars on display.

PORTLAND, Ore.—Roy Wilson, connected with the Manley Auto Company, Hupmobile dealer, for four years previous to 1918, is back again in the Manly fold as wholesale representative.

BOSTON.—The Henshaw Motor Company, distributor of Dodge Brothers cars and Graham Brothers trucks in Boston, has just opened another branch, this time for renewed cars exclusively.

MILWAUKEE. — Waltzer & Kern, Chrysler dealer in Milwaukee, is erecting a one-story, 86x126 garage at Prospect avenue and Kenilworth place. H. Schmitt & Sons Inc. is the general contractor.

QUEBEC.—Overland and Willys-Knight are now sold in Quebec by C. L. Plamondon, Rue de la Couronne.

EVANSVILLE, Ind. — McKinney and Toombs, Morganfield, Ky., and John Maxey, Stembal, Ind., have been furnished contracts as Willys-Knight and Overland retail dealers this week. They will be supplied with cars through the Bennighof-Nolan company, local distributor.

BALTIMORE.—The Fidelity Motors Co., Chrysler distributor, has opened a used car department at 1121 Cathedral street. The move not only provides much better space for the used car department but also takes it from the service station at 910 Bolton street.

OTTAWA.—Legare Automobile Supplies Co. Ltd., has opened a salesroom and distributing office for Hudson-Essex in this city, the first of a number which will cover Eastern Ontario.

THE DALLES, Ore.—J. T. Henry Automobile Company has been appointed Overland and Willys-Knight dealers.

QUEBEC.—Quebec Garage has the representation of Rickenbacker and Gray cars.

ROCHESTER, N. Y.—Tremendous increase in both new and used car business has forced the Mortimore Motor Car Company, Nash distributor, to open a new salesroom devoted exclusively to used cars.

CLEVELAND.—The values of used car business done by the Cleveland Packard Company during the first ten months of 1925 aggregated $257,000, according to announcement by C. M. Fisk, president. At the same time Fisk announced the company had extended its sales rooms by the leasing of the storeroom adjoining the salesroom to provide sales and exhibition space for used cars.

EVANSVILLE, Ind.—The North Side Hudson-Essex Company, metropolitan retail dealer, B. L. Bettag, manager, has moved from 1719 Main Street to 712 North Governor Street, and will operate the service department through Lockyear's Garage at the latter address.

BALTIMORE.—Olmstead & Moore, Inc., handling both the Oldsmobile and Jordan lines, have opened a branch at 211 South Highland Avenue, in the Highlandtown section. It is known as the East Baltimore branch and is in charge of E. L. Herbert, formerly with Nattans Motors.

GREENSBORO, N. C.—The Pickard Tire Co. has been organized and incorporated here as an accessory and tire dealer, capital stock of the Pickard company given at $100,000.

EVANSVILLE, Ind.—A. C. Ancona, for several years head bookkeeper for the A. L. Maxwell Company, Lincoln and Ford dealer, has joined the accounting department of the Wabash Valley Motor Company, Hudson and Essex distributor and dealer, as head bookkeeper.

GALESBURG, Ill.—A. L. Mulvany and F. L. Hitchcock have organized the Galesburg-Overland Company and opened their sales and service station at 366 East Simmons Street. Mr. Mulvaney was with the former Overland company here and Mr. Hitchcock comes from Elmwood, where he was dealer.

NANAIMO, B. C.—Sampson Motor Co. has opened a garage and show room on Wallace Street for Essex and Hudson cars.

ROCHESTER, N. Y.—Rochester Auto Parts, Inc., has been appointed distributor for King radio products in this territory. The new distributor has appointed many new dealers in Rochester and vicinity and is building up a strong organization to market the King products.

PORTLAND, Ore.—W. H. Ball, formerly of St. Johns, has joined the sales force of the Oldsmobile Company of Oregon, in Portland.

WOODSTOCK, Ont.—Work has been commenced on the erection of a new show room and garage for the local Chrysler dealer, Samuel Axlerod.

ST. LOUIS.—Frank A. Flint, president of the Flint Motor Car Co., oldest Chevrolet dealer in St. Louis, announced last week that the name of his company had been changed to the Flint Chevrolet Co. to avoid confusion.

EVANSVILLE, Ind.—M. Jacobs, Tell City, has joined the retail sales staff of the Hall-Hagans Chevrolet Company, local dealer.

BOSTON.—Knowlton L. Watson, formerly manager of the used car department of the C. P. Rockwell Company, distributor for Nash and Ajax, has been promoted to the position of sales manager for the Ajax line.

TRAIL, B. C.—Steve Walley has taken the McInnes Garage. Mr. Walley says his new location will enable him to make a better display of Chrysler cars than he has previously been able to do.

ATLANTA.—M. S. Mentzer, for the last five years, manager of the southern branch here for the Studebaker Corporation, has resigned that position, having purchased an interest in the business of the Yarbrough Motor Co., of Atlanta, Studebaker dealers in this territory.

DALLAS, Tex.—John E. Morriss, president of the Dallas Automotive Trades Association and one of the leading Ford and Lincoln dealers in Texas, has been elected a member of the board of directors of the Oak Cliff State Bank and Trust Company.

NORTH VANCOUVER, B. C.—North Shore Garage is the latest addition to automobile row. Star and Durant cars as well as Flint cars and Roadking trucks are controlled locally by this firm.

WAUKEGAN, Ill.—The Biflex Products Company, maker of Biflex cushion bumpers has retained the services of one of the best known metallurgical engineers in the country, Ralph H. Sherry.

EVANSVILLE, Ind. — The Kinchel-Gatsch Tire Company, Miller and Kokomo tire distributor and dealer, has moved from 415 Sycamore Street to 1046 Main Street. The business is under the management of Henry B. Kinchel.

CLEVELAND.—John O. Koepke, long an outstanding figure in the Cleveland automobile field, has acquired the Auburn East Cleveland Company, 14717 Euclid Avenue, according to announcement here by P. R. Ward, president of the Auburn Motor Sales Company.

EVANSVILLE, Ind.—Dudley and Slack, Owensboro, Ky., and Louis F. Tafey, Dawson Springs, Ky., have been signed up as retail United States tire dealers, according to Grandal Smock, manager of the territorial factory branch here.

ST. LOUIS.—George H. Lister of the Willys-Overland branch here has been appointed sales promotion manager to succeed Frank Whyte, recently appointed retail sales manager of the branch, and B. D. Agnew was appointed assistant retail sales manager.

SYRACUSE, N. Y.—George E. McEachron has been appointed dealer for Buicks in this city by the Ross Automobile Corporation which holds the district franchise. McEachron has been handling Rickenbackers and Rollins for some time.

LANSING, Mich.—B. Murray Saunders has joined the advertising department of Olds Motor Works. For the last four years Mr. Saunders has been with the Campbell-Ewald Company agency, both in production work and assisting in account contacting.

SPOKANE, Wash.—The Vowels Motor Company has moved into larger quarters at 920 W. Second Avenue, the rooms space vacated by the used car department of Wells-Chevrolet Company. L. P. and W. F. Vowels, owners, will carry a larger stock of Oldsmobiles and will also continue the rental car service with a line of Hertz cars. Expansion is contemplated next spring when a brick building facing Monroe Street and adjoining to the present quarters will probably be built to give additional space and add a used car salesroom.

VANCOUVER, B. C.—The McLaughlin Motor Car Co., Ltd., has passed out of existence. McLaughlin-Buick distribution and service for the Vancouver district is now controlled by Clark-Parsons Buick Limited. The former district factory branch will be entirely discontinued, but the extensive service facilities and parts supply built up by the branch during the last 18 years will be carried on by the new company. The decision of the General Motors Company to discontinue factory branches and the appointment of A. A. Ross, former manager at Vancouver, to the position of supervisor of General Motors interests in the province of British Columbia gave Clark and Parsons the opportunity to form the new organization.

ATTLEBORO, Mass.—The Frank Mossberg Corporation which succeeds the Frank Mossberg Company, has now completed its reorganization and announces that its assets exceed its current liabilities by over $225,000. L. B. Smith, who has been made vice president in charge of sales, announces that this company will introduce a new line of socket wrench sets with special Chrome Molybdenum Steel Socket. These wrenches will be packed in metal carrying cases designed for both car owner and garage mechanic. The company has many orders on hand Mr. Smith said.

With the Associations

N. Y. Service Men Meet

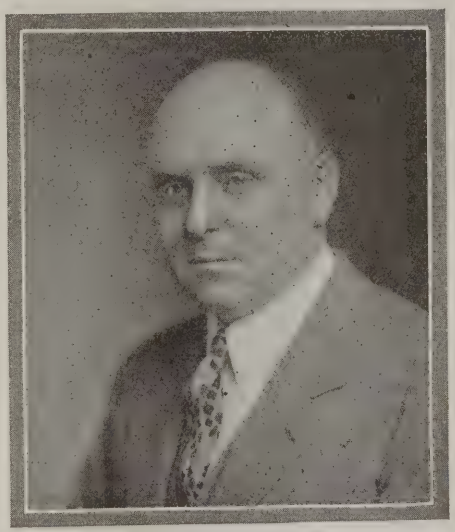
New York, Dec. 19.—Technical ability, character and personality are the most important qualities required in a service salesman, according to Harry C. Trent, secretary of the Colt-Stewart Co., Chrysler distributor, who spoke before the December meeting of the Automotive Service Association of New York.

Selection of the proper material is the most important step in training. Before placing a man on the floor, Mr. Trent reccommends that he spend a month in the parts department, three weeks in the stockroom and one in the office as this knowledge will be valuable to him in his work. He also said it was a good plan to have each service salesmen spend two days a month in the shop, particulary at the time when new models are being introduced, as this will keep them up-to-date on the technical side of their jobs.

In Mr. Trent's station, the service salesmen dress as any other business man, dusters having been discarded. This change has reacted favorably on both the men and the customers. If it is necessary to get under a car to make a diagnosis, the salesman is authorized to call a mechanic from the shop for the purpose.

The importance of paying service salesmen proper saleries was emphasized by Ralph Benham, Studebaker. In this connection it was brought out that the high earnings of mechanics working on the piece-work compensation plan, was making it increasingly difficult to pay salesmen salaries that would make the work attractive. The value of sending the salesmen to the factory for instruction was also mentioned and Mr. Benham said that he planned to send his entire service sales force during the winter.

It was announced by the board of directors that the association's contract with John R. Eustis as executive and general manager, has been extended five years.



Springfield, Mass., Plans Show

SPRINGFIELD, Mass., Dec. 19.—At the regular meeting of the Springfield Automobile Dealers' Association attended by nearly 50 members it was voted to hold the annual motor show at the Auditorium beginning March 1 next. That is the week preceding the big Boston show. Harry W. Stacey, secretary of the association, who has had charge of the show for the last 10 years will again look after the details assisted by a committee chosen by the president. John F. Shaw, of Northampton, manager of the Hampshire County Used Car Exchange, was a guest at the meeting and gave a talk on the used car situation.

St. Louis Tire Dealers Elect

ST. Louis, Dec. 19.—Jesse G. Johnston, president Johnston Bros. Tire & Service Co., was elected president of the Associated Tire Dealers of St. Louis at a meeting of that body last week at Claridge Hotel. C. V. Quinn was elected first vice president; H. F. Schollmeyer, second vice president; J. Delabar, secretary; A. P. Woehrle, retiring president, treasuer; J. W. Kuemmerle, sergeant- at-arms.

The new board of Directors is composed of A. A. Guenther, H. B. White,

Jesse G. Johnston, President, Associated Tire Dealers of St. Louis.

L. B. Wyner, L. Bowcott, E. L. Meyer, Jr., E. A. Colbeck and E. H. Steinman. It was decided to install the officers at a meeting at Hotel Chase, Jan. 12 when a dinner dance will be given.

Because of the large number of robberies committed against tire men at this season of the year, Arthur G. Jennings, business manager of the association appealed to the Chief of Police for protection. The chief in a letter assured the tire men that he would instruct patrolmen to keep a close watch on their establishments.

Carriers to Organize

SAN FRANCISCO, Dec. 19.—An organization of all the operators of motor stages and motor trucks for hire in the states from the Rocky Mountains to the Pacific probably will be the outcome of work undertaken at the eighth annual convention of the Motor Carriers' Association of California, which has closed its sessions in the Hotel St. Francis here.

The new interstate organization is to be known as the "Western States Association of Stage Operators," and will be primarily for firms and individuals owning and operating motor stages over regular routes on fixed schedules.

Boosters Plan Big Season

BOSTON, Dec. 19.—With meetings scheduled for Portland, Hartford and Providence in addition to the regular events planned for Boston, Automotive Boosters Club, No. 1, is going to have a very busy season. At the first meeting called by Charles M. S. Foster, its new president, he outlined what was hoped to accomplish during the 1925-26 year.

The December meeting will combine business and pleasure in the form of a dinner Dec. 21 at which there will be a Christmas tree from which Santa Claus will distribute presents. This will be followed by an address by men prominent in automotive activities. There will be a ladies night later.

It was voted to hold the Portland meeting during February when the motor show will be there and all the Boosters and dealers will be invited to attend, particularly those in Maine. The April meeting is scheduled for Hartford and the May meeting will be at Providence.

During motor show week in Boston the annual banquet of the association will take place. This is always one of the big events in connection with the Boston motor show. The club will also take part in the meetings to be held next year at Montreal joining New York Boosters, who are coming by boat to this city. While on the water they will have one of their members wedded as a feature of the trip. The entire party will go in a special train from here to Canada.

N. Carolina Plans Convention

WINSTON-SALEM, N. C., Dec. 19.—Directors of the North Carolina Automotive Trade Association, in special session here, decided to hold the annual convention of the association here, March 17-18. Four floors of a hotel here were reserved for delegates, expected to number approximately 300, representing all parts of this state.

Attending the meeting here were Harry Clendenin, of Greensboro, president; Coleman W. Roberts, of Greensboro, secretary; W. L. Toal, of Wadesboro, Henry Maston, John Fitts, and Paul Bennett, of this city. The directors named a local committee on arrangements, composed of Mr. Fitts, Mr. Maston, John Gilmer and K. E. Shore.

According to the tentatively arranged program, the first day's session will be devoted to group meetings, a luncheon and a banquet. Officers will be elected after the banquet. The second day will be given over to a sales congress, which officials of the National Automobile Dealers' Association will conduct, and an "Oriental frolic" in the evening. Approximately 500 dealers, salesmen and office employes are expected to attend the sales congress, it was said by directors of the association.

Coming Motor Events

Automobile Shows

New York—Jan. 9-15
National Automobile Show in Grand Central Palace.

Newark, N. J.—Jan. 16-23
Nineteenth annual Automobile Show under auspices of New Jersey Automobile Exhibition Co., Chamber of Commerce Building.

Buffalo, N. Y.—Jan. 16-23
Buffalo automobile show by Buffalo Automobile Dealers' Association in 174th Regimental Armory, Carlton, C. Proctor, manager, headquarters, Hotel Statler.

Milwaukee—Jan. 16-23
18th Annual Automobile Show, Auditorium.

Cincinnati—Jan. 16-23
Cincinnati Music Hall, Cincinnati Automobile Dealers Association.

Philadelphia—Jan. 16-23
25th Annual Automobile Show at Commercial Museum Under Auspices Phila. Automobile Trade Assn.

Columbus, O.—Jan. 18-23
Show in Motor Hall by Columbus Automobile Dealers Co.

Elmira, N. Y.—Jan. 18-23
16th Annual Show, Elmira Automobile Merchants Assn., Inc., N. Y. State Armory.

Kalamazoo, Mich.—Jan. 19-23
Automobile Show in Armory by Kalamazoo Automobile Trade Association

Baltimore—Jan. 23-30
20th Annual Automobile Show and Second Annual Motor Boat Exhibit, 5th Regiment Armory, Baltimore Automobile Trade Assn., Inc.

Brooklyn—Jan. 23-30
Fifteenth Annual Automobile Show in 23rd Regiment Armory, under auspices of Brooklyn Motor Vehicle Dealers Association.

Detroit—Jan. 23-30
Detroit Auto Show in Convention Hall by Detroit Automobile Dealers Assn.

Cleveland, O.—Jan. 23-30
1926 Automobile Show under auspices of Cleveland Automobile Manufacturers' and Dealers' Association, Herbert Buckman manager, in Public Auditorium.

Profits, Sales and Used Cars Topics of N.A.D.A. in Chicago

Successful Banquet and Meeting Is Held Under Auspices of Metropolitan Tradesmen

CHICAGO, Dec. 19.—Four addresses on subjects of great interest to the automobile industry were given at the sales meeting and banquet held by the National Automobile Dealers' Association under the auspices of the Chicago Automobile Trade Association Tuesday evening in the Congress Hotel here.

The speakers were C. A. Vane, general manager, N. A. D. A., Lynn M. Shaw, assistant general manager, H. D Bullock of San Francisco, and A. R. Kroh, sales promotion adviser, N. A. D. A. Their subjects, respectively, were "The Dealer's Profit Problem," "Departmentizing Sales and Profits," "Analyzing Your Sales Problems," and "The Dealer and the Used Car Problem."

Mr. Kroh set forth that the used car losses in 1924 were 8.2 cents per dollar of used car sales, which was nearly 1 cent less than the 1923 loss. In 1922 the dealers throughout the United States lost $126,000,000 on used cars, while in 1924 this was reduced to $40,000,000, Mr. Kroh said.

The N. A. D. A. has conducted an extensive campaign for the last four years to keep before the industry the necessity for sane and aggressive attention to the used car problem. It has constantly kept a corps of trained experts in the field, studying the situation and every phase promising better results than has developed.

VANDIVERT JOINS DU PONT

WILMINGTON, Del., Dec. 19.—R. M. Vandivert has been appointed advertising and sales promotion manager of the Fabrikoid division of E. I. du Pont de Nemours & Company with headquarters at Newburgh, N. Y. He is widely known in the advertising field, having been formerly connected with the national advertising division of the Hearst newspaper organization, and also having been prominent as an advertising executive for motion picture trade magazines.

DODGE BROS. DEALERS MEET

MILWAUKEE, Wis., Dec. 19.—Dodge Brothers dealers and service men from territory within a 100-mile radius of Milwaukee attended a three-day service school conducted here by A. F. Comeal, factory instructor. The school was held in the service station of the Edwards Motor Co., distributor for this territory. Problems confronting dealers or their service managers, and operators of fleets were brought up for solution and discussion. Information regarding efficient up-to-date service methods and special tools was also given out by the factory instructor.

Hoover Hits Rubber Monopoly

Secretary Says Situation Is Wholly Artificial — Suggests Relief Measures

WASHINGTON, D. C., Dec. 19.—In a letter to Senator Capper, replying to the senator's inquiry as to the activities of combinations and monopolies to fix prices of material imports, Secretary of Commerce Hoover uses the British Stevenson plan as an illustration of his statement that "We are now subject to the full result of monopoly action and we have no machinery of adequate defense."

Secretary Hoover says that "if present prices are maintained against us, the excess sum of $650,000,000 or $700,000,000 which we shall pay is equivalent to more than twice the net earnings for dividends on all our electric power companies."

He points out that dangers to the American rubber manufacturing industry that may come through a collapse in the price are so great that some smaller manufacturers have ceased production in the fear that they could not stand the loss of suddenly diminishing inventory values. He cites the fact that average New York spot crude rubber quotations advanced from 36.7 cents in January to $1.032 in July, though they were lower during the next three months but advanced to $1.095 in November, and that at one time they reached $1.21 per pound.

Commenting on the British claim that a "fair" price was the sole objective of the Stevenson plan, Secretary Hoover says that the price of 30 to 36 cents per pound, quoted by the British committee as fair, was equivalent to an annual average profit of from 15 to 25 per cent.

The secretary asserts that the situation is wholly artificial. Normal world consumption of rubber for 1926 he estimated at 580,000 tons, whereas the potential production, if unrestricted, would probably be 625,000 tons.

"We are, therefore," he says, "not in the midst of a genuine rubber famine but purely an artificial one created by restriction on production for the purpose of advancing prices.

"Our imports for 1925 will be about 860,000,000 pounds and at normal growth our consumption will be 900,000,000 pounds in 1926. At the price declared by the price fixing body as 'fair' to them, our next year's supply would cost us about $324,000,000, but at the present prices of $1.10 per pound it will cost us about $990,000,000 or $660,000,000 in excess of the 'fair' price.

"These increased prices of rubber are a very real thing to every family in the United States. The price over and above the so-called 'fair' price means an increased charge of probably $20 or $30 for each set of tires on a light automobile, and $50 to $70 for each set on a heavy car.

"The measures that we can take of course vary with each combination. I do not wish to favor trade reprisals. Some of the following measures would ultimately afford relief if we had them organized, and all are wholly defensive in nature:

"1—Our bankers can be discouraged from giving American credits to the support of these combinations.

"2—We should initiate a strong systematic campaign for voluntary saving in use in every one of the commodities where these combinations become extortionate.

"3—We should stimulate the manufacture and use of substitutes.

"4—We should stimulate production in countries where the commodities in question are not likely to be subject to such combinations.

"5—We might set up some sort of properly controlled machinery for emergencies which would prevent our many hundred buyers from binding against each other."

Says It Is Mere Gesture

NEW YORK, Dec. 19.—Dispatches from London that the British government has practically scrapped the Stevenson rubber restriction act mean nothing whatever to the American tire manufacturer, dealer or user, according to a statement issued by the General Tire & Rubber Co.

The cable announced that beginning Feb. 1 all restrictions on exportation of crude rubber would be lifted for three months. With the exception of a very small percentage the Stevenson act would have done just that thing anyway.

"With rubber over a dollar a pound it is obvious the British would sell all they could—if they had it. So the answer is, according to rubber experts, that Great Britain is all out of reserve rubber and cannot keep up with the present demand, with restrictions removed. The real rubber supply situation is being uncovered.

"The next 10 per cent release, bringing the theoretical total to 95 per cent of all supplies, would come Feb. 1, and it is with this that the London dispatch deals. Anticipating that release, it looks as if the British were making a diplomatic gesture, trying to placate the Americans who are blaming them, partly for the present shortage and partly for the high price. They magnanimously promise to release an extra 5 per cent of rubber which in all probability does not and will not exist. Rubber next year is likely to be even higher than now."

DURANT PICKS O'BRIEN

NEW YORK, Dec. 19.—Norman O'Brien has been appointed sales manager of the Jacksonville, Fla., wholesale office of Durant Motors, Inc., at 916 Main street, with jurisdiction over wholesale business of Star cars and parts throughout Florida and adjacent Georgia counties.

BACKED BY 35 YEARS OF "KNOW-HOW"

13 Years Before the First Ford

Since 1890—35 years ago—Miller has been building *dependable* vehicles; adopting new ideas, but clinging always to the good old ideals—honest workmanship and sincere service.

Miller BUILT "Since 1890"

Popularity

There is just one test for any product, and that is—DEMAND.

The ripple of applause that greeted the pioneer Miller Bus has become a thundering endorsement that will not down.

Miller Busses dot the highways from coast to coast, and back again. And still the orders come piling in! Many from distant ports, too. For the news of Miller *proved performance* has spread half-a-world away. Two great factories are hard put to keep delivery schedules. What better proof of merit than this evidence of enduring prosperity!

Write today for detailed specifications, and some mighty interesting facts and figures.

Next Week's MOTOR AGE—National Shows Issue and Specifications Number

Stretch Rubber to Lower Tire Prices

HERBERT HOOVER
Secretary of Commerce

Department of Commerce Sponsors Unified Campaign on Part of American Automotive Industry to Combat High Prices Maintained by British Rubber Monopoly by Conservation of Tires in Service—Motor Age to Tell How Savings May Be Accomplished

In subsequent issues of MOTOR AGE specific suggestions will be given as to how dealers may cooperate in the rubber conservation campaign and at the same time increase their own business through the sale of repairs, accessories and sundries useful in making tires last longer.

A RUBBER conservation program along the lines suggested in an editorial in the Nov. 26 issue of MOTOR AGE has been undertaken under the leadership of Secretary of Commerce Herbert Hoover by leading business associations representing the various branches of the automotive industry.

It is hoped this conservation campaign will materially reduce the current demand for raw rubber and cause a break in the exorbitantly high prices being maintained by the British interests which practically control the world's supply of raw rubber.

Joined in this campaign are the National Automobile Chamber of Commerce, the Rubber Association of America, the National Automobile Dealers' Association and the American Automobile Association.

The keynote of the campaign is "Stretch Your Rubber." In other words, make your tires last longer. It is estimated by the N. A. C. C. that by proper care tires can be made to deliver 25 per cent more mileage than the average user has been accustomed to get from them.

This means tires must be properly serviced. They must be repaired when it is economical to do so. They must be supplied with the right kind of accessories to maintain them in best condition. Part of the money the users will save in stretching their tires over an increased mileage naturally will be spent for repairs, service and accessories. This will mean good business for the dealer who repairs tires and sells sundries used for the maintenance and protection of tires. At the same time the public and the industry will benefit if by this campaign the price of rubber can be brought down to a reasonable basis.

This unified fight against the British rubber monopoly was decided upon between representatives of the rubber and automobile industries and government officials, led by Secretary of Commerce Hoover, at Washington last week.

As the result of an all-day conference it was decided that automobile manufacturers will immediately launch an advertising campaign to "educate" rubber users to economize all possible in their wear on tires. Representatives of the National Automobile Chamber of Commerce announced that the members of that organization would carry the slogan: "Stretch Your Rubber," in all of their national advertising copy.

This phase of the campaign will be linked up with that of the American Automobile Association, which will immediately issue an appeal to the 18,000,000 motor vehicle users to economize in tires and to take better care of their tires. The public will be told how to save tires, and the 40,000 dealers and agents throughout the country will be called upon by the National Automobile Dealers' Association to further the campaign. The Rubber Association of

EDITO

Tires in 1926

THE price of crude rubber remains high and the supply of the product is said to be inadequate. The British restriction policy at last has begun to restrict and from present indications the automobile industry will be confronted with a serious situation in regard to tires in 1926. American interests that have set out to grow their own rubber will not get into production on an appreciable scale for some years. Meanwhile it will pay the industry to do all in its power to conserve tires. Casings should not be too quickly discarded. An inexpensive repair frequently will greatly prolong the life of an otherwise good casing. A tube frequently is discarded as leaky when what is needed is a new valve core at a cost of about six cents. New flaps, boots and other accessories can be used to advantage in getting the utmost mileage out of tires. And drivers should be urged to use care in driving over rough roads so as not to unduly damage their tires. The hoarding of tires by consumers is not to be encouraged. It merely serves to increase the apparent shortage of the product and tends to drive prices upward. Conservation of tires will go a long way toward relieving any threatening crisis in the tire supply.

Reproduction of editorial in the Nov. 26 issue of MOTOR AGE urging conservation of tires as a means of combating the rubber restriction policy of British interests controlling the greater part of the supply of crude rubber.

High Speed Characterizes New and More Powerful Chrysler Six

Left: The new 4-passenger Chrysler coupe. The full-crowned fenders used on all models can be plainly seen; right: the 5-passenger phaeton showing the windshield wings which are standard equipment on both open cars. Instead of cowl lights the lights for parking are placed on the body near the rear door entrance.

Chassis Replete With Novel Features To Insure Good Performance at Low Speeds Also. New Body Lines Particularly on Radiator and Hood Give Striking Appearance to Car

By L. S. GILLETTE

WITH the embodying of striking new lines in a wide range of colorful bodies mounted on a low hung 90 h.p. six cylinder car capable of 80 m.p.h., the latest Chrysler "Imperial" —a larger and higher priced car—will make its debut at the National Automobile Shows. Prices will not be announced until this time.

The design of the chassis is conventional and does not depart from the general layout of the present six introduced exactly two years ago. Both these models as well as the four cylinder car will comprise the line.

While the salient feature of the new car is its high speed, it required extensive engine research to combine this factor with good low speed operation and hill climbing power without sacrificing any of these qualities. A new method of counterbalancing and a special type of piston have contributed largely to the unusually high output of the seven bearing 3½ by 5 in.. "L" head engine developing 92 brake hp. at 3000 r.p.m.

Rubber plays an important role in the makeup of the "Imperial" chassis. To secure quietest operation and to minimize chassis lubrication, the springs are carried in shock insulated rubber blocks instead of the conventional shackle bolt method. No metallic contact is formed between the rear supports of the engine and the frame, the greater portion of the engine weight being taken in special rubber mountings, thus minimizing the transmission of engine noises to the frame and body. The usual method of employing rubber hose to complete the hydraulic four-wheel brake system is adopted and follows closely the layout on the smaller six.

Six Body Styles

Six body styles will be offered. A roadster, phaeton and sedan on a 120 in. wheelbase chassis and a four passenger coupe, seven passenger sedan and Berline on a 127 in. wheelbase. Standard tire size for all models is 32 by 6.20 in. mounted on artillery wheels, except for the roadster which has wire wheels as regular equipment. One piece full crowned fenders are a special feature of the new car.

None of the demonstration models being available the day MOTOR AGE visited the factory, the writer was given one of the new cars completed that same morning to drive. After a twenty minute spin to beyond the city limits the Chrysler "Imperial" was put through its paces. From a crawl, the accelerator pedal was pressed to the floor boards—the car attaining better than 70 m.p.h. in a remarkably short distance without any signs of bucking or periods of vibration. On account of its general balance, quietness and positive steering, it was possible to maintain a comfortable touring speed of 50 m.p.h. without any feeling of unsteadiness Railroad crossings were taken between 40 and 45 m.p.h., there being little jolting and no noise from the chassis. The steering was found to be very easy especially on short turns and the braking system all to be desired. In traffic the reserve of power made fast "get-aways" a simple matter and the use of second speed was practically unnecessary.

Much of the rakish appearance which the bodies present must be credited to the radiator and the hood design. As can be seen from the accompanying illustrations, the radiator shell has the general Chrysler appearance although the deep flutes tapering back along the cowl to just below the windshield give the car a totally different aspect. This design blends well with the moulding running from the radiator around the bodies giving a deep belt effect and harmonizing with the low roof lines. On the closed cars, narrow metal panels continued from the rear upper quarter

are employed where the edge of the top turns over to join the upper structure, thus giving smooth lines and a custom built appearance.

All closed bodies which are built by Fisher were developed in the Chrysler shops and follow conventional composite construction embodying steel panels. The interior appointments are unusually complete and have been laid out to provide maximum comfort. On the roadster model the rumble seat concealed in the rear deck may be opened for instant use by the releasing of a spring catch located behind the front seat. The backs of the latter are hinged for greatest comfort and move in unison with the seat cushions. To minimize neglect of the battery, a small Chrysler emblem located in the center of the instrument group flashes when the battery requires the addition of water. It is only necessary to remove a small detachable narrow panel in the floor board in front of the driver's seat to reach the battery filler caps. Bulbs of the two filament type controlled from a rotary switch in the center of the steering wheel, are placed in the center of the E. & J. headlights whose design matches the contour of the radiator. A small jewel in the upper part of the lamp shell indicates to the driver if the bulbs are alight in the dim position. With few exceptions, wherever trade names are referred to, the units have been modified or designed by Chrysler engineers exclusively for the new "Imperial" car.

As already stated, the engine is an "L" head unit of 3½ by 5 in. bore and stroke with an N. A. C. C. h.p. rating of 29.40 and a piston displacement of 288 cu. in. Having a 4.8 compression ratio, 92 b.h.p. is delivered at 3000 r.p.m.

The unit power plant is supported in the frame at four points, the two feet cast on the timing chain cover being bolted to a heavy pressed steel cross member which also carries the radiator. At the rear the engine is mounted on rubber blocks held in place in a metal fitting attached to a steel cross member, the latter completely encircling the clutch housing. This cross member is assembled in place before the engine is set into the frame and is bolted at its ends to gusset plates on the frame. With this type of construction, the rear of the engine is relieved of any frame weaving and also simplifies the removal of the power plant when necessary.

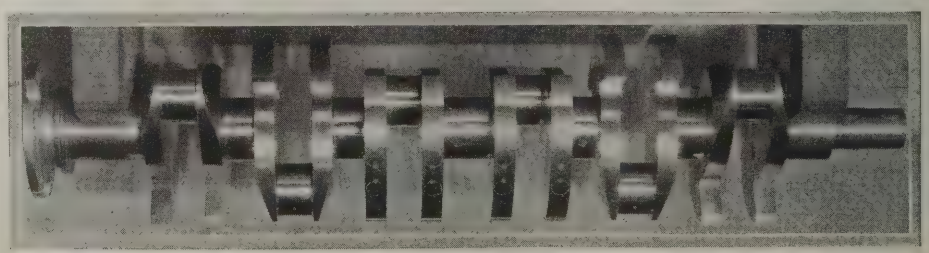
Cylinder block and crankcase of cast iron are cast integral, with the detachable cylinder head of the high turbulence type. The bores are reamed and finished with two honing operations while the inside of the casting is treated with an impervious oil paint to seal all pores. The water passages which are of liberal dimensions may be inspected by the removal of two pressed steel headers on the left side of the engine.

Four-Point Suspension

Radical departure from standard crankshaft design has brought about unusually smooth operation of the seven bearing shaft by the employing of a series of twelve counterweights, two being attached directly opposite each of the throws. These balances have been so compensated as to allow for the weights of the reciprocating parts. With this design the section of crankshaft for each cylinder is claimed to be in perfect balance for that unit. The shaft itself is of 1045 S. A. E. drop forging weighing 108 lb. and carried in bronze back babbitt lined bearings of the following dimensions. The diameter of shaft 2⅝ in., length of journals 1 and 4 1⅞ in., bearings 2, 3, 5, 6, $1\frac{3}{16}$ in., rear bearing 3¼ in. Oil holes are drilled diagonally from main bearing journal to crank pins. In addition to being static and dynamic balanced, a Lanchester vibration dampener is mounted on the forward end of the shaft and combined with the fan pulley. At the other end the balanced grey iron flywheel weighing 50 lb. and of 15⅝ in. outside diameter has the steel starter ring gear shrunk on. Connecting rods of "I" section with a center to center length of 10⅞ in. weigh 46 ozs. each when unassembled. The lower bearing which has the babbitt cast in the rod is of $2\frac{3}{16}$ in. diameter by 1½ in. long. At the upper end the tubular pin of carburized and hardened steel is given a lapped finish and held in the rod by a locked bolt. The dimensions of the pin are 1 in. diameter by 3⅛ in. long. All rods are carefully matched for balance prior to assembly.

Cutaway view showing the rubber shock insulating blocks for supporting the semi-elliptic springs.

Following two years of experiments with various metals and designs, a new type of piston is employed in the "Imperial" engine. The main feature of the piston is that it has all the advantages of the aluminum type combined with the desirable qualities of those of cast iron. The piston itself is aluminum alloy with the piston pin bosses made of the same material and connected with the piston head through webbing. Horizontally the bosses are joined with the body of the piston by an Invar strut. Invar is a steel alloy having a negligible co-efficient of expansion but possessing an unusual degree of toughness.



By employing the Invar strut between the piston pin bosses and the shell it is possible to fit the piston in the bores to limits as close as .003 in. to .0035 in. without danger of scoring or seizing. In manufacture, the Invar strut has several lips turned over on each side of its rectangular form. The piston is cast in a mould and the alloy is allowed to flow freely around the edges of the strut already in position so that it is completely secured and locked in place. Weighing 1.24 lb. the piston has a length from the center of the pin hole to the top of 2⅛ in. while the overall length is 4 in. Three rings all above the pin are used, two being of the plain type with the lowest, an oil control design necessitating relief holes drilled in the groove.

Through a conventional triangular drive employing a 1½ in. wide Morse chain of 78 links, the camshaft and accessories are operated. Adjustment for the chain is provided for by swinging the generator located on the right hand side of the engine. The camshaft of 1040 S. A. E. steel is carried in four bearings, the first or number one being of the bronze back babbitt lined type with the others formed in cast iron. Sizes of the bearings from front to rear are:

No. 1 2¼ by 1½ in. length
No. 2 2⅛ by ⅞ in. length
No. 3 $2\frac{3}{32}$ by ⅞ in. length
No. 4 1⅝ by $1\frac{11}{32}$ in. length

Cams of curved flank type operate the two piece mushroom tappets. The latter are held in two clusters of six each and provided with the conventional form of adjustment. While both valves are of the same dimensions they differ in type and material. The exhaust is of the tulip type made of silichrome with the inlet valve in chrome nickel and of the regular mushroom design. Valve port diameters are 1 21/32 in., the stems ⅜ in. diameter, length $6\frac{3}{16}$ in., lift $\frac{5}{16}$ in. and the valve seat angle 45 degrees.

Through helical gears off the camshaft a vertical shaft is driven which operates the ignition distributor at its upper end and the oil pump at the lower extremity. The pump gears formed of a steel driving and a bronze driven gear are carried

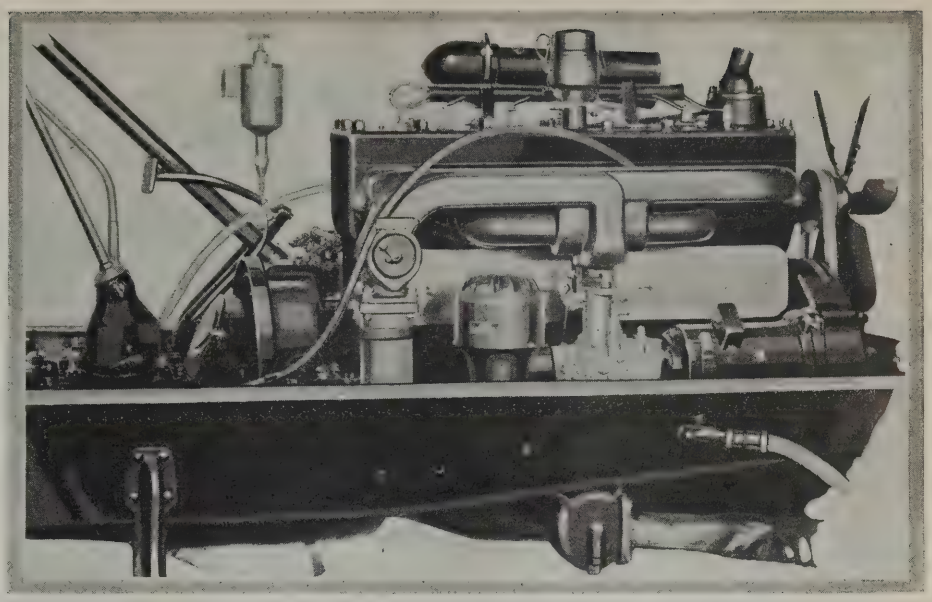
The 7-bearing crankshaft employed on the new "Imperial" engine. The two counterweights opposite each throw should be noted.

in a cast iron housing. A large round brass mesh strains the oil in the pressed steel pans before entering the pump. The general arrangement of the pressure oiling system is the same as on the smaller six, oil passing to the main bearings through an oil manifold drilled in the case. A unique feature is the oil return line which feeds back directly into the aluminum housing encircling the strainer. To cleanse the oil of impurities, a Purolator filter is located on the dash and is placed in the direct pressure line of the oiling system.

Camshaft bearings are oiled through a hollow passage in the camshaft while holes drilled through the lower end of the connecting rods to the crankpin allow oil to be forced to the cylinder walls and piston pin when the hole in the crankpin coincides with the orifice in the connecting rod. A separate lead carries oil to the timing chain. Other parts are lubricated by mist. A bayonet type of gage is employed to show the oil level which at the "full" mark indicates a seven quart capacity.

Distributor on Left Side

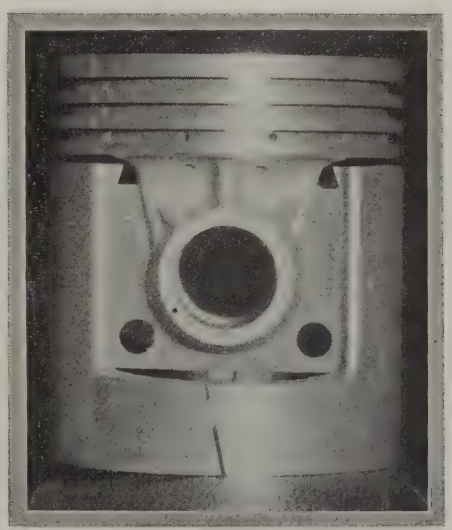
The distributor located in the center on the left side of the cylinder head is in a very accessible position. It is of the semi-automatic, double breaker type with a counter clockwise direction of rotation. The high tension wires pass through insulated ducts to the ⅞ in. 18 std. A.C. spark plugs. All four electrical units are of Remy make with the battery a 6-8 volt, 160 amp. hrs. Prestolite. Model designation of the various units are:



Distributor—732-A
Coil—525-B
Generator—945-B
Starter—732-A

Mounted on the left side of the flywheel housing, the starter can be quickly removed by the loosening of a single nut and stud. Engagement with the 124 tooth ring gear is through a 11 tooth pinion mounted on a sliding gear with an overrunning clutch. The generator is of the third brush type with thermostat control.

Both intake and exhaust manifolds are cast integral and follow the same design as on the smaller six only they are proportionately smaller.



The carburetor, a specially developed Stromberg OX-3, is bolted directly through a top outlet to the intake manifold. Two of the more important developments are the providing of a knurled screw in which are marked eight settings enabling the driver to adjust his carburetor to suit the best driving conditions. The other device is a needle valve which automatically increases the fuel supply when the choke is raised. In addition a fumer or electrical heating device is installed in the bowl of the carburetor to facilitate starting in cold weather.

Water is circulated through the cooling system by a centrifugal pump attached by three bolts to the front of the cylinder block. On the other end of the shaft carrying the impellor is placed a six bladed fan of 16 in. diameter, the latter being carried on double row ball bearings in the same housing as supports the water pump. The entire unit is driven by a "vee" belt off the crankshaft, adjustment being compensated for by a movable flange on the fan pulley.

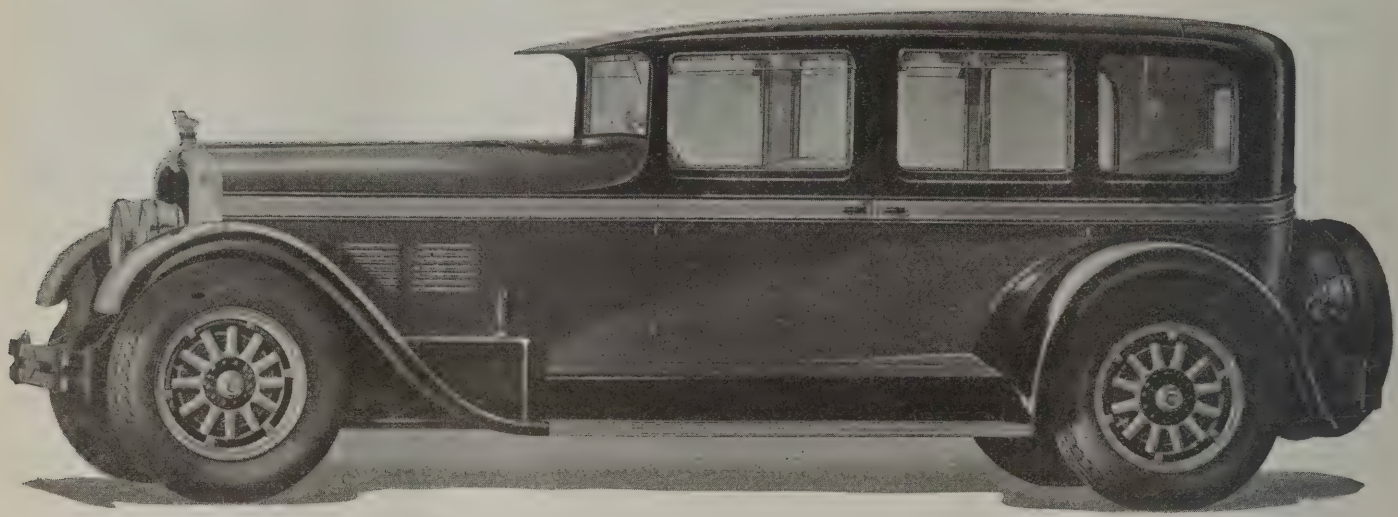
Right side of the power plant. The by-pass for heatiing the intake manifold when the engine is cold may be seen. The distributor on the top of the block and the air cleaner should be noted.

In many respects the clutch which is of the single, dry plate type follows closely the design employed in the Chrysler four. On both sides of the pressed steel clutch plate is basket weave friction material woven integral with the plate. Knurled nut adjustments are provided with spring locks to govern the pressure applied to the plate through the several coil springs. The radial ball throwout bearing is lubricated by a pressure gun attachment. At the forward end the pilot shaft is carried in a ball bearing in the end of the crankshaft while at the rear the main 1½ in. shaft is supported in a large roller bearing. There is a large inspection cover on the housing.

The new piston employed in the "Imperial" engine. The rectangular piece is made of Invar, a non-expansive steel alloy. This type of construction enables the aluminum alloy piston to be fitted to limits as close as .003 in. without damage to the bores.

Bolted directly to the bell housing, the gearset is of conventional design and provides the following ratios:

Low, 3.20 to 1
2nd, 1.81 to 1
3rd, 1.00 to 1
Rev., 4.06 to 1



The main shaft is supported at the forward end in a roller bearing and at the rear in a plain ball bearing immediately behind of which is the drive for the speedometer. The counter shaft is stationary with the gear cluster carried on rolled bearings.

All gears are given a burnished finish. The emergency brake operates on a drum behind the gearset and in the lever mechanism is incorporated a compensating spring to prevent over travel of the ratchet and make the lower hard to operate. To give the front compartment a clean appearance, the brake lever protrudes through a conical and self contained opening similar to the gear shift lever. In addition, the rachet release rod passes through the center of the lever and operated through a button, The dimensions of the emergency drum are 8 in. diameter by 2⅛ in. wide giving a braking area of 49 sq. in. Thickness of the lining is 5/32 in. The gearset is specially made for the car by the Detroit gear Co.

At either end of the 2¾ in. diameter tubular propellor shaft is mounted a trunnion type universal joint. Final drive is through the Hotchkiss system. The rear axle specially made by the Timken company is of the semi-floating type and provided with two standard ratios for domestic use 4.27 and 4.63 to 1 and a 4.09 to 1 ratio for the export market. The drive pinion integral with the short shaft

(*Continued on page 23*)

NEW STUTZ REPLETE WITH UNIQUE MECHANICAL FEATURES

New Stutz five-passenger sedan, with double belt and distinctive hood and radiator lines.

By W. L. CARVER

THE coordination of a chassis and a power plant which are replete in unique mechanical developments with a line of bodies low and rakish, but still dignified and comfortable, makes the New Stutz Vertical Eight a most unusual car. No single feature stands out beyond any of the others, but all have been combined to produce well rounded, striking appearance, all-around performance and simplicity of maintenance.

That the make-up of the new Safety chassis is unusual is demonstrated best by a brief resume of some of its features.

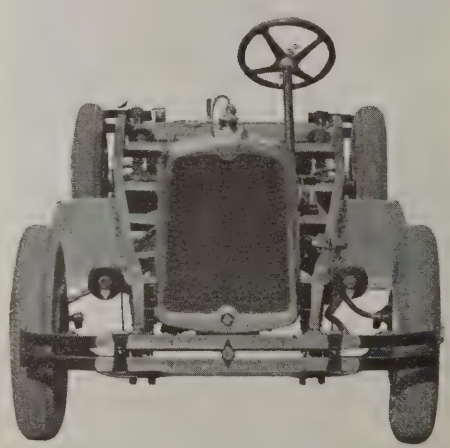
The engine is eight-in-line with nine main bearings and an overhead camshaft which is driven by silent chain at the front end. Maximum h.p. is 92.

Rear end drive is through a Timken F. J. worm gear assembly with the worm undermounted.

Brakes which are fitted to all four wheels are the new Timken hydraulic type which require low operating pressure and have almost 360 deg. contact in semi-steel brake drums which are equipped with cooling fins.

Frame height amidship is just over 18 in., producing a floor board height above the ground of a fraction more than 20 in.

All chassis bearings are lubricated periodically from the engine by the Meyers reservoir system.



Although the wheelbase is 131 in., the car turns in a 24 ft. radius. Steering is by a Ross cam and lever gear.

Springs are unusually long and flexible and have been designed to coordinate with balloon tires. Front springs are shackled at the front and anchored at the rear.

Frame is 7¾ in. deep and reinforced by heavy tubular cross members and rolled steel flange running boards which bolt directly to outer faces of side members.

Bodies in themselves represent no radical departure from the conventional, but when coordinated with the chassis produce a striking combination. The maximum overall height of the entire line of bodies is 70 in. and a man of ordinary height standing on the curb can see clear over the top. Although the overall height is strikingly low, head room has not been skimped and is as liberal as that of the most conservative body. The seat level when on the road is approximately 30 in. above the pavement, leaving about 39 in. headroom. Liberal leg room is found in both front and rear compartments of all bodies.

Windows and doors are wide and particular attention has been paid to the vision of the driver as well as the passengers. All windows at the sides are fitted with plate glass eaves which provide ventilation without draft and interference with vision.

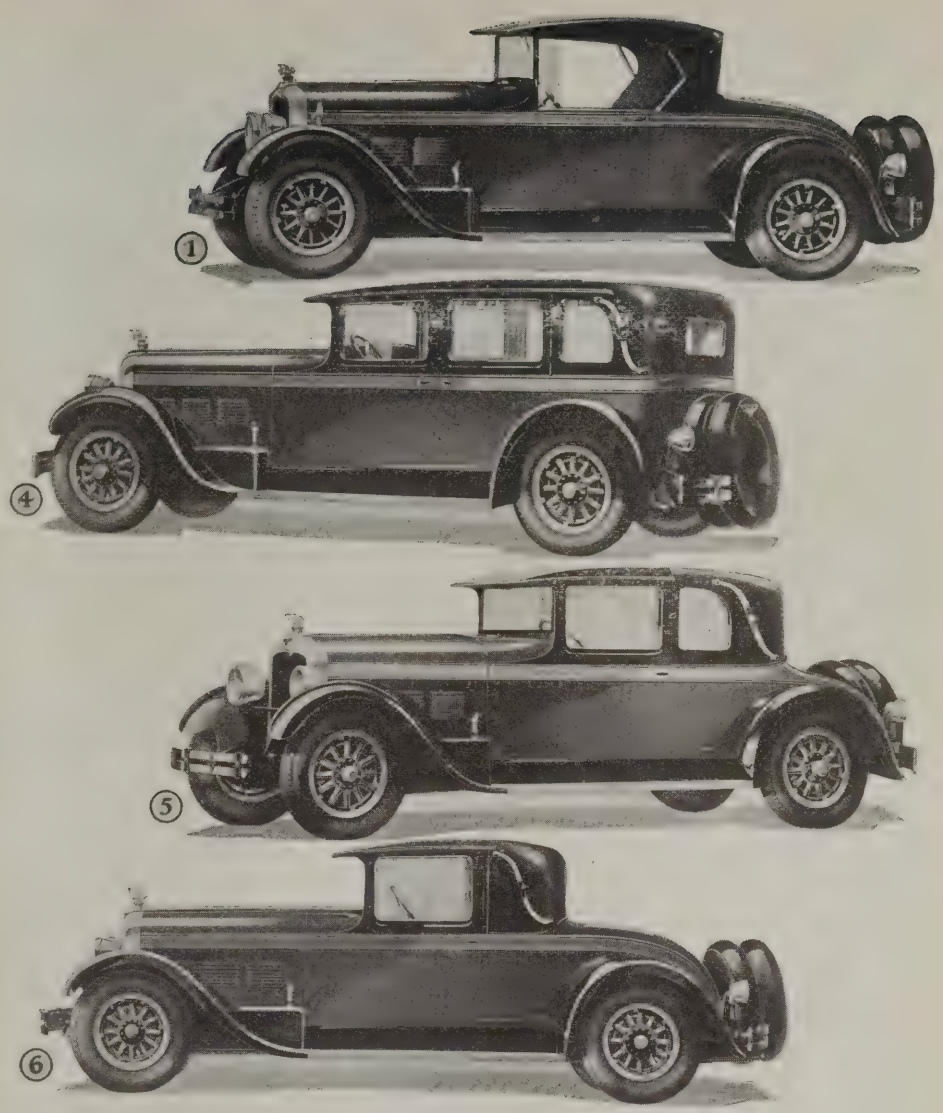
Front view of chassis of new Stutz.

That the characteristics which have been high-spotted in the foregoing paragraphs are reflected in the performance of the car has been demonstrated by a representative of this publication. Several laps were driven around the Indianapolis track at an average time of two min., which is equivalent to 75 m.p.h. Acceleration from 5 to 25 m.p.h. required 6.5 seconds and from 10 to 40 m.p.h., 10.6 sec. From 20 to 60 m.p.h. required 17 sec. At 60 m.p.h. the car shows a terrific punch and can be taken to 75 m.p.h. like a racing job.

However, this performance was overshadowed by the characteristics of the car on the road. In a half-day's drive in rain over brick pavement, asphalt and gravel, the car was driven at speeds as high as 65 m.p.h. with no feeling of danger. The brakes were applied at speed on the straightaway and in turns with no skid. Short turns in gravel were entered at speeds of better than 50 and the brakes were thrown on hard before the steering wheel was thrown over with no perceptible skid or roll. A winding clay test hill, with maximum grade of 20 per cent, which was extremely muddy, was approached at 10 m.p.h. and negotiated in record time with no feeling of lugging. The combination of smooth liberal engine power, low center of gravity, balance, and sweet brakes is responsible for this performance.

Six Body Types at $2,995

Six body types, all priced at $2,995, are supplied on the new chassis. All models are equipped with shockproof windshields in which wires running transversely about 2½ in. apart are



Some Details of New Stutz

Price	$2,995
Wheelbase	131 in.
Cyl. bore and stroke	3 3/16x4½ in.
No. cylinders	8
Piston displacement	287.27 cu. in.
N. A. C. C. h.p. rating	32.52
Compression ratio	4.8 to 1
No. main bearings	9
Tires	32x6.20 in.
Springs (rear)	62x2¼ in.
Springs (front)	38x2¼ in.
Rear axle drive	Worm gear

placed in the glass as it is made. With this construction it is practically impossible to dislodge jagged fragments of any appreciable size, nor can stones or other materials ordinarily encountered on the road pass through the windshield. All bodies are fitted with dual rear vision mirrors and Folberth windshield cleaners. Electric cigar lighters on extension cords are carried on the instrument boards. An auxiliary trouble lamp is clipped back of the instrument board and can be fitted to the cigar lighter socket. A push button switch locks the retracting spring of the lighter cord at will.

Instruments are grouped on an elliptical panel on the dash and are protected by a single glass with interior illumination for night driving. The top of the panel is decorated to correspond with the characteristic radiator. Instruments comprise a Stewart speedometer, a Phinney Walker clock, a Grolan gasoline gage and an engine therometer, ammeter and oil gage, all made by the National Gauge and Equipment Co. The carbureter choke control and push button ignition switch are installed symmetrically with the instrument panel. Upholstery in the open cars is hand buffed leather dyed to harmonize with the body finishing scheme. Closed cars which are fitted with smoking and vanity sets are upholstered in Laidlaw No. 1390 cloth with Chase mohair optional at increased price. Here again the interior color scheme harmonizes with the exterior finish.

Steering wheels in all models are 18 in. dia., and both rim and spider are made of solid walnut. In addition to the usual short levers for ignition and carbureter control and the horn button, another longer lever at the head of the steering column controls the lighting circuit, being connected through the interior of the column to a switch box which is located on the steering gear housing. Several positions on this switch provide proper lighting for all conditions. Nickel plated Brown headlamps provide long and short driving beams and parking lights. At the rear a combination tail, stop and reverse lamp harmonizes with the headlamps. Gear and handbrake levers are long and convenient to the wheel and a hinged strap type of accelerator pedal is used.

Four of the six new Stutz body styles. Fig. 1 is the two-passenger speedster; Fig. 4 the five-passenger brougham; Fig. 5 the four-passenger victoria with offset driver's seat and auxiliary folding seat; Fig. 6 the two-passenger coupe with rumble seat and adjustable rear window. Road clearance is 8 in. on all models.

Nickel plated shells are fitted to the Fedders radiators and the cap, which also is nickel plated, carries a distinctive emblem. Double bar nickel bumpers are used at the front and bumperettes at the rear. These do not require the usual mounting brackets, as provisions for their direct mounting have been made at the spring horns. At the rear a pressed steel tire carrier with screw and lock adjustment for the reception of the tire is carried by substantial brackets.

General appearance is rounded out by artillery type wheels finished in natural wood. Visors are integral with both open and closed tops, being extensions in either case. Roof lines are curved slightly over the top to harmonize with the low, flowing lines. All bodies are finished with a double belt as shown. The beads are lacquered black with a red hair-line stripe. Pyroxylin enamel finish is used over the entire body, while black bituminous enamel is used on fenders, splash guards and running gear. Superstructures of all closed bodies are finished in black pyroxylin enamel.

Description of Bodies

Bodies with their color schemes and special equipment are listed as follows:

Two-Passenger Speedster. Fitted with rumble seat for two passengers and golf bag compartment. Top including integral visor with natural wood bows and nickel fittings folds back and top boot is regular equipment. The rear curtain can be taken out entirely and top can be detached easily. Windshield frame is nickel plated and carries windshield wings. In addition to the rear view mirror on the windshield, a circular mirror is mounted on the left fender. Sea fog grey and ocean blue form one two-tone combination, another is light chicle drab and copra drab, while the third is light sage green and dark sage green.

Four-passenger speedster. General specifications are the same as those for

the preceding car and the same color schemes are used. Of course no rumble seat and golf bag compartment go with the two seater job. An added bit of standard equipment is a rear compartment cover or storm apron which attaches by means of snap fasteners.

Five-pasenger sedan, and Brougham. The general make-up of these two bodies is much alike, the exception being the leather rear quarter top irons and D-shaped windows in the brougham which replace the standard rear quarter window in the sedan. Equipment which is otherwise standard includes smoking and vanity sets and cord robe hanger. Two-tone color combinations are Bambalina blue and Algerian blue in one case and the combination of Plymouth and Buckingham gray for the other.

Victoria coupe. A four-passenger body with the conventional individual driver's seat and auxiliary seat which folds under the instrument board. There is room in the rear deck for golf clubs on the left side. Top has leather rear quarters, ornamental top irons and D-shaped rear windows.

Two-passenger coupe. Has a single cross seat which is wide enough to accommodate three people comfortably. Rear quarters are leather fitted with top irons and no window. A rumble seat finished in black leather accommodates two extra passengers and the rear window lowers to afford communication with the interior of the body.

Following are the color schemes in which the two last named body models can be obtained:

Kensington grey, light and Wellington grey, dark.

Palmetto green, light and Tarragon green, dark.

Chicle drab, light and Copra drab, dark.

Green, light and green, dark.

Cobalt blue, light and dark blue.

Sage green, light and sage green, dark.

Wire wheels are optional equipment on all models at an additional cost. All windshields are one piece and can be swung forward for additional ventilation although cowl ventilators are standard equipment.

Worm Gear Is Undermounted

Before entering the detailed description of the mechanical units it will be well to refer to Fig. 7 which illustrates the manner in which all of the units have been coordinated to produce the striking low appearance with more than liberal head room. Three major factors are responsible for this combination. The first is the worm drive axle which with the undermounted worm drops the rear end of the propeller shaft 5¼ in. below its location with the ordinary bevel drive axle. Furthermore the distance from the center of the axle shafts to the top of the worm gear housing is 4$\frac{13}{16}$ in., which is about 2 in. less than that of a bevel drive axle of the same capacity. This difference plus the characteristic shape of the two axle housings allows the rear seat to be lowered at least three in. below the ordinary relationship.

With the lower propeller shaft, a straight line drive in the loaded position drops all of the elements of the transmission line below the usual relationship to the wheel centers. This fact with a special gear box cover which reduces the height of that assembly by 1¼ in. has permitted the frame and floor board lines to be dropped well below the minimum height established by the usual arrangement. It will be noted that the bell housing is accommodated by the space below the inclined toe boards in the front compartment.

In order to take full advantage of these possibilities the frame is built with a double drop. The amidship section from the dash to a point just ahead of the rear seat pedestal is 18 in. above the ground in the loaded position. The frame has a long inclined drop of between 4½ and 5 in. in the section between the front axle and the dash while the kick-up at the rear axle is more than 7 in.

92 Horsepower Maximum

As illustrated by Fig. 8, 92 h.p. is the maximum developed by the engine at 3,200 r.p.m. Cylinder bore is 3$\frac{3}{16}$ in. and the stroke is 4½ in. Maximum torque is approximately 193 lbs. ft. at 1,400 r.p.m. With eight cylinders of these dimensions, the displacement is 287.27 cu. in. and the N. A. C. C. rating is 32.52 h.p. The compression ratio is 4.8 to 1.

Monobloc construction is used for the cylinders and these with the upper half of the crankcase are a single iron casting. Added rigidity is secured by parting the crankcase well below the centerline of the crankshaft with a liberal flange all the way around the joint. In addition to these provisions, the seven intermediate main bearings are carried in T-flanged bulkheads which contribute materially to the lateral and vertical rigidity of the unit. The bell housing is cast integrally with the cylinder block.

Main bearings of the crankshaft are 2½ in. dia. from end to end, and are carried in shimless interchangeable bronze back babbitt bushings of the full contact type.

Effective length of main bearings is as follows:

Front	3$\frac{17}{32}$ in.
Center	1$\frac{11}{16}$ in. including fillets
Rear	2⅝ in. including fillets
Intermediate	1$\frac{3}{16}$ in. including fillets

The dia. of the connecting rod bearing is 2⅜ in. while the length is 1⅜ in. Oval cheeks are used at each crank throw and the entire shaft is machined all over. The crank arrangement is 2-4-2 so that the two throws at each end constitute one four cylinder crank and the middle four form another four cylinder crank. This arrangement eliminates any unbalanced couple. Due to its form the shaft is in inherent dynamic and static balance. Crankshaft material is S. A. E. 1045 steel.

Main bearing caps are cast iron. The front and rear are retained by four $\frac{7}{16}$ in. dia. studs while two ½ in. studs are used at the center cap and two $\frac{7}{16}$ in. dia. studs are used at the six intermediate caps. All of these studs are 3½ nickel steel alloy. The rear cap construction includes the oil seal for the crankcase compartment with a slinger well and drain.

Connecting rods are duralumin alloy and are 9¼ in. long between centers. S. A. E. No. 10 white metal is cast centrifugally into the lower end on a tin bond. Bearing caps are retained by two $\frac{7}{16}$ in. dia. chrome nickel steel bolts. The complete rod assembly weighs just over 30 oz. and the shank is H-section. In the upper end of the rod a bushing of S. A. E. No. 62 bronze is press fitted. The effective dia. and length are ⅞ and 1⅜ in. respectively.

No screw retainer is used at the piston pin which floats in both rod and piston. Bearing in the bronze bushing at the head of the rod and the two cast iron surfaces in the piston is distributed equally and Tobin bronze plugs are inserted in the pin ends to permit floating without scoring the cylinders. Pins are made of S. A. E. 1020 steel, case-hardened, ground and lapped. The piston bearings are reamed and the bronze bushing in the rod is fly-cut.

Pistons are cast iron of a high steel mixture and are somewhat unusual, as the pin bearing is located midway in the bearing portion of the skirt, the three-ring band being only an auxiliary portion which serves the purpose of sealing the cylinder. Piston walls are full cylindrical and 3/64 in. thick with an eccentric ground clearance at the pin ends. Perfect circle rings of ⅛ in. width are fitted in all three grooves and the excess oil which collects at the lower ring is delivered to the pin bearing by two parallel shallow grooves milled vertically at each end of the eccentric clearance area at the pin ends. Pistons

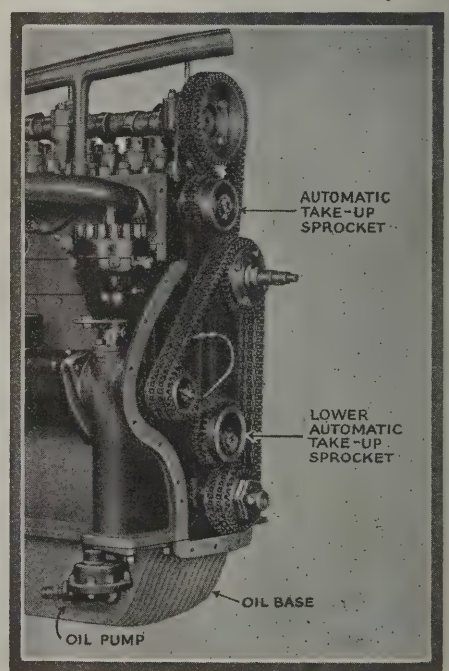


Fig. 10. Arrangement of chain drive for overhead camshaft in new Stutz engine.

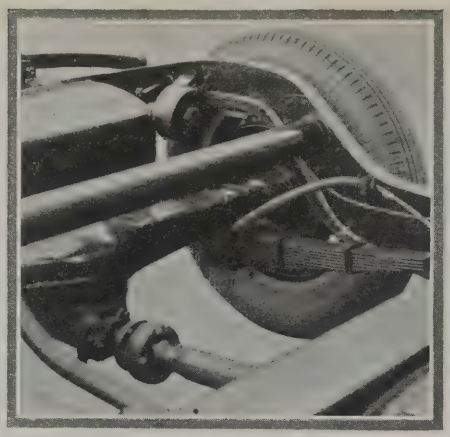

are ground flat over the top. The weight of a complete piston and rod assembly is 59 oz.

Cooling Fins on Crankcase Pan

The interior of the engine viewed with the crankcase pan removed, as illustrated by Fig. 9, is remarkably clean, as only the crankshaft and reciprocating assemblies are contained in this portion of the engine. Cast aluminum is used for the crankcase pan which is 5 in. deep, with 14 longitudinal cooling fins cast on the bottom exterior. Splash bars are cast in, and the sump is formed by bolted-in sheet metal plates. A tubular screen of .014 bronze wire, 20 mesh, protects the pump intake. The balance of the lubricating system will be described later. As the sump is 5 in. deep and is bolted to the lower crankcase flange which is located 2¼ in. below the crank center, the total depth of the crankcase is 7¼ in.

One of the most novel features of the new engine is the silent chain drive to the overhead camshaft. Two Link-Belt silent chains are used, both of ⅜ in. pitch. The lower chain, which also drives the accessories shaft, is 1½ in. wide, while the upper chain is 1⅜ in. wide. Thirty teeth are cut in the sprocket which is attached at the front end of the crankshaft. From this sprocket, the chain passes over a Link-Belt patent adjustable idler having 25 teeth and then around a 25 tooth sprocket on the front end of the accessory shaft which is located at the right side of the engine. Finally the chain passes over the 36 tooth front sprocket of the transfer shaft and thence back to the crankshaft sprocket.

In the upper train, the drive starts at the 27 tooth rear sprocket of the transfer assembly and the chain passes over another automatic tightener having 27 teeth and then around a 45 tooth sprocket on the front of the camshaft and then back to the transfer sprocket. With this arrangement all shafts when viewed from the front run in a clockwise direction and the drive to the camshaft is transmitted through the two vertical sections of the chains with the idlers located on what would otherwise be the slack side. All sprockets are hardened

Stutz rear axle showing worm gear housing and mounting of springs below axle.

as are the various components of the chain assemblies. Each of these chains is stretched and then bench tested for alignment and silence before leaving the Indianapolis plant of the Link-Belt Co. Links instead of being simply the product of a stamping operation are first blanked and then shaved to true contour. All of the sprockets are produced in the same plant.

How Idlers Take Up Slack

Spiral springs take up the slack at the idler sprockets and a locking device adjusts the position of the eccentrically mounted idlers to each stage of chain wear, thus preventing any possibility of chain slap. Idlers as well as the transfer assembly are carried on heavy studs which are fixed in either the crankcase or cylinder head. The transfer assembly is lubricated by high pressure from the main oil line and the bearing combination is phosphor bronze on hardened steel. A flange shaft which bolts on the front of the transfer assembly drives the six bladed 16½ in. dia. fan through a friction clutch.

Analysis of the front end drive reveals that only the crankshaft and camshaft run at speeds which are integral multiples or possibly harmonic. The accessory shaft is driven at 5/6 crankshaft speed while the transfer assembly rotates at 11/5 crankshaft speed. This arrangement eliminates any chance of harmonic periods of vibration. It is stated that the combination of a heavy, well supported crankshaft, silent chain drive with the cushioning or absorbing effect of the idlers and the varying speeds of the front end, has nullified the question of torsional vibration. No period was found upon careful check on the track at any speed from 5 to 75 m.p.h.

Four bolts secure the camshaft sprocket to a flange at the front of the camshaft. These bolts are spaced at equal angles and therefore in combination with the 45 teeth allow very close adjustment of the angular relationship of the cam to the crankshaft. In fact this sprocket is removed when the valves are to be ground and re-assembly is not governed by marks on the sprockets but by setting the camshaft for dead center position of the crankshaft. Auxiliary covers at the front of the cylinder head and cover facilitate this work and keep the time of the service operation down.

Five phosphor bronze pedestals provide the supports and bearings for the camshaft. The dia. at the front bearing is 2⅜ in. and length 1$\frac{9}{16}$ in. while the dia. and length at the other four are 1½ in. and 1¼ in. respectively. Bearings are situated between each group of two cylinders. The barrel dia. of the camshaft is 1½ in. and the shaft is rifle drilled from end to end and then the ends are plugged. S. A. E. 1015 steel of a special forging quality is carburized and hardened at the bearing and cam surfaces. Radial oil holes are drilled at each camshaft bearing, the oil intake being at the front pedestal and the outlet to the rectifier at the rear pedestal.

Cams Automatically Lubricated

As illustrated by fig. 11 each cam is fitted with a special lubricating device which eliminates the possibility of stoppage when small metering holes are used. At the heel of each cam a hole is tapped into the interior drilled oil passage. Into this tapped hole, a small special bronze fitting is threaded and staked. This bronze fitting carries a bronze pin which is .004 in. smaller in dia. than the hole in which it operates. Due to the combination of centrifugal force and the oil pressure within the shaft, this pin is held in the outer posi-

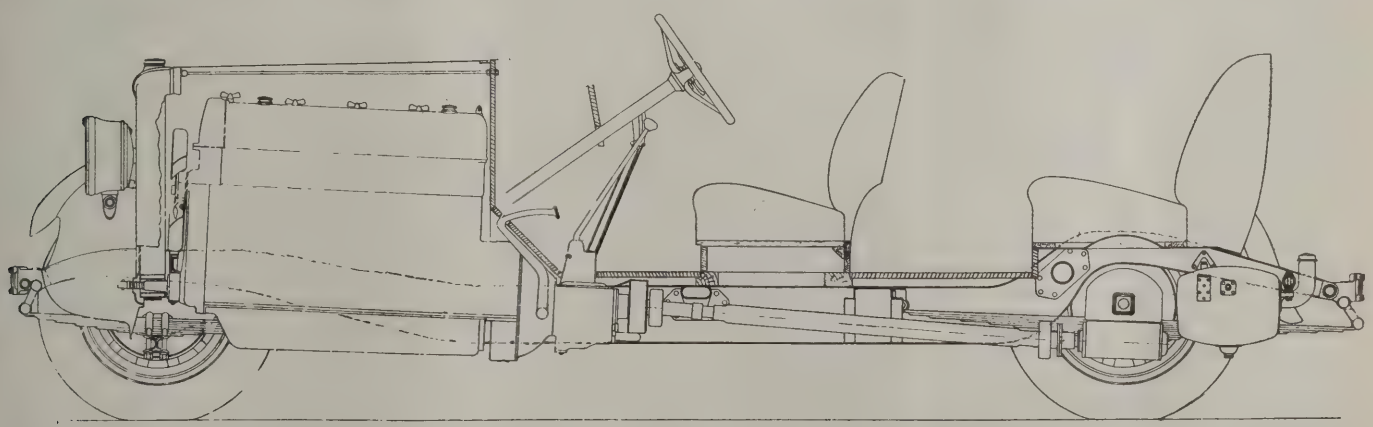

Fig. 7. Side elevation line drawing of new Stutz chassis illustrating advantages of coordinating worm drive axle, straight line drive and double drop frame.

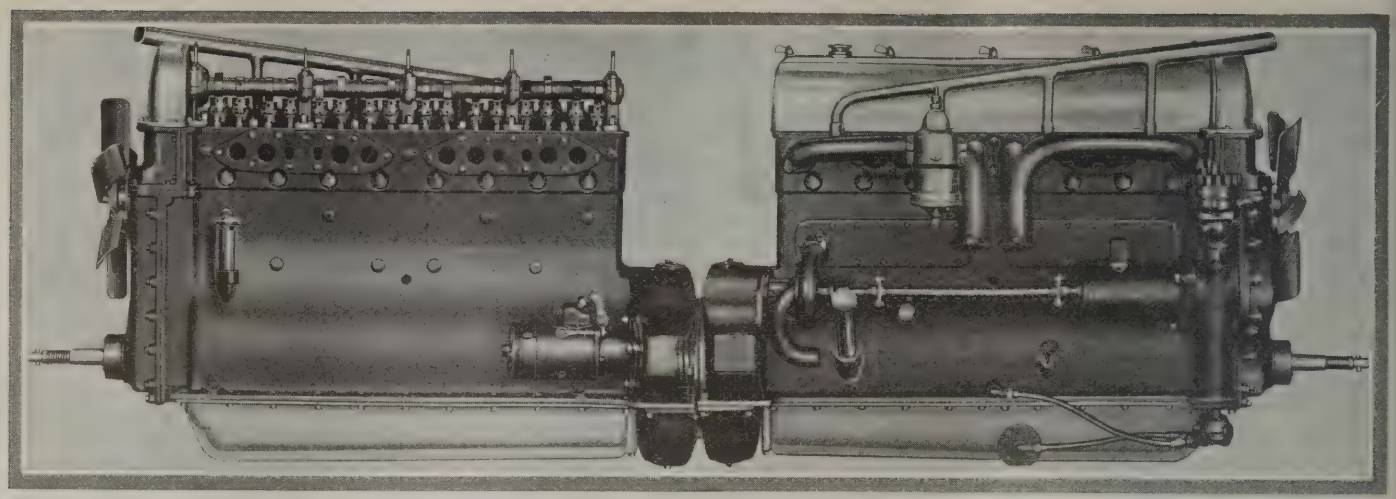

Fig. 12 (left). Left side of Stutz engine showing general overhead arrangement and porting.
Fig. 13 (right). Right side of engine with valve housing cover in place.

tion except when it is forced inwardly as the heel of the cam passes over the valve lifter nut. The reciprocating action which is set up is self cleaning and the desired amount of oil is carried out in the joint between the pin and the fitting. A small cross pin in the inner end retains the metering pin when in the outward position.

Due to the metered supply of lubricant which is supplied to the wiping surface of the valve operating nut no perceptible noise is set up at this point, although the clearances are unusually large. The clearance at the intake valves is .032 in. while the exhaust clearance is .028 in. Little or no noise is produced at fairly high speeds even when the cylinder head cover is removed. Intake and exhaust cams have the same contour and are ground from the same master cam, the lift being $\frac{11}{32}$ in., and the valve timing is approximately conventional.

Ignition Is Dual

Cast iron is used for the cylinder head which is unusually deep. The cylindrical combustion space which is somewhat larger than the cylinder bore is machined in the lower face of the head and 16 valves are set in a row on the longitudinal centerline of the engine. Valves are ported individually with eight intake openings on the left side and eight exhaust openings on the right side. Four small auxiliary exhaust ports which connect with those of cylinders 2, 3, 6 and 7 come out at the left side of the head to provide heat for the intake manifold. As ignition is dual, metric spark plug holes are tapped at an angle near the base.

As illustrated by fig. 11, the clear dia. of the valve ports is $1\frac{7}{16}$ in. and the angle of the valve seat is 45 deg. Valve heads have a modified tulip shape and the stem dia. is $\frac{3}{8}$ in., the material being chrome silicon alloy. Valve stems are centered in pressed-in cast iron guides, and the upper end, which is threaded to S. A. E. $\frac{3}{8}$ in. 24 pitch to receive the valve operating nut and piston, is guided by the latter unit in a cast iron sleeve that is piloted and bolted to the upper face of the head.

As illustrated, the valve stem nut is relieved on the outer dia. while the piston is ground to $1\frac{1}{2}$ in. dia. and has a length of $\frac{7}{8}$ in., which provides adequate bearing surface to withstand the side thrust of the cams. Eight cross holes are drilled in the barrels of both parts to provide means for valve clearance adjustment. Also one side of the guide is cut out to provide access to the holes in the valve piston. With this arrangement, two short rods of about $\frac{3}{16}$ in. dia. constitute the tool equipment for valve adjustment. The oil which is distributed by the camshaft over the top of the nut supplies lubrication. Much of this is skimmed off by the bevel end at the top of the upper guide and the remainder passes down the bearing surfaces at the large dia., which keeps it off the valve stems. The seat for the valve stem guide is a milled trough running almost the full length of the head. Drains back to the crankcase are provided at each end so that only fog reaches the valve stems. Valve springs are of liberal length and exert a pressure of 40 lbs. when the valve is closed and 90 lbs. in the open position.

The general appearance of the overhead layout is illustrated by fig. 12, and the aluminum valve housing cover is shown in place in fig. 13. Two vents are placed in the top of the cover which is secured by five wing nuts and studs. The auxiliary covers at the front end also are shown by fig. 13.

Dual Manifolding System

Fig. 12 also shows the porting on the intake side of the engine with the four auxiliary exhaust passages. A Swan dual manifold and a $1\frac{1}{4}$ in. Zenith duplex-SV5D carbureter are used here. In this arrangement the center group of four cylinders which are equivalent to one four cylinder engine are supplied by the inner half of the carbureter and the inner portion of the swan manifold. Similarily, the pairs of two cylinders at each end of the block which are equivalent to another four cylinder engine are supplied by the outer half of the carbureter and a separate manifold arrangement. No connection between the two manifolds occurs at any point. In the carbureter a single float chamber is used but beyond that point the effect is that of two individual carbureters except that both butterfly valves are on a single stem.

Heat is applied at a throat just below the branch sections of the manifold. At low speeds the exhaust surges back and forth through the heating chamber around the throat while the great volume of exhaust gas at high speeds and the rapidity of sequence of exhaust valve opening tend to create a dead end at the heating chamber. Therefore more heat is delivered at low than at high throttle openings.

Oil Pump Is Accessible

Fig. 13 illustrates the installation of the balance of the auxiliaries at the right side of the engine. As shown, the exhaust manifolds for the front and rear sets of four cylinders are separate and have individual exhaust pipes extending down to the junction with the horizontal pipe which connects with the A. C. muffler. The junction of the three pipes is in a cast fitting having a detachable lower cover for the purposes of engine tuning. This arrangement eliminates the exhaust surging which occurs when a single exhaust manifold is used on an eight-in-a-row engine. The rear exhaust manifold carries a Wall rectifier which distills the impurities out of the crankcase lubricant. This rectifier, the invention of Col. Guy Wall, draws its supply from the low pressure line at the rear end of the camshaft and discharges the rectified oil to the sump. Volatile vapors and steam are returned to the intake manifold, while carbon and dirt are separated out of the hot oil by a much finer filter than can be used with cold oil.

A vertical tubular extension in the wall of the crankcase which is just back of the timing gear cover flange provides the location for the oil pump and distributer head. It will be noted that every auxiliary unit on the entire engine

has an external, easily accessible location and that any one unit can be removed by withdrawing two or three nuts or bolts without disturbing any other.

Two contact arms and a four-lobed cam are used in a Delco No. 5296 distributer which is controlled by both manual and automatic advance. Eight high tension wires are carried in a two-piece pressed steel manifold of gradually decreasing section at each side of the block. The coil is Delco No. 2191. No fuses are used at any place in the electric system, as a circuit breaker is installed on the dash. Three-bolted flange mounting is used for the Delco No. 333 generator.

Relatively wide gears are used in the oil pump to assure liberal oil supply at all speeds. Oil is drawn from the tubular screen inside the engine pan by an external copper tube line and is delivered by a similar line to a connection located in plane with center bearing just above the lower crankcase flange. From this point the oil passes through an inclined drill hole upward to another large hole which is drilled the full length of the block. Drilled holes connect this passage with each of the main bearings and drilled holes from all but the front and rear bearings connect with the connecting rod throws, two holes communicating with the center main bearing. Cylinder wall lubrication is by splash from the crank throws.

Stainless Steel Water Pump

Supply to the camshaft is delivered by a hole drilled vertically through the cylinder block and head and indexing with a hole in the front camshaft bearing pedestal. Small drilled outlets from this vertical passage supply oil to the idler, intermediate and accessory shafts. Camshaft lubrication already has been described. The surplus oil which leaves the rear end of this shaft passes down through the rear bearing pedestal and out to the chassis lubricating by-pass and the rectifier. The oil pressure regulator is shown just below the water pump propeller shaft in Fig. 13 and the oil filler and bayonet gage are close by.

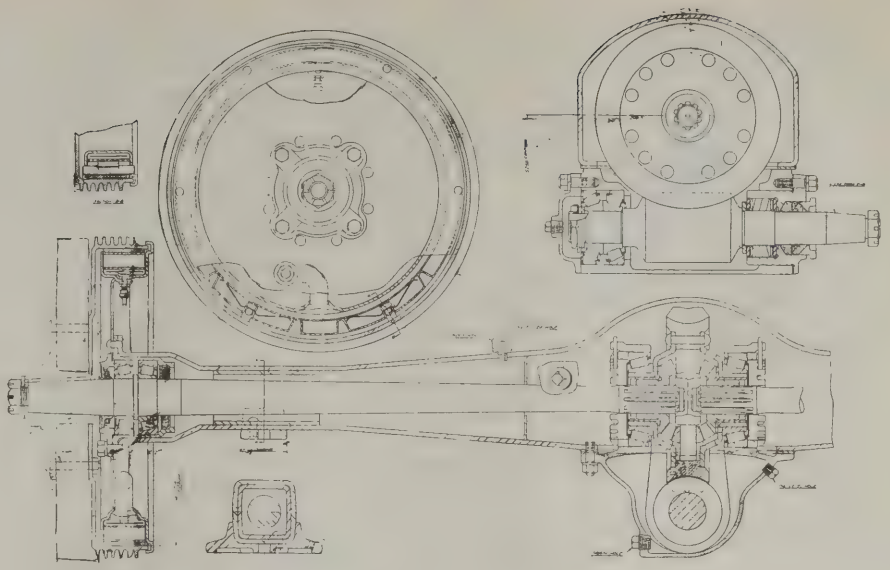

Fig. 14. Cross section of Stutz worm driven axle and new hydraulic brakes.

From the rear of the generator shaft a balanced propeller shaft and universal joints drive the water pump shaft which is stainless steel with a single knurled packing gland for manual take-up, no wrench or other tools being required. The pump is carried on the bell housing symmetrically with the starting motor. A long steel tube and two hose connections connect the pump intake with the bottom tank of the Fedders radiator while a short hose connection leads to the rear of two cover plates which are bolted to the side of the water jacket.

A flange at the rear end of the crankshaft carries a semi-steel flywheel of $12\frac{3}{16}$ in. rim dia. Hardened steel is used for the starter gear which is shrunk over the flywheel and has 117 teeth, 8-10 pitch and $\frac{1}{16}$ in. width of face. Within the flywheel is a 11 in. dia. Borg and Beck push type clutch which drives the clutch shaft through ten splines with a 205 annular pilot bearing. The throwout bearing is a graphite bronze shoe which contacts with the polished cast iron throwout ring on the clutch.

Design of the gear case is largely conventional, although through the use of a pressed steel shifting gate assembly, the height of the cover has been reduced 1¼ in. below anything made previously by the Detroit Gear and Machine Co. The upper shaft assembly is mounted on annular ball bearings while the pilot bearing and lower bearings are Hyatt rollers.

The hand or parking brake is mounted on the tail shaft of the gear set and controlled by a direct connected face cam. Diameter of the brake drum is 6½ in. and the width of the anti-friction lined brake band is 2¼ in.

Oiltight Mechanics universal joints are fitted to each end of the alloy steel tubular propeller shaft which is in line with the worm shaft and power plant when the car is loaded normally.

Features of Rear Axle

Two striking features are incorporated in the new rear axle. The first is the adoption of the worm drive and the second, the use of low pressure hydraulic brakes which use anti-freeze solution and develop almost complete peripheral contact. The worm drive axle was attempted by a few American cars about twelve years ago and discarded. However the tooth form of the new worm represents a vast departure from the worms of that day. In the present axle, a spiral Timken tooth form has replaced the involute form which was first introduced.

As illustrated by Fig. 14, the one piece malleable worm and gear carrier is the only cast part on the entire axle not counting the brake drums. The worm gear is special bronze and the worm is hardened alloy steel ground and polished. This assembly is fully reversible and reductions of 4¾, 5 and 5¼ to 1 are available for cars of various weight and speed characteristics.

At the rear of the worm shaft, two Timken bearings are placed back to back in a capped enclosure to take all of thrust in either direction and a portion of the radial load. At the front, a high

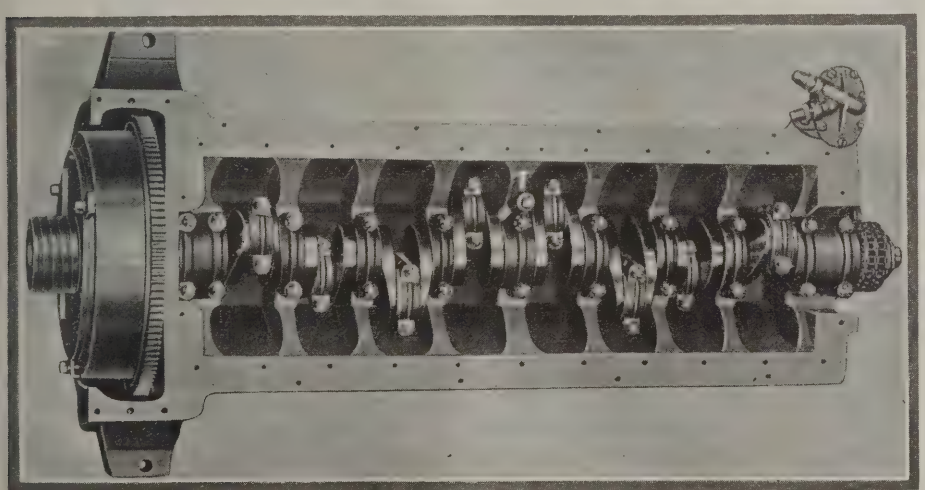

Fig. 9. Interior of crankcase which contains only crankshaft and reciprocating assemblies. Also shows clutch and oil pump.

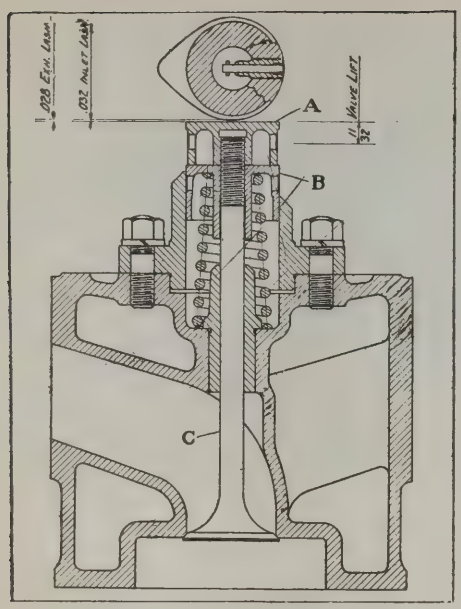

Fig. 11. Cross section through Stutz valve passage show operating assembly and oil metering device in heel of cam.

duty Hyatt bearing carries the balance of the radial load and is located just back of a stuffing gland.

Pressed steel is used for the one piece axle housing which has a substantially square section, being fitted with welded-in lubricant dams near the differential and reinforcing sections inside of the spring pads.

At the outer end of the axle shaft, two Timken taper roller bearings are opposed at each side of a turned flange and carried in a riveted-in carrier which is closed by a bolted cap, thus relieving the differential of all side thrust loads. Packing glands are placed at both sides of the wheel bearings. Stamped steel brake carriers are secured to the axle housing by the same rivets as secure the wheel bearing enclosure. Twelve-spoke heavy artillery type wheels are mounted on a taper at the outer end of the axle shaft. Tires all around are six ply 32x6.20 in., mounted on 4½ in. Firestone rims.

Brakes of Unusual Construction

A channel shaped brake holder of pressed steel is welded to the flanged carrier. An inner flange projects out and over the inner end of the brake drum to afford complete enclosure. Beginning at this point, the braking system is a striking departure from any existing practice. A heavy rubber tube resembling a small dia. inner tube is carried in the bottom of the channel and is equipped with an integrally formed length of heavy rubber hose which includes a molded elbow. This hose connection with its elbow passes through a hole at the bottom of the brake holder and connects with the copper tube braking line on the chassis. At the top of the holder another hole is formed through which a bleeder valve passes. This valve resembles an ordinary tire valve in appearance and also is moulded with the tube.

Outside of the tube are placed six sectional shoes of pressed steel as shown by Fig. 14. Each of these comprises an inner circular shoe which contacts with the expansion tube and an outer corrugated strip which is welded on to form the circular base for the brake liners which are attached by copper rivets. Six pins of ⅜ in. dia. retain the shoes in their proper radial location and in conjunction with the flat springs shown, retract the shoes to the inner position when the brakes are released.

Brake construction is identical for all four wheels with the exception of a slight difference in carriers at the front and rear wheels. Connected with the brake pedal is a piston of about 3 in. in dia. Contrary to the usual custom, this piston does not operate directly in a close fitting cylinder with the usual ring or gland equipment. In this case the piston is carried in a cylindrical guide which serves that purpose only and the rear head of the piston bears against a closed rubber bag which is contained in a chamber to the rear of the guide cylinder. Here again the outlet elbow which connects with a combination filler, shut-off and overflow valve is molded integrally with the master rubber bag.

Brake System Completely Closed

Thus the entire brake operating system is a closed system, as the connection at the master bag joins the tubular system which connects with the four brakes. No piston and cylinder joints occur anywhere and the system requires but one filling of anti-freeze solution, following which air is bled at the valves on the expansion tubes. Maximum pressure developed in the system is about 40 lbs., and equalization takes place between not only the four wheels but all of the 24 segmental shoes.

The front axle is the usual I-section forged steel with a relatively deep drop at the center to accommodate over mounted springs, each of which is secured by two U-clips. The axle sections outside incline upward to the king bolt bosses at a sharp angle which is of value in absorbing front wheel braking strains. Reversed Elliot construction is used and the king pin is secured in the boss on the axle. Bronze bushings of $\frac{13}{16}$ in. inside dia. which are pressed in the ends of the yoked knuckles bear on the king pins while the vertical load is carried on a ball thrust bearing. Brass screwed caps close the king pin ends and lubrication is provided by a Myers wick-feed reservoir. King pins are inclined outward at 6 deg. to produce practically center point steering in conjunction with a 2½ deg. camber at the wheels.

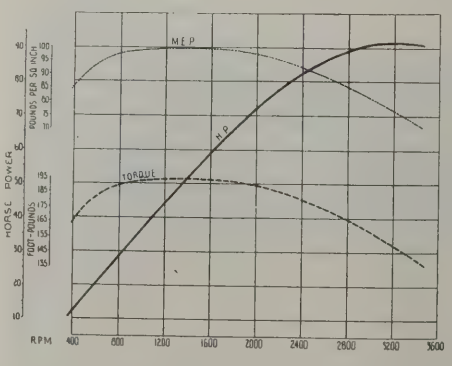

Fig. 8. Power curve of new Stutz engine. Maximum of 92 h.p. is obtained at 3,200 r.p.m.

Hardened steel ball studs are used for the steering system and the ball seats are Timken type which provide practically 90 per cent contact. No cushion spring is used back of the ball seats but shims determine the relationship and and a light spring is provided to prevent the rattle which would otherwise accompany the required mechanical clearance. The cross tube is one-piece tubular construction with hardened steel inserts in the expanded ends. The middle portion of the tube is utilized as an oil reservoir of large capacity and wicks convey the oil to the ball joints. With the drag link, a Ross cam and lever gear completes the steering system.

Five tubular and two channel cross members insure unusual rigidity of the frame.

Front spring horns are joined by a 1½ in. dia. tubular member, while two 1¾ in. dia. tubes connect the rear horns. Just ahead of the rear axle, another tubular member of 3¼ in. dia. has welded flanges which are riveted into the bottoms of the side channels. Another tubular member of the same dia. and with similar flanges is arched and flattened at the center to clear the propeller shaft just back of the transmission brake. A rolled steel channel member carries the radiator and front engine support and is bolted in to permit removal when the engine is to be lifted out of the chassis.

The rear springs are undermounted on the axle in a rigid fastening and are located inside of the frame side members. Brackets including Myers reservoirs are riveted on the back of the heavy intermediate cross channel and the spring eyes all around are bronze bushed. Shackles at an angle of nearly 45 deg. are placed at the rear ends of the rear springs and here again reservoirs are cast in the spring horns. Rear springs are 62 in. long and 2¼ in. wide and are made of chrome vanadium steel, the number of leaves varying from 10 to 14.

Front springs are made of the same material and have the same width as those at the rear, the length being 38 in. The number of leaves varies from 10 to 13 depending upon the type of body.

The drop at the front end of the frame is concealed by box shaped dust pans and a splash guard is fitted to the front cross channel. Watson Stabilators are fitted as standard equipment all around with those at the rear attached inside of the side members. The battery is located under the left end of the front seat with the tool box on the right side. A Prest-O-Lite battery of 160 amp. hrs. is standard equipment.

BILL FIXIT STORY No. 14

PREVIOUS installments in this series by A. H. Packer were published March 19, April 2, April 16, May 7, May 21, June 18, July 30, August 13, September 3, September 24, October 22 and December 10, 1925.

SYNOPSIS: Bill Fixit's electrical trouble shooting men start on a trip in a Speedway car. They stop at various places along the way and in a mining community are robbed of all their money. This necessitates getting a job with the local electrician, to whom they give some helpful information gained in working in Bill Fixit's garage. Directional radio is used by government agents in locating a gang of crooks and the boys' money is recovered. The trip is continued and the night after leaving the mining town they stop with Barney Oldfield Smith, an amateur race driver and help him with a magneto job, where a new condenser is needed. The condenser is obtained from Bill Fixit's electrical station, but in the meantime Valvy discovers an old radio set, and the Red Head engineers a trouble shooting job on the set and restores it to its original usefulness. After recovering from the excitement of getting the radio set to working they settle down on magnetos again and give Barney some good pointers.

Overhauling the *Magneto*

The Red Head Brings Out Some More Points That Are Sometimes Overlooked in Working on a Repair Job

By A. H. PACKER

"SOMETHIN'S gotter be done," roared the Burley One, leader of the gang, as followed by his three road workers he stamped into the superintendent's office.

The superintendent received them in his usual suave manner. "What can I do for you, gentlemen?" he asked.

"Somethin's gotter be done," the Burley One repeated. "These contraptions we gotter use gettin' snow off the roads are too hard to start. With no starters and on a cold morning when a young blizzard has blocked the roads, the farmers want action. Your job's no better than ours next election, if we can't give a little service."

"But what can I do?" said the superintendent, beginning to get a little hot under the collar. We've tried all the garage men around here. They have all taken a shot at the magnetos to the tune of a hundred dollars or so, and look at them now. No better than before."

"I tell you what," said a little fellow standing by the door. "I drove by the Smith farm this morning, and that young nut that drives around in a speed buggy all the time has hung out a sign which says he is taking electrical jobs on tractors and automobiles. Perhaps he could fix up our road machinery so it would start easier."

The Burley One laughed long and loud, but the superintendent considered the idea. "It might do no harm to try him," he said. We have done everything else. Perhaps from fooling around he has learned something useful. You never can tell."

The phone rang that morning while Barney, the Red Head and Valvy were practicing a line plunge through an ample stack of buckwheat cakes, Valvy leading the attack, but ably assisted by his interference. Barney answered the bell's insistent ring and came back beaming. "The first job," he said, "and a big one. The engines in the road clearing equipment that the county uses start hard and it's up to us to fix 'em," and then the joy gradually died from his face as he began to realize that he hadn't the faintest idea how to start.

"Sure," said Red. "Impulse couplings 'll fix 'em up most likely."

"Yeh, impulse couplings, that's what I thought," alibied Barney as he came back to the pancake job. "We can order 'em from Bill and in a day or two we can tackle the work. But before another job comes in that stumps—I mean before you fellows go away I want you to show me some more about magnetos. The other day we talked about taking 'em apart but we didn't go far enough to cover all details of the job."

When breakfast was over the Red Head sent a wire to Bill for the impulse couplings they would need and then got out his diagrams and test sheets to give Barney some more help on magneto overhauling.

"The last time we were talking about testing we considered a simple way of testing the armature of a magneto. Now we will consider the circuits we need (Fig. 1) for testing a coil such as we find in Dixie magnetos.

"When the Dixie magnets are laid to one side or removed entirely, the coil is made accessible and can be taken off to be tested, the condenser being also removed at the same time. As in a battery coil, it is necessary to send current through the primary and provide a place for the spark to jump. A gap is easily constructed as shown with a short piece of stiff wire. The coil terminal shown going to battery is the one usually grounded. The interrupter used for this test is shown as having its own interrupter which will need a condenser.

"This condenser can be the regular one from the magneto or a condenser from some battery ignition system. If any other magneto is ever encountered which has a detachable coil it could be tested in similar fashion after first testing to locate the primary and secondary circuits.

Testing the High Tension Insulation

"In the high tension magneto an armature or a coil has generated in it the high voltage which produces a spark

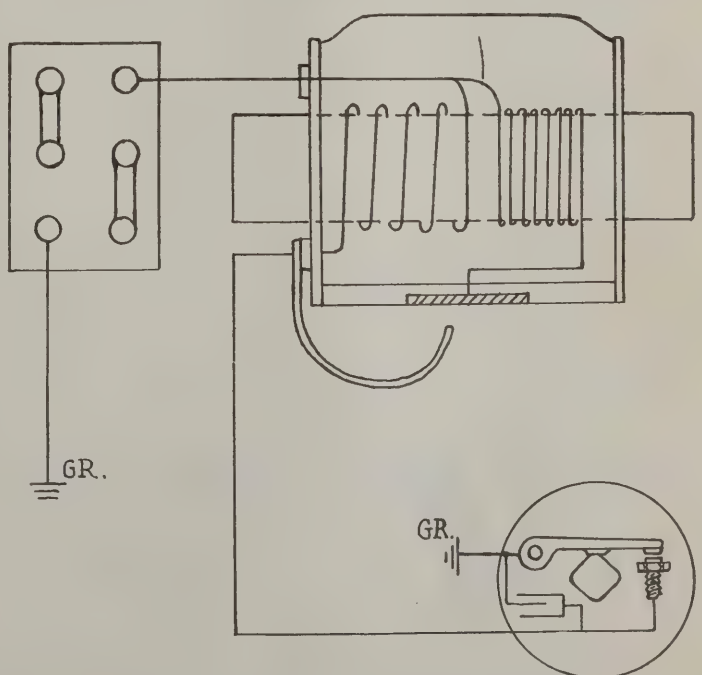

Fig. 1. Testing Dixie coil with battery current.

at the plug, but this high voltage can accomplish nothing if at any point the insulation is defective. With a good armature, there may be no spark available if the high tension brush holder is punctured, or if the same thing happens to the high tension pencil or the distributer.

"It is accordingly wise to test these parts while the magneto is apart, and if no special equipment is available, the old standby, a Ford coil, can be pressed into service, with a twelve volt battery used if necessary and strong spring tension on the points to get a very high voltage spark. The Ford coil," continued Red, "can be used as shown in this sketch of Bill's (Fig. 2) where he shows a six volt battery. One terminal of the battery connects to the lower coil terminal and the other through a switch to the upper terminal at the side.

"It's a good idea to use a safety gap between the high tension terminal at the side of the coil and one of the other terminals and then if this is made adjustable the high tension test voltage can be varied. In the sketch (Fig. 2) a high tension distributer brush holder is shown being tested. With the safety gap set at one half inch sparks should jump in this gap while the loop is moved over the high tension surface. If there is a crack at any place it will be shown by a heavy spark jumping through which will stop the sparks at the safety gap. At the end of the distributer brush holder and at the brush, sparks will, of course, jump, but they should not jump anywhere else."

"Looks as if we've figured on everything that can be done to the pieces," said Barney. "What tricks do you have up your sleeve when it comes to putting the machines together?"

"Oh, several," said Red. "We first grease the bearings with hard oil. Vaseline is often used but is a little too soft and melts out when the engine heat warms up the magneto. Aside from that I think that timing the interrupter with the armature is the first important detail in assembling the magneto.

"Men in the small shops to which Bill Fixit sells parts often write to us that they have repaired a magneto, every part tests O. K. and yet the spark is weak. The chances are that the points open when the alternating current is not at its maximum. The right point is usually obtained when the armature or inductor as the case may be, is just leaving the pole tip.

"A way of checking this in Dixie magnetos is shown in this sketch (Fig. 3) where a buzzer and some dry cells are shown in series with the coil and interrupter circuits. When the interrupter points touch, the buzzer lets you know about it. The shaft of the magneto is then turned in the normal direction until the buzzer stops and at this instant the gage should just slip in between the inductor and the pole piece.

"If the setting is not right it can be changed by loosening the screws shown in this other sketch (Fig. 4). With these screws loosened the relation of interrupter to inductor may be varied until the proper setting is obtained (Fig. 3), after which the screws can be tightened.

"In the armature type magnetos it is usually not possible to change the relation of interrupter to armature, for a keyway is usually milled in the armature shaft into which a projection on the interrupter fits. The roughneck mechanic usually gets things wrong if at all possible, though," said Red, "for I have seen interrupters forced on with the key not in the keyway, with the result that the interrupter would wobble around and the points would open at the wrong time.

"The right way is to put the interrupter in place and turn it slowly, until you feel the key drop into the keyway. Then put the interrupter screw in place and tighten it. The relation of armature to pole piece when the contacts separate will be approximately as shown in this sketch

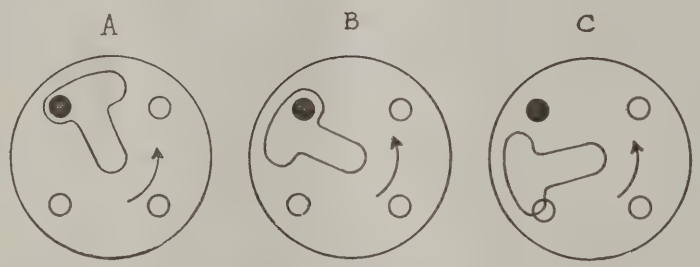

Fig. 6. Checking distributer setting. "A" correct for advance. "B" correct for retard. "C" wrong.

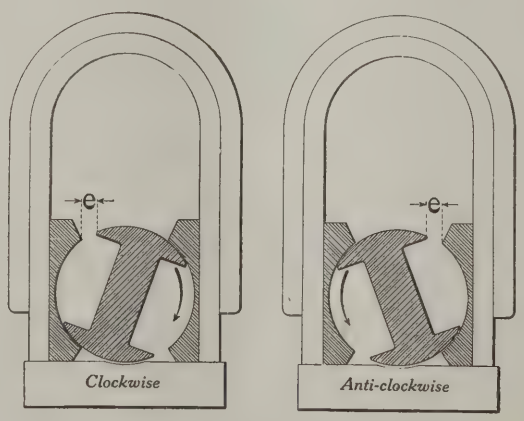

Fig. 5. Position the armature should be in when the interrupter contacts separate.

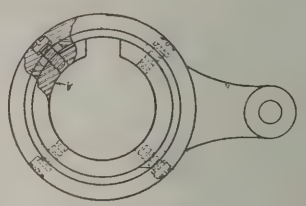

Fig. 4. Clamp screws which are loosened to change interrupter to inductor timing.

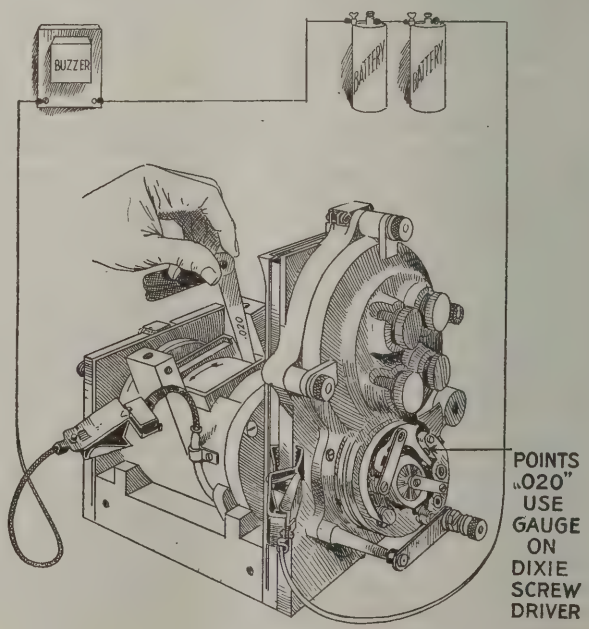

Fig. 3. Checking position of inductors with reference to interrupter.

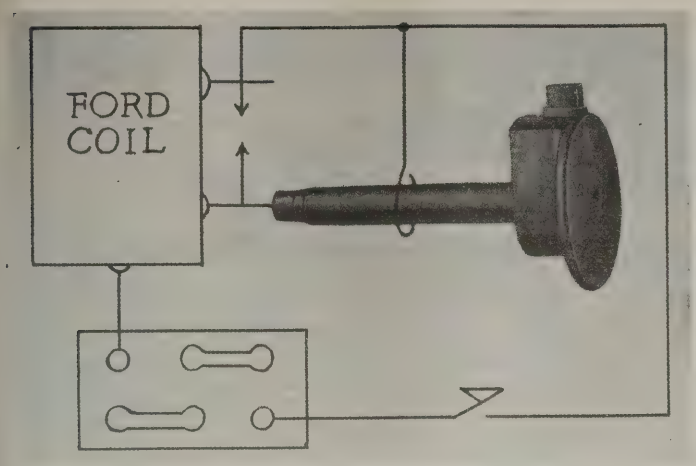

Fig. 2. High tension insulation test, using a Ford coil.

(Fig. 5) where at the left a clockwise magneto is shown, while at the right is an anti-clockwise magneto.

"With the conventional magneto this distance marked "e" will vary as the spark is advanced and retarded, the spark intensity accordingly varying somewhat in the different positions of the spark advance lever. This is the reason that the spark is sometimes advanced to crank an engine, although it is done at the risk of having the engine kick back, for the magnetos are usually so built that the advance or normal running position gets the hottest spark. With impulse couplings such as we intend to install on the big snow sweepers, there is no danger of this occurring and no trouble getting started.

"When we put the magneto together it is necessary to check up the distributer to see that it is properly timed with the interrupter. After the end brackets are on it is often impossible to change the timing so it has to be checked as soon as the end brackets are put in place and while they are held there by hand or with one or two screws, temporarily used.

"It is dangerous to depend on marks on the gears for they may be in the wrong place, perhaps put there by repairmen not thoroughly acquainted with the tricks of the trade that the electrician should know. This sketch (Fig. 6) shows how the distributer brush should check up under various circumstances.

"At 'A' we have conditions as they should be when the interrupter points just begin to separate with the advance lever in the advance position. The distributer segment has just slid under the brush connected with one of the spark plugs and is just making a full contact with it. When the spark is retarded it occurs later and the distributer will have rotated farther as shown at 'B.' The distributer brush and segment are still making contact although a little more rotation will separate them.

"If the condition at 'B' exists when the interrupter contacts separate, with the spark lever in the *advance* position, then in the retard position the segment would be all the way out from under the brush as shown at 'C.' Under these circumstances we would not only fail to get the spark at the **proper plug,** but the timing would be so far out that the spark would go to the wrong plug.

"A magneto timed this way would not start in the retard position for it would continually fire in the wrong cylinder. It could be started in the advance position if it could be cranked without kicking back but when the spark was retarded it would pop in the carbureter and quit. That shows how important it is to get the distributer timed right.

NOTE: The subject of magneto overhauling will be concluded in the next Bill Fixit story. It will include two methods of remagnetizing the magnets.

Chrysler Brings Out More Powerful Six

(Continued from Page 12)

is carried in a straddle type of mounting two taper roller bearings being employed on the shaft proper and a parallel roller bearing in the overhung support. Timken taper roller bearings are used to support the four pinion differential while the outer ends of the axle shafts are carried likewise. The shafts made of 3240 S. A. E. chrome nickel steel are 1¾ in. diameter at the wheel end and 1⅜ in. at the ten splined ends.

Similar in construction to the smaller six, the front axle is tubular being designed for great torsional strength. Yokes and spring pads are forged, the latter being machined in place on the heavy wall 2½ in. diameter tubing.

The steering unit is a specially made cam and lever Ross gear employing a radial thrust ball bearing at either end of the cam. The steering wheel is of walnut including the spokes and has a 17 in. diameter.

Springs of the semi-elliptic style made of chrome vanadium steel are employed all round, those on the front axle being 41½ in. long and overslung while those on the rear are underslung and 58 in. long. All springs are 2¼ in. wide. Spring covers holding a sufficient quantity of lubricant for several months are also provided all around.

Except for slight modifications and improvements, the design of the hydraulic four wheel braking system is the same as that employed on the smaller six, being of the external contracting type. The drums which have the same dimensions front and rear are 14⅜ in. diameter by 2 3/16 in. wide. With a brake lining 1¾ in. wide, the total braking area is 249 sq. in. Lining thickness is 5/32 in. The master cylinder is placed on the transmission case in the conventional method and the wheel operating cylinders are the same size on both axles.

The frame employs pressed steel side channels 7 in. deep by 2½ in. wide and made of 5/32 in. stock. Between the front and rear spring hangers, 2 in. diameter tubular torsional members are employed. There are also three pressed steel cross members, the forward one carrying the weight of the engine being 5½ in. wide with the center one 4¼ in. wide and the rear member 4½ in. wide.

Standard tire equipment is 32 by 6.20 in. straight side Seiberlings mounted on 12 spoke special Kelsey wheels having 4½ in. rims.

Both open models are built by Chrysler and all bodies are given a pyroxylin base finish. The phaeton is painted above the black bead in a mallard green and the lower part is crane gray. The upholstery is of genuine brown leather with black binding to give a two-tone effect.

Above the maroon beading the roadster model is finished in sheraton gray with the lower part silver gray and the spokes of the wire wheels to match the upper part. Colonial grain upholstery in the French pleat style is used for the cushions on both the front and rumble seats, the latter being fitted with a self locking type of arm rests. Both the top and windshield are easily detachable, the natural wood end top bow fitting into nickel plated thimbles.

Both the 5 and 7 passenger sedans have the same interior fittings except the larger model has auxiliary seats. Both cars have a black upper structure with the 5 passenger model using a cactus gray finish below the beading and a pueblo gray employed on the larger car. Upholstery is in broadcloth with striped material on seat backs, cushions and side arm rests.

The berline has the same specifications except for the curved glass partition which drops down into back of front seat. A dictaphone is also provided. The front compartment is trimmed in long grain black leather. On the coupe the upper

BUILDING ^ ELECTRICAL ^ FLAT RATES
SHOP ^ LEGAL ^ PAINT & TRIM ^ ACCOUNTING

A Click in the Clutch

Q—We have a 1924 Big Six Studebaker in our shop which with the motor running with clutch disengaged at a speed of 200 to 300 r.p.m. has a sharp dull click. When running about 500 r.p.m. it is not noticeable. This noise sounds like a valve tappet, but we have set tappets as close as possible. Would you think that a little play in the timing gears would cause this noise.—Frahm Brothers Garage, Manning, Iowa.

From your letter it seems that you are not sure as to the location of the noise. If it really is in the clutch it is possible that the three toggle levers which operate against the clutch shifter bearing do not touch at the same time. Possibly two of them are operating the clutch and the third one is loose and makes this clicking or rattling sound. If the noise is stopped by operating the clutch pedal and then is produced by pushing the clutch pedal down again, it would seem to prove that the trouble really is in the clutch. The clutch is properly adjusted as follows:

The clutch pedal should be adjusted so that the clearance between the under side of the clutch pedal pad and the toe board is five inches. This can be adjusted by loosening the clamp screw and the adjusting screw at the lower end of the pedal arm and moving the arm until the clearance is correct. Then tighten the two screws.

If this adjustment brings the pedal arm closer than ⅛ inch to the under side of the toe board, it is too close and should be readjusted to give this clearance. Then loosen the nuts holding the pedal pad in the upper end of the pedal arm and screw the pedal pad in or out until there is 5 inches clearance between the pad and the toe board. Be sure to tighten the lock nuts after adjusting.

The clutch toggle levers are correctly adjusted when from one-half to one inch movement of the clutch pedal is required to bring the clutch shifter bearing into contact with the toggle levers, all three toggle levers touching the shifter bearing at the same time.

To make the correct adjustment press down the clutch pedal and place a block or piece of metal ⅛ of an inch thick behind the shifter bearing housing at point "A."

Then, one at a time, loosen the toggle lever adjusting screw lock nuts and turn the adjusting screws in or out until the levers are all just in contact with the shifter bearing. Be sure to tighten the lock nuts and remove the block from behind the shifter bearing housing.

If the trouble is not in the clutch then you might try running the engine slowly and holding a screwdriver against the valve stems or against the valve tappets, one at a time to see if this affects the condition. You might also try adjusting the valve tappets absolutely tight one at a time to see if this makes a difference in the noise. This would produce a continuous pressure on the camshaft at different places and would temporarily eliminate noise due to a loose camshaft bearing. It might also temporarily eliminate noise due to a worn valve tappet.

WHITE VALVE TIMING

Q.—A few weeks ago you showed the valve timing of a 16 valve Pierce-Arrow truck engine also a 16 valve White touring car engine. We would like to have the valve timing of the White 1917 touring car engine.—Bennett Motor Co., Silver City, N. M.

In 1917 there were three engines used. The 16 valve engine known as model G. M. had the exhaust close 10 deg. after top dead center while the intake opened on top dead center. Model G. E. C. had the exhaust close on top dead center and the intake open 5 deg. after top dead center. Model G. K. has the exhaust close 5 deg. after top dead center and the intake open 10 deg. after top dead center.

The Readers' Clearing House

THIS department is conducted to assist dealers and maintenance station executives in the solution of their problems.

All questions are answered direct by letter, so the name and address should be given in full. This saves waiting for the answer to be published, which sometimes occurs several weeks late, depending upon the space available.

Readers' names will not be published with articles, if a request to this effect is received with the letter.

Inquiries not of general interest will be answered by personal letter only. Emergency questions will be replied to by letter or telegram.

Also state whether a permanent file of MOTOR AGE is kept, for many times inquiries of an identical nature have been made and these are answered by reference to previous issues.

Addresses of business firms will not be published in this department but will be supplied by letter.

Technical questions answered by B. M. Ikert and A. H. Packer; Legal, by Wellington Gustin; Paint, by G. King Franklin; Architectural, by Tom Wilder; Tires, by a Practical Tire Man; General Business questions, by MOTOR AGE organization in conference.

Timing Chain Noisy

Q—We are having trouble with timing chain slap on a 1922 Chandler. We removed the generator chain and still found that the slap existed. This could be eliminated however, by holding a hammer handle on the slack side of the chain which goes from the crankshaft to the camshaft.—George R. Tufts, 14227 W. Frian Street, Van Nuys, Calif.

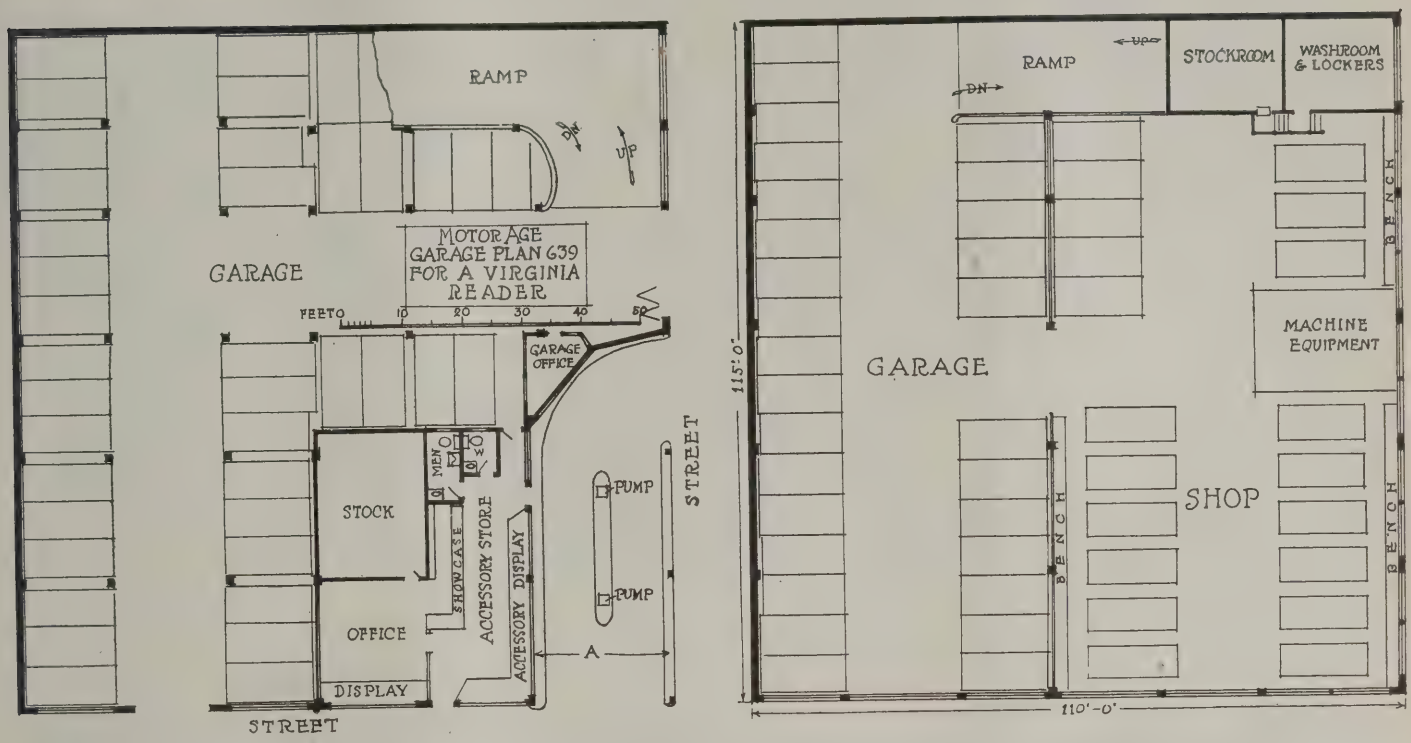
On the 1922 Chandler there is no adjustment to the chain and when wear has taken place it is necessary to remove a link or half link and then when more wear takes place it is necessary to install a new chain. We understand that you have installed new chains and still have trouble. A chain is considered to have the right tension when you can squeeze the two sides together and reduce the distance from one side of the chain to the other side by one half inch.

If the chain is still too loose after new ones have been installed, it is possible that the center to center distance between crankshaft and camshaft has been reduced by excessive wear in the main bearings. There is, of course, always some tendency to produce timing chain slap due to the fact that the camshaft first jumps ahead or tries to and then holds back as various cams receive the thrust from the valve springs. This has caused one maker of motor cars to install a camshaft brake to eliminate this back and forth rocking tendency.

Another possibility is that looseness in the camshaft bearings or valve tappets contributes toward this condition. The main bearings are of the replacable type, but unless new main bearings would increase the center to center chain distance considerably, this would probably have but little effect.

TIMED WRONG AND ENGINE POUNDS

Q—We have a 1924 Chandler on which the timing chain has slipped a few teeth and we are unable to get the valves set right. This is a Pikes Peak motor and when you accelerate, the motor pounds like the bearings are loose. Advise what to do to get the valves timed right.—E. O. Gerken, 3254 Glenwood Avenue, Toledo, Ohio.



The timing on this motor is conventional and the exhaust valve should close when the piston is on top dead center or has barely started down again. We do not believe that improper valve timing would cause pounding such as you describe, although this might be possible if the ignition is improperly timed and the spark occurs too soon. We would recommend checking up the main bearings after the timing has been corrected, assuming that this does not eliminate the difficulty.

Two Story Concrete Building with Ramp

The big problem in a building of this kind is to locate the ramp where it can be approached and left without impossibly short turns or too much waste of storage space.

Q.—I am contemplating building a combination two story concrete garage, service station and gas station with ramp (no elevator) to second floor on a piece of land the size as shown below, 110 by 115 ft.—Virginia Reader.

We would ask readers of this department to read the above letter as an example of what not to do when asking help. There is only one chance in a hundred that we have given him what he wants simply because he is so stingy with his information and we would not publish the plan except that it might help someone else.—Editor.

You have given us so little information about the nature of the business you intend to handle in this new building, that we have been obliged to use our imagination to a great extent. Perhaps if we have not laid it out according to the purposes for which you intend to use it, it will still be somewhat subject to changes without material alteration of the construction. The 50 ft. wide garage section with the entrance on both streets and the ramp from first to second floor might be permanent while the space devoted to the accessory sales, filling station and shop could be made smaller or larger as the conditions might demand.

The filling station is as narrow as could be well used and it would be advisable to leave more space making the dimension A four or five feet greater than it is. You will note that the second floor will have to be carried on columns, but that the second floor itself will be column free with the exception of the row through the center which forms a division between the two sections. The roof should be supported on trusses and supplied with some skylights, especially for the shop.

The stock room and shop toilet are located above the ramp and are elevated above the second floor level to give headroom for cars on the ramp.

LEGAL QUESTIONS ANSWERED

By WELLINGTON GUSTIN

of the Chicago Bar

MAY SELL AFTER JUDGMENT

Q.—We have in our possession a car left for repairs on March 5, 1924. They refused to pay the repair bill and storage or to permit me to sell it for these charges. I have letters in which they gave me authority to repair the car and in which they wanted to compromise on the storage bill. Now I cannot get them to answer my letters. Please give me the Alabama laws in regard to this case and what to do to get my money.—Fred Marthaler, Leighton, Ala.

Retaining possession of the car under claim of lien does not prohibit your bringing suit and reducing your claim to judgment, then selling the car under the judgment. It appears that this would be more effective under the circumstances, since you have no statutory lien in your state covering the garage man. The common law lien under which you may retain possession does not permit you to sell the property. But you may sell after judgment.

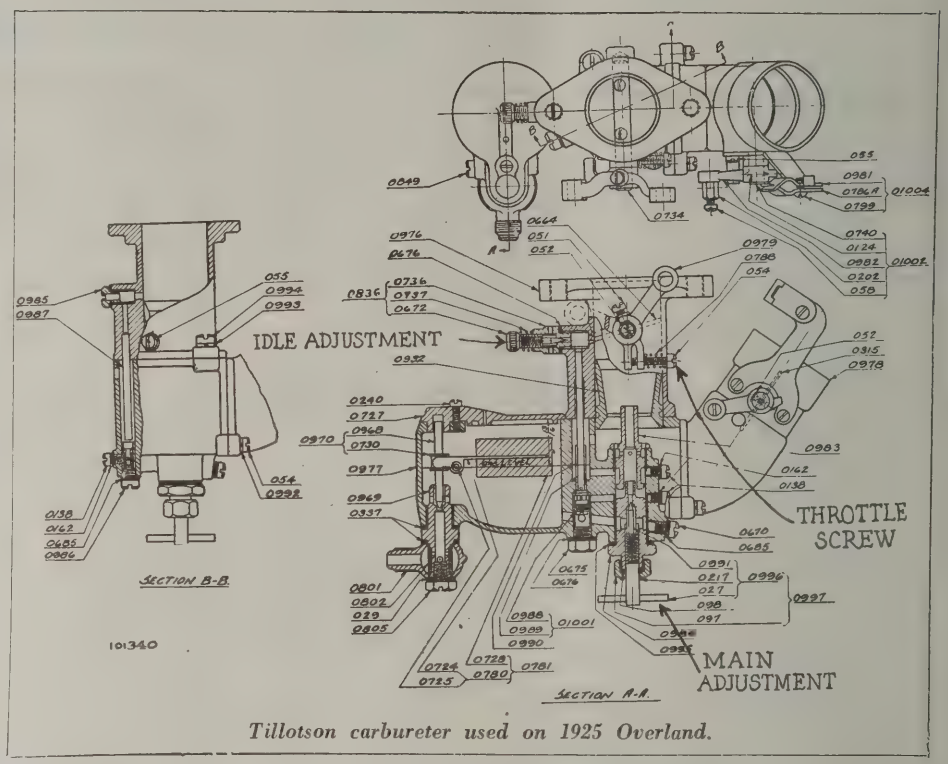
WRITING IS BEST EVIDENCE

Q.—Have you an available draft or form for a contract which two or more partners would sign, obligating each to the other, their creditors and the public they would serve as a partnership, without incorporation? Could you send me something to give me an idea as how to draw up such a contract?

A partnership agreement need not be in writing, though the writing is best evidence of what the parties have agreed to. No formality is needed, but a concise statement of your interest and responsibility to each other, length of agreement, division of profits, losses, and purposes are the essential elements.

The READERS CLEARING HOUSE — Defeating Old Man Wear and Tear

Engine Balancer Must Be Properly Timed



Q.—Supply information about a Stearns Knight balancer on a 4 cylinder 1925 car. We had one of these cars burn out the No. 3 connecting rod bearing and we fitted a new one but the car developed a knock as soon as the engine was started. It looks as if something is loose or running out of true and it seems as if it knocks twice in each revolution. We found the center main bearing on wrong, the oil hole being on the wrong side so that the bearing did not get oil.

The balancer is used on Willys Knight cars and not on Stearns Knight cars so we assume that you were working on a Willys Knight. The balancer consists of two cylinders which rotate in opposite directions at twice crankshaft speed, being geared to each other and to the crankshaft. The cylinders have holes drilled lengthwise in them and they are correctly installed when the holes are up and accordingly the heavy portion down with the crankshaft verticle, that is, the piston on dead center.

It does not matter whether the No. 2 and No. 3 pistons are up or down just so it is the dead center position when the teeth are meshed. If assembled in one position, it will be found that the heavy portion of each cylinder is again down when the crank has been turned one half revolution which gives the other dead center position.

Q.—Explain adjustment of the Tillotson carbureter on a 1925 6 cylinder Overland. —Geo. Podlosck, 214 So. 9th St., Reading, Pa.

Sectional views of this carbureter are shown giving the idle adjustment, the main adjustment and the throttle screw position. This instrument has two adjustments—the by-pass adjustment for idle and low speeds, and the needle adjusting screw for medium and high speeds. Knurled screw No. 0672 governs the idle; turning clockwise makes it richer, counterclockwise leaner. The approximate setting is one turn open. The throttle lever screw No. 054 should be adjusted at same time to give required engine speed; turning clockwise increases engine speed. The man flow of fuel is governed by plug 0984 and needle valve 0996. Turning to the left opens the adjustment and increases the flow of fuel. The approximate setting is two turns open. Before adjusting carbureter, spark plugs, ignition system and valves should be in good order and gasoline line and strainers free and clean.

Tillotson carbureter used on 1925 Overland.

RUNNING EXHAUST THROUGH A HALF INCH TUBE

Q—Could you give me the name of some firm that could furnish copper tubing, also connections as used for oil lines in a crankcase? At what engine speed would a ½ in. copper tube carry to the exhaust of a Buick 6 without danger of bursting the tube?—Vernon Hoblet, Willshire, Ohio.

The names of several concerns are being given by letter. You do not say what you wish to use the copper tube for. We assume that you are making up a hot spot device of some sort using exhaust gas for heating it. You could not run all of the exhaust gas from any car through a ½ in. copper tube and still have the engine operate properly. The size would be so small and the back pressure so great that the engine would not work right. We do not believe, however, that it would burst the tube for pressure is not sufficient. To operate a device of this sort you should tap into the exhaust manifold or exhaust pipe and put a scoop on the inside so that a portion of the exhaust gas will be carried out and go through your copper tubing. This is done on certain hot spot devices which are used to improve carburation.

The Radiator Does the Charleston

Q—We are having a great deal of trouble lately with a car equipped with an eight in line engine. The trouble has to do with the shimmying of the radiator. We feel this is due to the very long hood and suggested putting two braces running from the radiator back to the dash but the customer objected.—M. D. Leasure, 418 Laurel Blvd., New Castle, Pa.

This condition seems to be due to the combined results of balloon tires, three point suspension and extra long engine and hood. It can be overcome by steadying the radiator or the engine. In some cars cross rods are now being used, one running from the left side of the radiator to the right side of the dash and the other from the right side of the radiator to the left side of the dash. The two rods are then clamped together at the center where they cross. This overcomes the effect dut does not get at the cause. Another method is to steady the engine with respect to the frame which in effect gives four point suspension instead of three point. On one make of car, however, this has been tried out over rough roads and seems to prove perfectly satisfactory giving very steady operation where before a considerable amount of shimmying was experienced.

We understand that the factory which makes the car to which you referred in your letter can now supply brackets for steadying the front of the engine to the cross member of the frame. Referring again to different methods of steadying the radiator, we might point out that on one car a heavy channel iron extends from the dash to the radiator.

Q—On a 6 cylinder Auburn we are troubled with a clicking sound in the clutch, which is only heard when the car is running slow in high gear and when idling. It sounds like four light taps every revolution of the clutch.

It is possible that this is due to the contact of the clutch throwout fork with the lugs which operate the clutch throwout bearing. If the two arms of the fork do not strike at exactly the same time it may cause this clicking noise. We understand this may be remedied by using a file and filing off the arm which touches first so that both will touch at the same time.

Clearing Up Electrical Troubles

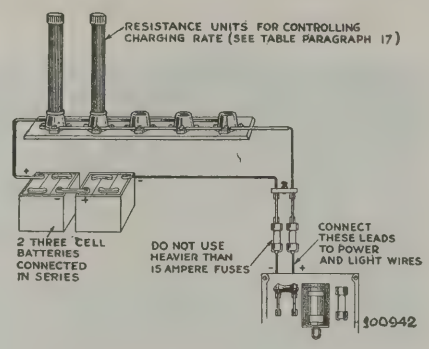
Charging Batteries With the Farm Lighting Plant



Q.—I am a subscriber to your magazine and note that you help those who write you for advice. I have a Delco farm lighting plant, 32 volts D.C. 850 watts. Now, I want you to tell me the correct way of charging storage batteries as used on automobiles with this plant. At times I have occasion to charge only one battery and again I may want to charge several. Please tell me how to wire the charging wires in order to charge only one battery and several. How many batteries can I charge on this plant at once.

At present I have 250 watt lamp connected in series with the battery to be charged and this gives a charging rate of about 7 or 8 amps. But should I want to charge more batteries will not the charging rate be lowered. Now, after you have told me how to charge several batteries at once, tell me this, Will the voltage affect the charging in any way? That is, if more than one battery is charged, will the voltage drop too low? And, on the other hand, if I charge only one battery will not the voltage be too high, the plant being 32 volts.

I have been told that it is better to have several lamps on the line, but will not this drop the voltage too low? Any service you can render me will be more than appreciated and in answering, please write to me direct and include a drawing of just how such an arrangement should be wired. Is there an instrument of any kind that can be had that is suitable for controlling the charging rate and is connected in the circuit doing the charging? —Curtis A. Johnson, Johnson Service Station, Hochheim, Texas.

We are showing two illustrations, one of which gives the wiring diagram and the other is a chart showing approximately the amount of charging current when various numbers of resistance units are used. These are resistance units supplied by any authorized Delco farm lighting representative. You can of course, use lamps in place of the resistance units if you wish. You can also cut the wire between the battery and the switch and connect a Ford ammeter or any other ammeter in the circuit to see how much current is flowing. Then merely add more lamps or bigger lamps to increase the current. The more batteries you connect the less current you will have while the more lamps or resistance you put in parallel as shown in the diagram the more current you will have.

It is apparently out of the question to charge more than five, six volt batteries at a time, for this gives 30 volts and the voltage of the charging current is only 32. Even under these circumstances it might be necessary to run the plant while charging in order to get adequate current.

Connecting batteries for charging from a 32 volt system.

Turn on Lights When Installing Battery

Q.—I have a National Highway six automobile, 1917 model with Westinghouse starting and lighting device on same. I bought this car second hand, with battery in, and drove it 6,000 miles without battery being touched. At that time the battery went down and would not charge up, so I bought a new battery and put it in the car myself, with negative end grounded on frame and positive end connected in line to lights and starter. Upon starting the motor, the ammeter registered discharge; and upon stopping the motor and turning on lights it showed charge.

I then tested the battery to see if the terminals were marked wrong and they were O.K., according to the salt water solution. I then tested out the old battery and found, according to the salt water solution, it had been connected up with the positive end on the ground and the negative end on the line. I therefore reversed the wires in my ammeter to register properly and have driven 16,000 miles since and everything is still O.K.

Now, I am told by some that this battery condition could not have existed as I state. What would take place in this case with the battery turned around as I state the old one was. This is a single wire circuit. Would the generator be affected in a case like this? I am advised generators of some makes would be ruined under these conditions. After putting in the new battery, the ammeter showed from three to five amperes more charge than the old battery did—A. M. Ikenberry, 1002 N. Penn Ave., Mason City, Iowa.

Ordinarily it does not make any difference which end of the battery is grounded. The wiring diagram for the 1917, 6 cylinder National car shows the postive grounded. It also shows the generator as being of a type which included a voltage regulator. Some of these regulators were made with two silver contacts at the regulator side. Others were made with one silver and one Tungsten contact and with these it was necessary to have the current go in a certain direction across the points. Consequently if your generator had a regulator of this type with one Tungsten and one silver point and you reversed the battery it would theoretically oxidize the Tungsten contacts and make the generator stop charging after running about one half hour. As you mention no trouble due to the generator failing we assume that the regulator must have had two silver contacts.

Aside from this condition there is practically no possibility of trouble and if you close the cutout points by hand after the battery is installed it will automatically magnetize the generator in the proper direction. When you first connected up the battery it was really being charged although the ammeter said discharge. Your reversal of the ammeter wires was one way of correcting the condition. The other way would have been to reverse the battery.

As a precaution it is always advisable to turn on the lights and make sure that the ammeter shows discharge whenever a battery is installed. The difference in the charging rate when the new battery was put in was doubtless due to a difference in the voltage and the fact that the voltage regulator would thereby permit a different current to flow.

HOME MADE RECTIFIER NOT SO GOOD

Q.—At one time in MOTOR AGE I saw a description of a lead-aluminum chemical rectifier and I wish you could give this information again as I would like to make one to charge batteries.—Harry B. Brown, Box 115, Eldon, Iowa.

We are giving you some recommendations by separate letter. In general we do not believe it advisable to try to make this kind of rectifier as it is very inefficient. It also requires about as much current as would be used with a good efficient rectifier in charging eight or ten batteries. In addition it is necessary to have glass jars, lead plates, aluminum plates, and other items and by the time these are purchased and a lot of time has been spent in assembling the outfit you would find it would cost considerable and would then not be satisfactory.

The article in question however was published in the August 22nd, 1918, issue of MOTOR AGE and other references may have appeared since then. If only one battery is to be charged at a time it is well to get a good commercial rectifier.

Motor Age's Flat Rate Forum

EDITED BY B. M. IKERT

Flat Rate For That "Mysterious" Case of Trouble

ALMOST always in circles where flat rate is discussed someone brings up an objection that flat rate does not take care of the job that is hard to diagnose and for which there is no definite labor operation or cost listed on the flat rate schedules.

For example, recently a man who operates a repair shop said that he could not get "sold" on flat rate because it was not applicable to so many jobs that came into his place of business.

As in almost every other line of endeavor there is always the proverbial exception to the rule. And so, no matter how well organized a shop's flat rate system may be there always will be some job popping up for which the flat rate book has made no provision. But this is no reason why the flat rate system as a whole should be chucked into the waste basket as not having sufficient coverage.

If any flat rate system were 100 per cent perfect, we should have no further need for service managers. When the infrequent job not listed in the flat rate schedules comes up, someone in the organization must be qualified to analyze the conditions and establish a price accordingly.

Often the objections raised to the establishment of flat rate prices for repairs are caused by another factor and that is improper trouble shooting. Certainly it is not the customer's fault if a shop spends a day locating a certain trouble that requires but a few minutes to remedy, once it is found. We frankly admit that sometimes a case of trouble arises that has everyone in the shop guessing and which oftentimes takes a long time to "lick."

THINGS THAT HELP FLAT RATE

So many of the flat rate operations require less than an hour to perform and in order to handle such jobs very quickly many of the larger service stations have installed "quick service yards." Thus the customer does not have to drive into the building, there is no tie-up of cars and in general the service is good all around. Of course weather conditions have something to do with the proper functioning of such a "yard."

In a shop one time a customer said that his car ran all right but that the engine overheated. Everything seemed all right so far as lubrication, cooling, carburetion, valve timing, ignition, etc. where concerned. The mechanics checked all these things, advanced the ignition slightly, made sure there was the proper amount of water in the system, etc. and sent the customer out saying it was their belief things would be all right.

But the customer came back in a short time with the radiator water boiling hot and another council was held. Surely a strange case one would say, when everything seemed right. But there is always the one reason behind such engine behavior and this trouble was finally solved by the service manager taking the car out on the road after the engine and cooling water had been allowed to get quite cold in the shop.

When the first symptoms of overheating became apparent he stopped the car, got out and raised the hood. Then he saw. It was a hose connection closed up by suction from the water pump. Someone had put in a piece of light rubber hose which under certain conditions simply closed up and thus shut off the water circulation. The installation of the proper thickness hose cured the trouble.

It took a long time to find this source of trouble and yet the flat rate operation of replacing a hose connection amounted to only 50 cents. Certainly nobody would think of charging a customer $10 or more for installing a hose connection. And after all, the repair or service operation, flat rate operation, if you please, was listed in the shop's schedule. The job looked mysterious and as though it was not on the books, but it was there as "Replace One Hose Connection.....50 cents."

MOTOR AGE'S FLAT RATE FORUM

No. 46

FLAT RATES FOR FORD MISCELLANEOUS ENGINE OPERATIONS

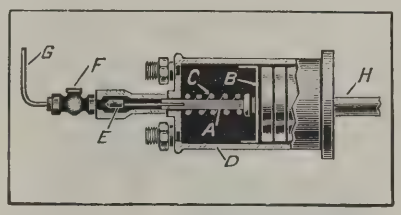
Manufacturer's Official Designation		Charge
17	Repair cylinder head bolts stripped—one or two	$4.00
18	Repair cylinder head bolts stripped under dash, loosen body and move back	8.00
19	Clean out feed pipe	4.00
20	Replace cylinder head gasket	1.25
21	Replace all three hose connections	1.25
22	Replace one hose connection only	.75
23	Replace crankshaft starting pin, or pulley	1.75
24	Tighten motor to frame	2.50
24a	Tighten or replace front crank case bearing cap	1.50
25	Clean crankcase or install gasket under lower cover	1.50
26	Replace manifold carbureter or bolt or repair leak in manifold	2.00
27	Install new butterfly spring	2.00
28	Overhaul carbureter—Kingston and Holley	2.50
29	Adjust carbureter	Free
30	Replace commutator wire loom	.75
31	Replace commutator case, brush or roller	.75
31a	Clean commutator	Free
32	Replace commutator pull rod joint	.75

THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies

Bailhe Accelerator

AN accelerator which does not require an additional foot support is being made by the Bailhe Manufacturing Company, Fort Wayne, Ind. The Bailhe Accelerator employs a rocking ball point and a 3 in. rubber pad, and it is designed to provide two ranges of speed, a loafing and a sporting range with a resting point between. The manufacturers claim that perfect control of the fuel supply is obtained even over rough roads. It is being introduced for Ford cars but it is adaptable to other cars as well.



Bailhe Accelerator.

Presto Cigar Lighter Display

Metal Specialties Manufacturing Company, Chicago, offers the trade an attractive display stand on which are mounted three Presto Cigar Lighters and other items. The display contains: One No. 330 Combination 3 in 1 lighter, one No. 210 Ratchet type lighter, one No. 250 Universal Mounting type lighter, one No. 340 Bracket for No. 320 2 in 1 and two No. 245 Ash Receivers. The total retail price of these items is $17.25 and they are priced to the dealer, with the display stand, at $10 f. o. b., Chicago. The stand measures 12 inches wide 11 high and five deep and is finished in red, white and green.

Jiffy Battery Service showing manner of carrying Jiffy Automatic Filler and Jiffy Battery Hydrometer. To the left is the Automatic Battery Filler designed for self-service.

Self-filling Master Cylinder.

Presto Hose Clamp

THE Presto Hose Clamp is a novel accessory manufactured by the Cooper Clamp Company, 737 Park Ave., Brooklyn, N. Y. The Presto Hose Clamp differs from the conventional type in that it is made in two pieces and one clamp will fit several different diameters. This is accomplished by having a series of hooks on one of the pieces which will fit into a corresponding slot on the other piece. All diameters met in automobile practice are taken care of by three clamps. List price $10 per 100.

Battery Service Equipment

AMONG the offers of battery service equipment are four products of the Mapel Engineering Co., St. Louis, Mo. This company's Automatic Battery Filler is primarily for self-service by the owner in water storage batteries. A nozzle is furnished which fits any standard screw top catsup bottle as a container. This is priced at $1. Mapel Engineering also makes the Jiffy Automatic Filler for watering storage batteries. It has its own container and operates with a collapsible rubber bulb. The company recommends it for giving a maximum amount of accurate service and the price is $1.50. The Jiffy Battery Hydrometer is said to withdraw the proper amount of solution from the battery and prevent overfilling with the consequent inoperation of the hydrometer float. The instrument can be raised without danger of leakage and the actual gravity noted at a glance. Price $1.25. Mapel's Jiffy Battery Service, for large service users comprises, a half gallon hard rubber container and a handle for carrying outfit. It provides for carrying the Jiffy Automatic Filler and the Jiffy Battery Hydrometer and sells for $5.

Additional Descriptions Will Be Found on Next Page

Self-Filling Master Cylinder

THE Mattingly Self-Filling Master Cylinder for all hydraulic brakes automatically keeps the brakes fully charged with fluid, thus eliminating the necessity of pumping additional fluid into the brakes. If any of the fluid is lost by evaporation or leaks this device automatically replaces it from the supply tank. Installation is quickly accomplished. The Self-Filling Master Cylinder is priced at $10 and made by the Mattingly Automatic Valve Co., St. Louis, Mo.

Presto Hose Clamps.

Adjustable Tank and Radiator Cap

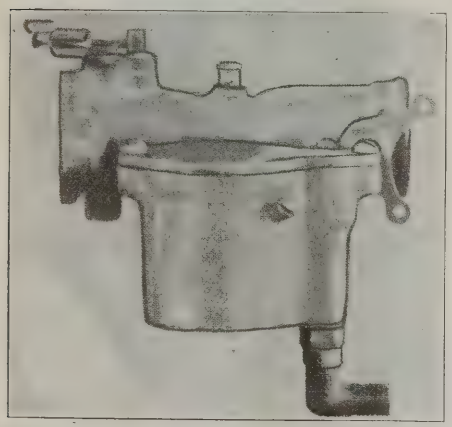
THE Automotive Specialty Corp., 47 W. 63rd Street, New York, is manufacturing the Tasco adjustable gasoline tank and radiator cap, which is made of nickel plated brass. The cap has a hinged lid and is attached by tightening a screw, no bushings or adapters are necessary. The size is adjustable and two sizes fit all cars. It is packed in individual boxes, 12 to the carton, which is of the display type. Price, 50 cents each.

Bodyguard Transmission Lining

BODYGUARD Transmission Lining, a product of the Atlas Asbestos Co., North Wales, Pa., fits all Fords, including 1926 models. The lining is made from cabled or cord yarn on a plan which is declared to give the lining particular ruggedness and durability. Besides carrying an unusual number of yarn strands the lining is six plies in thickness. Packed in sets with rivets. List for models prior to 1926 is $2.50 per set. List for 1926 models is $2.80 per set.

THE MARKET'S NEW OFFERINGS

Accessories—Equipment—Supplies



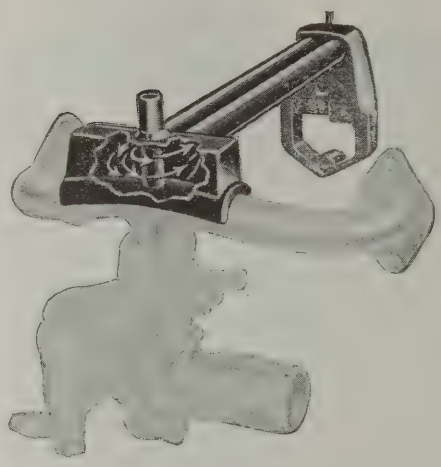
(Continued from page 29)

Bear Battery Protector

PREVENTION of battery terminal corrosion is said to be assured by use of Bear Battery Protector, a preparation put up in tube form by the Bear Manufacturing Co., Rock Island, Ill. Each tube holds enough for several applications, one application often being enough to last a year or more. A special solution in powder form to clean batteries is furnished with each tube. Tubes retail at 50 cents each.

Model "C" Haling Carbureter

EASY starting, smooth performance at low speeds, economy in fuel consumption, full power on hills and a powerful and smooth pick-up are claimed for the Model "C" Haling Carbureter. This device is made by the Haling Carbureter Factory, Rochester, Minn. Model "C" is a double jet carbureter. It is said the carbureter never needs adjusting and that the mileage per gallon varies little whether the car is driven 25 or 35 m.p.h. or more.

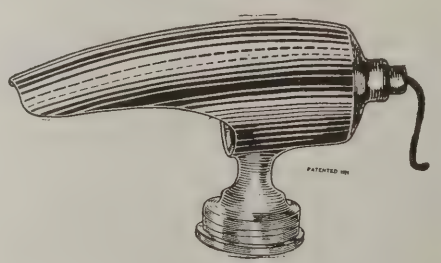


Model "C" Haling Carbureter.

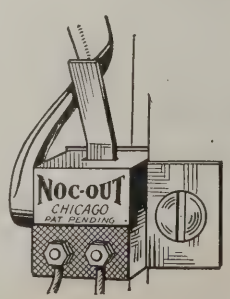
"Adpasco" De Luxe Polishing Cotton

ADPASCO De Luxe Mercerized Polishing Cotton is a new product to be used anywhere on automobiles, for absorbing oil, grease, etc. and for polishing any bright part of the vehicle. The manufacturers say the cotton is free from lint, dust and like objects found in waste and will not scratch the finest surface. The Advance Packing and Supply Co., 808 Washington boul., Chicago, is the producer.

Stop Light Switch



WITTEK Manufacturing Company, 2532 S. Kedzie ave., Chicago, offers a Stop Light Switch which is easy to install and which is said by the producers to give unfailing service. It is for Fords and fastens on the transmission cover. Packed in display boxes of 12. List price, each, 40 cents.



Hot Spot for Chevrolet.

Red Arrow Foot Accelerator

THE Arrow Manufacturing Co., Kokomo, Ind., announces that its product, the Red Arrow Foot Accelerator for Fords is adaptable to the new model Ford cars without change. A specially designed connection, which has always been used on the device, provides the same easy installation as on older models and is not affected by the changes in Ford carburetor controls. This connection consists of a swivel post and adjusting link, which joins the auxiliary rod to the hand throttle arm on the left side of the motor. The auxiliary rod passes through the swivel post, which is free to turn, thus assuring a smooth, even action in foot throttling. The adjusting link provides a wide range of adjustment and prevents all lost motion. The list price of the Red Arrow Foot Accelerator is $1.50, west of Rockies $1.75.

Ideal Rode Lite.

Wittek Stoplight Switch for Fords.

Hot Spot for Model K Chevrolet

SUMMER performance in winter weather is promised by the Dunn Manufacturing Co., Clarinda, Iowa, through use of the Dunn Hot Spot for Model K Chevrolet. It is said the Hot Spot will render effective service in averting prolonged choking during the warming up period and eliminating bucking and backfiring. A control damper permits applying any degree of heat desired or shutting off the heat entirely for summer driving. Price each $4.50

Dash Gasoline Gage

MODEL G Gasoline Gage, produced by the Grolan Manufacturing Company, Dayton, Ohio, is a new mechanically operated instrument board gage which may be easily installed in the tank opening on most cars which do not carry a device of this kind as original equipment. It is said to give efficient service and in all respects answer the needs of the car owner.

Grolan Dash Gasoline Gage.

Ideal Rode Lite

E. H. FINCH COMPANY, INC., 1476 Broadway, New York, is producing the "Ideal Rode Lite," which the makers claim materially reduces the annoyance and danger of night driving, by giving full illumination of the roadway without blinding the drivers of approaching cars. The list price is $10, which includes ten feet of armored cable and a switch for mounting on the instrument board.

When properly mounted on the left mud guard, the manufacturers say no portion of the light's reflector will be visible to anyone approaching it and the driver will be given a clear view of roadway from the left hand wheel track to the right hand curb for approximately 100 feet.

EDITORIAL

A Crumb of Comfort

ANNOUNCEMENT from Washington that the new tax rate on motor vehicles would cover cars in stock when the expected downward revision goes into effect in March or April will reflect an influence, no doubt on the winter stocking programs of automobile dealers. On the face of reports dealers who stock ahead of the spring selling season will be given advantage of any reduction in the rates made by congress.

Contrary to apprehensions felt by many dealers the dealer will not be obliged to absorb the difference between the two rates on cars contracted for in his heaviest buying period. The dealer who saw a bugaboo in the tax situation now can breathe easier although under any circumstances it would be to his interest to stock amply anyhow in January and February for the buying demand of months immediately later. Regardless of who must stand the difference between the old and new rates the dealer must have an assured supply of cars for the spring trade.

It is still apparent that a cheaper supply of raw rubber will not be cooked up by Great Britain. Here's to the success of American chefs.

Here Are Your Prospects

BUSINESS institutions in all parts of the country were very liberal this year in provisions for salary bonus distribution among employes. The close of the year records numerous instances of exceptional profit-sharing apportionments in which a host of workers and executives are beneficiaries. We have heard of not a few instances wherein Christmas or year-end bonuses ran into the hundreds of dollars.

This widespread generosity on the part of large employing organizations has a bearing on possibilities in automotive merchandising apart from the indication of prosperous conditions.

It means many income earners will have fattened pocketbooks, holding surplus money to be invested or spent in a wide variety of manners—and it consequently points out for the automotive merchant a potential buying field which he might cultivate profitably within the next few weeks.

One of the first secrets of successful selling is first to locate those who are capable of buying the merchant's products. No doubt there are many persons in this long list of Christmas bonus and profit sharing plan recipients who right now are looking for a place to put the money thus acquired where it will produce the highest possible degree of satisfaction. So, why not an automobile? It is the business of the dealer and the salesman to give them the idea. It would be a good plan for the dealer to find out what companies in his territory are making special distributions and then go ofter the proposition systematically.

And another seasonal selling thought. The end of the year witnesses many changes in positions in business life and many promotions that carry increased salaries. It also is a time when numbers of organizations pay dividends and in instances especially husky dividends. In hunting for new sales leads let's watch closely for the fellow with newly acquired capital. He is looking for a good place to invest or spend. The man without funds will not buy but the man with money is always eligible for consideration in a selling enterprise.

One operation which usually is followed by good health is co-operation.

Going After the "Half Sold"

A CAMPAIGN to increase the sale of winter necessities in automotive equipment is being conducted by the North Carolina Automotive Trade Association. This is a campaign which can serve both to stimulate pre-holiday sales and business after the holidays on through the cold weather season.

In this movement the North Carolina organization is a jump ahead of many of the local trade associations, yet it offers a suggestion to other groups of tradesmen as to one effective means of developing a better market for those items which the car owner should buy and which he is more likely to buy in season than at any other time.

There is no argument as to the relative value of the seasonal drive and there is no argument against efforts to "sell" the public on something generally accepted as logical.

Repeated reminders are necessary to convert the "half sold" prospect into a "fully sold" prospect, to convert "believers" into actual buyers. There is a difference between admitting a fact and buying on the strength of your convictions.

Car owners know there are winter necessities they should have and they are ripe to buy if the thought is kept constantly before them.

The trade needs more of these local cooperative movements.

"Championship Stuff" has been the 1925 slogan. Let "Championship Stuff" be an actuality in 1926.

Christmas Boosts Automotive Sales

Stocks on Hand Promise No Trouble for Dealers

Early 1926 Expected to Witness Good Business If General Prosperity Continues

NEW YORK, Dec. 30.—Moderately increased sales of new and used cars and a spurt in the sales of accessories and special equipment marked the holiday season for the automobile industry. It was an unusually successful Christmas period, being helped by the low prices of the popular closed cars and a spirited merchandising campaign by distributors and dealers.

Nearly all the motor car factories are operating on reduced schedules or are closed for inventory and plant changes. During January production will be stepped up gradually. Dealers are entering the New Year with somewhat larger stocks than they held at the corresponding time a year ago, but the supply should give no trouble if sales during the early part of 1926 are on the level confidently expected by the factory executives.

There seems to be no reason to fear an early slump in the automotive market so long as general prosperity continues. The motor cars ought to find buyers. The only adverse factor that is given any serious consideration at this time is the possibility of higher prices as a result of increased cost of tires as original equipment. But the advance, if made at all, will be almost if not quite compensated by the tax reduction contemplated in the new revenue bill.

One company last week announced price cuts and two advanced. The large producers, however, for the most part are keeping their price plans for the early part of the year very much to themselves. There will be considerable maneuvering for position between now and the closing of the New York automobile show, as competitive considerations are playing as large a part in the establishment of price lists as are the economic factors.

A campaign for economy in the use of tires has been launced by the industry with a view, ultimately, of bringing down the cost of crude rubber, but it is realized that this will be a slow process at best.

REGISTRATIONS INCREASE

EVANSVILLE, Ind., Dec. 31.—Passenger car registrations in Vanderburgh county for the official year of 1925 ending December 15, totaled 17,463, according to the report of the local branch of the secretary of state's license bureau. The total marks a gain of 1,500 passenger car registrations over the year of 1924, it was said. Motor truck registrations are at about the same level as in 1924. A total of 2,638 motor truck licenses were issued in 1925.

CLEVELAND REVISES PRICES

Cleveland, O., Dec. 28.—An upward price revision has been announced by the Cleveland Automobile Co., on two models of the "31" chassis and two models on the "43" chassis. The three-passenger coupe on the "31" chassis has been increased $60, the sedan on the same type has been increased $90, the coupe and sport touring on the "43" chassis each are increased $50 under the new price scale.

HAYNES SALE PLANNED

INDIANAPOLIS, Dec. 26.—Arrangements for the liquidation of the balance of the property of the Haynes Automobile of Kokomo were made here by a contract drawn between the Fletcher Savings and Trust Company of this city as trustee for the bondholders of the Haynes plant and the Carle Machinery Company of Detroit which will handle the details of disposition of the assets and machinery of the plant. The remaining assets include the six major buildings of the Haynes plant, 40 houses in Kokomo, a farm of about 40 acres and the machinery and equipment of the plant. The value is estimated at about $500,000.

CHANDLER-CLEVELAND MERGE

CLEVELAND, O., Dec. 31.—A charter for the merger of the Chandler-Cleveland automobile companies of this city has been filed with the department of state of Delaware. The corporation provided is to have 350,000 shares of preferred stock and 1,000,000 of common stock of no par value. Stockholders of the two companies are to have until January 15 to exchange their common stock for preference stock of the combined companies. An offering of preference stock also will be made by bankers, the proceeds of which will be used to retire the present preference stock of the Cleveland Automobile Co.

Rickenbacker Announces Upward Price Revisions

Detroit, Dec. 28.—Upward price revisions on both six and eight cylinder models and the addition of new coupe-sedan to both lines, are announced by the Rickenbacker Motor Co. The new price schedules follow:

Six

	Old	New
Phaeton	$1,495	$1,750
Brougham	1,595	1,895
Coupe-Roadster	1,695	1,920
Sedan	1,795	2,095
De Luxe Coupe	1,995	1,995
Coupe-Sedan	.....	1,695

Eight

	Old	New
Phaeton	$1,995	$2,150
Brougham	1,995	2,295
Roadster	1,995	2,195
Coupe-Roadster	2,095	2,320
Sedan	2,195	2,495
De Luxe Coupe	2,320	2,395
Coupe-Sedan	.....	2,095

Peoria Association Warns Trade Against Overstocking

Resolution Also Opposes Recourse Financing and "Cramming" By Makers

CHICAGO, Dec. 26.—Resolutions opposing recourse financing and declaring that the manufacturers are again overstocking their dealers were adopted at a recent meeting of the Peoria Automotive Association and broadcast to dealers' associations generally. Among the statements made were:

The experienced and business-like automobile dealers look with growing alarm on the factory policy of insisting on the dealer endorsement in any form on retail time paper.

Any difference in the cost to the purchaser of endorsed paper and non-recouse paper must be paid by the dealer either in money or work. There is no practical difference in the long run between endorsement with recourse and paper with repurchase agreement. The same amount of expense and work is necessary to keep the customer paying. The local banker is becoming wary of loans to heavy endorsers.

The cash buyer helps to pay the cost of time financing where the finance company is subsidized by the manufacturer.

Local, state and national dealers' organizations should immediately recognize that the large producers of motor cars are again resorting to cramming cars on dealers in excess of any reasonable stock. With the production capacity of six million cars for 1926 and a potential market for three and a half million the dealers must promptly recognize the dangers before them.

An automobile carried in stock for three months must always be sold at a loss, as even in the best regulated agencies the net profits do not usually exceed 5 per cent and this is completely absorbed by three months' storage and financing.

N. Y. TRUCK MEN MEET

NEW YORK, Dec. 31.—At the annual meeting of the Motor Truck Association of America, Inc., held at Cafe Boulevard, officers and directors were elected, finances discussed and the association's opposition to the gasoline tax and compulsory automobile insurance reasserted.

Officers elected are: President, Joseph Husson, Eleto Co.; first vice-president, Hermann Irion, Steinway & Co.; second vice-president, Charles M. Geiger, Peter Doelger Co.; third vice-president, Thomas R. Freebody, Louis K. Liggett Co.; secretary, C. M. Billings, Vacuum Oil Co.; treasurer, Nat Mallouf, Mallouf Haulage & Maintenance Co.; directors for three years, Henry K. Jaburg, H. R. Schmadeke, Commonwealth Fuel Co., E. Ward, Franklin Simon Co. and Herman J. Harms.

Increased Interest Being Shown in Trade Days

Distribution of Tickets Begins Immediately After Christmas for Both Displays

NEW YORK, Dec. 26.—All signs point to increasing interest in the trade days at the National Automobile Show in Grand Central Palace Jan. 9-16. Thousands of acceptances have been received to the invitation for makers of cars and accessories, jobbers, garage owners, body builders, fleet users and others connected with the industry to attend the show on Monday and Tuesday from 10 a. m. to 1 p. m.

The S. A. E. is making special plans to have as many of its members as possible attend on the trade days because of their educational value in addition to the opportunity they will offer to make valuable comparisons and to be prepared to do business most expeditiously in their various lines through the year.

That accessory manufacturers realize the value of the trade days is shown by the steadily increasing list of exhibitors both at the New York and Chicago shows.

Tickets for the trade days will be distributed immediately after Christmas. A separate ticket will be required for each session—a pink and blue for the New York and white and red for the Chicago trade days.

More than 400 dealers have already applied to S. A. Miles, show manager, for supplies of the show poster, which uses the figure of the Winged Mercury grasping a wheel in a small cut-out printed in yellow and black. The poster is in the form of a hangar and is being distributed by Metropolitan dealers.

For the first time in the history of the national show in Grand Central Palace two separate entrances will be provided to relieve congestion. The new entrance on Park avenue will be a time saver from all the hotels except the Commodore, for all the West Side and for taxicab users.

ENGINEERS DISCUSS HONING

DETROIT, Dec. 26.—The meeting of the Detroit Section of the Society of Automotive Engineers drew an attendance exceeding 200 automotive men, the great majority of whom were production executives. The subject under discussion was cylinder finishing with particular reference to the question of lapping and honing as compared to the older grinding method.

Production men from Chrysler Motor Corp., Wilson Bros. Foundry and Machine Co., Continental Motors Corp. presented short papers as did representatives of Oakland, Dodge, Lincoln, Jewett, Hupp, White and Buick. In general, the consensus was that honing offers a great saving in production time and a superior finish providing the preliminary operations are of sufficient accuracy. In fact every speaker emphasized the need for careful boring and reaming prior to the honing operations.

Motor Car Output in U. S. and Canada

WASHINGTON, Dec. 31.—Following tables show the production of automobiles, both passenger cars and trucks, for the first 11 months of 1925, compared with the full year, 1924, as announced by the Department of Commerce for the United States and Canada:

Total Cars and Trucks

	1925	1924
Jan.	241,062	324,567
Feb.	287,213	367,370
Mar.	377,252	393,489
Apr.	439,125	384,353
May	426,016	331,638
June	447,860	254,146
July	400,361	260,935
Aug.	259,581	283,879
Sept.	332,781	295,480
Oct.	452,392	293,356
Nov.	376,251	232,248
Total 11 months	3,995,029	3,430,467
Dec.		209,631

The following table shows car and truck production in 1925 in United States and Canada:

	Cars	Trucks
Jan.	212,921	28,141
Feb.	252,803	34,410
Mar.	332,154	45,098
Apr.	391,302	47,823
May	382,714	43,303
June	364,806	38,054
July	358,554	41,817
Aug.	221,831	37,750
Sept.	272,425	60,368
Oct.	406,572	45,823
Nov.	336,358	39,893

FORD SETS NEW RECORD

DETROIT, Dec. 26.—The sale of Ford passenger cars and trucks for November 1925 marked the best November sales record in the history of the Ford organization. Figures released by the company show that 146,788 passenger cars and trucks were sold during the past month, an increase of approximately 25,000 over November 1924. The enrollments under the Ford weekly plan also showed a marked gain over the same period of last year. For the month 31,425 purchasers of Ford products were enrolled under the weekly payment plan. This is twice as many as for November 1924.

Western Electric Supply Department Incorporated

NEW YORK, Dec. 26.—Western Electric Co. has set apart its electrical supply from its telephone manufacturing business and incorporated the former under the name of Graybar Electric Co., a contraction of the firm name of Gray & Barton under which the supply business came into existence in 1869. Physical separation of the two departments was carried out in 1923 with the opening of general supply department offices here and the advent of the Graybar concern involves compartively few changes. Albert Lincoln Salt is president, Frank A. Ketcham, executive vice-president, Leo M. Dunn, vice-president in charge of merchandising and accounting, George E. Cullinan, vice-president in charge of sales, Elmer J. Shepard, treasurer, and N. R. Frame, secretary.

Tire Production Expected To Set December Record

High Cost of Crude Rubber Cannot Hold Back Output Longer, Officials Believe

AKRON, Dec. 31.—Indications are that automobile tire production this month will surpass that of any previous December. Present schedules of the tire factories are well ahead of the same month last year.

The Akron plants started increasing their production last month, following a slight slump in October. Even then sales were comparatively large, but it was desired, if possible, to conserve the dwindling supply of crude rubber in an effort to bring down the price. The policy of eliminating "spring dating" on tire shipments was designed for this purpose.

High cost of crude rubber is no longer a factor in the industry, as far as production is concerned. The manufacturers are convinced that dollar rubber and possibly higher is here to stay, and they have ceased worrying over the price. It has been demonstrated that the market cannot be depressed by any artificial means.

Moreover the demand for tire and other finished rubber goods for immediate delivery has continued heavy, so that production has been abnormally high in the last quarter of the year.

Practically all the rubber companies are preparing for a banner year in 1926, by building additions and making improvements to their plants. Nearly $5,000,000 is being spent this year in expansion programs.

N. A. P. A. ELECTS OFFICERS

DETROIT, Dec. 26.—Election of officers and discussion of policies for the coming year marked the convention of the National Automotive Parts Association held here Monday and Tuesday of this week. The board of directors was re-elected.

In addition to formulating policies, members of the association went into a one-day session with manufacturers whose lines they represent. This was for the purpose of discussing prospects for 1926.

Officers elected were: George W. Yeoman, chairman of the board, H. G. Root, president, Automotive Parts Corp. of Ohio, W. W. Martin, vice-president, Superior Motor Parts Company of Pittsburgh, L. B. Fijux, secretary and treasurer, Automotive Parts Corp. of Michigan.

In addition to the above officers, the following men compose the board of directors: A. F. Baxter, Standard Motor Parts Company, Buffalo, R. W. Boozer, Central Motor Parts Company, Indianapolis, Estel Scott, General Auto Parts, Kansas City, Mo., C. C. Colyer, Motor Sales, Los Angeles.

Dodge Brothers Sales Ahead Of 1924 by December 15

Price Reduction to Be Announced Soon Expected to Range from $50 to $200

NEW YORK, Dec. 31.—Although no official statement can be obtained it is reported that the Dodge Brothers price reductions to be announced Jan. 7 as retroactive to Dec. 15 will range from $50 to $200. Robert C. Graham, newly appointed vice-president and sales manager of Dodge Bros, Inc., reports that the announcement has brought telegrams from dealers everywhere.

Dodge Brothers shipments for the first eleven months of 1925 were 242,614 against 211,669 in the same period last year, an increase of 14.6 per cent. Sales to Dec. 15 this year have exceeded the entire year 1924 by 16,973, establishing a new high record for the company.

Increased production this year is accounted for by export, bus, truck and commercial car as well as passenger car business. According to an official report, 1,466,023 cars had been produced previous to Dec. 1 and since the completion of the first Dodge Brothers car eleven years ago it is said that 90 per cent are still in service.

Financed wholly out of surplus earnings Dodge Brothers will have completed early in 1926, plant additions costing about $8,000,000 increasing output capacity by about 50 per cent to meet the greater demand at home and abroad. Over 20 per cent of production is said to consist in commercial cars, trucks, buses and chassis, and the recent acquisition of a majority interest in Graham Bros. fortifies the position in the commercial car field.

Last of N.A.D.A. Congresses Is Held in Indianapolis

INDIANAPOLIS, Dec. 26.—The ninety-seventh and last of the sales conferences of the National Automobile Dealers' Association flying squadron was held in Indianapolis with more than 600 dealers and salesmen and other of the automobile trade in attendance. It was the largest automobile sales meeting ever held in Indianapolis and its success was due largely to the promotion of the Indianapolis Automobile Trade Association officers and John B. Orman, manager, who was responsible for getting out the crowd that came here from all parts of the state.

The meeting was conducted by Lynn M. Shaw, assistant general manager for the N. A. D. A. who was introduced by Vice-President J. S. McFarland, president of the Indianapolis trade body and president of the Lathrop-McFarland Co., distributor of Oldsmobile. Both H. D. Bullock, market analyst of the N. A. D. A., and H. K. Kroh made strong talks after Shaw's address.

Stretch Rubber for Economy

(*Continued from page* 10)

America will attack the monopoly from the production and manufacturing end, thus creating a 100 per cent front of manufacturers and users, against the monopoly. Representatives of the industry, who attended the conference in Secretary Hoover's office, included: Alfred Reeves, manager of the National Automobile Chamber of Commerce; H. H. Rice, and Pyke Johnson, of the same organization; W. O. Rutherford, president of the Rubber Association of America; Paul L. Palmerton, chief of the Rubber Division, U. S. Department of Commerce; Harvey S. Firestone, president of the Firestone Tire & Rubber Company; Ernest Smith, general manager of the American Automobile Association, and the heads of several other tire manufacturing companies.

Simultaneously with the industry's attack on the rubber monopoly a resolution was introduced in Congress providing for a sweeping investigation of the British monopoly on crude rubber, which has resulted in rubber speculation and an increase of from 35 to $1.10 per pound.

As a result of the increase automobile users are paying from $30 to $70 a year more than is necessary, for their tires, it was charged on the floor of the House by Congressman Tilson, House floor leader, and author of the investigation resolution.

The N. A. C. C. has already inaugurated a campaign for the conservation of rubber through the more careful use of tires in service.

The Chamber points out that while every automobile manufacturer is endeavoring to lower costs in order to supply his product at the lowest possible price, the whole automotive industry is threatened with increased costs unless there is a decreased demand for crude rubber to offset the high prices created by the British Stevenson restriction plan, despite the fact that there is no real shortage of crude.

The conservation campaign is a direct result of Secretary Hoover's warning that "we are now subject to the full result of monopoly action." Among his five recommendations for ultimate relief against the "trade war being made upon us" he included a strong systematic campaign for conservation.

Following a conference between Alfred Reeves, general manager of the N. A. C. C., and Secretary Hoover and by instruction from the recent meeting of the Chamber directors, President Clifton appointed a committee consisting of Alvan Macauley, Packard, chairman; H. M. Jewett, Paige, and H. H. Rice, General Motors. This committee now recommends:

That the Chamber enlist the support of the 2,000,000 automobile dealers, salesmen, garagemen, professional chauffeurs and repair parts men as well as owners of the 18,000,000 motor vehicles in the United States in a campaign for better use of tires by taking the following steps:

1. Ask the cooperation of all organized units of the automotive industry and users.

2. Ask car users to obtain the greatest possible mileage from their tires by maintaining proper air pressure; by making repairs promptly; by using brakes carefully; and by rounding corners at slow speed. If the 18,000,000 motor vehicles in the country were so used it is estimated that at least 25 per cent would be added to tire mileage.

3. Ask manufacturers to include in their advertising some statement calling attention to the need for better use of tires, such as those contained in a sheet attached to the announcement. Some of the largest manufacturers have already agreed to this.

"The British restriction plan," says the Chamber, "arbitrarily limits the amount of crude rubber that can be shipped by planters out of the British East Indies. While it is now ruled that 100 per cent of 'standard production' may be shipped after Feb. 1, this is based on 'standard production in 1920,' and is not at all the rubber which could be available without restriction.

"The United States uses 70 per cent of the world's crude rubber. If a fair price is 36 cents per pound the present prices, hovering around $1, will, according to Secretary Hoover, cost the American public $660,000,000 this year or an excess charge over a fair price of from $20 to $30 per set for each light automobile and from $50 to $60 per set for each heavy car."

The latest British estimate says that British rubber companies have increased their profits this year by about $250,000,000 and that the bulk represented America's purchases, estimated to have exceeded $500,000,000 in the last twelve months.

Chrysler Has New Six

(*Continued from page* 23)

structure and belt moulding are in black with a silver gray finish employed below the bead.

Heaters are fitted in all closed models while the aluminum binding together with felt around the pedals and controls keeps out draughts. Standard equipment includes: double automatic windshield cleaner, twin mirrors attached to one piece Fisher windshield, 90 mile speedometer, radiometer, electric cigar lighter, clock. Instruments are arranged in three groups on the walnut finish instrument panel. The indirect lighting system is used.

McDUFFEE IS ADVANCED

INDIANAPOLIS, Dec. 26.—Joseph H. McDuffee has been advanced to the position of general sales manager of the Prest-O-Lite Co., it was announced here this week by Robert J. Hoffman, vice-president of the company. McDuffee is well known to the industry as a former official of the Cole and of the Elgin.

Parts and Accessory Trade Closes Its Greatest Year

First Quarter of 1926 Expected 25 Per Cent Ahead of Last Three Months of 1925

NEW YORK, Dec. 31.—The automotive parts and accessory business is closing the biggest year in its history and will enter 1926 with excellent prospects, according to the Motor and Accessory Manufacturers' Association.

A large group of representative members, analyzing sales expectations for the first quarter of next year, anticipated a volume in that period exceeding the current quarter by approximately 25 per cent and the first quarter of 1925 by upwards of 30 per cent.

These companies reported shipments for the month of November at 140 per cent of the January level as compared with 188 per cent for October and 158 per cent for September. November business exceeded February and March as well as January but fell behind all other months of the year up to date.

Manufacturers in all divisions of the industry reported anticipated gains in business in the coming quarter over the first and current quarters of 1925. Anticipated gradual increase in car and truck production as the new year gets under way, the original equipment makers looked for a steady but not steep increase in business in the early part of 1926. Makers of products sold to the trade looked for larger increases in view of the tremendous gain this year in car and truck registrations.

Jobbers throughout the United States and Canada reported November business generally less than October but materially ahead of November a year ago. Increased use of closed cars has materially improved automotive jobbers' business for the late fall months.

MILWAUKEE TRADES MEET

MILWAUKEE, Wis., Dec. 26.—An attendance estimated at 500 greeted the appearance of nationally known figures in the automobile industry at the sales conference held at the Pfister hotel here Dec. 16, sponsored by the Milwaukee Automotive Dealers' Association. The conference featured a discussion on the building and developing of sales plans, and training of salesmen on a scientific basis, led by noted authorities on the subjects.

NEW LOCOMBILE DEALERS

BRIDGEPORT, CONN., Dec. 26.—Locomobile Company of America, Inc., announces the appointment of the following as direct dealers to handle the Junior Eight:

Byrne Locomobile Company of Lake Wales, Lake Wales, Fla., H. W. F. Motor Sales Co., Peoria, Ill., Ralph N. Baker, Springfield, Ill., Locomobile Company of Norwalk, Norwalk, Conn., Locomobile Co. of Fresno, Fresno, Cal., B. E. Northland, Santa Ana, Cal., H. C. Field, Brawley, Cal.

Horses Are Scarce In Oakland

OAKLAND, CAL., Dec. 26.—Horses are so scarce in California that no one will furnish a team of them to this city of 250,000 inhabitants. Bids on two 1,600-pound draft horses were asked by the street department three weeks ago. The department wanted the horses to haul plows and scrapers. Not a single bid was received. The municipal purchasing agent was then authorized to buy the horses in the open market, but when he went to the said o.m., there was not a draft horse to be had. Mayor John L. Davie has now instructed the purchasing agent to organize an expedition into the San Ramon and Livermore valleys, and further, even back into the high Sierras, if necessary, where horses are said still to be in existence.

ZONE SALESMEN MEET

ATLANTA, Dec. 26.—Chevrolet salesmen in the ten zones which comprise the southeastern division met recently for their annual conference in Atlanta, and each one of the ten zone representatives was awarded a special bonus of $100 for exceeding his 1925 sales quota. The increases over last year's volume ranged from 28 per cent to as high as 236 per cent, every zone showing a substantial gain. L. C. Costley, sales manager for the Atlanta branch, presided at the meeting.

FLINT PROMOTES KAUFFELT

DALLAS, Tex., Dec. 26.—L. M. Kauffelt, district manager for the Flint Motor Company with headquarters at Dallas, has been made regional manager for the company with headquarters at Kansas City. His new territory will cover Iowa, Nebraska, Illinois, Kansas, Missouri, Oklahoma, Texas and New Mexico. R. Roscoe Shumate, assistant sales manager of the Dallas branch has been named manager of the Dallas branch.

Willys Export Corp. Will Take Foreign Federal Sales

TOLEDO, Dec. 26.—Announcement was made here today that the John N. Willys Export Corporation would take over export sales for Federal trucks. The agreement goes into effect January 1.

Under the new arrangements, The John N. Willys Export Corporation will handle all sales of Federal trucks in the export territories. The agreement means that the export division of the Federal Motor Truck Company will be eliminated.

Ward Mohun, export manager for the Federal company, will joint the export corporation forces, it also was announced. He will assume his duties January 1 and will in all probability be given the position of manager of truck sales.

Stearns Will Keep Identity After Merger with Willys

Overland Head Says Car Will Still Be Marketed Under Same Name and Built as at Present

CLEVELAND, O., Dec. 26.—The F. B. Stearns Co., pioneer automobile manufacturer of this city will not lose its identity by the purchase of the plant by the Willys-Overland Co., of Toledo.

John N. Willys, of Toledo, president of the purchasing company so informed Cleveland men interested in the future of the local plant. While en route to Cleveland after the purchase was announced here, Mr. Willys stated that the Stearns car would be operated entirely independent of the Willys-Overland plant.

The Stearns plant will be operated here on even a greater scale than in the past, under plans formulated for pushing the sale of the cars.

George W. Brooker, president of the Stearns Co., said that the manufacture of Stearns-Knight cars would be continued and efforts made to increase sales.

For the last 10 years Willys has controlled the manufacture of Knight engines. The Knight type engine has been a part of the Stearns business for many years. Acquisition of the Stearns plant means that there will be only two makes of passenger cars equipped with Knight engines that are manufactured in the United States.

GOTFREDSON HAS SALESROOM

CLEVELAND, Dec. 26.—Generally excellent increases in sales recently have made necessary the leasing of a new large down-town salesroom by the Gotfredson corporation, truck division, according to announcement here today by A. B. Miller, sales manager.

NEW GARDNER DEALERS

ST. LOUIS, Dec. 26.—New dealers added by the Gardner Motor Co., include the following:

James J. Sullivan, Jr., Los Angeles, Brawley Motors Co., Brawley, Cal., Diversey-Kimball Garage, Chicago, East Side Motor Sales, Chicago, Gudmundson & Schumm Motor Sales, Chicago, Johnstown-Chandler Co., Johnstown, Pa., M. E. Rose, Eureka, Cal., The Stone Motors Co., Inc., Schenectady, N. Y., J. P. Mosier, St. Francois, Mo., Austin Park Garage & Motor Sales, Chicago., West Side Auto Repairs, Philadelphia, Gardner-New York Corp., New York City, Schlensker Auto Co., Evansville, Ind.

CHRYSLER DEALERS MEET

CINCINNATI, O., Dec. 26.—Formal opening of the new home of the Chrysler car at the Gilbert Avenue and Court Street plant of the Robert Sloan Company took place recently and a get-together session of Chrysler dealers in the Cincinnati territory was held by Mr. Sloan in the afternoon and in the evening a dinner was given at the Business Men's Club. Among the guests at the dinner was J. W. Fields, vice-president and sales manager of the Chrysler Motor Corporation, Detroit

Louisiana Reports Heavy Sales in Last 3 Months

Winter Expected to Be a Record Breaker and That Business Will Continue Good

NEW ORLEANS, Dec. 26.—Louisiana is well up among the the states reporting heavy automobile sales during the past three months. Indications are that the high wave of business will continue into the spring months, usually the best in the year from the dealers' point of view. The pleasing volume of business is attributed by dealers in New Orleans to the fact that conditions throughout Louisiana and Mississippi are sound, to the absence of unemployment and to the plentiful supply of money in the hands of prospective buyers.

New Orleans dealers feel confident that this winter will be a record-breaker in sales and that business will continue at its high crest into the spring months. In anticipation of this increased business, several distributors have already arranged for larger stocks of cars than ever carried in New Orleans before.

This year, more than ever before, dealers assert, the automobile played a bigger part in "Christmas giving." Many dealers arranged attractive terms and advertised their cars as suitable Christmas gifts.

During the year, the closed car continued to win in favor throughout this section of the South. Another favorable indication is that many families are provided with at least two cars. "I have been traveling around the city," one New Orleans dealer said, "and I find that two-car garages are as common as one-car garages were two or three years ago. And whereas the one-car garage was an added feature then, it is emphatically standard now. Just ask the real estate man what chance there is for him to sell a home which is not equipped to house an automobile, or, in the better districts, two automobiles."

OVERLAND DEALERS MEET

SAN ANTONIO, Tex., Dec. 26.—Willys-Knight and Overland dealers from the southwest and most parts of central Texas attended a sales congress at the Gunter Hotel this week. J. P. LeNoir, sales manager for the San Antonio Overland Company, distributor for Willys-Knight and Overlands in this district, was in charge of the conference. E. E. Young of Austin, president of the Austin Automotive Trades Association and Willys-Knight and Overland dealer at Austin, was the chief speaker for the occasion. Some 50 dealers were at the conference.

STREET NAMED BENDIX

SOUTH BEND, Ind., Dec. 26.—The City council of South Bend recently passed a resolution changing the name of North Anthony Street to Bendix Drive, as an appreciation for the increased industrial activity brought to the city by the Bendix Brake Company. The plant is now turning out 2,000 sets of brakes a day, according to the officials, and this production will be stepped up as rapidly as the various new plant units are completed.

CHEVROLET DEALERS MEET

SAN ANTONIO, Tex., Dec. 26.—Some 50 Chevrolet salesmen of the San Antonio territory attended a sales conference here this week at which J. E. Grim, advertising manager, and R. K. White, sales promotion manager of the Chevrolet Motor Company, were the chief speakers. Mr. Grimm said the company would spend $6,500,000 for advertising in 1926 and declared the salesmen could cash in on the company advertising by going after business. The company men will hold conferences in all the large cities of Texas before returning north.

NEW HUDSON DEALERS

WASHINGTON, Dec. 26.—Two new Hudson and Essex dealers have been announced here: The I. C. Barber Motor Company, Fourteenth and Irving Streets, Northwest, and the Moses Motor Company, with show rooms at Connecticut Avenue and R Streets.

Moto Meter Co. Holds Its Eighth Annual Convention

NEW YORK, Dec. 26.—The eighth annual sales convention of the Moto Meter Company, Inc., which was held at the factory offices, Long Island City, was attended by the five district managers, the entire road organization and upwards of 100 from the factory. Sales policies for 1926, advertising schedules and general policies constituted most of the program.

The company has just completed the biggest year in its history, manufacturing approximately 2,000,000 Moto Meters. The plan for 1926 is to go 1,000,000 in sales beyond 1925.

The improved Moto Meter line for next year carries refinements in two models —the de luxe and standard models. Both of these models have gold-finished dials, with script letters. There is also a new retaining ring with the laurel design. Prices remain the same as last year.

DEALER FETES EMPLOYES

EVANSVILLE, Ind., Dec. 26.—All departments of the Wabash Valley Motor Company, Eighth and Walnut Streets, Hudson and Essex distributor and dealer, were represented at the regular monthly employes' "get together" meeting Friday night, in the company's salesroom. Talks on automotive sales and service problems were made by Carl Maxwell, president; and C. S. McKamy, secretary-treasurer. Sixty employes were present. The Christmas season was observed with a social hour of music and refreshments.

Dow-Jones Announces Terms Of Fageol-Hall-Brill Merger

American Car & Foundry Co. Will Have Control of New Firm When Deal Is Completed

SAN FRANCISCO, Dec. 26.—Negotiations between the American Car and Foundry Company, J. G. Brill & Co., and the Fageol Companies of California and Ohio, have progressed so far in the voting by the stockholders of the Fageol Company of California on the proposed merger, that announcement is made through the Dow-Jones Company that the combination will be consummated. This statement, however, adds:

"Official announcement of the consummation of the plan is looked for within a few weeks."

This is taken by automotive interests here as indicating that the voting by the Fageol stockholders has been slow, and probably is not yet completed, though it is generally believed that the two-thirds majority necessary for the consummation of the merger will be obtained. The Dow-Jones statement continues:

"New J. G. Brill Company stocks—'when issued'—are being quoted in the street at 55 for class 'A' and 30 for class 'B.' This would be equivalent to 140 for J. G. Brill present common, and 110 for present preferred on the basis of proposed terms, which, while no public announcement has been made, are understood to be two shares of class 'A' and one share of class 'B' in the new corporation (i. e., the merger) for one share of the present Brill common; and two shares of class 'A' in the new corporation for one share of the present preferred. In outline, the plan, it is understood, will provide as follows:

"Class 'A' would be eventually retired, giving American Car and Foundry control in class 'B.' Class 'A' stock is to stand at $50 par, being non-voting, and callable at $60. Class 'B' common is to be of no par value. Class 'A' stock is to be underwritten at $55, and dividends of $4 a year on 'A' and $2 on 'B' are in prospect.

"The two Fageol Motors—California and Ohio—and the Hall-Scott Motors of New York and California, having been acquired, the merger will be complete with the acquisition of Brill, with the American Car and Foundry holding the controlling interest in Brill."

TIME PAYMENTS ON REPAIRS

CLEVELAND, Dec. 26.—Stimulation of general reconditioning of owners' cars and of garage repair business generally is expected as a result of the introduction by the Superior Boulevard Garage company, Cleveland, of the time payment plan on repair work. The payment plan is similar to that in use in sales of cars on a deferred payment plan. Automotive interests look for the general adoption of the plan here.

Top Cadillac Production Is Assured Throughout Winter

Company Enters December With 3,000 Surplus Orders — Sells 15,000 in Five Months

DETROIT, Dec. 31.—August, September, October and November shipments by the Cadillac Motor Car company were double those of the corresponding months of 1924, according to a statement just issued. At the end of November, Cadillac records revealed 3,000 unfilled orders, which is an unusual situation for this time of the year. This, with the current rate of incoming orders, assures capacity output throughout the winter.

In these figures, Cadillac records one of the most remarkable gains of any of the motor companies. In no twelve-month period have so many producers of high-grade cars placed on the market more popular models at reduced prices.

Popularity of this new line is shown in the statement that in the last five months of 1925 the company sold 15,000 cars—only 2,100 less than during the entire fiscal year from August, 1924, to August, 1925.

October shipments were 3,200. November shows a similar figure, and December shipments will total 3,000. So great is the current demand that the usual December shutdown for inventory will be postponed.

While Cadillac unit production figures are not impressive as compared with volume production such as that of Ford and Chevrolet, they become decidedly so when converted into dollars. The 100 per cent increase in output means a tremendous increase in the amount invested in new Cadillac cars by the buying public. While officials of the company are unwilling to state a dollar volume of Cadillac sales, it is understood that $100,000,000 is a conservative figure.

PHILADELPHIA PLANS SHOW

PHILADELPHIA, Dec. 26.—There will be at least 39 exhibitors displaying from 45 to 50 different makes of cars at the twenty-fifth annual automobile show of the Philadelphia Automobile Trade Association, to be held in the Commercial Museum, January 16-23. An important innovation will be a model shop and garage, fully equipped, to be conducted and managed by the accessory exhibitors, who will take the entire space for this feature that was used last year for all the accessory exhibits, in the room in the rear of the car display. Provision has been made for 62 accessory displays, in addition.

DUGGAN SUCCEEDS KERBY

TORONTO, Dec. 26.—P. J. Duggan has succeeded R. D. Kerby as sales manager of Durant Motors of Canada, Ltd., Leaside, Ont. Mr. Kerby was recently appointed assistant general manager.

Cleveland to Use No More Horses

CLEVELAND, Dec. 26.—Motor trucks have now replaced the last horse-drawn vehicles in the service of the city of Cleveland, according to announcement here by Howell L. Wright, city utilities director.

Two teams of work horses which for years hauled "trouble" wagons of the light and water divisions of Wright's department have been granted a permanent vacation at the city farm.

Two new White trucks have been thrown into service to replace the horse-drawn vehicles, making a total of 206 Whites in the city's truck fleet.

Dealer Gives Premiums in Sale of New Motor Cars

DALLAS, Tex., Dec. 26.—The Dallas Rickenbacker Company is offering some special inducements to move new cars during the next few days. The Dallas dealers declare the people have never got over the desire to get something for nothing since the days when "a pair of socks was given with each pair of shoes bought, or a pair of suspenders with each pair of pants." They say the people like the idea of having "something thrown in" when any purchase is made.

Hence the Dallas Rickenbacker company has been offering $42 worth of extra equipment, 50 gallons of gasoline, a gallon of oil, a saving of $100 on the price of the car, free inspection for one year, service guarantee of 90 days and free driving lessons to any member of the family.

The result of these "free things" was as desired. They caused the prospective buyers to make a decision. Several new Rickenbackers were moved out and others are to be delivered in the near future on the same basis. There was no hike in the regular price of Rickenbacker to make room for the "trimmings thrown in." It was just like the old buggy dealer giving a whip, a can of axle grease and a laprobe free with each buggy sold.

BIFLEX ENLARGES PLANT

WAUKEGAN, Ill., Dec. 26.—The Biflex Products Company, maker of Biflex cushion bumpers, is adding another unit to its plant. The new building will provide 15,000 additional square feet. It will be a one-story structure and modern throughout. A new switch track accommodating four freight cars at one time will run parallel to the building. This additional factory space is made necessary by increased output, and in order to relieve the Halladay plant at Decatur, Ill., of some of the manufacturing burden.

Oakland Closes Second Best Sales Year in Its History

Production and Business in 1925 Approximately 26 Per Cent Over 1924

PONTIAC, Mich., Dec. 31.—In the year soon to close the Oakland Motor Car company will have enjoyed the second greatest sales year in its history, being exceeded only by the boom year following the late war.

The production and sales this year are approximately 26 per cent greater than during 1924. Sales of the new Oakland Six have broken monthly records since the car was introduced toward the last of July. During the last five months of the year, more than 60 per cent of the total year's production and sales were made.

In Detroit, Chicago, Cleveland, Pittsburgh and other cities throughout the country, the Oakland Six enjoyed the greatest fall business in its history. During the month of October, all previous monthly records for production and sales were shattered.

Production schedules had to be revised a month after the new Oakland Six was announced and daily output was increased very rapidly until 375 cars a day were being turned out late in the fall, which was the maximum capacity.

When production capacity had been reached, $750,000 was spent for more equipment to permit a daily production of 500 Oakland Six cars, which schedule will be reached early in the spring. This is in addition to capacity required for the new General Motors Six, which will be produced and distributed as a companion car to the Oakland.

DURANT DEALERS MEET

OAKLAND, Cal., Dec. 26.—Statement that 1925 had been the greatest merchandising year for the Durant products, and announcement that the most aggressive merchandising campaign ever carried on in the West would be started January 1, 1926, featured the annual convention of Durant and Star dealers in Oakland, late in December. Direct dealers from Idaho, Oregon, Nevada, Arizona, Washington, the Hawaiian Islands and all parts of California were in attendance to the number of 600. Norman DeVaux, vice-president and general manager, presided at the meetings, assisted by H. W. Curtis, director of sales, and Ernest Jones, assistant to Curtis.

THOMPSON BOOSTS VINTON

CLEVELAND, O., Dec. 26.—Thompson Products, Inc., valve and bolt manufacturers, Cleveland, announce the promotion of Al Vinton to district manager of the Pacific coast territory, with headquarters in San Francisco. Vinton was formerly a Thompson sales representative in the Kansas City territory.

Cincinnati Show Space Is Allotted to Car Dealers

Purple, With Splashes of Gold and Green to Be Decorative Motif at Display

CINCINNATI, Dec. 26.—Effects of gorgeous splendor accompanying a Maxfield Parrish motif in purple with splashes of gold and green will be the setting for the decorations of the 1926 Automobile Show of the Cincinnati Automobile Dealers' Association Jan. 16 to 23, as described to the members of the C. A. D. A. by Manager Harry T. Gardner.

The occasion of the description of the 1926 show was the annual allotment of space to the prospective exhibitors which took place at the Grand Hotel. This in itself was novel and interesting and was arranged with a dramatic presentation which impressed the observer with the care of the manager to make the drawing of booth space absolutely fair and impartial.

The following are the exhibitors, their space allotment and their choice number:

Herold Motor Car Co., Reo, 1,740 feet, Choice 17; Citizens Motor Car Co., Packard, 1,640 feet, Choice 21; Max R. Miller Co., Knight-Overland, 1,263 feet, Choice 23; Fulton-Kruse Motors Co., Wills St. Claire, 1,210 feet, Choice 13; Universal Car Co., Ford, 1,140, feet, Choice 5; Hodde Motor Co., Star-Durant, 1,280 feet, Choice 3; Southern Ohio Motors Co., Pierce-Arrow, 1,264 feet, Choice 15; Gilbert-Chevrolet Sales Co., Chevrolet, 1,362 feet, Choice 24.

Leyman-Buick Co., Buick, 1,980 feet, Choice 25; Nash Cincinnati Motors Co., 2,301 feet, Nash and Ajax, Choice 12; Fuller Automobile Co., Hupmobile, 1,800 feet, Choice 20; H. & T. Auto Co., Paige-Jewett, 1,700 feet, Choice 18; Hodge-Long Motor Co., Chandler Cleveland, 1,740 feet, Choice 16; Herschede Motor Car Co., Peerless, 960 feet, Choice 11; Charles Schiear Motor Co., Hudson-Essex, 1,760 feet, Choice 2; Cincinnati Automobile Co., Stutz, 640 feet, Choice 7; Cincinnati Oakland, Oakland-Pontiac, 1,760 feet, Choice 4; J. A. Gross Motor Car Co., Moon Diana, 960 feet, Choice 6. The Moon-Diana space was the same as the company had last year being the block at the entrance of the South wing of Music hall to the right of the entrance. Robert Sloan Co., Maxwell-Chrysler, 1,980 feet, Choice 22; Bishop Motor Car Co., Jordan, 960 feet, Choice 14; Bauer Auto Sales Co., Lincoln, 1,760 feet, Choice 9; Pfaff Motor Car Co., Marmon, 1,440 feet, Choice 1; E. S. Gahagan Company, Studebaker-Rolls Royce, 1,932 feet, Choice 19; Mason Towle Co., Dodge, 1,330 feet, Choice 8; Franklin Motor Car Cincinnati Co., 1,210 feet, Franklin-Locomobile, Choice 10.

After the member organization had been allotted, space allotments of 506 feet were made to Velie; 924 feet to Flint and 550 to Cincinnati Cadillac Co. A few small spaces were reserved for exhibitors of accessories. Two other applicants for space were not able to obtain allotments because their papers did not arrive in time to be considered.

NEW PAIGE DEALERS

DETROIT, Dec. 26.—The Paige-Detroit Motor Car Company has appointed the following new dealers:

Troost Paige-Jewett Co., Kansas City, Mo.; Jaige-Jewett Co., Newark, N. J.; Watkins Motor Co., Chaffee, Mo.; William V. Bird, Coeur D Alene, Ida.; F. H. Van Dorn, Red Bank, N. J.; Paige-Jewett Corp., Appalachia, Va.; Auto Service Garage, Dry Ridge, Ky., Gravois Paige-Jewett Co., St. Louis, Mo.; Linton Motor Co., Lowell, Ariz.; J. D. Rake, Richwood, W. Va.; Mulligan Paige-Jewett Co., Savanah, Ga.; Decatur Paige-Jewett Sales, Decatur, Ind.; W. A. Grate, Ashley, Ind. The Lostro Auto Sales, Columbus, O.

N. T. D. A. TO MEET AT SHOW

NEW YORK, Dec. 26.—George J. Burger, secretary-treasurer of the National Tire Dealers' Association, announces that the board of directors will hold its next meeting in Chicago Feb. 1 and 2, during the Chicago show. The Greater New York Tire Dealers' Association of which Burger is president will hold its annual dinner-dance Jan. 14 at Hotel Pennsylvania, during the New York show. The Chicago Tire Dealers' Association will probably hold its annual dinner-dance during the Chicago show but the date has not been selected.

D. B. EXPORT MEN LEAVE

DETROIT, Dec. 31.—In line with the program of expansion in the export field, nine men have been sent by the export division of Dodge Brothers, Inc., to various parts of the world to supplement men in the various territories. Three have been sent to Asia, three to Europe, two to South America and one to South Africa. These men will open up territory which has not been developed and will specialize in helping dealers in the territories to which they are assigned. Among the new branches which will be opened by the export division are the following: Johannesburg, Singapore, Tsien-Tsien, Hamburg, Buenos Aires. Another branch for Southern Europe will be opened in the near future.

Ford Engineers Show Plans Of New Airship to Coolidge

WASHINGTON, Dec. 26.—Agents of Henry Ford here have presented to President Coolidge at the White House secret plans for construction of a giant, all-metal dirigible, to be as large as the Los Angeles and to be safer from destruction than any bird machine ever devised.

The plans were described by W. B. Mayo, Ford aeronautic engineer, who was accompanied by Howard Coffin, head of the Government's airship production during the war, and since a member of the Morrow Aircraft Commission. Mr. Mayo informed the President that every primary section has been subjected to every known test following its construction and has withstood them all in a most remarkable manner.

The new machine is to be of aluminum, it is understood, but unusual secrecy has attended the development of the new air monster and Mayo brought no written plans. Special scientific tests are said to have developed machinery which defies all corrosive acids that in past machines have eaten away substantial parts and subjected the birdmen to grave danger. The metal dirigible will be able to use either hydrogen or helium.

Mexican Demand for U. S. Cars Shows Heavy Advance

Estimates Show Volume Has Doubled in 1925 over 1924—Prices Average High

LAREDO, Tex., Dec. 26.—That American made automobiles are finding favor in Mexico and the trade with the United States is increasing at a rapid rate is indicated by reports made by Brennan & Corrigan, custom brokers here.

According to their report a total of 772 car loads of automobiles passed through Laredo for Mexican points in 1924 while already more than 1,200 car loads have been exported through Laredo so far this year and another 1,000 loads are scheduled to move before the 15th of January. In 1924 a total of 5,000 American made automobiles passed through here for Mexican points. This year the total number will reach 10,000 it is said. The majority of the automobiles routed through here went to Monterey, San Louis Potisi, Victoria, Saltillo and Mexico City. In price they averaged more than $1,000 each.

Automobiles passing through here for Mexican points are paid for by purchasers before they are delivered on Mexican soil unless the purchaser happens to be a representative of some factory with a financial rating that is gilt-edged. A good number of the cars passing through here this year originated at San Antonio and Dallas and were results of sales efforts on the part of automobile concerns in those cities.

The value of automobile tires, accessories and parts passing through here for Mexican points during the year approximate $750,000,000 it is said. This is three times the amount passing through here last year. A considerable amount of these items originated at San Antonio and Dallas where Mexican dealers and Mexican car owners are inclined to shop for prompt shipment.

Reports brought to the border are that four of every five cars of recent vintage seen in Mexico are American made.

CHEVROLET DEALERS BANQUET

NEW ORLEANS, Dec. 26.—One hundred and sixty-five agents and dealers of the New Orleans district were guests of the Chevrolet Motor Company at a banquet in the convention hall of the St. Charles Hotel Saturday night, November 27 in celebration of their record as a leading sales organization. W. F. Doyle, sales manager of the district, which comprises all of Louisiana, half of Mississippi and part of Alabama, was toastmaster. The list of speakers included: E. W. Fuhr, regional sales manager of St. Louis; C. E. Dawson, assistant general sales manager, Detroit; R. K. White, service and promotion manager, Detroit; J. E. Grim, advertising manager, Detroit and L. F. Garlock, assistant service and promotion manager, Detroit.

Nash December Business Seen 50 Per Cent Ahead of 1924

Orders by Middle of Month Are More Than All of Same Period Last Year

KENOSHA, Wis., Dec. 31.—December Nash business is running at a rate better than 50 per cent over December 1924, which was the greatest December in Nash history, according to E. H. McCarty, general sales manager of the company. "Despite the general belief," says Mr. McCarty, "that this pre-holiday season is supposed to witness a slackening of sales throughout the country, we are enjoying a brisk demand that gives promise of surpassing last December sales by at least 50 to 60 per cent. At the middle of the month, we had bona fide orders on hand for 50 per cent more Nash cars than during the whole of December a year ago. And December, 1924 was the greatest December in Nash history.

"There are several ways to account for this unusual selling activity. In the first place, Nash sales were considerably stimulated by the Nash announcement of price reductions in November. On top of this our dealers have been concentrating their selling efforts during the last few months toward educating the public to the special winter features of the Nash cars.

"The increasing popularity of the automobile as a gift for Christmas has also played an important part in building up our volume of business this month. The stability of general business conditions and the sound prosperity of the country is largely responsible for this active Christmas buying.

"I understand that the Christmas savings funds in Chicago alone reached a total this year of $25,000,000 as compared with $20,000,000 for 1924. And according to some recent figures given out by the American Bankers Association, the savings deposits for the entire country total $2,000,000,000 more than a year ago. All this is finding reflection in increased motor car buying, and we are feeling the effects by a volume of orders that is far above all records for the corresponding period of previous years."

OHIO DEALERS HEAR N. A. D. A.

COLUMBUS, O., Dec. 26.—More than 260 dealers and salesmen in central Ohio gathered at the Deshler Hotel for afternoon and evening sessions when dealers and salesmen's problems were discussed and explained. The meeting, which is among the first of a series to be held under the auspices of the N. A. D. A., was addressed by Lynn M. Shaw, assistant general manager; H. D. Bullock, sales analyst and A. R. Kroh, sales promotion advisor of the N. A. D. A. A. C. Faeh, manager of the Ohio Council of the N A. D. A., arranged for the meeting and made a short talk in introducing the speakers.

Booth Joins Ajax Motors

Harold W. Booth, former sales manager of Willys-Overland St. Louis branch, now assistant Ajax sales chief.

TOWN NAMED FORDSON

DETROIT, Dec. 26.—Springwells, a small municipality west of Detroit, has voted to change its name to Fordson, in honor of the Ford family. The vote was 269 for to 237 against. By its new name, Fordson will honor every member of the Ford family, the mother and father of Henry Ford, Mr. Ford and Mrs. Ford and his brothers and son Edsel Ford, and Mrs. Edsel Ford. While members of the Ford family do not object to the city using the name they have so far refused to discuss the change.

RECOURSE IS OPPOSED

CHARLOTTE, N. C., Dec. 26.—Proposals to revise automobile financing contracts to include a recourse clause is becoming a widely discussed subject among automobile dealers and distributors in this territory. The subject was discussed by representatives of the Commercial Investment Company, of New York, and Carolina dealers and distributors of Willys-Knight and Overland lines, at a conference here. The dealers vigorously opposed the proposal.

TRUCK DEALERS MEET

ATLANTA, Dec 26.—International Truck dealers in the Atlanta territory attending the annual sales conference of the Atlanta branch of the company recently were told that the company's truck sales in this territory during 1925 have been approximately 300 per cent greater than they were in 1924, and that all indications promise that 1926 sales will exceed 1925 by at least 100 per cent.

South African Conditions Show Good 1926 Prospect

Authority Sees Need, However, of Better Contract System on Part of U. S. Car Makers

NEW YORK, Dec. 31.—William Campbell, manufacturers' representative of Johannesburg, British South Africa, who for 20 years has handled a wide line of American cars and parts for that country, is on his annual visit to the United States and will remain until after the national shows.

He reports general conditions in South Africa as unusually favorable, due to the phenomenal corn and fruit crops. The only cloud on the horizon is the seamen's strike, which interferes with exportation of citrous fruits. The corn crop this year was the largest in the country's history and had an added value due to the veritable chain of grain warehouses which the government has erected throughout the country and the increase in railroad rolling stock.

Nevertheless several of the largest importers of automobiles are in a more or less nervous condition, due to changes made by American manufacturers in their South African representation. Annual contracts, under which these importers have been working, were never so unpopular as now, because of cancellations by cable. This question is being discussed in South Africa more than ever.

Too high prices placed on cars by certain importers, and too little attention to service are also causing disturbance. There are examples of 300 per cent profits on replacement parts, which is not considered good for the trade.

European manufacturers have already sensed the situation and some who have been luke-warm in the South African field are planning for permanent representation and giving five-year contracts. Mr. Campbell believes that American manufacturers should get into direct contact with the foreign field, just as they are in the domestic field.

CHANGES TRADE NAME

MARION, Ind., Dec. 26.—The Indiana Manufacturing and Electric Company, manufacturers of automobile accessories and Indiana Hyperdyne radio receivers, has announced that the trade name of the company's entire line of products will be changed to "Case." This name will be used on all their products regardless of their nature or through what channels they are marketed The Indiana Manufacturing and Electric Company has been operating in combination with a subsidiary company, the Indiana Radio and Electric Company in the manufacture and marketing of this line of radio receivers. These two companies have been consolidated, the assets of the Indiana Radio and Electric Company have been completely absorbed by the manufacturing company and the business will be conducted and owned entirely by the latter company.

Along Automobile Row

LITTLE ROCK, Ark.—T. S. Farrell, formerly district agent for the Garford Motor Truck Company, has formed the Rickenbacker Farrell Company, which will have the agency for the Rickenbacker automobile agency in all except seven counties of the state. The location of the sales offices has not been determined, Mr. Farrell said.

MONTREAL.—Montreal Tire Sales, 1348 St. Lawrence boulevard, has gone into the radio field and is featuring the Rogers Batteryless A-C radio receiving sets.

DENVER.—Under the name of the Denver Velie Company, G. R. Pennington of the Pennington-Reed Insurance Company has taken over the Velie sales agency for this district, and is located at West Fourteenth and Bannock.

CHICAGO.—Carl M. Schonig, formerly a Hupmobile dealer, has joined the S. & M. Chevrolet Co., 8622 Commercial Avenue, as director of sales.

MONTREAL.—The Canadian Fairbanks Morse Co., Ltd., has added a complete stock of McQuay-Norris motor bearings.

HOUSTON, Tex.—The Firestone Tire & Rubber Company is to have a new home here. Announcement was made that a new building, providing more than 175,000 square feet of space will be erected to house the factory branch of the Firestone Company here.

WALNUT RIDGE, Ark.—James J. Sharum, president of the Sharum-Hopps Motor Company, has purchased all the stock of the company, retiring from the business. The company is agent for the Ford Motor Company.

MONTREAL.—Day-Martin, Ltd., has been appointed Canadian distributor of Pines Automatic Winterfronts, manufactured by the Pines Mfg. Co., Chicago.

EVANSVILLE, Ind.—The local Rickenbacker motor car agency, Edwin A. Aleon, manager, has been promoted to distributor rank for the tri-state territory covering southern Illinois and Indiana and western Kentucky, according to Mr. Aleon. The status of local agency has been changed from yearly contract to perpetual dealership. Mr. Aleon was recently in Harrisburg, Ill., to arrange for the opening of a retail dealer agency.

CONWAY, Ark.—C. C. Webb, formerly a salesman for the J. F. Jones Franklin Company at Little Rock and more recently connected with the Bulman Furniture Company here, has assumed his duties as manager of the James Motor Company here succeeding B. B. Drinkard.

CHICAGO.—The Chevrolet agency of Ross & Kushler, Inc., 1832 Irving Park Boulevard, has been dissolved. Mr. Ross has retained the Irving Park store while Mr. Kushler has purchased the business of the Kennedy Motor Sales, 6317 Broadway.

WINNIPEG, Man.—Lloyd Gorman, connected with the Wood, Vallance Co., Ltd., for over 15 years, has joined the accessory department of the Miller Morse Co., Ltd., also of Winnipeg.

DAYTON, O.—The Dayton Federal Truck Co. has signed a long lease on the building at 725 S. Main Street, formerly occupied by the Green Engineering Co. This move was necessary owing to increased business enjoyed by the Dayton Federal Truck Co., distributor for the Federal-Knight and heavy duty Federals.

FT. WORTH, Tex.—The Packard-Scruggs Company has added a Hudson-Essex agency to its Packard agency by appointment from the Hudson Motor Car Company of Detroit, and will handle the new line from its present location at 300 Throckmorton.

EVANSVILLE, Ind.—The Stickard Motor company at Princeton, Ky., has been signed as Willys-Knight and Overland retail dealer by the Bennighof-Nolan Company, distributor. The Stickard agency marks the 50th dealer point supplied in the Tri-State territory covering southern Indiana and Illinois and western Kentucky by the Bennighof-Nolan Company.

MONTREAL.—Paul-Smith, Reg'd, has been appointed selling agent for Quebec for Snap-On-wrench sets and tools, manufactured by the Snap-On-Wrench Co., Milwaukee.

MINNEAPOLIS.—Ford dealers from four states have closed a winter campaign sales meeting with officials of the Twin City branch. Agency managers were present from Minnesota, South Dakota, Wisconsin and Iowa. H. M. Bradford, assistant manager of the branch, presided.

CHICAGO.—The Northwest Buick Co., 3444 Lawrence Avenue, has broken ground for its new $160,000 home at Hamlin and Lawrence Avenues.

SAN FRANCISCO.—James Warden, Jr., has been appointed manager of the Ajax division of the Pacific Nash Motor Company, with headquarters in the sales-offices of the Ajax on Van Ness Avenue, San Francisco.

MONTREAL.—Mark-Kieran & Co., have been selected Canadian representatives for the products of the Zip Abrasive Co., Cleveland, O.

JACKSONVILLE, Fla.—The Bacon Motors Co., Hudson and Essex dealer in Jacksonville and the adjacent Florida territory, has announced plans for the construction of a substantial addition to the company's Jacksonville sales rooms and service station.

MILWAUKEE.—Jung & Reul Motor Co. has been organized at Jefferson, Wis., to handle Chevrolets exclusively. Earl Jung and Roy Reul, firm members, were formerly with the Jefferson Auto Co.

CHICAGO.—The Dashiell Motor Co., 2542 South Michigan Avenue, distributors of Dodge and Graham Brothers vehicles, has opened a new display room devoted entirely to the sale of used cars at 2522 South Michigan.

PORTLAND, Ore.—Appointment of J. C. Lawson Motor Company, East 10th street and Hawthorne Avenue, as East Side representatives for Oldsmobile Company of Oregon, is announced. Prior to coming to Portland, Mr. Lawson for five years was with the factory branch of the Willys-Overland Company at Winnipeg, Canada, and for the past two years has been associated with the East Side Overland Co.

STEUBENVILLE, O.—Papers have been filed with the secretary of state chartering the Reo Service & Sales Co., with a capital of $75,000 to operate a sales agency and service station.

CLEVELAND.—The Oakland dealer organization in the Cleveland district has been expanded by the addition of another showroom for the display of Oakland sixes. C. A. O'Hern has just opened a new Oakland display room at Chester Avenue and E. 30th Street, directly opposite the big plant of the Towell Cadillac Company.

JACKSONVILLE, Fla.—Lucian Powell, Jr., 426 W. Adams Street, Jacksonville, has been appointed as a dealer to handle Pierce-Arrow in this city, and also will act as distributor of the Pierce-Arrow in the adjacent North Florida territory. Mr. Powell also handles the Oldsmobile in the same territory, and will continue to handle this line in addition to the Pierce-Arrow.

CHICAGO.—The Dashiell Motor Co., distributors of Dodge Brothers passenger cars and Graham Brothers trucks, has opened a new branch at 3430 North Crawford Avenue, under the management of Walter Felton.

LOS ANGELES.—Val Haresnape, member of the contest board of the American Automobile Association, has accepted the general managership and vice presidency of the Al G. Faulkner, Inc., metropolitan Hudson & Essex dealer in Los Angeles.

WILMINGTON, Del.—Hammond Motors, Inc., has established a new Chevrolet agency in Wilmington, located at Thirty-fifth and Market streets. The company has a branch at Newark, Del., selling Buicks and Chevrolets.

CHICAGO.—The Ritt Motor Co., Chrysler dealer, has moved into its new building at 814 Diversey Parkway.

MILWAUKEE. — Hokanson - Thompson Inc., Oakland distributor in Wisconsin, has announced appointment of Sommer Motor Co., 1802 North Avenue, Milwaukee, as a Milwaukee Oakland dealer.

FORT WORTH, Tex.—The Smith-Swinney Motor Company has been organized here for the purpose of handling Hudson-Essex cars. The new concern is composed of O. B. Smith and J. G. Swinney and the sales rooms and service station are located at 115 Commerce street.

OGDEN, Utah.—Harbertson Bros. Motor Co. has been appointed "Music Master" radio dealers for Ogden and district.

CHICAGO.—Robert W. Grant, formerly connected with the Ford Motor Co., and more recently with the Dealers' Equipment Company, has been appointed manager of George E. Sherman & Co., Inc., authorized Ford and Lincoln dealer at 1725 West Division Street.

DALLAS, Tex.—Coincident with the introduction of the new six-cylinder Star cars J. F. Roark, district sales manager for Durant Motors, announced the formation of the Dallas Auto Sales Co., Inc., which will handle Star and Durant cars in Dallas and vicinity.

DENVER.—The Locomobile Sales Company has moved from 1520 Broadway to 1344 Lincoln Street. This building has been completely rearranged and re-decorated for the new tenants. Complete sales and service departments are being maintained at this address.

COLUMBUS, O.—The Lostro Sales Co., 207 North Fourth Street, Columbus, O., has been made agent for the Paige and Jewett lines by the Madden-Atkinson Auto Co., central Ohio distributors for those lines.

CHICAGO.—J. A. Dvoratchek, proprietor of Jack's Sales and Service, Rickenbacker and Rollin dealer, has opened a new salesroom and garage at 2231 Lincoln Avenue.

MILWAUKEE. — The Merkle-Chevrolet Co. has been organized in Milwaukee with capital of $50,000 by B. F. Anger, G. E. Merkle and R. G. Gunderson. Mr. Anger is president of the Anger-Chevrolet Co. which distributes these cars in Wisconsin.

DALLAS, Tex.—The Helm-Burks Motor Company, distributor of Hupmobiles in the Dallas territory, has occupied its new three-story fireproof home at Preston and Pacific streets. The retail sales rooms and the parts and service departments will be housed in the same building.

EVANSVILLE, Ind.—The C. F. Curtis Company, operating the Duco automobile finish service agency, has moved its shops from the Evansville Auto Exchange, First and Locust Streets, to the Evansville Nash Motor Company building, 1209-11 Main Street.

CHICAGO.—The Woodlawn Motor Car Sales and Service Co., 6136 Cottage Grove Avenue, dealer in Paige and Jewett, announces that it has added the Pierce-Arrow to its line.

OAKLAND, Cal.—The Kleiber Motor Company of San Francisco, has opened its permanent factory branch for sales and service of Kleiber cars and trucks at the corner of Eighteenth Avenue and East Twelfth Street, Oakland. This branch replaces the temporary location at 2919 Broadway. Jack Lynch, Frank J. Gasper and Clarence A. Hunt, the Kleiber Company's Alameda county representatives, are in charge of the new branch.

SPRINGFIELD, Mass.—Frederick J. Benn has accepted the position as manager of the Springfield Durant Company, handling the distribution of Star and Durant cars throughout central Massachusetts and the Connecticut valley region. Mr. Benn for three years was wholesale manager of the J. S. Harrington Company, Hudson and Essex distributor, and for four years before that time was with the Willys-Overland branch here.

With the Associations

Alabama Trades to Meet

BIRMINGHAM, Dec. 26.—Plans have been practically completed for the eleventh annual convention of the Alabama Automotive Trades Association which will be held in Montgomery, Ala., January 25 and 26 at the Exchange Hotel. The program and business arrangements have been made by Jim Farley, secretary, and when it comes to business nothing has been left out.

Mr. Farley has announced that there will be no social features during this meeting as they estimate it will take the full two days to get through with the business. Only the members of the association will be permitted to attend the meetings.

The meeting will be called to order at 10 o'clock on Monday morning by President E. W. Brownell. There will be an address of welcome by some Montgomery representative after which the president will make a talk on the necessity for getting down to business and a reasonable basis of co-operation in order to take care of the best interests of the automobile men.

Immediately after the president's address the convention will adjourn to meet in divisions to discuss matters of vital importance to special groups. Each group will be a separate meeting to be presided over by the director and to consider its own problems.

Meetings of the gas and oil division will be held under the guidance of Director Thad Holt of Birmingham, the meeting of the replacements parts division will be presided over by Director G. E. Woodward of Birmingham. Director Harper Johnson will have charge of the wholesale tires and accessories department, while Director J. H. Lord of Mobile will have charge of the retail tires and accessories division, Director R. M. Wikle of Talladega will be in charge of the Ford car division, the larger car division will be called to order by Director W. C. Stokes of Montgomery, the truck dealers' division will be directed by J. H. Shepherd of Tuscaloosa, the battery dealers' division will be directed by Frank Stephens of Montgomery and the repair men and cylinder grinders' division will be called to order by Director R. M. Hernandez of Birmingham.

On Tuesday morning at 10 o'clock the second meeting will be called to order. There will be the regular order of business, the presentation of resolutions and reports of the various committees. This will be followed by the election of officers and the selection of the meeting place for the next convention.

Los Angeles Engineers Meet

LOS ANGELES, Dec. 31.—Gasoline, detonation and changes in engine construction that might become necessary as a result of the researches conducted by the oil companies was the principal subject of discussion at the recent meeting of the Southern California Section, Society of Automotive Engineers, held at the City Club, Los Angeles. R. E. Haylett, of the Union Oil Company, led the discussion. Members of the Service Managers Association of Los Angeles were guests of the automotive engineers at the meeting.

Duesenberg Speaks at Chicago

Chicago, Dec. 26.—"Sho must had seben speeds," said one little colored fellow, helping to get some of the dirt off of Pete De Paolo's car. From under the car came a voice in contradiction, " 'Tain't neither, jes two—fust, an' gone."

And many other stories both amusing and instructive were told by Fred Duesenberg before the Mid West section of the Society of Automotive Engineers here last night, when he explained many of the problems that confronted the race car designer and explained the trials and achievements in adapting superchargers to his speed creations.

"And what effect will racing design have on commercial vehicles?" he was asked.

"Not so much as in past years," he answered. "And yet I believe the supercharger can be advantageously applied to passenger and commercial cars, making it possible to use smaller engines and still have greater power, acceleration and gas economy, one of the chief advantages of the supercharger in commercial work being its ability to give uniform mixture to all cylinders. This we have been unable to get when no supercharger is used, with the result that we have had to retard the spark enough to suit the cylinders with lean mixtures, thus reducing the possible power obtainable from the other cylinders."

Speaking of the new race cars which will have 91½ cu. in. displacement, Mr. Duesenberg said that he hardly knew what the limiting r.p.m. would be, that it was determined by piston speed, also the speed with which valves could be operated, and while in making a new design it was always estimated that a certain speed would be the maximum, yet when the engine was tried out, the speed went higher, due to some factor that had not been anticipated.

St. Louis Service Men Meet

ST. LOUIS, Dec. 26.—Arthur R. Mogge, president Lewis Automobile Co., and a veteran of the industry here, was the principal speaker at a recent meeting of the Service Managers' Bureau of the St. Louis A. D. A. at Hotel Claridge. Other speakers were Dr. C. W. Cuno, chemical department, Washington University, James M. Given, Davis Boring Tool Co., William J. Bell, Norman C. Hayner Co.

Mogge Meets Dealers

ST. LOUIS, Dec. 26.—J. D. Perry Lewis, merchandising director of the A. E. A., was the chief speaker at a meeting of the Automotive Accessory Association of St. Louis at the American Annex Hotel which was attended by 156 dealers in accessories and automotive supplies, wholesale and retail, in St. Louis, St. Charles, Mo., Alton, Ill., Belleville, Ill., Wood River, Ill., Granite City, Ill., and other points close to St. Louis.

Mogge spoke on the slogan, "Give Something for the Car for Christmas." He advised the automotive merchants to utilize their show windows for attractive displays and said that the whole country is spending huge sums of money for Christmas presents and that the automotive dealer has hundreds of items in stock which would make appropriate gifts.

Robert E. Lee, secretary-manager of the St. Louis A. D. A. extended an invitation to the accessory men to attend the N. A. D. A. sales Congress at Moolah Temple Dec. 14.

President Dan F. Hyland of the A. A. A. of St. Louis, who presided, appointed as a committee on program to arrange for three successive meetings of the association in January, February and March, Frank Quan of Fred Campbell Supply Co., George H. Niekamp of Beck & Corbitt Supply Co. and Stuart Campbell.

Finance Decision Discussed

RALEIGH, N. C., Dec. 26.—Representatives of automobile financing companies and a committee representing the North Carolina Automotive Trade Association held a conference here recently with the North Carolina department of revenue, when administration of the title law and repossession of cars was discussed in the light of recent court decisions. These decisions were regarded as favorable to the dealers and financing companies, but require certain recording of papers, including the mortgages and notes, as protective measures.

Indianapolis Plans Show

INDIANAPOLIS, Dec. 26.—The Indianapolis Automobile Trade Association has sent out announcements and applications for space for the Indianapolis Automobile Show which this year will be staged from February 15 to 20.

"Placing the show two weeks earlier than usual this year," says John B. Orman, manager, "the directors believe the early spring business will be greatly benefited. Up to this time the local show has been held during the early part of March, but directors and dealers have come to believe that such a date is altogether too late in these days when the show building is always adequately heated no matter what the weather."

Coming Motor Events

Automobile Shows

New York—Jan. 9-15
National Automobile Show in Grand Central Palace.

Newark, N. J.—Jan. 16-23
Nineteenth annual Automobile Show under auspices of New Jersey Automobile Exhibition Co., Chamber of Commerce Building.

South Dakota Tradesmen Hold Big Annual Session

Dan G. Urquhart Is Re-elected President of Association at Aberdeen Convention

HURON, S. D., Dec. 26.—With a registration of nearly 400, the Automobile Trades Association of South Dakota recently held in Aberdeen the largest and most enthusiastic convention since the organization was founded. A full two-day's program covered the items of interest to those in the automobile business, and indications point to a most successful year for 1926.

The convention was addressed by H. W. Shelby, district manager of the National Cash Register Company on the subject, "Face the Facts." Mr. Shelby's careful survey of the automobile and garage business in South Dakota in connection with his business enabled him to impart some valuable information to those present. Following his address the convention entered into a general discussion of the laws that had been passed at the last session of the legislature, and in connection with these laws, Buell F. Jones, attorney general, discussed those laws pertaining to the confiscating of personal property that has been used in the violation of the state prohibitions laws.

J. J. Murphy, chairman of the board of the railroad commission discussed the bonded warehouse law, and E. S. Goff and George Henry, director and registrar of the motor vehicle department of the office of the secretary of state, discussed the motor vehicle laws, and particularly the certificate of title law. Many points that had been misunderstood by dealers were fully explained by the officers present.

In the evening the annual banquet was held in the dining room of the Sherman Hotel, and the attendance was so large that 150 had to be accommodated in an adjoining room. The Automobile Association of Aberdeen provided an entertainment, following which those present listened to a short address by R. E. McCarthy of the Alexander Hamilton Institute on the subject of "Automobile Merchandising." After his address the principal address was given by W. V. Harrington, president of the Harrington Motor Company of Minneapolis, and a director of the National Automobile Dealers' Association. Mr. Harrington's subject was "Associations," and his address was well received by all present. After the banquet a dance was held in the new building of the Hatfield Motor Supply Company for all the visitors who cared to take part in this form of amusement.

The program the following morning was opened by an address given by R. D. Baldwin, of R. D. Baldwin & Company, Aberdeen, public accountants. Mr. Baldwin's subject was "Control" and he dealt with the necessity for good accounting systems in all places of business. Following this address the association was favored with a series of talks by three representatives of manufacturers of shop equipment. These three men, O. H. Leidy, representing the L. S. Sterrett Company, R. B. Belling, representing the Black & Decker Manufacturing Company, and B. F. Kragtorp, representing the McQuay-Norris Manufacturing Company, discussed the repair shop and the necessity for proper tools and shop equipment.

The afternoon session was addressed by Ex-Governor C. N. Herreid, president of the Citizens Trust and Savings Bank of Aberdeen, on the subject of the automobile finance problem. Following his address, F. H. Rash, a representative of the Surety National Detective Bureau of Sioux Falls, discussed before the convention the subject of "Protection." A short talk was also given by Teddy Roe representing the Standard Unit Parts Corporation on the subject of "Buy at Home." This completed the addresses and the convention then listened to the report of the committee.

Following a general discussion the convention elected a board of directors for the ensuing year as follows: Dan Urquhart, Huron, Elmer Judy, Aberdeen, George Dresser, Mitchell, G. H. Evans, Sioux Falls, A. B. McGowan, Redfield, E. J. Hanson, Watertown, O. M. Saylor of Rapid City, and E. P. Johnson of Brookings.

Immediately after the adjournment the board of directors elected the following officers for the coming year: Dan Urquhart, Huron, president; Fred J. Varie, Deadwood, vice-president; E. R. Judy, Aberdeen, treasurer; H. M. Whisman, Huron, secretary-manager. Watertown, South Dakota, was elected for the meeting place for 1926.

One of the outstanding features of the convention this year was the holding of an accessories and parts exposition in the same building in which the convention was held. About 25 firms manufacturing tires, equipment and supplies of one kind or another had fine exhibits on display.

Dealer Uses "Dog-Eat-Dog" System

BUFFALO, N. Y., Dec. 26.—The Meyer Motor Company, Studebaker distributor in Buffalo, uses what it calls the "dog-eat-dog" system in paying salesmen's commissions. Under this plan the commission for selling a car goes to the salesman, who actually puts the sale across, regardless of what may have been done by any other salesman in the way of luring the prospect to the dotted line.

Does it work?

It does.

The plan has been operative with this concern more than a year. From October 15, 1924, to October 15, 1925, using this system, the company sold 1,062 cars. The highest previous record of sale of Studebakers in Buffalo in a corresponding period, is said to have been 635. The company's executives do not credit the dog-eat-dog system with the sale of all of the cars disposed of in the period mentioned. It was partly due, they say, to improvements in the Studebaker car, and to its growing popularity.

Before adopting the present plan the Meyer people used many years a form of the protective file system, commonly employed in retail automobile merchandising, and under which it a salesman digs up a prospect and nurses him along—or pretends to—he gets the commission if that prospect is ever sold.

The company found that this plan made the salesmen indifferent to all prospects save their own. When the prospect of some other salesman came in the man on the floor, for example, would make no effort to close him up. Why should he bother? The commission would go to some one else. Chilled by this indifference the prospect would often walk out. Also it was found that under the old system salesmen were carrying a lot of dead-wood as prospects and pretending to keep in touch with them, hoping they might some time come to life and buy. This entailed use of a lot of time and energy on the part of executives whose duty is was to check up the lists of prospects. These were wasted.

The dog-eat-dog system was submitted to the sales force before it was adopted and was approved by a majority vote. It speedily eliminated the "weak sisters" on the force. Only the live ones were able to stand the gaff. It creates hard feelings now and then among the salesmen but the company's executives do not experience much trouble in smoothing these over. The system has stimulated search on the part of the salesmen for prospects and has kept the company supplied at all times with live ones to solicit.

EXTRA GENERAL DIVIDEND

AKRON, Dec. 26.—A Christmas bonus in the form of an extra 6 per cent dividend on common stock has accompanied letters mailed to stockholders of the General Tire & Rubber Co., announcing the company's annual meeting, which will be held today. As the regular common stock dividends have been on an 8 per cent basis for 1925, this brings the total common dividend disbursement for the year to 14 per cent.

EMPLOYMENT INCREASES

MOLINE, Dec. 26.—More than 600 men are now employed at the East Moline plant of the Yellow Sleeve-Valve Engine Works. This is a 100 per cent increase over a year ago. By spring it is stated the force will be increased by another hundred, according to Louis Ruthenberg, general manager.

KEY TO SYMBOLS

*—At extra cost
†—Balloons at extra cost
½—Semi-floating
¾—Three-quarter floating
A—Air
Al—Aluminum
B—Semi-steel
B-F—Both internal and external, four wheels
Ch—Chain
CI—Cast iron
Cm—Central magazine
Cu—Oil and grease cups
D—Multiple disk
E—Full elliptic
E-F—External four wheels
E-R—External rear wheels
E-T—External transmission
f—Fabric
F—Filter
Fl—Full floating
G—Head and side
Gr—Grease cups
H—Horizontal (valves)
H—Hydraulic (brakes)
He—Helical gear
I—In head
Int—Integral
I-F—Internal four wheels
I-R—Internal rear wheels
J—Three-quarter elliptic
K—Cone
L—L head
m—Metal
M—Mechanical
N—None
N—Platform (rear springs)
O—Optional (brakes)
O—Special type (rear springs)
Oc—Oil cups
Ow—Oil cups with wick feed
P—Single plate
Pr—Pressure gun
PC—Pressure to all crankshaft and connecting rod bearings
PF—Full pressure to all bearings
PK—Pressure to crankshaft, connecting rods and camshaft bearings
PS—Splash with pressure
Pu—Pump
Q—Quarter elliptic
R—Rectifier
S—Semi-elliptic
Sep—Separate
Sp—Splash (lubrication)
Sp—Spur gear (camshaft drive)
Spe—Special make
Sta—Standard
T—T head
Th—Thermo-syphon
V—Cantilever
Var—Varies
X—Sleeve valve
Y—Yes

ABBREVIATIONS—NAMES OF MFRS OF STOCK PARTS

A-K—Atwater-Kent
A-L—Auto-Lite
Ada—Adams
Al—Alemite
Ans—Ansted
B&B—Borg & Beck
B-L—Brown-Lipe
Bal—Ball & Ball
Ba—Bassir cups
Bo—Bowen Products
Car—Carter
CAS—CAS Products
Cle—Cleveland
Cli—Climax
Con—Continental
Conn—Connecticut
Col—Columbia
Cpl—Campbell
Da—Dawson
DeJo—DeJon
Det—Detroit
Dit—Ditweiler
Do—Dot
Due—Duesenberg

Pet—Peters
Ray—Rayfield
Roc—Rockford
Sa—Saal
Sal—Salisbury
Sch—Schebler
Sne—Snead
Spe—Special Make
Spi—Spicer
Spl—Splitdorf
Ste—Stewart
Stl—Sterling
Str—Stromberg
The—Thermoid
Thi—Thiemer
Til—Tillotson
Tim—Timken
Uni—Universal
W-G—Warner Gear
Wag—Wagner
War—Warner
Wat—Watford
Wes—Westinghouse
W-M—Willys-Morrow
Wis—Wisconsin
Ze—Zerk
Zen—Zenith

Due now to the great and increasing popularity of the new 90-degree Cadillac, as well as the lower Cadillac prices, the legitimate market for Cadillac is very greatly enlarged.

Therefore, there now exists a very real business opportunity for a dealer to sell Cadillacs in many cases where it never existed before.

You may be interested — and you may be rightly situated. If you feel that you are, write us fully. Your letter will be held confidential.

CADILLAC MOTOR CAR COMPANY, DETROIT
DIVISION OF GENERAL MOTORS CORPORATION

New 90 Degree

CADILLAC

Mechanical Specifications of Current Passenger Car Models—Continued

The Tuarc Type H in Action

First to be Seen— Last to be Seen to

Mechanical perfection and complete utility are rarely combined in a form that is so beautiful as the Tuarc Type H steel wheel.

Steel strength, highest convenience in mounting or inflating tires, consistent lightness, and complete silence are embodied in simple curves which flow nicely into the contour of balloon tires.

The impression this wheel makes capitalizes the fact that it is the first moving part of a car to be seen. The construction of the Tuarc Type H makes it about the last moving part which ever needs to be seen to.

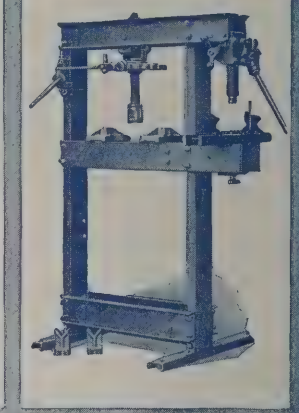
A MANLEY PRESS FOR EVERY SHOP



21 Operations on the Ford car that can be performed with a Manley Press

1. Pressing steering spindle body bushings out and in
2. Pressing steering arm bushings out and in.
3. Pressing lower steering column bushings out and in.
4. Straightening steering drag link.
5. Straightening front axle.
6. Pressing wheel hubs out and in wheel.
7. Pressing timing gear off and on camshaft.
8. Pressing timing gear off and on crankshaft.
9. Pressing gear off and on generator.
10. Straightening camshaft.
11. Straightening crankshaft.
12. Pressing piston pin bushings out and in piston.
13. Pressing bushings out and in transmission brake drums.
14. Pressing bushings out and in transmission triple gears.
15. Pressing differential axle gears off and on axles.
16. Straightening rear axle shafts.
17. Straightening rear axle shaft housing.
18. Pressing drive shaft pinion roller bearing sleeve off and on.
19. Straightening drive shaft.
20. Straightening drive shaft housing.
21. Pressing spring hanger bushings out and in.

12 REASONS WHY THE MANLEY PRESS IS PREFERRED:

1. Excess capacity: Manley ratings are very conservative and all Manley equipment has a much greater capacity than the Manley ratings indicate.
2. Exposed screw: The Manley Press is arranged so that the end of the screw is exposed and the Press is designed so that you may jar stubborn parts loose by a hammer blow on this exposed screw end, giving the effect of as much as a hundred ton straight pressure.
3. Open construction makes it possible to handle work of any length.
4. Extra wide clearance on lower table (42 inches).
5. Double table saves time adjusting table for work of different heights, long nose and short nose supplied with Press, this also saves time adjusting for height.
6. High speed Rack and Pinion Press Attachment. Two men can work on this Press at the same time.
7. Hand wheel mounted on ball bearings.
8. Hand levers in most convenient position, enabling operator to keep eyes on work.
9. Quick change of leverages and speeds.
10. Correctly lubricated.
11. Designed by R. E. Manley and guaranteed by The Manley Mfg. Co.
12. Price $100.00 without Rack and Pinion Press or Crankshaft Straightening Attachment. With Rack and Pinion Press and Crankshaft Straightening Attachment $145.00.

For the smaller shops the 20 Ton Manley Press is recommended; complete with Rack and Pinion Press and Crank-shaft Straightening Attachment $104.00.

GATES BELTS

"The Standardized Fan Belt"

90 to 100 cords encased in rubber—exactly the same cords and the same construction that go into a cord tire—that's why Gates Vulco V-Belts have solved the V-Belt problem.

Made by the World's Largest Manufacturers of Fan Belts.

How Studebaker Sells the Public *on the Dealer as well as on the Car*

THE SATURDAY EVENING POST January 3, 1926

Your Wife may buy a Used Car with Perfect Safety

—The Studebaker Used-Car Pledge certifies Value and Price

YOUR wife patronizes the store whose policy of square dealing is a matter of certainty. There she buys with absolute confidence. She may buy a Used Car with equal confidence under the policy outlined in the Studebaker Used-Car Pledge. For expert knowledge of Used-Car values is not necessary to secure honest treatment, where this Pledge is displayed.

Studebaker has brought to the business of selling Used Cars the same measure of integrity and square dealing expressed by Wanamaker in this statement:

From haggle and barter	— to fixed fair prices.
From tricks of the trade	— to open square dealing.
From the customer beware	— to the customer be satisfied.
From obscure price marks	— to accurate price marking.
From advertising bombast	— to accuracy in word and print.

Guided by this same policy, as expressed in the Studebaker Used-Car Pledge, the Studebaker dealer who sells you a used car has, as his first and biggest objective—your confidence. Therefore, he does not simply sell you a Used Car, arbitrarily priced for profit. He sells you "unused mileage," honestly priced to make you a friend of Studebaker.

Your Studebaker dealer is essentially a merchant in new cars. The solid business foundation upon which the Studebaker Corporation has progressed for 73 years, has actuated the policies under which he sells—whether fine One-Profit Studebakers, or used cars of any make.

Read this Pledge and you will understand why common sense guides the careful buyer, of either a new or used car, to the showroom of a Studebaker Dealer.

Pledge to the Public on Used Car Sales

1 All used cars offered to the public shall be honestly represented.

2 All Studebaker automobiles which are sold as CERTIFIED CARS have been properly reconditioned, and carry a 30-day guarantee for replacement of defective parts and free service on adjustments.

3 Every used car is conspicuously marked with its price in plain figures, and that price, just as the price of our new cars, is rigidly maintained.

4 Every purchaser of a used car may drive it for five days, and then, if not satisfied for any reason, turn it back and apply the money paid as a credit on the purchase of any other car in stock—new or used.

Not only to the public, but also to The Studebaker Corporation of America, whose cars we sell, we pledge adherence to the above policy in selling used cars.

By Your Studebaker Dealer

Out of every eight cars sold for more than one thousand dollars—one is a Studebaker

This is because buyers have considered these facts:

1. Studebaker is the only One-Profit car in the quality field—the only car which has all bodies, all engines, all axles, all clutches, gear sets, springs, differentials, steering gear, gray-iron castings and drop forgings designed, engineered and manufactured by one organization. Therefore prices are down to bed rock.

2. Studebaker facilities make possible Unit-Built construction. Since the entire car is designed and built as a unit, it functions smoothly and yields scores of thousands of miles of excess transportation

3. Studebaker's $100,000,000 facilities enable us to keep cars constantly up-to-date. Changes are constantly made, not saved up for annual announcements which make cars in the hands of owners artificially obsolete.

4. Purchasers may buy Studebaker cars out of income at the lowest time-payment rates known to the industry.

5. Studebaker cars are sold and serviced by a world-wide organization of responsible merchants

THIS IS A STUDEBAKER YEAR

The Country Has Gone Nash

Nash Is Turning December Into June

Daily during this month, when ordinarily motor car sales are depressed, Nash has been receiving wires to rush shipments for immediate delivery.

Business has piled up at the factory at so rapid a rate that December, 1925, will again set a new high record for December production and sales and will eclipse December last year—the previous banner Nash December—by 50 to 60%.

And this month, too, will see Ajax round out the 11,000th car built and shipped since the start of production barely more than six months ago.

Today the man with the Nash-Ajax franchise is in an uniquely fortunate position.

With a wider market, greater price range, superior value, and rising sales, his monthly and yearly net are climbing to figures never before approximated in the history of the Company.

THE NASH MOTORS COMPANY, *Kenosha, Wis.*

NASH (2696)

Prevent All Ailments from "LEAKAGE OF THE HEART" *in Motors You Repair*

OIL or gas that escapes past piston rings is like leakage of the heart. The piston rings (or valves in the heart of the motor) are not functioning properly. Result: Oil pumping, excessive oil consumption, piston slapping, lost compression, and other ailments.

Cure all such ailments with Ramco Inner Rings. And, in addition, make more money by preventing these troubles by putting Ramcos into every motor you tear down. Your customers will appreciate this ounce of prevention that will pay for itself over and over. Ramcos keep the piston centralized. They maintain the elasticity of the piston rings by cushioning the joint between rings and piston. And they equalize the tension of the rings. Let us send you a set of Ramcos for trial.

Order Ramcos from your jobber or write us.

Chief of the Sixes

To the Automobile Dealers of America

OUR next announcement will reveal the name and other vital facts concerning the new General Motors Six—an entirely new automobile of tremendously broad appeal.

Subsequently the car itself will be displayed at the principal automobile shows.

This newest member of a famous family will be the fruit of the resources, engineering skill and manufacturing experience gained by General Motors in more than seventeen years of leadership.

It will combine elements of appearance, performance, and engineering design which will win for it immediate public acceptance. Its price will be such as to have a nation-wide appeal.

It will be built by Oakland and distributed as companion to the present Oakland Six under a double franchise that promises to become one of the most profitable in the industry.

Every automobile dealer in America—regardless of size, location or present affiliation—is invited to write at once for complete details. Address Oakland Motor Car Company, Pontiac, Mich.

STEWART-WARNER

1926 Campaign for Better Accessories—

THIS is going to be a great year for every dealer standardizing on the Stewart-Warner Accessory Family.

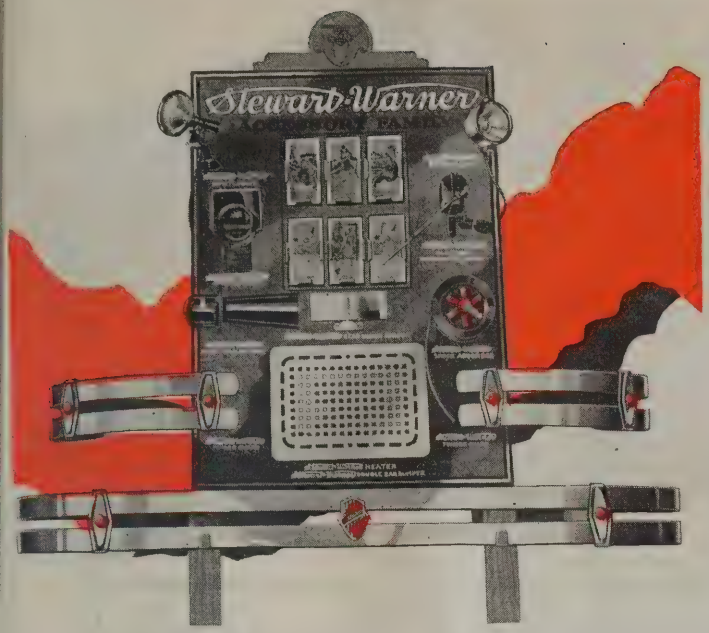
The time has come to give careful thought to the quality of the accessories offered to your customers.

You hold your customer's satisfaction and good-will of far more value than any special discounts on products of doubtful character.

The car you sell has been steadily improved. The car manufacturer has exerted every effort toward obtaining better material and better construction. In keeping with this we urge the use of BETTER ACCESSORIES.

To install "gim-cracks"—unknown brands—or brands in which the car owner takes no pride—is to be-little your car product—and gain nothing but adverse criticism.

So, we know that the dealer will join with us in a Campaign for Better Accessories, right at this time when accessories have attained the position of essentials.



Twelve million people are today using Stewart-Warner Accessories, and this with our greatly increased appropriation for 1926 National Publicity will make selling easy for the dealer—and add laurels to the car he sells.

Our 1926 Message

We are going to tell the public that YOU have his best interests at heart. That YOU are the logical ONE to sell him his accessories. That he can buy his entire equipment of "better accessories" under one name—"Stewart-Warner." In this connection we do not claim to make the ONLY "better accessories," but we DO CLAIM TO MAKE THE ONLY COMPLETE LINE OF BETTER ACCESSORIES.

A car fully equipped with Stewart-Warner Accessories creates attention and can be sold on the assurance of 100% protection and satisfaction. Right now—at the beginning of the year—at inventory time—is an excellent time to take stock of your accessory business.

Aside from the superior selling advantages in the Stewart-Warner Line—you have the valuable advantage of Stewart-Warner Distribution Service, through 62 Service Stations in leading centers in

Could you ask for more?

You can join with us in the 1926 Campaign for Better Accessories and reap the harvest that is already assured because of the record heights to which Stewart-Warner sales mounted in 1925.

Compare your inventory right now with the Stewart-Warner Line and decide which you would rather have.

We'll work with you and for you. We are organized to do so and seek the opportunity.

Yours for Better Accessories,

STEWART-WARNER
SPEEDOMETER CORPORATION
CHICAGO U. S. A.

the United States and Canada and 34 in foreign lands. We have no jobbers or other distributors. We control our entire distribution. This enables the dealer to do business with a comparatively small stock—getting new stock as needed in a few hours time.

SEE WHAT THIS DOES:

It reduces your stock room space.

It reduces the cost of stock-keeping records.

It requires a smaller investment.

It gives you better control of finances.

It eliminates "dead ones."

It prevents loss on "orphans."

It saves "writing-off" for depreciation.

It insures a fresh stock at all times.

It perfects your organization.

It gives you multiplied turn-over—ever increasing percentage of profit on the initial investment.

Stewart-Warner Accessories

TWELVE MILLION PEOPLE ARE TODAY USING STEWART-WARNER PRODUCTS

What AC Means to the Dealer

New AC Spark Plugs

A new design, new alloy for sparking points, new electrically fused Kyanite insulator core and a new glaze.

AC Carbon-proof Plugs are also made in all sizes.

The demand for AC Spark Plugs is assured through their use as factory equipment on the following cars:

Ajax	Davis	Nash
Apperson	Dodge Brothers	Oakland
Buick	Durant	Oldsmobile
Cadillac	Essex	Paige
Case	Flint	Star
Chandler	Hudson	Velie
Chevrolet	Hupmobile	Westcott
Chrysler	Kissel	Wills Sainte Claire
Cleveland	Marmon	

New AC 1075 for Fords

The special features of the AC 1075 make it the most desirable plug for Fords. Dealers are building a big and profitable business by emphasizing these features in making sales:

1 Spring Terminal Clip
2 Heavy Body Porcelain
3 Hexagon of extra length permits easy and positive application of spark plug wrench
4 High Temperature Fins — Patented carbon-proof Porcelain
5 Drip electrode forms natural Oil Drain

Made in both one and two-piece design.

DEALERS who carry AC products can build a profitable business.

◆ ◆ ◆

The demand is assured because of their use as car equipment.

◆ ◆ ◆

They are backed by strong advertising.

◆ ◆ ◆

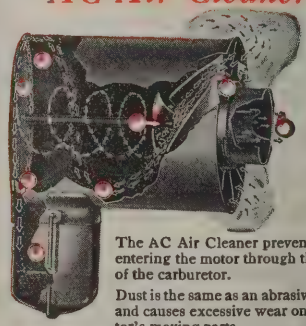
AC Speedometers

The Model for Fords



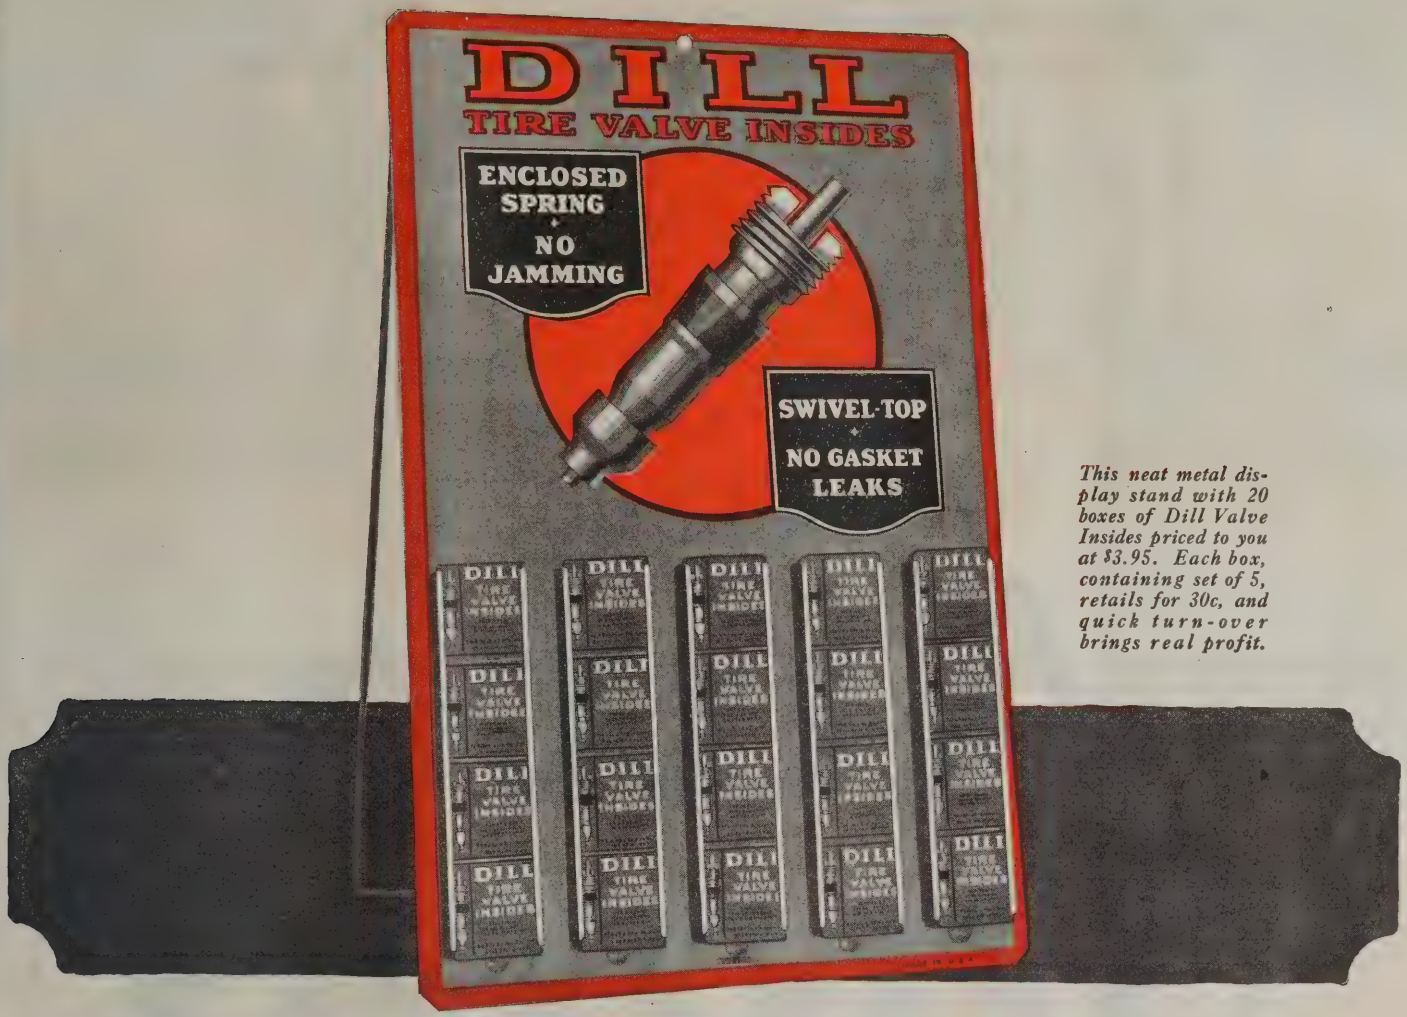
There is proof of the quality of AC Speedometers in the fact that they are used as original factory equipment on Buick, Cadillac, Chandler, Chevrolet, Chrysler, Gray, Oakland, Oldsmobile, Peerless and G.M.C. trucks.

The AC Speedometer for Fords is of the same quality as furnished the above manufacturers for their original factory equipment.

The AC Direct Drive does away with the troublesome swivel joint and insures continuously satisfactory service.

Packed complete with all attachments.

AC Air Cleaners



The AC Air Cleaner prevents dust from entering the motor through the air intake of the carburetor.

Dust is the same as an abrasive compound and causes excessive wear on all the motor's moving parts.

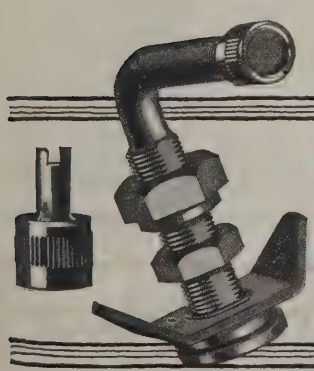
AC Air Cleaners are original factory equipment on the 1926 models of Nash, Buick and Oakland.

Installation is easy as it connects directly to the carburetor. Once installed it requires no attention as there are no moving parts to get out of order. Packed complete with all attachments.

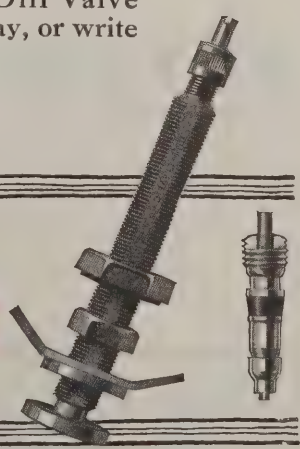
Models are now ready for Chevrolet, Chrysler Four, Dodge Bros., Ford, Maxwell, Oldsmobile, Star, Studebaker, as well as the 1925 and earlier models of Buick, Nash and Oakland.

This neat metal display stand with 20 boxes of Dill Valve Insides priced to you at $3.95. Each box, containing set of 5, retails for 30c, and quick turn-over brings real profit.

Valve insides sell themselves from this attractive display



SET this display stand on your counter and watch how the little boxes of Dill Valve Insides are snapped up! Balloon tire users, especially, are quick to buy them. Every pound of pressure in their tires is important, and they know that there is no danger of leakage through Dill Valve Insides.



A sturdy metal barrel protects the frail valve stem and spring. No chance of bending or twisting out of place. Every part is made and assembled with the finest accuracy to do the job 100%—and they never fail!

Your jobber will supply you with this display stand filled with Dill Valve Insides. Order from him today, or write direct to us.

The NEW STUTZ

"When an organization of vision and ambition engages year after year in the production of motor cars, it develops certain ideals, definite standards of perfection; it conceives its 'dream car.'

"But the ideal of practical automobile technicians is never a merely theoretical conception, for it is born of the hard school of experience and close observation of the requirements of the public. The ideal car embodies all the virtues that experience has shown desirable, and eliminates all the disadvantages that observation has taught to be detrimental.

"Some ideal cars remain but dreams, never reaching material being because of production problems or financial limitations. A few pass from the dream stage into reality and become pioneers of new eras.

"The New Stutz is an ideal car—the realization of notably ambitious aims. In its design has been enlisted the skill of leading engineers of America and Europe, who have adopted tried and proven ways to accomplish the desired ends. It is being built with little restriction on eventual production costs, ample capital being available, with no interference from hampering traditions.

"We, who have built the car for you, offer the result of our labors firm in the conviction that we are rendering a distinct contribution to motor car engineering."

P. E. Moskovics

President, The Stutz Motor Car Company

MOTOR

"The motor of the New Stutz will, I confidently expect, be recognized by the automotive engineering profession as a decided advance toward the common goal of greater simplicity, maximum efficiency and elimination of vibration.

"In evolving this motor, I have had associated with me C. E. Greuter, a pioneer designer of overhead-valve engines; Paul Bastien, a former chief engineer of the Societe Anonyme Auto-Metallurgique, Brussels; and William Guy Wall, one of America's leading engineers.

"While in some ways, this automobile appears to be a radical departure from earlier practice, it utilizes only tried and sound principles. It is the new application and combination of these principles which result in such a remarkable automobile."

Chas. S. Crawford

Chief Engineer, Stutz Motor Car Company

REAR AXLE *and* BRAKES

"The worm-drive rear axle incorporated in the New Stutz is intrinsically as standard and as proven a type as the more familiar bevel-gear drive.

"This company has equipped thousands of modern, high-speed and long-distance motor buses with worm-drive rear axles of essentially the same type. Even under this strenuous service, worm-drive axles that have already gone three hundred thousand miles and more are good for several hundred thousand additional miles—and with no lessening of their quietness or efficiency. On passenger cars, the worm-drive should be good for at least a half-million miles, or longer than any car is likely to remain in service.

"The hydrostatic brakes with which the New Stutz is fitted have been thoroughly demonstrated in service. Their principle is recognized as sound hydro-mechanical engineering.

"The design of this brake gives practically 100% contact of the brake-shoes on the drums—with equal pressure applied to all four wheels. The hydrostatic system is a closed one, and being hermetically sealed, is insured against leakage and evaporation."

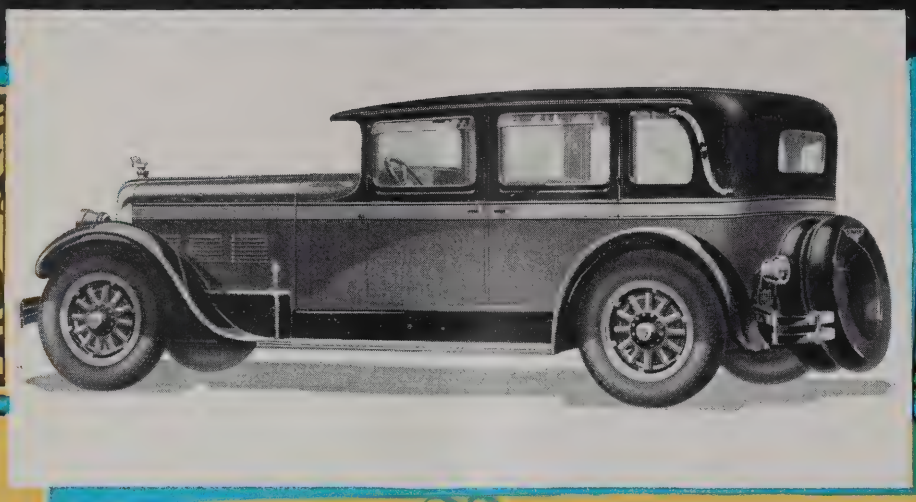
A. W. Alden

Chairman of the Board, Timkin-Detroit Axle Co.

BODIES

"In an international experience extending from the inception of the automobile, I never before have had presented such an opportunity for legitimately 'hanging a car on the ground.'

"The chassis construction of the New Stutz has permitted us to approach very closely to the ideal in motor car proportions. The result is a car of very distinctive appearance, yet free from any suggestion of freakishness, whose lines and contour are exceedingly smart and, by their directness, suggestive of smooth, straightforward speed.



"No sacrifice of either legroom or headroom is made; on the other hand, the low center of gravity must greatly add to the comfort and safety of the passengers."

Brewster

Brewster & Company, New York

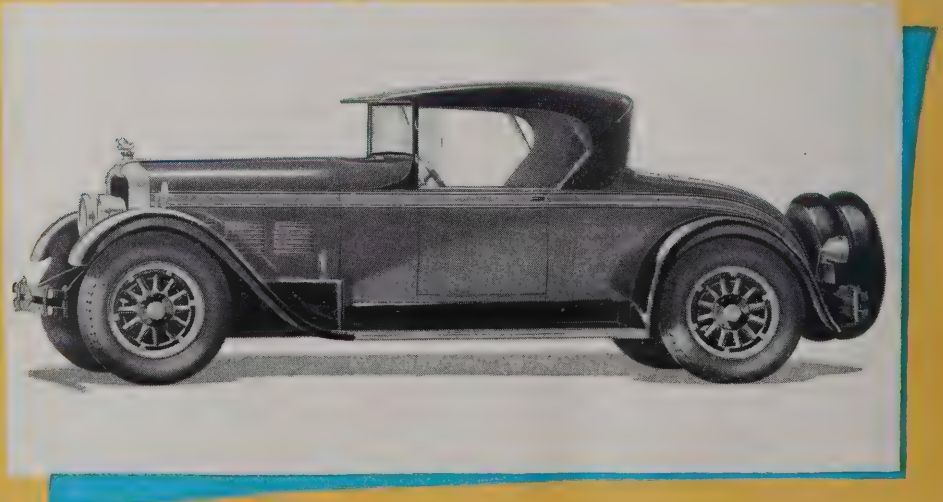
The NEW STUTZ vertical eight

STUTZ
SAFETY 8 CHASSIS

The Brougham

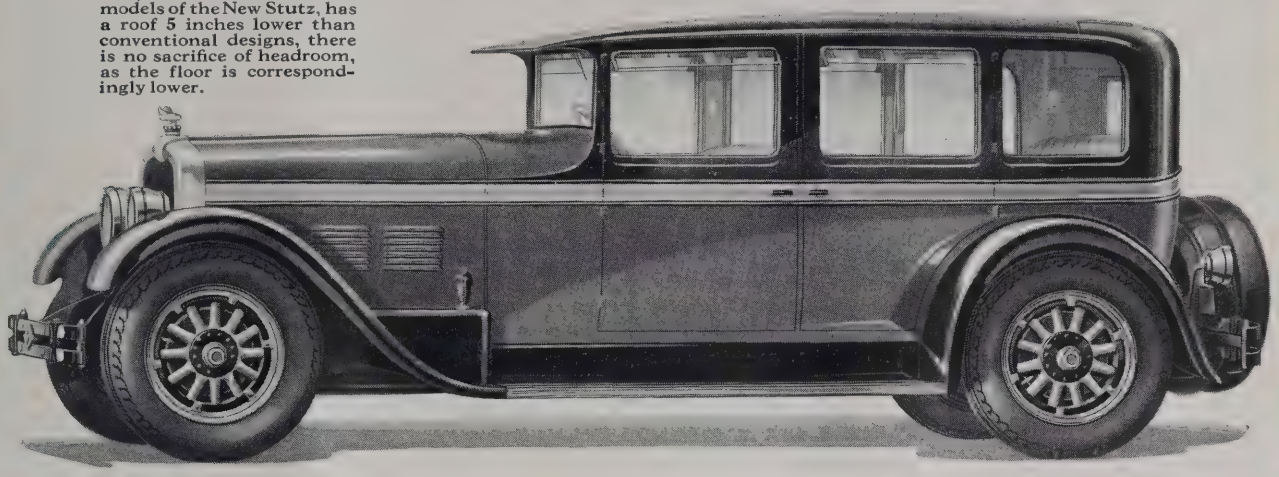
A five-passenger closed car of the same general design as the sedan, except that the rear quarter windows are D-shaped instead of rectangular, and rear quarter is leather-trimmed and embellished with Victoria irons. Hubbard Ventilating Eaves on doors.



The four-passenger Speedster

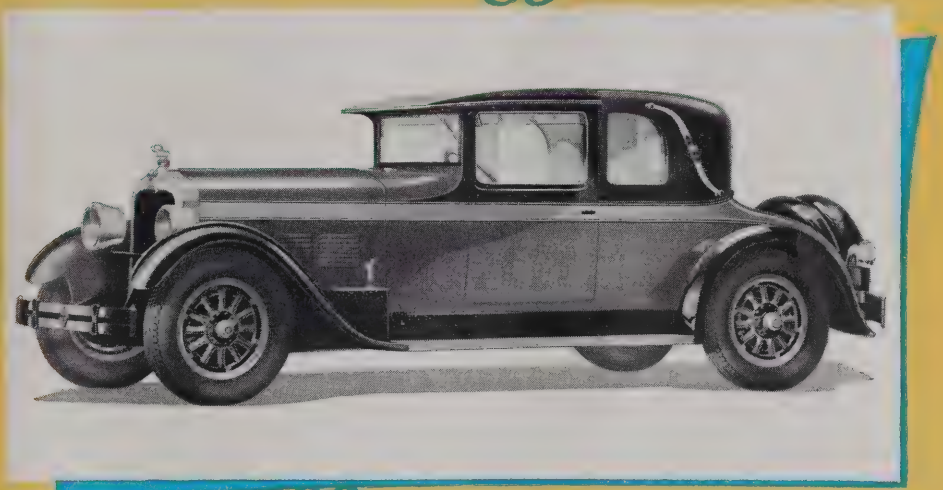
A roomy, four-passenger Speedster with one-man folding top. A tonneau storm-apron, reaching from the back of the front seat to the back of the rear seat is provided.

The two-passenger Speedster

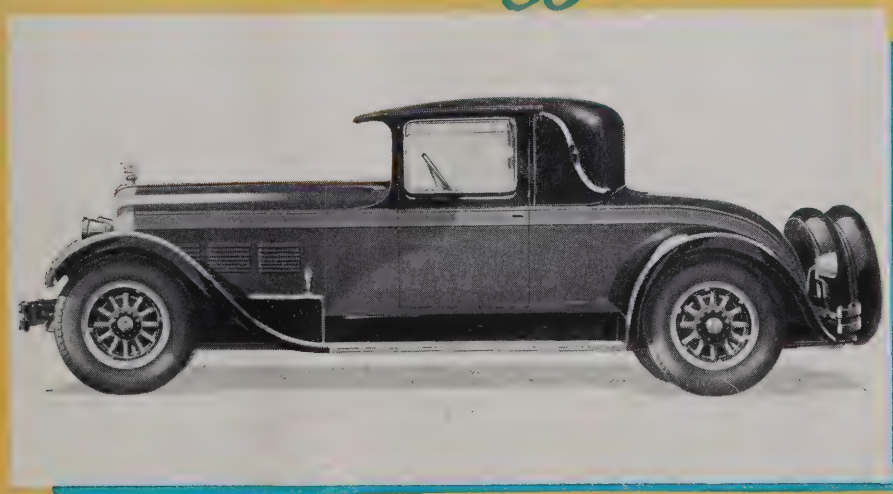


An open car with rumble seat in rear deck; a door in curb side of the rear deck permits using rear compartment for golf clubs, etc., without opening up the rumble seat. It has a detachable folding top.

ee preceding page



The five-passenger Sedan



A genuine sedan (not a coach) with full windows all around. Hubbard Ventilating Eaves on doors. Although this, like all other closed models of the New Stutz, has a roof 5 inches lower than conventional designs, there is no sacrifice of headroom, as the floor is correspondingly lower.

The Victoria Coupe

A four-passenger staggered-seat closed car of customary coupe arrangement, but with leather-trimmed, Victoria-ironed rear quarter. It has a rear deck with door, a golf-club compartment and a glove-box. Hubbard Ventilating Eaves on doors.

The two-passenger Coupe

A single-seat-inside closed car with rumble seat in rear deck. Door in curb side of rear deck to admit golf clubs, etc. Leather-trimmed, Victoria-ironed rear quarter. Drop glass in rear of body. Parcel compartment back of front seat.

see next pag

The first showing of a new and advanced type of automobile at the NEW YORK SHOW

THE NEW STUTZ is "the new car" that you have been reading about in the preceding issues of this publication. It is more than a new model, more than the usual yearly refinement or dressing-up with minor improvements.

It is a car of a new type, basically and fundamentally different from all other cars of today. Yet no single feature of The NEW STUTZ is experimental or untried. The car simply combines proven features never before brought together in one automobile.

Read the condensed summary of features below:

VERTICAL EIGHT MOTOR—This motor shows a performance unparalleled by any other stock motor under 290 cu. in. piston displacement. The motor develops over 90 H.P. A speed of over 75 miles per hour is available when desired; likewise, acceleration from 10 to 50 miles per hour in less than 15 seconds. The camshaft, actuated by an exclusive form of automatic silent-drive, operates directly on the tappets of overhead valves. These function without either rocker-arms, push-rods, rollers, or other noise-producers. The crankshaft is very large, heavy, rigid; it is inherently balanced. It has nine bearings with a total bearing-surface of 120.5 sq. in., exceeding that of any other motor of its capacity. Vibration is non-existent. Fan mechanically actuated; no belt required.

WORM-DRIVE REAR AXLE—The adoption of this costly type of rear axle, in combination with a lowered center of gravity, represents its first appearance in any American passenger car, regardless of price. Yet, it is standard in the more expensive foreign chasses, and has been thoroughly proved by long use on thousands of motor vehicles.

This type of axle is incomparably quiet at all speeds, and remains noiseless after hundreds of thousands of miles. In fact, the worm-drive improves rather than deteriorates with use. The worm and gear are guaranteed by us for two years.

NON-LEAKING, HYDROSTATIC BRAKES—These are four-wheel brakes of an entirely new design. There is nothing on them to adjust; they are inherently equalized. There are no working parts to get out of order. Each brake is divided into six shoes, which are uniformly actuated by an expanding circular tube, giving equalized braking pressure at every point on every wheel. Leakage is impossible, as there are no cylinders or pistons. The entire hydrostatic system is of continuous tubular construction, hermetically sealed. The lining will last several times as long as in brakes of conventional design, and the shoes can be readily replaced.

CHASSIS LUBRICATION SYSTEM—All working parts of the chassis are lubricated by an entirely new self-lubricating system, non-clogging, self-cleansing, troubleless and positive. Oil is fed to each moving part by means of local magazines, which contain enough oil for three months' supply, mechanically refilled directly from the motor when needed.

OIL RECTIFIER—A triple-duty rectifier keeps the crankcase oil at its original purity and consistency, eliminating all foreign matter, gasoline and water.

IGNITION—The Delco dual ignition operates two spark plugs in each cylinder from opposite points. The firing of the gasoline charge from two points lessens the actual burning time, increases the mixture turbulence and thereby delivers a greater explosive force against the piston-head. Knocking is eliminated, acceleration is improved, greater speeds are attainable, and longer and harder "pulls" may be negotiated.

FRAME—Most rigid frame on any car, with integral steel running boards (actually, side bumpers). Seven cross-members; double drop, torsion-resisting construction.

LIGHTS—Twin-beam reflector headlights; steering column control. Combination tail, stop and backing light.

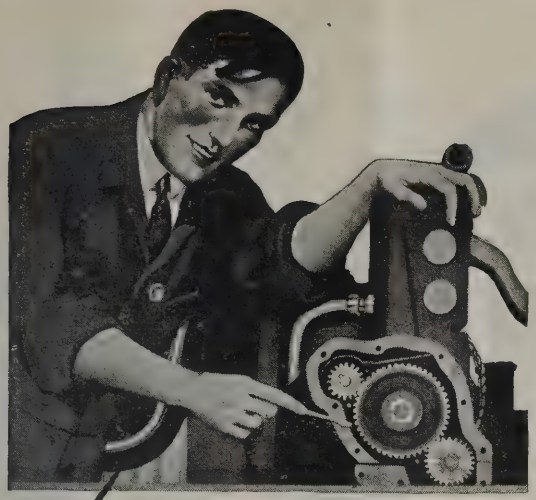
FINISH—Lacquer, three tones. Polished to a high lustre. Available in a number of attractive color combinations.

UPHOLSTERY—Rich and luxurious, employing fine, high-grade fabrics and genuine leathers of distinctive beauty.

LOCATION OF CONTROLS—Emergency brake and gear shift lever within a hand-span of the steering wheel. No obstruction to passage between controls and front seat.

INSTRUMENT BOARD—Speedometer, eight-day clock, ammeter, oil gauge, gasoline gauge and water-temperature indicator are all under one glass plate, indirectly illuminated. Board also carries ignition control, carburetor control and a combination cigar-and-pipe lighter, inspection and spot light.

BODIES—Six models. Designed and constructed under the supervision of Brewster of New York.



All models are equipped with bumpers, front and rear, Watson Stabilators and full-balloon cord tires. Hubbard Ventilating Eaves on all closed-body doors.

To the Automobile Trade:

Dealers who are interested are invited to write to The Stutz Motor Car Company for fuller details and to inspect The NEW STUTZ at the Automobile Shows.

Be a noise killer

IT is a sure way to please all of your trade. If you make the engine run more quietly, even the least-knowing motorist appreciates that you have improved his car.

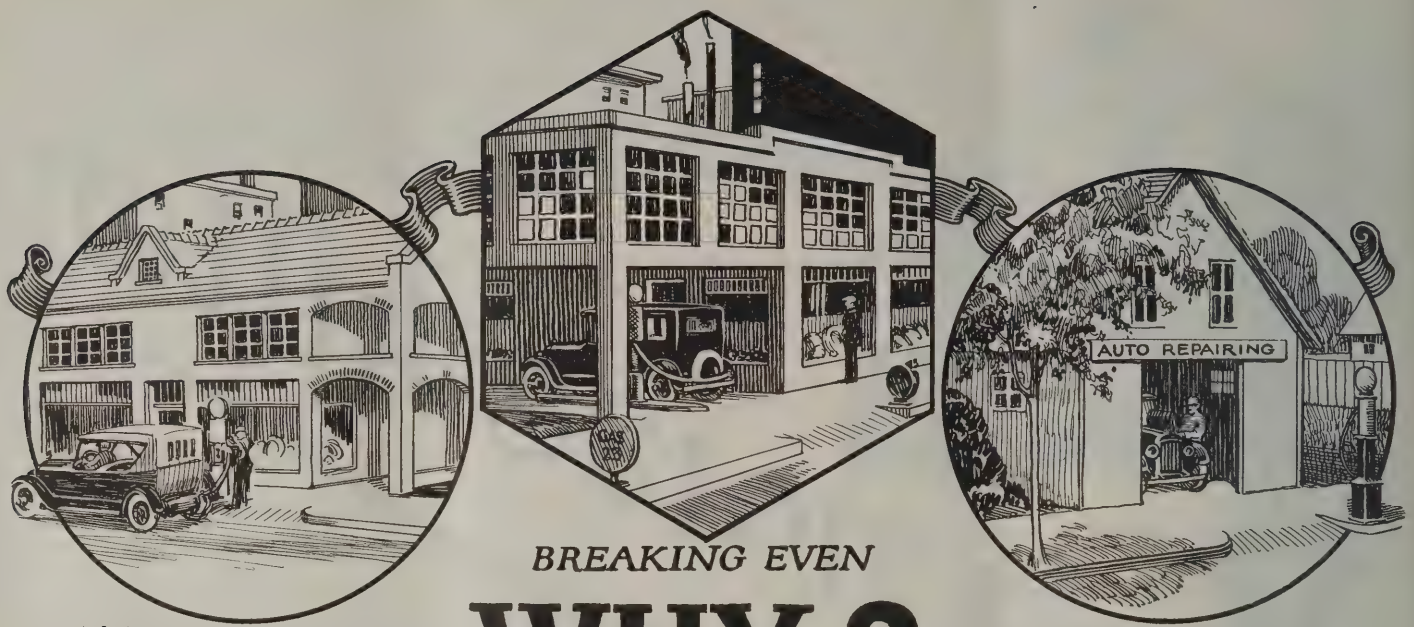
You know that the clash of metal-on-metal in the timing assembly is responsible for much of the irritating motor noise. You can put an end to this noise by installing a

Textolite

Silent Cam Shaft Timing Gear

Textolite Cam Shaft Timing Gears have a flexible web. They are die-formed. They will absorb the shocks of 100,000 miles of severest service. They are oil-proof, heat-proof and tougher than cast iron.

Get the complete story and name of your nearest distributor from



JOHN C. HOOF & COMPANY
157 West Illinois Street, Chicago, Ill.

Like many other General Electric products, Textolite Gears were developed in the Research Laboratories. Here scientists are working continually that men may have better materials with which to work.

MAKING PROFITS

BREAKING EVEN

WHY ?

LOSING MONEY

The Difference Comes in Knowing How

There are three kinds of automotive dealers—those who are making money, those who are not making money, and those who are actually running their business at a loss.

Only one kind survives—and that is the first of the three.

Profit makers know how. They take advantage of every opportunity to learn. Reading right, is perhaps their most productive teacher. It shows them dozens of ways to success.

Every week MOTOR AGE brings to its subscribers ways and means of making good. Every week there is something of money value in it for you.

MOTOR AGE

Rickenbacker

A • CAR • WORTHY • OF • ITS • NAME

Built Up To a Standard—Not Down To a Price

You Will Be Interested

Rickenbacker policies—Rickenbacker types—Rickenbacker values for the coming year represent a distinct departure from the prevailing trend which may be expressed in the phrase "Cut quality—then cut price."

With characteristic daring and initiative this dynamic concern which has taken the leadership in so many innovations, now again shows the way.

You will be intensely interested in the Rickenbacker line for the coming year.

They comprise all standard and at least two strikingly original types.

All will be exhibited at the National Shows—and in the spacious show rooms of our metropolitan distributors.

See the new Rickenbackers.

Ask about our sales plan for the future—you will be surprised and pleased with both.

THE HEADLIGHT ADJUSTING STATION

Vol. I. No. 4. PUBLISHED BY THE AMERICAN FLATLITE CO.

Just Read What One of Oregon's Leading Official Headlight Adjusters Says About Flatlite—

Yes. It's the young lady in the picture.

We wrote her on November 23rd, and enclosed a copy of our booklet "Motor Vehicle Headlighting."

Her answer follows:

The American Flatlite Co.,
Reading Road at Dandridge St.,
Cincinnati, Ohio.

Gentlemen:

We are in receipt of your letter and the forms mailed to us November 23rd. The forms are very helpful, especially the pamphlet "Motor Vehicle Headlighting."

Our headlight adjusting station proved to be more satisfactory than we hoped when we installed it, both from the financial standpoint and as a drawing card for new customers. We were surprised at the number of people, not only from our own district, but from all parts of town, who came to have their lights adjusted, who had never been in before, and we know that a good many of them will come back when they need other service.

We have kept a list of all the cars we adjusted and the name and address of the owners, thereby building up a very good mailing list which we can use to advantage in advertising our shop and other lines.

It is always a pleasure to me to work with Flatlite Reflectors, because I am always sure of the satisfaction of the best light it is possible to get.

Thanking you for your interest, I am
Very truly yours,
Mrs. EILEEN GANTENBEIN.

LONG & SILVA GARAGE
East Eighth and Hawthorn Streets
Portland, Oregon.

Every light adjusting station in the country should have a copy of our free 28-page book on Motor Vehicle Headlighting.

Every garage and service station should consider this new and profitable business.

And the best and quickest way to learn all about how to conduct a light adjusting station anywhere, is to mail the coupon below. Ask us anything you want to know. We have the answer based on the experience of thousands of successful stations located in every state.

Cut out and mail the coupon now.

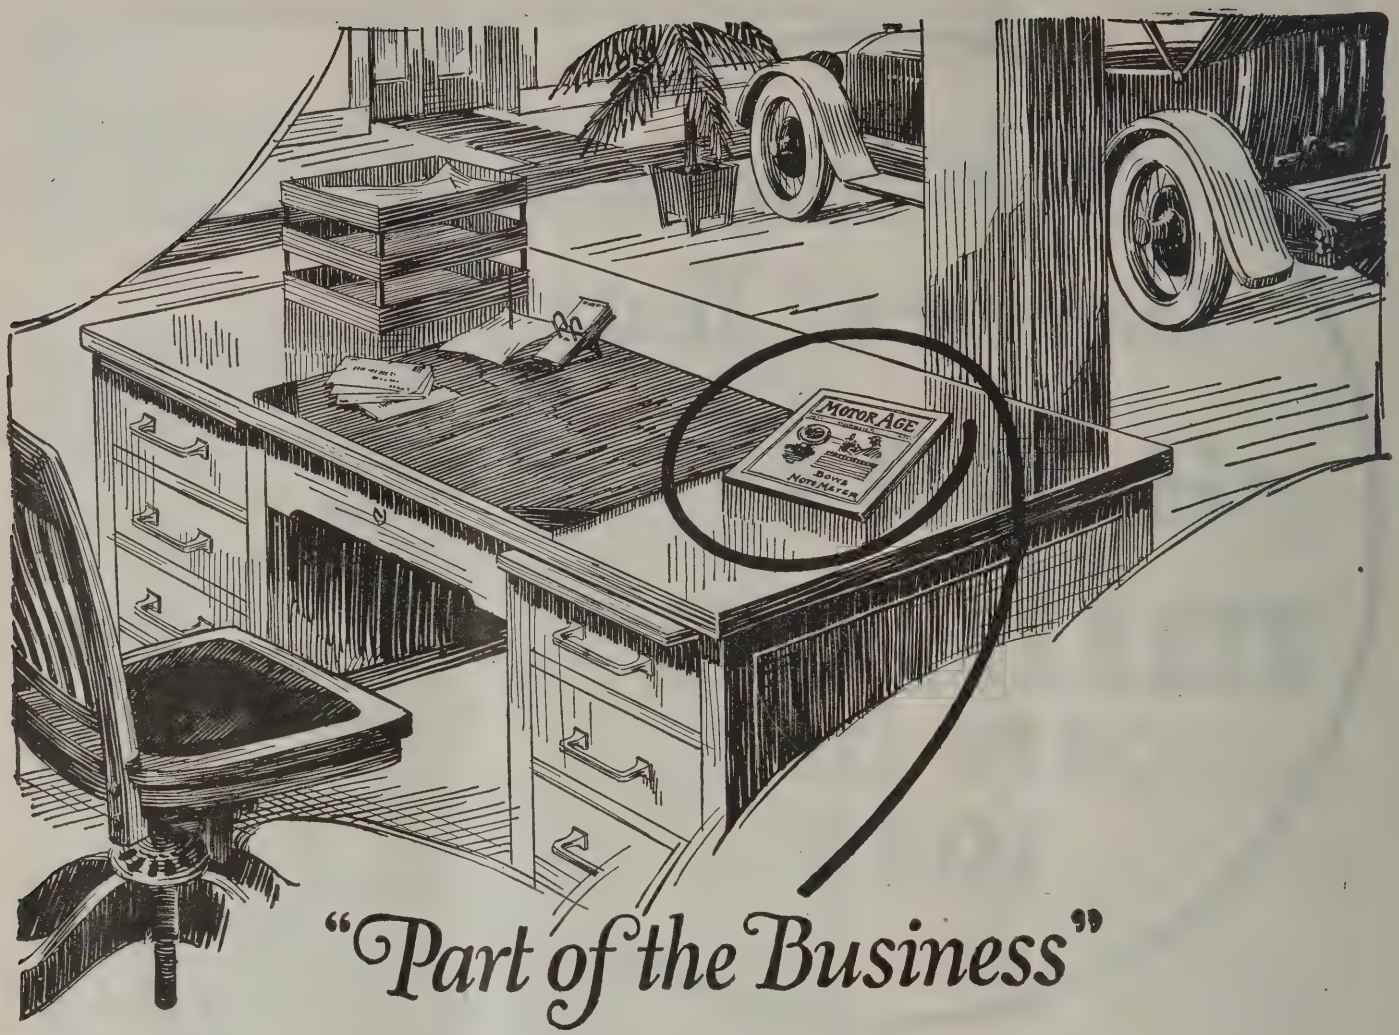
Chevrolet's Greatest Year

-a half million cars in 1925

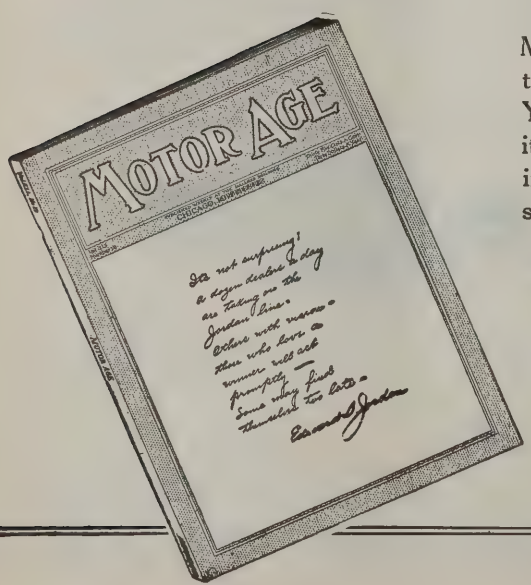
Never before has any manufacturer of gear-shift automobiles even approached Chevrolet's total production this year of over a half million cars.



Chevrolet is the world's largest builder of cars with modern three-speed transmissions—a position won and being held by providing high quality at low cost.

CHEVROLET MOTOR COMPANY
DETROIT, MICHIGAN
Division of General Motors Corporation

for Economical Transportation



CHEVROLET

QUALITY AT LOW COST

"Part of the Business"

IF an automotive merchant could travel through the country asking hundreds of other automotive merchants about their methods of doing business—if he could find out why some businesses have failed and others prospered—if he could hear the personal stories of success from the acknowledged leaders of the automotive trade—if he could do this he would return home a far broader man and a more progressive dealer than when he started. His mind would be filled with new ideas. His enthusiasm would be kindled. And his business would reflect the valuable lessons learned.

MOTOR AGE is making such a trip possible to thousands of automotive merchants the world over. Yet these men need never leave their desks, for in its columns MOTOR AGE presents information of inestimable value gathered from every conceivable source.

Are you using the right kind of HACK SAW BLADES?

THERE are Goodell-Pratt blades made for general all-around work, blades for jobs where there is severe twisting and side strains, blades for iron and steel, blades for brass or pipe, blades for soft metals, blades for thin steel sheets or tubing. Are you using the right kind of blades? Read this advertisement and find out.

No. 888 ALL-HARD Hack Saw Blades

Made from a high grade of hot rolled sheet steel .025 inch thick. Cut so that the length of blade runs with the grain. Teeth are cut, sharpened and set by a special process for speed in cutting. Hardened and tempered by another process which assures uniformity and long life.

These all-hard blades are for general work and are offered in lengths from 8 to 12 inches.

No. 777 FLEXIBLE Hack Saw Blades

These blades are for cutting under difficult conditions. Made to withstand severe twists and side strains without snapping.

Made from best hot rolled sheet steel with hardened teeth and back, *but with soft centers* for flexibility. The result is a fast-cutting, long-life blade that will stand up under severe strains.

Offered in lengths from 8 to 12 inches.

Pick the right Goodell-Pratt blade for the metal to be cut

For cutting iron and steel rods or bars, use blades with 14 teeth to the inch.
For cutting brass, tubing or pipe, use blades with 20 teeth to the inch.
For soft metals or light tubing, use blades with 24 teeth to the inch.
For thin steel sheets or tubing, use blades with 32 teeth to the inch.

Interesting catalog FREE

The Goodell-Pratt Catalog shows all the Goodell-Pratt hack saw blades, as well as frames and all the other 1500 Good Tools—many made especially for motor repair work. Write for a copy. It's free to you.

There are Profit Making Ideas in Every Issue of

MOTOR AGE

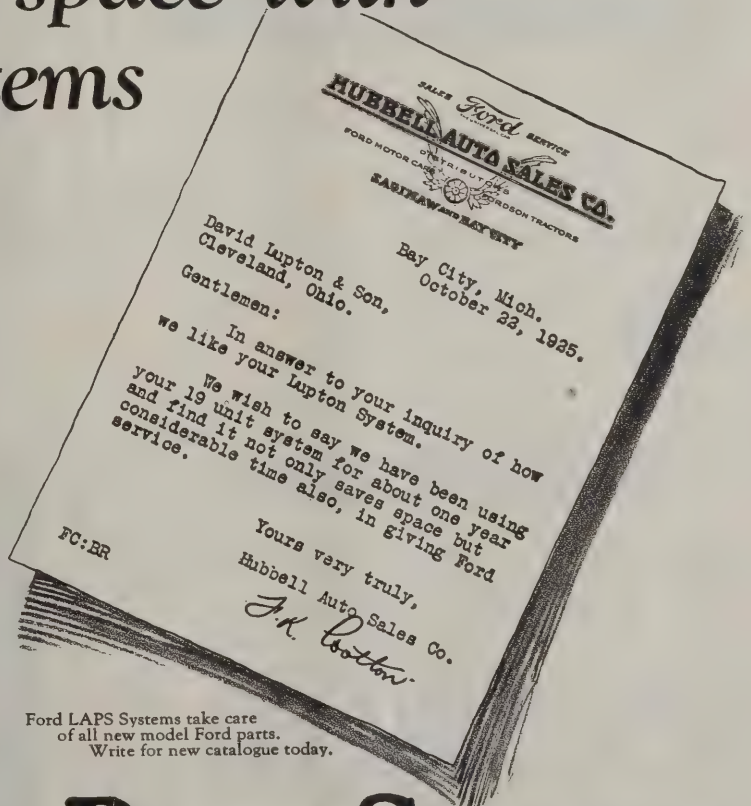
Many subscribers of MOTOR AGE, who realize the value of its contents each week, route every issue regularly through their places of business to all departments.

As a means of business-building this is a profitable habit to encourage, both for the benefit of the organization and its individual members. It is always best to read MOTOR AGE every week.

MOTOR AGE

5 SO. WABASH AVE. CHICAGO, ILL.

HERE'S part of the No. 19 Ford LAPS system at the Hubbell Auto Sales Co., Bay City, Michigan. Notice the neat appearance of the steel bins, the systematic storage of parts, and the convenient arrangement for quick service. Also note visual check on parts in stock. If you see 'em, they're there. If not, you re-order.



Save time and space with these parts systems

TO make money in parts these days, you have to save time and space in the parts department. And you have to give rapid, sure service to build up a profitable business. Your modern customer won't wait while you hunt through a confusion of bulky bins for the item he wants.

That's why successful dealers, accessory men, and shops have installed LAPS systems. These steel systems keep all the parts at your fingertips—in logical order, and with the minimum use of floor area. They permit snappy service to mechanic or driver and, at the same time, release valuable space for your display room, office, or other departments.

Many a dealer has increased his parts business 50% by installing a LAPS system. Could you use this extra profit? If you could, write today for "Better Parts and Accessories Merchandising."

Never Before a Jack Like This

—with a high-power lifting range from 4¾ to 15½ inches

The Master So-Lo Jack Fully Solves the Balloon Tire Problem

Heavy ALL-STEEL Construction

(Side Bars Channeled for super-strength)

Compound leverage takes the car up with startling ease.

Folding-telescope handle extends to full 36 inches. Combined rigid-universal joint at handle-end makes this the easiest of all jacks to place under the car and to operate.

Its unusual shape and handsome green enamel "overcoat" make it a wonderful display feature.

Retails at $6.00

(West of Mississippi $6.50)

THE MASTER SO-LO JACK IS A SURE SELLER

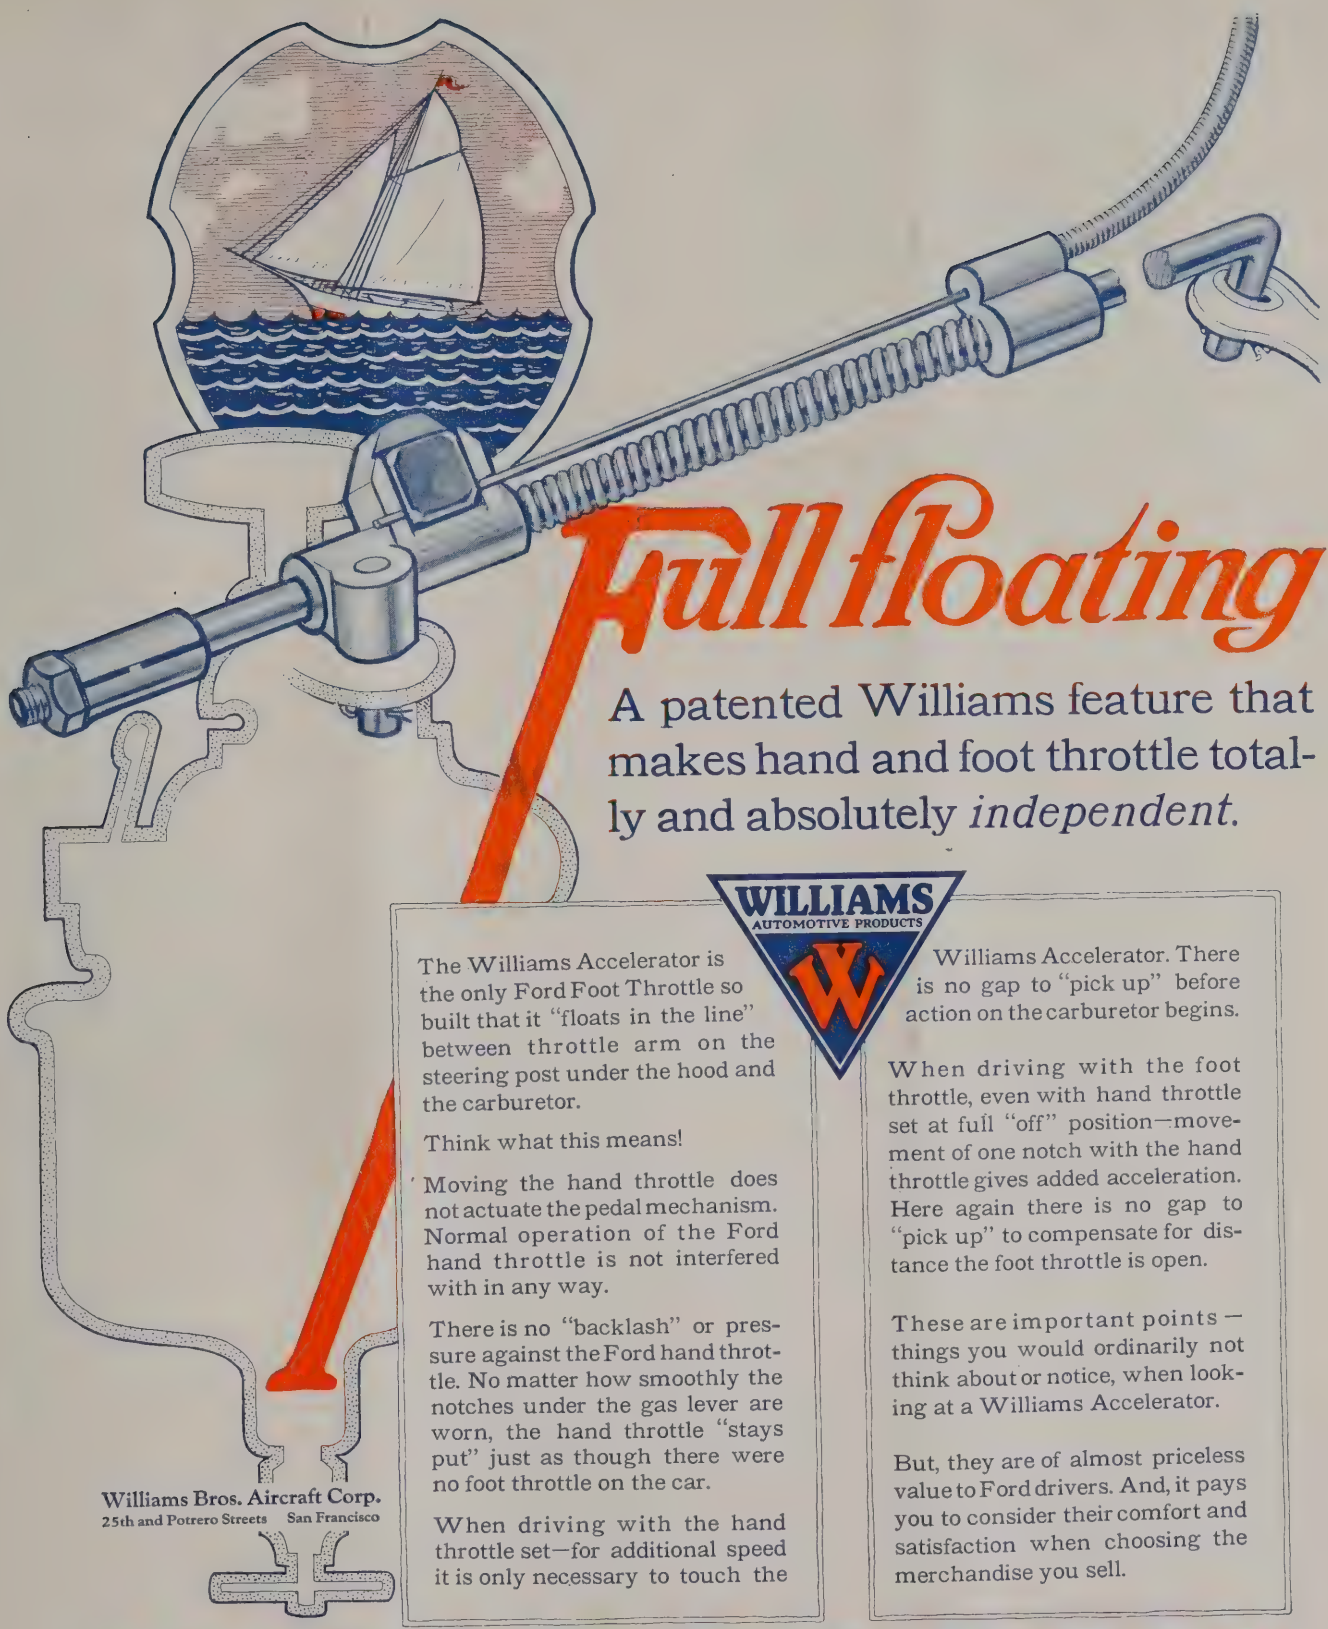
Do You Read Our Editorials?



EVERY once in a while we discover a reader who goes through each issue of MOTOR AGE with great care, and yet manages never to read an editorial.

This raises the question, "Why is an editorial?" You may be quite certain editorials are not written just to fill space, for space in MOTOR AGE is too valuable a commodity to be used in that way. They are meant to be read, and read by just such people as the reader described. Because we believe that it is important that our editorials be read, we see that they are printed in rather large type, well displayed, and inviting to the eye.

Our editors are well informed men. They study their field—your field—continually. In the process they gain many impressions and form many opinions about the same things that occupy *your* mind when you consider the problems of your own business. They cannot afford to be dogmatic about these things, nor make their conclusions the basis of authoritative articles, for they may be mistaken. But they can tell you what they think and why—they can pass on to you their personal opinions for you to match against your own. And it is in their editorials that they can do this.

If you could drop into our office once a week for an informal talk with our editors, you would probably gain much by getting their slant on the various controversial questions that you, as a member of the trade, are deciding or helping to decide. By the same token you can gain much by reading our weekly editorials, for it is just here that our editors do talk to you informally, and tell you what they are thinking of on a host of subjects intimately related to your business.

Turn to our editorial page, and see if you don't agree.

Full floating

A patented Williams feature that makes hand and foot throttle totally and absolutely *independent.*

WILLIAMS
AUTOMOTIVE PRODUCTS

The Williams Accelerator is the only Ford Foot Throttle so built that it "floats in the line" between throttle arm on the steering post under the hood and the carburetor.

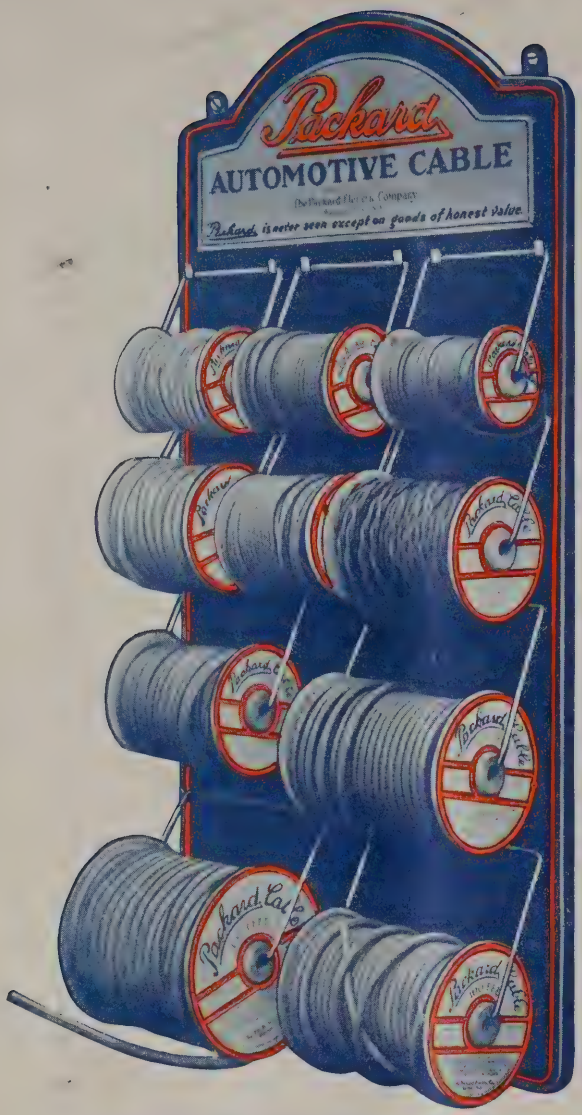
Think what this means!

Moving the hand throttle does not actuate the pedal mechanism. Normal operation of the Ford hand throttle is not interfered with in any way.

There is no "backlash" or pressure against the Ford hand throttle. No matter how smoothly the notches under the gas lever are worn, the hand throttle "stays put" just as though there were no foot throttle on the car.

When driving with the hand throttle set—for additional speed it is only necessary to touch the Williams Accelerator. There is no gap to "pick up" before action on the carburetor begins.

When driving with the foot throttle, even with hand throttle set at full "off" position—movement of one notch with the hand throttle gives added acceleration. Here again there is no gap to "pick up" to compensate for distance the foot throttle is open.



These are important points—things you would ordinarily not think about or notice, when looking at a Williams Accelerator.

But, they are of almost priceless value to Ford drivers. And, it pays you to consider their comfort and satisfaction when choosing the merchandise you sell.
